142. The contention made invites a discussion of the rule of reason doctrine applied by the courts to the Sherman Act. A vast body of decisions may be found dealing with the doctrine. For the present purpose, it will suffice to say, that it is now firmly established that the statutory provision, "Every contract, combination * * * in restraint of trade * * *," is hereby declared to be illegal * * * means that all unreasonable restraints of trade offend the Act. Standard Oil Co. v. U. S., 221 U. S. 1, U. S. v. Columbia Steel Co., supra. It is equally well recognized that the determination of what constitutes unreasonable restraint is the province of the courts. Judicial construction of the law has declared certain restraints unreasonable. With but rare exceptions, since the decisions in the Standard Oil case and the American Tobacco case in 1911, activities which theretofore were stricken down as illegal restraints have been regarded since as unreasonable per se.

143. In view of the settled law and the facts, defendant's contention that the restraints were reasonable must be [fol. 3019] rejected as untenable. The restraints on commerce, here proved by abundant evidence, have been denounced as unreasonable per se.

144. Defendant seeks to draw a parallel between the instant facts and those in the Columbia Steel case, supra. By contradistinction from the facts in that case defendant, British Timken and French Timken are separate corporations who in their respective territories, both before and after their agreements, were potential competitors in the tapered bearing market. They were the largest dealers in tapered bearings in their respective territories. They occupied dominant positions in the entire anti-friction bear-

ing industry. Defendant did not acquire British and French Timken.

145. The defense that the combination was formed without intent to restrain trade, for good business reasons, was denied validity in numerous cases. If good business reasons and expressions of good intent would serve as justifications for restraining trade and stifling competition the Sherman Act would render no aid to the free flow of commerce. The Act aims to bulwark the national economy and insists that individual interests give way to the benefit of all. Standard Sanitary Mfg. Co. v. U. S., supra, 49, Addyston Pipe & Steel Co. v. U. S., supra, Eastern States Retail Lumber Dealers' Association v. U. S., 234 U.S. 600.

146. There is nothing in the evidence to indicate a lack of intent to restrain trade. Indeed, all that the evidence discloses is an intent to form a smoothly operating combination to control commerce in the tapered bearing industry throughout the entire world.

147. In the face of the numerous agreements and the clear expressions of defendant's officers in the volumes of letters and memoranda offered in evidence, it is difficult to understand how anyone can disclaim a clear intent to restrict competition.

148. It is likewise difficult to place credence in the assertion that there was no intent to restrain trade when one reads the following comments of defendant's president, pertaining to domestic trade:*

> "Louie Klinedinst and I were in New York last week and had a long talk with Fred Hughes and Lester Sigourney of New Departure and arrived at a mutually satisfactory selling price for flanged type bearings both ball and tapered roller. We held the price on these bearings at a point where a nice profit will be made for both companies, and I feel that we did a pretty good job as New Departure might have been out of line if we had not told them our prices, and in that event we should have had to cut our prices."

and

> "All three of the principals involved agreed that the patent was not valid and that if any license was taken out it would be merely a move for legalizing the

---

* Letter dated April 5, 1933, Umstattd to H. H. Timken

fixing of prices so that we would not be threatened by either the Clayton or Sherman laws."

149. It is next urged by defendant that any restraints imposed by the agreements were ancillary to the creation of a close relation between it and Dewar, analogous to a partnership or joint venture. It is suggested that the [fol. 3030] purpose was to expand its bearing business in European markets, and necessarily involved the investment of large sums in the acquisition and development of British and French Timken and hence not in violation of law. In this connection defendant assumes that since the parties could lawfully agree to be excluded from each other's territories, they could lawfully agree also that any incursions into each other's territories should be made only at prices agreeable to the party in whose territory the sale was made. It says that such a provision was reasonably ancillary to prevent competition by defendant with the corporations through which the common undertaking was conducted.

150. Both the assumption made and the conclusion reached are wholly erroneous. The common undertaking was a joint venture only in the sense that they jointly undertook to continue the manufacture and distribution of bearings with all the limitations and restrictions which had theretofore been imposed. The joint venture was not ancillary to the agreement. Regardless of the descriptive term used to denote the affiliation, it did not constitute a legal basis for the avoidance of the consequences of the conduct which eliminated competition.

151. Throughout the trial great emphasis was placed on this phase of the defense. The record abounds with repetition of "joint venture", "partnership", "partnership in the laymen's sense". All of the defendant's officers and employees took great pains to make reference time and again to "our joint venture" and to "our partners".

152. It will be recalled that the relationship of defendant, British Timken and French Timken in respect of the manufacture and sale of bearings did not originate with the agreement between defendant and Dewar. Ever since 1909 defendant had maintained the territorial market restrictions with the predecessors of British Timken, and in France with the predecessor of French Timken.

153. The agreements made in 1928 and the activities

restricting commerce, were antedated by other agreements and activities of similar nature. Licensing of patents first served as the basis for the restrictions, but they were continued despite the expiration of the patents. Although the question, whether the early agreements founded on patent ownership transgressed the law may not be in issue in this case, the fact that in their essence they set the pattern for the restraints, is of great and fundamental importance. The only substantial change in the relationship of the parties resulting from the Dewar-defendant contract was that defendant acquired a stock ownership in British Timken and French Timken. The execution of the 1928 contracts did not mark the beginning of new business contracts. They merely extended the restrictive arrangements which had existed for almost twenty years between potential competitors.

154. The only conclusion which may properly be drawn is, that the restraints were not ancillary to the "joint venture". To the contrary, the arrangements were made to carry on effectively the combination; to eliminate competition between the parties and to frustrate any competition of outsiders.

155. The underlying motive of Dewar for making the agreement which was recognized by defendant was Dewar's desire to escape defendant's competition and to continue the existing contracts.

156. Both British Timken and French Timken were managed and operated by Dewar. Except for such powers possessed by virtue of its stock ownership and the contracts, defendant had no control over the business conduct of either. While it is true that officers and employees of defendant visited the plants of the two foreign companies from time to time to give advice in respect of the improved production and it is also true that technological information [fol. 3021] was supplied by defendant, all such assistance was in support of the combination to eliminate competition among the parties and with others.

157. British Timken and French Timken retained their corporate independence and jealously guarded their interests in dealings with defendant. A few years after the Dewar-defendant contract was made, Dewar asserted the "very separate and distinct entities of the various Com-

panies concerned" and Hess abandoned, even in name, the partnership fiction when he wrote in October of 1934:

> "* * * some of the things we formerly did willingly and freely, without any recompense, as affecting only our partner Michael Dewar, and ourselves, now becomes a matter of these same things being done for another company in which we hold a 25% interest only. Thus, as you will see from my various future letters, we feel it is quite desirable to definitely set up in our new agreements several points beyond question of a doubt that in the past would only be the occasion of a simple letter from either of us to each other, thus settling any divergence of opinion in almost every instance."

158. In 1948 Dewar, when his depositions were taken in London, proclaimed: "'Me' is British Timken."

159. It is quite obvious from these expressions of the officers of the respective companies that even if the stock investment of defendant and the cooperation between them indicated a pre-existent fiction of a "joint venture" or partnership in their own judgment, by 1934 neither believed that such relationship existed.

160. The facts are that defendant did not build plants in Europe or purchase subsidiaries abroad. It simply acquired substantial interests in a dominant manufacturer of bearings in England, participated in the formation of and invested in the stock of a potential competitor in France. The repeated assertion that it was in a joint venture or was a member of a partnership does not make it so.

161. Even if we were to assume, arguendo, that there was a "joint venture" between the parties and that an Ohio corporation could become partner in a business undertaking with a citizen of England or an English corporation (10 Ohio Jurisprudence § 632, § 857, Ohio v. Standard Oil Co., 49 O. S. 137), no immunity is afforded to defendant from the violations of the Sherman Act.

162. The argument is predicated on the oft quoted opinion of Judge Taft, later Chief Justice Taft, in Addyston Pipe and Steel Co., supra, in which restraints of trade resulting from a legal partnership agreement were held not to run afoul of the law. That decision does not uphold the type of conduct which is here attacked.

163. If a joint venture or partnership is formed for the purpose of a lawful business enterprise and restraints result from the right to protect established business interests no violation of law occurs. But if the association is formed for the purpose of continuing a combination to allocate exclusive sales territories in the world, to fix prices and to eliminate competition both within and without the combination, it cannot hide from the effects of the law under the cloak of a joint venture or partnership. Were it otherwise, an easy way could be found to circumvent the law by entering into agreements purportedly to protect a joint venture or partnership.

[fol. 3022] 164. Defendant also asserts that any restraints imposed by the contracts were ancillary to its agreements to furnish know-how to British Timken and other Timken companies. It says that the convenants by which it agreed not to compete in the territory in which British and French Timken were to use this know-how and by which each of them in turn, agreed not to compete in defendant's territory were reasonably ancillary to the sale of the know-how under the contracts. It concludes that the law permits the restriction not to compete in each other's territory as a recompense for its contribution to the foreign companies of advice and instruction in the manufacture of bearings and the quality of steel used and information with respect to inventions, discoveries and practices whether patented or not.

165. In taking this position it principally relies on the Addyston Pipe case, supra. It is pointed out that the agreements "by the seller of property or business not to compete with the buyer in such a way as to derogate from the value of the property or business sold" and "by the buyer of property not to use the same in competition with the business retained by the seller" were held in that case to be ancillary restraints not in violation of the Sherman Act.

166. Defendant goes so far as to argue "that, due to the more restrictive nature of a patentee's monopoly, he is more restricted in the conditions which he may impose, than is the seller of unpatented property such as know-how, which is available to any member of the public who can discover it" and "that the legal principle which supports a patentee's agreement not to sell in the licensed terri-

tory is just as applicable to one who licenses or transfers know-how".

167. The precise legal basis for the argument so advanced is not disclosed. Analogy is drawn between Fowle v. Park, 131 U. S. 88 and Dr. Miles Medical Company v. Park & Sons Company, 220 U.S. 373 and the instant case.

168. It must be noted at the outset of the discussion of the problem, that the know-how furnished by defendant to the other companies was not a secret process for the manufacture of tapered roller bearings. Other manufacturers were admitted to the plants of British and French Timken, where they could observe all the know-how put into operation. In the extensive record of the testimony dealing with the assistance given by the officials and technical staff, there is no trace of any secret process which was imparted by them. No contention was made at any time that such was the case. The know-how consisted of designs, data showing how defendant manufactured its product, the advice of defendant's employees and help of like nature.

169. Reference is made to a patentee's right to impose restrictions in respect of the patented products.

170. The patent monopoly is so circumscribed as not to be an instrument in restraint of trade to a greater extent than is consistent with the privileges granted. The proposition of law has been firmly established that the patent does not empower its owner to restrain trade in processes or devices which are not embraced within the scope of his patent. U.S. v. Line Material Co., supra, Standard Sanitary Co. v. U. S., supra, U. S. v. U. S. Gypsum, supra. The law has too jealously guarded the benefits derived from a free flow of commerce to permit even the reward for the development of the useful arts and sciences to be greater than essential to encourage inventions.

171. The limitations imposed by the judicial opinions in the use of patents to restrain trade are too well-known to justify a lengthy discussion of them. Those opinions only serve as guide posts to resolve the question here presented.

[fol. 3023] 172. In order to sustain the argument of defendant, this Court is asked to find that one who transmits his skill in the manufacture of a product to another is entitled to a greater reward than one who is instrumental in the advancement of science by his inventive genius. Such finding would be obviously wrong.

173. In Ethyl Gasoline Corp. v. U. S. supra, 456, the court said:

> "He may not, by virtue of his patent, condition his license so as to tie to the use of the patented device or process the use of other devices, processes or materials which lie outside of the monopoly of the patent licensed."

174. During the existence of the tapered bearing patents defendant could not legally allocate markets on processes which were not within the ambit of its patent monopoly. Therefore, it defies all sense of logic to say that upon the expiration of the patents defendant could lawfully engage in like conduct and practices upon the theory of supplying know-how on unpatented processes.

175. One who possesses greater knowledge or superior skill in the manufacture of a product is entitled to be fairly and adequately compensated if he furnishes his knowledge or skill to others. He is not entitled, however, to exact as a price for such contribution, complete freedom from competition. The quid pro quo for furnishing of know-how cannot be an absolute license to avoid the provisions of the Sherman Act. The harm caused thereby would be too great a tribute to knowledge and skill when viewed in the light of public policy.

176. It would seem that after the lapse of years since the passage of the Sherman Act, every type of economic venture has been under the scrutiny of judicial eyes to determine whether it clashes with the mandate of the Act. The ingenuity of business enterprise, however, makes it inevitable that new practices be examined as they arise. So in this instance a phase of business conduct must be weighed in the light of the general principles of the antitrust laws without the benefit of specific decisions for guidance.

177. We are, here, confronted with a situation, wherein a patentee upon the expiration of its patent monopoly, seeks to justify the perpetuation of the favored position it enjoyed by virtue of the patent through the ingenious theory of furnishing know-how. If lawful restraints and monopolies could be predicated on the ownership of know-how they could last ad infinitum. This Court cannot subscribe to such unharnessed privilege.

178. The contracts to divide the world into exclusive marketing areas cannot be defended as ancillary to the transfer of know-how by defendant.

179. The next contention advanced by defendant is, that if any restraints were imposed by the Business Agreements, they were ancillary to the licensing of the trade mark "Timken" to British and French Timken and therefore were not contrary to law.

180. Neither factual nor legal justification may be found to give merit to the contention.

181. Defendant maintains that the objectives which it desired in 1928 to achieve in respect of the mark were:

> "(1) The affirmation of its equitable ownership of the mark in England and in various portions of the British Empire.
>
> [fol. 3024] (2) The disposition of the French and German trade-mark problems to the end that it would ultimately become the owner of the trade-mark registrations in those countries.
>
> (3) The removal of any possibility of challenge to it of its registrations in certain European countries wherein, as has been shown, they could be questioned on the basis of prior use.
>
> (4) The establishment of a reversionary right in it in the mark on termination of the contract with the British and French Companies."

182. It is readily discernible from the recital of these objectives that defendant had serious doubt of its ownership of the mark in 1928 in the various territories assigned to British and French Timken. In fact in some markets British Timken's predecessor was the owner of the mark. In France S. M. G. had registered it. In Germany one Prausnitzer was the sole owner of the trade mark "Timken." It is apparent from the testimony that defendant could not use the mark in a great portion of the world.

183. At that time defendant was primarily concerned, therefore, not in safeguarding the trade mark rights which it then possessed, but rather in acquiring the rights obtained by other manufacturers, as a consequence of the early patent license agreements, in areas where defendant had agreed not to manufacture and sell. Its own covenants not to make or sell bearings in territories allotted to others

brought about the situation that the trade mark "Timken" was registered and owned by others.

184. Defendant's assertion that it was the sole equitable owner of the mark is unimpressive. The agreements attempted to remedy its dubious trade mark rights.

185. Its own counsel in England, forcibly brought the matter to defendant's attention in a letter on April 2, 1927 as follows:

> "We are glad to note that you are endeavoring to obtain a controlling interest in British Timken. This is in line with our own suggestions and will put you in control of the trade-mark "Timken" all over the world, whereas, under existing conditions, there is a danger that, if your present license agreement with British Timken should be terminated, you might not be able to prevent others from establishing a right to use the word "Timken" in certain countries from which you are excluded by the agreement from doing business."

186. Despite counsel's optimism concerning world control of the mark, great difficulty was encountered in effecting registration in many countries.

187. It is true that from the inception of the business dealings with foreign producers and distributors, defendant scrupulously guarded its right in the trade name. Every agreement contained a provision that on all bearings sold, the name "Timken" be affixed. It is also true that the officials of defendant impressed company counsel with the importance of the preservation of the trade mark. But the trade mark provisions of the challenged contracts were subsidiary and secondary to the central purpose of allocating trade territories, specifically recited in them as follows:

> "The Companies parties hereto for their mutual advantage and convenience in working have agreed to make arrangements for an interchange between them of information and facilities and in connection therewith to define their respective territories and for other purposes in manner hereinafter appearing."

[fol. 3025] 188. The evidence conclusively proves that defendant entered into the agreements not for the purpose of exercising its right to protect the trade mark "Tim-

ken" from its unlawful use by British and French Timken nor to protect the public from British or French Timken passing off their products as those of defendant, but for the purpose of preventing competition in the sale of bearings. Through the years 1909-1924, defendant enjoyed freedom from competition, because of its patent monopoly. It now attempts to defend the extension of this right on the basis of granting British and French Timken the use of its trade mark.

189. Assuming that the restraints were reasonably ancillary to protect the trade mark and that the law sanctions such ancillary restraints, defendant's contention nevertheless is founded on the tenuous premise that it was the equitable owner of the mark outside of the marketing territory allocated to it.

190. Defendant did not and could not have a right to license a trade mark in markets where it did not own the mark.

191. Defendant maintains that the trade mark is its property; that the ownership of any property is in a limited sense monopolistic; that in the exercise of such a limited monopoly power, defendant has the right to exact as a consideration for the use of its property, an agreement with others not to compete.

192. The conflict between the Sherman Act and the limited patent monopoly has been the subject matter of innumerable litigated cases. The courts have attempted to harmonize the opposing basic policies inherent in their respective economic concepts. They tried to fit the antitrust laws within the frame work of the Constitutional grant of a patent monopoly. Whether within the provisions of the Sherman Act commerce may be restrained to the extent that it is reasonably ancillary to protect a trade mark has not been decided or discussed by the courts.

193. Trade marks in our economic system provide the method by which one seller may be enabled to distinguish his goods from those of another. Fundamentally the basic function of the law pertaining to trade marks is to safeguard the good will of one manufacturer or distributor against the sale of another's merchandise as his. Canal Co. v. Clark, 80 U. S. 311, Hanover Star Milling Co. v. Metcalf, 240 U. S. 403. The right to protect it is bestowed by the law not only to reward business enterprise and pre-

vent piracy on successful and established ventures, but at the same time to prevent deception of the public into believing that they are purchasing one product instead of another.

194. The trade mark right as all other rights is not without bounds. The owners rights are canalized within the exercise of the trade mark's accepted and defined functions. The law is replete with decisions which set out their functions and limitations.*

195. Some of them are lucidly delineated in United Drug Co. v. Theodore Rectanus Co., 248 U. S. 90, 97-98 as follows:

> "The asserted doctrine is based upon the fundamental error of supposing that a trade-mark right is a right [fol. 3026] in gross or at large, like a statutory copyright or a patent for an invention, to either of which, in truth, it has little or no analogy. Canal Co. v. Clark, 13 Wall. 311, 322; McLean v. Fleming, 96 U. S. 245, 254. There is no such thing as property in a trade-mark except as a right appurtenant to an established business or trade in connection with which the mark is employed. The law of trade-marks is but a part of the broader law of unfair competition; the right to a particular mark grows out of its use, not its mere adoption; its function is simply to designate the goods as the product of a particular trader and to protect his good will against the sale of another's product as his; and it is not the subject of property except in connection with an existing business. Hanover Milling Co. v. Metcalf, 240 U. S. 403, 412-414.
>
> "The owner of a trade-mark may not, like the proprietor of a patented invention, make a negative and merely prohibitive use of it as a monopoly. See United States v. Bell Telephone Co., 167 U. S. 224, 250; Be-

---

* Whatever extension of trade mark rights is encompassed in the Lanham Act (Title U.S.C.A. sec. 1051 et seq.), its enactment did not open the door to employ a trade mark as an instrument to undermine the antitrust laws. This is borne out with transparent clarity by its legislative history.

ment v. National Harrow Co., 186 U. S. 70, 90; Paper Bag Patent Case, 210 U. S. 405, 424.

"In truth, a trade-mark confers no monopoly whatever in a proper sense, but is merely a convenient means for facilitating the protection of one's goodwill in trade by placing a distinguishing mark or symbol—a commercial signature—upon the merchandise or the package in which it is sold."

196. In order to resolve the instant question all that need be said is that the trade mark right is not comparable to the right the owner has in a chattel or realty; it is not a right in gross or at large; it is not such a right as is awarded to an inventor in the product of his invention. U. S. v. Masonite Corp., 316 U. S. 265.

197. Even the patent monopoly is not broad enough to encompass the power to engage in conduct and practices to eliminate competition such as were employed by defendant, British and French Timken. U. S. v. National Lead, supra; U. S. v. Line Material Co., supra, Hartford-Empire v. U. S., 323 U. S. 386, 433 Mercoid v. Mid-Continent Co., 320 U. S. 661, 665, Standard Sanitary Co. v. U. S., supra, U. S. v. Gypsum, supra, Ethyl Gas v. U. S., supra, U. S. v. Masonite Corp., supra, Federal Trade Commission v. Beech-Nut Co., 257 U. S. 441, Interstate Circuit v. U. S., supra, U. S. v. Paramount Pictures, 334 U. S. 131, 143 (see note 12).

198. A trade mark is not the product of invention. The privileges which are accorded to the owner of a patent are predicated upon invention and are safeguarded to carry out the Constitutional intent to promote the progress of science and the useful arts. If a trade mark were to be given the power of monopoly, it would not be limited in time as in the case of a patent. The public would not benefit from an invention and there would not be the ultimate gain which flows from the disclosure of a patent. That is the foundation for the patent monopoly.

199. A trade mark brands a product as to its origin. The law empowers the owner or the originator of a mark to protect his wares against the imitator who seeks to palm off merchandise as his by the use of the same mark. He is given the right to enjoin such practices. The public in-

terest is served by that protection which in the exercise of all rights is paramount. Deception is prevented.

200. The trade mark may become a detrimental weapon if it is used to serve a harmful or injurious purpose. If it becomes a tool to circumvent free enterprise and unbridled competition, public policy dictates that the rights enjoyed [fol. 3027] by its ownership be kept within their proper bounds. If a trade mark may be the legal basis for allocating world markets, fixing of prices restricting competition, the unfailing device has been found to destroy every vestige of inhibition sat up by the Sherman Act. The rights pertaining to trade marks and trade names were well known long before that legislative enactment was passed by Congress. It is certain that it was never intended that the consequences of violations of the antitrust laws may be escaped by the licensing of trade marks.

201. Defendant vigorously asserts its position, that since exports and imports of anti-friction bearings from and into the United States in foreign commerce over the years have been relatively insignificant, an injunction to prevent the alleged restraints would be a vain and needless gesture on the part of the Court. The basic purpose of the Sherman Act, it says, is to insure trade on a competitive price basis. The argument goes that inasmuch as there is no price competition in bearings imported into or exported from the United States, and since it is impossible for American manufacturers or foreign manufacturers to engage in the exporting or importing of bearings to each other's markets on a successfully commercial basis, the illegality which is essential to the granting of equitable relief does not exist.

202. Several days were devoted, in the trial of the case, to defendant's effort to sustain this contention. Tables of figures were offered in addition to the statements of defendant's officials, to prove that the volume of exports and imports in tapered roller bearings was negligible. Whether the absence of trade was the result of the competitive restrictions charged by the Government or of natural economic forces was not pointed out.

203. Several witnesses testified that the economic dislocation of world markets precipitated by the first world war, and the depression which followed, caused a near chaotic condition in foreign commerce. It was augmented,

they said, by the policies of the various nations to encourage purchase of domestic goods. The "Buy British" slogan was mentioned as illustrative of this program, in which nearly all countries engaged. The tariff regulations, the formation of the sterling bloc, the fluctuation of currency values, the government restrictions against imports and exports also contributed to the net result, they maintained, that producers were unable to compete with foreign manufacturers on a profitable basis. They concluded that this condition has prevailed not only in the roller bearing industry, but it affected all industries.

204. In the consideration of this claim the question immediately arises: If all the impediments to foreign trade existed ever since 1914, which became more and more pronounced to the present day, why were the contracting parties, defendant, British Timken and French Timken so concerned about airtight agreements to keep each one within its own commercial domain? The repeated and persistent provisions of the successive contracts, for territorial restrictions, contradict any claim of lack of ability to compete.

205. Local and national pride in domestic goods and sales resistance to foreign made products have always been obstacles to import and export trade. The ingenuity of the American businessman, fortified by the advantages of free competition in many instances has been able to penetrate the strongest tariff walls.

206. The evidence bears out the fact that there was and there is actual and potential competition in the international roller bearing market. The contracts were consummated for the very purpose of regulating and restricting it.

207. How else could this portion of Dewar's testimony be explained:

[fol. 3028] Q. Is it your intention to say that it was immaterial to you who sold as between American Timken and British Timken at all times, or just when you were in competition with S.K.F.?

A. Our main object in life was to sell Timken tapered roller bearings. Naturally, I did not want the American Timken Company to sell bearings in our territory unless —well, in our territory.

Q. In other words, you did not mean that as between

a bearing made in Canton and one made in Birmingham, you did not care which was sold in your territory—they both have the name "Timken" on them?

A. Yes.

Q. But you are interested in selling bearings made in Birmingham in your territory?

A. Yes, certainly; but if we were unable to sell a bearing made in Birmingham, we preferred to sell in our territory a bearing made in Canton or in France rather than a S.K.F. bearing made in Gothenburg.

Q. So in other words, if you were trying to get the business from S. K. F., it was then that it was immaterial to you which Timken bearing was sold?

A. Well, I should have put it the other way around: it was when S.K.F. was trying to get the business from us. After all, we started.

Q. You used the phrase 'common enemy' referring to Swedish S.K.F. Were they a common enemy at all times, or were they not during some time?

A. They were a common enemy all the time.

Q. And they were a common enemy at the time you entered into the arrangements in France in 1934, and the arrangements in England in 1932?

A. They were largely a common enemy from the time we ever heard of them up to now inclusive.

Q. So that they were a common enemy with whom you had friendly arrangements?

A. We occasionally had a truce—like the Russians and the Germans.

and that of William R. Timken:

Q. Now, you said Mr. Dewar wanted to know where he stood.

A. Yes.

Q. In what respect? Would you be a little more explicit?

A. Well, he wanted to know where his—what he was putting his money into. He didn't want to get into a dog fight with us.

[fol. 3029] Q. About territories in which to sell bearings, you mean?

A. Yes, it would hardly be economical to support two sets

of distributors in the same country, for instance. Therefore, he wanted a clear understanding of what territories his company would serve.

208. It is not purely conjecture to conclude, that had it not been for the rigid restrictions provided in the contracts and their strict enforcement in actual practice, the volume of business with foreign countries would have been considerable in size. The officers of defendant admitted that the need for bearings from the United States was continuously shown by the inquiries made by foreign purchasers. Small competitors of defendant in the United States were able to make shipments abroad on a relatively large scale. The last war accentuated the demand, but defendant adhered to its obligation as a member of the combination and refused to make sales. Forsythe's report to Klinedinst:

"We have received definite orders from their sales territories which upon being referred to British Timken were turned down at their instructions."

is convincing evidence of the potential competition and the destructive effect of the combination.

209. Political and social changes have repeatedly caused fluctuations in international trade. Our own economy has always been affected by the currents of trade regulations abroad. But violent as the variations have been, commerce with foreign nations has remained one of the great influences on our own economic welfare. The provisions of the Sherman Act, pertaining to free competition with other nations, have not become a dead letter as a consequence of the world events of the past thirty-five years.

210. The evidence presented is convincing that defendant, British Timken and French Timken have formed a world cartel in tapered roller bearings. They have divided the world into exclusive sales territories. They have fixed prices. They agreed to and have effectively eliminated competition among themselves. They agreed to and did attempt to eradicate the competition of outsiders. They combined with competitors to fix prices. The defenses offered do not constitute justifications for such patent violations of the antitrust laws.

211. The Government is entitled to a decree. The exact nature of the needed remedy to prevent future violations will be determined at a hearing set for that purpose.

Freed, United States District Judge.

March 3, 1949.

IN UNITED STATES DISTRICT COURT

[Title omitted]

MOTION BY DEFENDANT FOR AN ORDER REJECTING AND DISREGARDING THE DOCUMENT LODGED BY THE PLAINTIFF, DENOMINATED "FINDINGS OF FACT AND CONCLUSIONS OF LAW", AND REQUIRING PLAINTIFF TO SUBMIT A DRAFT OF THE FINDINGS OF FACT AND CONCLUSIONS OF LAW REQUIRED BY RULE 52(a) OF THE FEDERAL RULES OF CIVIL PROCEDURE—Filed June 3, 1949

Now comes the defendant and moves this Honorable Court to

(a) reject and disregard the document denominated "Findings of Fact and Conclusions of Law", lodged by the plaintiff with the Clerk of the Court on April 12, 1949, which provides, in substance, that the Court adopts its Memo-

randum in the above-entitled case dated March 3, 1949, as its findings of fact and conclusions of law therein, and

(b) require the plaintiff to prepare and submit to this defendant and the Court a draft of the findings of fact and conclusions of law required by Rule 52(a) of the Federal Rules of Civil Procedure, with an opportunity to this defendant to present a statement of its approval or disapproval thereof, and, in the latter instance, a statement of its objections and its reasons therefor and a draft of the findings and conclusions which it proposes as a substitute for the draft submitted to it.

The reasons and grounds upon which this motion is submitted are as follows:

1. The Court has entered no order which has relieved the plaintiff, the prevailing party in the above-entitled case, of the duty of submitting to the Court and this de- [fol. 3032] fendant a draft of the findings of fact and conclusions of law required by Rule 52(a) of the Federal Rules of Civil Procedure, as required by Rule 4 B of this Court.

2. The document lodged with the Court denominated "Findings of Fact and Conclusions of Law" does not constitute a draft of the findings of fact and conclusions of law required by Rule 4 B of the Court, but instead constitutes in form and effect a proposed order, by the signing of which the Court would adopt its Memorandum as its findings of fact and conclusions of law.

3. The Court's Memorandum dated March 3, 1949, even if adopted by the Court as its findings of fact and conclusions of law, would not constitute or include the findings of fact and conclusions of law required by Rule 52(a) of the Federal Rules of Civil Procedure in that the Memorandum does not include findings of underlying, subsidiary and ultimate facts on all issues involved in the case at bar separately found; includes discussion of portions of the evidence and the Court's reasoning with respect thereto; mingles statements of fact with arguments and inferences drawn by the Court; and does not set forth the Court's conclusions of law separately stated.

(S.) Luther Day, John G. Ketterer, Attorneys for Defendant.

George W. Derr, Esq., Department of Justice, Antitrust Division, 237 Leader Building, Cleveland, Ohio, Attorney for Plaintiff:

Please take notice that the defendant has filed a motion in the above-entitled case for an order rejecting and disregarding the document lodged by the plaintiff, denomi- [fols. 3033-3044] nated "Findings of Fact and Conclusions of Law", and requiring plaintiff to submit a draft of the findings of fact and conclusions of law required by Rule 52(a) of the Federal Rules of Civil Procedure, and that the same will be on for hearing at the District Court of the United States for the Northern District of Ohio, Eastern Division, Federal Building, Cleveland, Ohio, at a time to be set by the Court of which you will be notified

(S.) Luther Day, John G. Ketterer, Attorneys for Defendant.

Copies of the foregoing motion, notice of motion, and brief in support thereof, were served upon counsel for the plaintiff by handing the same to Lester Kauffman, Esq., one of counsel for the plaintiff, this 13 day of June, 1949.

(S.) George H. Rudolph, Attorney for Defendant.

ORDER DENYING DEFENDANT'S MOTION—Filed June 23, 1949

The above entitled cause coming on for hearing on the 20th day of June, 1949, on the motion of the defendant entitled "Motion by defendant for an order rejecting and disregarding the document lodged by the plaintiff denominated 'Findings of Fact and Conclusions of Law', and requiring plaintiff to submit a draft of the findings of fact and conclusions of law required by Rule 52(a) of the Federal Rules of Civil Procedure", and on the arguments of counsel for the plaintiff and for the defendant with respect to such motion, upon consideration thereof by the Court, it is.

Ordered that the defendant's motion be, and the same is hereby, denied, to which action of the Court the defendant excepts.

(S.) Freed, Judge.

Dated: June 23, 1949. Cleveland, Ohio.

Approved as to form.

[fol. 3048] IN THE UNITED STATES DISTRICT COURT FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Civil Action No. 24214

UNITED STATES OF AMERICA, Plaintiff,

v.

THE TIMKEN ROLLER BEARING COMPANY, Defendant

FINAL JUDGMENT

This cause came on for trial March 22, 1948 before the Honorable Emerich B. Freed, United States District Judge, and the trial was completed on April 27, 1948. The court filed its opinion on March 3, 1949, finding and adjudging the defendant to have violated Sections 1 and 3 of the Sherman Antitrust Act. By order filed June 20, 1949 the court adopted said opinion as the findings of fact and conclusions of law herein, pursuant to Rule 52 of the Rules of Civil Procedure;

Now, Therefore, upon motion of plaintiff, by its at-

torneys, and after hearing defendant by its attorneys, it is hereby

Ordered, Adjudged and Decreed as Follows:

1. As used in this judgment:

A. "Anti-friction bearings" means rotating devices for reducing friction between moving mechanical parts, wherein rollers of various shapes or balls are inserted between containers which are inserted between the [fol. 3049] moving parts; and includes ball bearings and all types of roller bearings, such as, but not limited to, straight and tapered roller bearings, and accessories and parts of such bearings.

B. "Tapered roller bearings" means anti-friction bearings employing conical or truncated conical rollers.

C. "British Timken" means Timken, Limited, a joint stock company organized and existing under the laws of the United Kingdom, with its principal office and place of business at Birmingham, England.

D. "French Timken" means Societe Anonyme Francaise Timken, a corporation organized and existing under the laws of France, with its principal office and place of business at Asnieres, France.

E. "United States" means the United States and its territories and possessions.

F. "Person" means an individual, partnership, firm, association, corporation, or other business or legal entity.

G. "British territory" means those parts of the world allocated in 1938 as exclusive production and sales territories to British Timken by the agreements referred to in Subsection A of Section IV of this judgment, including (1) the United Kingdom, Eire, and all countries other than France and Russia on the continent of Europe; (2) all dominions, colonies, mandates, and dependencies of the United Kingdom, and of all other European countries, in any part of the world, except (a) those of France, (b) those located in or adjacent to North or South America, and (c) by later agreement, Hong Kong.

[fol. 3050] H. "French territory" means those parts of the world allocated in 1938 as exclusive production

and sales territories to French Timken by the agreements referred to in Subsection A of Section IV of this judgment, including France, its dominions, colonies, mandates, and dependencies in any part of the world, other than those located in or adjacent to North or South America.

I. "Defendant's territory" means those parts of the world allocated in 1938 as exclusive production and sales territories to defendant by the agreements referred to in Subsection A of Section IV of this judgment, including (1) the United States, as herein defined, (2) Canada, Mexico, Central America, and the West Indies, (3) South America, (4) the rest of the world not allocated to British Timken or French Timken, and (5) by later agreement, Hong Kong.

II. The provisions of this judgment applicable to defendant shall apply to the defendant, its officers, directors, agents, employees, subsidiaries, successors, assigns, and all other persons acting, or claiming to act under, through or for such defendant.

III. Defendant has violated Sections 1 and 3 of the Act of Congress of July 2, 1890, 26 Stat. 209, 15 U. S. C. Sections 1 and 3, entitled "An Act to protect trade and commerce against unlawful restraints and monopolies," commonly known as the Sherman Antitrust Act, and acts amendatory thereof and supplemental thereto. Said violation has consisted of defendant and its co-conspirators, British Timken and French Timken, engaging in an unlawful combination and conspiracy in restraint of trade and commerce in anti-[fol. 3051] friction bearings among the several states of the United States and with foreign nations, and between territories of the United States and foreign nations, and of defendant and said co-conspirators entering into unlawful contracts, agreements and understandings, and planning and acting together and engaging in illegal practices individually to eliminate competition among themselves and with others in the production, sale and other distribution of anti-friction bearings in all markets of the world, including the United States.

IV.

A. Each of the following agreements is unlawful under Sections 1 and 3 of the Sherman Antitrust Act

and is hereby terminated; and defendant is hereby enjoined and restrained from the further performance or enforcement of any of the provisions, including those involving rights or obligations upon termination of said agreements and of any agreements amendatory thereof or supplemental thereto:

1. Agreement dated November 28, 1938 between defendant, British Timken and French Timken, entitled "Business Agreement"; and

2. Agreement dated November 29, 1938 between defendant, Michael B. U. Dewar, Esq., and British Timken, entitled "Supplemental Business Agreement."

[fol. 3052] B. Each of the following agreements, entered into during the trial of this action, is hereby terminated; and defendant is hereby enjoined and restrained from the further performance or enforcement of any of the provisions of said agreements and of any agreements amendatory thereof or supplemental thereto:

1. Agreement dated March 22, 1948 between defendant and Michael B. U. Dewar, Esq., entitled "Agreement with respect to British Timken Limited";

2. Undated agreement between defendant, Michael B. U. Dewar, Esq., and Timken Holdings Ltd., entitled "Agreement cancelling previous Agreements and Bye-Laws of Timken Holdings Ltd. and for transfer by Mr. Dewar to the Canton Company of his shares in Timken Holdings Ltd."

C. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under any contract, agreement, arrangement, understanding, plan or program for the purpose or with the effect of continuing, reviving or renewing any of the agreements listed in Subsection A or B of this Section IV.

V. Defendant is hereby enjoined and restrained from entering into, performing, adopting, adhering to, maintain-[fol. 3053] ing or furthering, directly or indirectly, or

claiming any rights under, any combination, conspiracy, contract, agreement, arrangement, understanding, or concerted plan of action with British Timken, French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof, or any other person engaged in the production of anti-friction bearings:

A. To allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

B. To limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

C. To refrain from, restrain or limit production, sale or other distribution of anti-friction bearings, through quotas or otherwise, or to apportion customers for anti-friction bearings, in any territory or market;

D. To refrain from competing or to leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;

E. To exclude any producer or distributor of anti-friction bearings from any territory or market, or to interfere with or restrict any such producer or distributor in competing in any territory or market;

F. To fix, maintain or adhere to prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings produced by defendant for sale or other distribution in any territory or market, or produced by any other person for sale or other distribution in the United States;

[fol. 3054] G. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

H. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (1) information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information, relating to the production of anti-friction bearings, or (2) any ma-

terial or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery.

VI. Defendant is hereby enjoined and restrained from:

A. Referring any order or inquiry for anti-friction bearings to British Timken or French Timken, or any subsidiary, agent, sales representative or distributor thereof, or to any other producer of anti-friction bearings, or any subsidiary, agent, sales representative or distributor for such producer;

B. Refusing to sell anti-friction bearings to any person for resale or other distribution in British territory or French territory, as herein defined, at prices and on terms and conditions of sale corresponding to those regularly offered to purchasers of the same classification for resale or other distribution in defendant's territory, as herein defined;

[fol. 3055] C. Selling or offering for sale to, or purchasing or offering to purchase from British Timken or French Timken, anti-friction bearings, at preferential prices, discounts or terms and conditions of sale;

D. Offering or paying to, or receiving or accepting from British Timken or French Timken any commission, rebate, penalty, or other payment in connection with the sale or other distribution of anti-friction bearings to any other person in any territory or market;

E. Appointing, designating, or employing, or continuing the appointment, designation or employment of British Timken, French Timken or any other producer of anti-friction bearings or subsidiaries thereof, as an agent, sales representative or distributor of defendant in connection with anti-friction bearings, or in any way selling or otherwise distributing anti-friction bearings through British Timken, French Timken or any other producer of anti-friction bearings or subsidiaries thereof;

F. Appointing, designating, or employing, or continuing the appointment, designation or employment of any person, as an agent, sales representative or distributor of defendant in connection with anti-friction bearings, who also acts as agent, sales representative or distributor for, or is connected with British

Timken, French Timken or any other producer of anti-friction bearings or subsidiaries thereof;

[fol. 3056] G. Acting for or representing as agent, sales representative or distributor, in connection with anti-friction bearings, British Timken, French Timken, or any other producer of anti-friction bearings or subsidiaries thereof;

H. Reserving or protecting for British Timken, French Timken or any other producer of anti-friction bearings, or subsidiaries thereof, any market or territory for the production, sale or other distribution of anti-friction bearings.

VII. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adhering to, maintaining, furthering, or renewing, directly or indirectly any contract, agreement, combination, understanding or arrangement with any other person which provides for:

A. An assignment, license or grant of immunity under any patent or patent application;

B. The receipt, grant, disclosure, rendering available or exchange of information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method or other technical information relating to the production of anti-friction bearings, or of any material [fol. 3057] or machinery used in the production of anti-friction bearings, or of any information, advice, assistance or rights with respect to any such material or machinery; or

C. The transfer of any right or immunity under a trade mark or name, relating to the production of anti-friction bearings,

upon the condition or requirement that such other person shall:

1. allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

2. limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

3. refrain from, restrain or limit production, sale or other distribution of anti-friction bearings,

through quotas or otherwise, or apportion customers for anti-friction bearings, in any territory or market;

4. refrain from competing or leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;

5. exclude any producer or distributor from any market for anti-friction bearings, or interfere with or restrict any producer or distributor in competing in any such market;

[fol. 3058] 6. maintain or adhere to fixed prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings;

7. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

8. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (a) information, advice, assistance, or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information, relating to the production of anti-friction bearings, or (b) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery;

9. restrict the use or disposition of any anti-friction bearings bought from defendant.

VIII. A. Within two years from the date of this judgment, defendant shall divest itself of all stock holdings and other financial interest, direct or indirect, in British Timken and French Timken. Within one year from the date of this judgment, defendant shall present to the court for its approval a plan for such divestiture.

[fol. 3059] B. Defendant is hereby enjoined and restrained, from the date of this judgment, from:

1. Acquiring, directly or indirectly, any ownership interest in (by purchase or acquisition of assets or securities, or through the exercise of any option, or otherwise), or any control over, British Timken

or French Timken, or any subsidiary, successor, or assign thereof;

2. Exercising any influence or control over the production, sales or other business policies of British Timken or French Timken, or any subsidiary, successor, assign, agent, sales representative, or distributor thereof;

3. Causing, authorizing or knowingly permitting any officer, director, or employee of defendant or its subsidiaries to serve as an officer, director, or employee of British Timken or French Timken or of any subsidiary, successor, assign, agent, sales representative, or distributor thereof.

IX. Defendant is hereby ordered and directed, as long as it shall produce tapered roller bearings, to offer to sell and to sell such bearings upon request, in such quantities as may be reasonably required, and without discrimination as to their availability or as to the prices, terms and conditions of their sale, to any person for export either in its original form or incorporated in another product, whether such person is located in the United States or in some other [fol. 3060] country or area, and regardless of any intermediate processes or transactions which may take place prior to such export. If at any time the supply of tapered roller bearings produced by defendant shall become or be insufficient to meet demand for such bearings, the defendant may allocate its sales of such bearings among its customers for export on the same basis which it uses in allocating sales of such bearings to its domestic customers.

X. A. As used in Sections X and XI of this judgment:

1. "Confusing mark" means any trade mark, trade name, corporate name, symbol, or other designation, or part thereof, or combination including any of the foregoing, likely to be identified or confused with defendant's corporate name.

2. "British or French trademark territory" means any country or area where British Timken, French Timken, or their subsidiaries, successors, or assigns, own, control, or in any way claim, or have owned, controlled, or in any way claimed a confusing mark.

B. Defendant is hereby ordered and directed, within one year from the date of this judgment, to take all steps and measures needed in fact and in law to permit and enable defendant to fill orders and inquiries for export sales of any anti-friction bearings produced by it and to comply with the provisions of Section IX in British or French trademark territory, including but not limited to:

[fol. 3061] 1. Taking all actions necessary to comply with all laws and regulations of the United States or any foreign country, non-compliance with which would prevent or impede imports and exports, as, for example, applying for import and export licenses;

2. Taking all actions necessary to eliminate any interference with the importation into or sale or other distribution of anti-friction bearings produced by defendant in British or French trade mark territory, by defendant or by any person acquiring such bearings from defendant, or by any person dealing in such bearings of defendant, arising from the use by defendant on any such bearings, or on any container, package, wrapper, tag, label, display, or advertising associated therewith, of any confusing mark, where such confusing mark is or has been owned, controlled, or in any way claimed in British or French trade mark territory. Such actions shall include, but are not limited to, changes in its packages and methods of marking anti-friction bearings produced by defendant so as to make available for such importation, sale or other distribution said bearings, and containers, packages, wrappers, tags, labels, displays or advertising associated therewith, which do not bear confusing marks.

3. Advertising anti-friction bearings produced by [fol. 3062] defendant for sale in British or French trade mark territory, by inserting advertisements of appropriate size and prominence in foreign trade and other journals similar to those journals in which defendant advertises in the United States, and making available and disseminating appropriate trade literature regarding such bearings, comparable to

similar literature used by the defendant in defendant's territory.

4. Giving notice in writing to all persons who have made written inquiries to defendant regarding the purchase or distribution of anti-friction bearings for export since July 1, 1945, advising such persons of defendant's ability to supply tapered roller bearings and stating the terms on which they may be purchased, or, if the nature of the inquiry so indicates, stating the regularly offered terms and conditions upon which such person making inquiry may now become a distributor of defendant; and circularizing such persons with appropriate trade literature.

5. For a period of five years from the date of this judgment, making available upon request, to any prospective purchaser for export, or foreign user, of anti-friction bearings produced by defendant, services and assistance relating to the distribution or use of such bearings comparable to the services [fol. 3063] and assistance made available to distributors and users of such bearings in defendant's territory, as herein defined. Defendant's charges, or absence of charges, for such services and assistance shall be consistent with defendant's prevailing practice in defendant's territory, but shall in no case exceed the actual cost to defendant of making such services and assistance available, without allocating any overhead or general administrative expense.

XI. A. Defendant is hereby enjoined and restrained from instituting, maintaining or furthering, or threatening to institute, maintain or further any claim, suit or proceeding, judicial or administrative, in the United States based upon a confusing mark which is owned, controlled, or in any way claimed by British Timken or French Timken.

B. Defendant is hereby ordered and directed, within thirty days from the date of this judgment, to take all requisite steps, including the withdrawal of any notices, to prevent any further action by Treasury or Customs officials of the United States based upon the use of a confusing mark, to prevent the importation into or distribution in the United States by British Timken or

French Timken or persons who have acquired such bearings from either of them, or persons dealing in British or French Timken bearings, of anti-friction bearings produced in British or French trade mark territory.

C. Defendant is hereby ordered and directed to sub-
[fol. 3064] mit, within ninety days from the date of this judgment, upon notice to the Attorney General, a plan, not inconsistent with the provisions of this judgment, for avoiding confusion among present and prospective purchasers, within the United States, as to the source of origin of anti-friction bearings produced by defendant, British Timken or French Timken respectively; and upon approval by this Court of the plan as submitted or modified, shall forthwith take all steps necessary to put such plan into operation.

XII. Defendant is hereby enjoined and restrained from:

A. Requiring any person to restrict its use within any territory or market of trade marks or names or other designations in connection with anti-friction bearings produced by such person or by any person other than defendant, to trade marks or names or other designations owned, controlled, or in any way claimed by defendant or any other person for any territory or market;

B. Granting to or reserving for any person, or permitting any person to obtain any right or power to control, any trade mark or name or designation owned, controlled, or in any way claimed by defendant so as to give such person any right or power to prevent or restrict the importation into any country or area of anti-friction bearings produced or owned by defendant;

C. Establishing, by use, application to the United States Patent Office, or in any other way, new trade marks or names, or rights in words or designations likely to be confused with, or containing, marks, names, [fol. 3065] words, or designations known by defendant to be owned, controlled, or in any way claimed by British Timken or French Timken.

XIII. Defendant is hereby ordered and directed, within ninety days from the date of this judgment, to provide copies thereof to British Timken and French Timken; and to all directors, officers, subsidiaries, agents, sales representatives and distributors or defendant, British Timken and French Timken.

XIV. For the purpose of securing compliance with this Judgment and for no other purpose, duly authorized representatives of the Department of Justice shall, upon written request of the Attorney General, or an Assistant Attorney General, and on reasonable notice to the defendant, made to its principal office, be permitted, subject to any legally recognized privilege, (1) access during the office hours of said defendant to all books, ledgers, accounts correspondence, memoranda, and other records and documents in the possession or under the control of said defendant relating to any matters contained in this Judgment, and (2) subject to the reasonable convenience of said defendant and without restraint or interference from it, to interview officers or employees of said defendant, who may have counsel present, regarding any such matters. No information obtained by the means provided in this Section shall be divulged by any representative of the Department of Justice to any person other than a duly authorized representative of such Department, except in the course of legal proceedings to which the United States is a party for the purpose of securing compliance with this Judgment or as otherwise required by law.

[fol. 3066] XV. Jurisdiction is retained for the purpose of enabling any of the parties to this Judgment to apply to this Court at any time for such further orders and directions as may be necessary or appropriate for the construction or carrying out of this Judgment, for the modification or termination of any of the provisions thereof, and for the purpose of the enforcement of compliance therewith and the punishment of violations thereof.

XVI. Judgment is entered against the defendant for all costs to be taxed in this proceeding.

—— ——, United States District Judge.

Dated: —— ——.

IN UNITED STATES DISTRICT COURT

[Title omitted]

DEFENDANT'S OBJECTIONS TO DRAFT OF JUDGMENT PROPOSED BY PLAINTIFF—Filed September 13, 1949

The defendant, The Timken Roller Bearing Company, acting solely in obedience to Rule 4a of this Court, and not intending to waive but expressly preserving its right to object and except to any final judgment that may be entered against it in this action, and its right of appeal therefrom, disapproves and submits its objections to, the draft of judgment proposed by the plaintiff in the respects, and for the reasons, hereinafter set forth.

In stating its objections, the defendant will treat, for this purpose only, the finding and decision of the Court as correct.

Preliminary Statement

In considering the provisions of the decree to be entered in the case at bar the following basic principles, among others, should be given effect:

(1) The scope of the decree is dependent upon the facts involved in this particular case, and should be limited to the type of practices found to have been engaged in by the defendant.

(2) The scope of the decree is to be determined by general principles governing the granting of equitable [fol. 3068] relief and, therefore, must be limited to the issues in the case as established by the pleadings.

(3) The purpose of the decree should be to enforce the law fairly, and it should not be punitive in form.

(4) The decree should work out a compliance with the law without unnecessary injury to the public.

(5) The decree should be framed in such a way as to suppress the unlawful practices found to have occurred, and to take such reasonable measures as will preclude their revival.

(6) The provisions of the decree must be remedial and not legislative in character. The Court may not create, as to the defendant, new duties, prescription of which is the function of Congress, or place the de-

fendant for the future, in a class different from that occupied by other people. It may not cause the defendant to be outside of the protection of the law of the land.

(7) The decree must be specific and not so vague as to put the whole conduct of the defendant's business at the peril of a summons for contempt.

(8) The decree may not prohibit the conduct of normal and usual business transactions not related to the specific violations of law found to have occurred.

(9) The decree may not destroy private property rights such as patent and trademark rights.

The drastic decree proposed by the plaintiff is largely violative of these fundamental principles.

Specific Objections and Reasons

Plaintiff's Proposed Decree, Section I

1. Defendant objects to the following portions of Section 1:

The word "exclusive" should be deleted from the second lines of Paragraphs G, H and I, respectively, for the reason that the territories allocated by the agreements referred to in Paragraph A of Section IV were not "exclusive" because, under the agreements, the Timken companies were permitted to sell bearings for replacement in each other's territories upon payment of a commission.

Plaintiff's Proposed Decree, Section II

2. Defendant objects to the following portions of Section II:

[fol. 3069] The words "directors" and "subsidiaries, successors, assigns and all other persons acting, or claiming to act under, through or for such defendant," in lines 2 to 4, inclusive, should be deleted for the reason that Rule 65(d) of the Federal Rules of Civil Procedure prescribes the persons against whom the Court's decree can be effective, and this suggested section seeks to add classes of persons and entities not set forth in such rule.

Moreover, the word "subsidiaries" is too vague and indefinite. Does it apply to corporations controlled by

working stock control or majority stock control, or to corporations otherwise affiliated with defendant? Likewise, the word "successors" is too vague and indefinite.

Plaintiff's Proposed Decree, Section III

3. Defendant objects to the following portions of Section III:

(a) The words "and acts amendatory and supplemental thereto." in the 5th and 6th lines should be deleted, for the reason that the Court found only that the defendant had violated Sections 1 and 3 of the Sherman Act.

(b) The words "among the several States of the United States and", appearing in the 9th and 10th lines, should be deleted for the reason that there is no evidence in the record to support a finding that defendant engaged in a combination in restraint of United States domestic commerce, and the Court did not so find or decide.

(c) The words "and engaging in illegal practices individually," appearing in the 14th and 15th lines should be deleted, for the reason that there is no evidence in the record to support such a finding, and the Court did not so find or decide.

(d) The words "in all markets of the world, including the United States" in the 17th and 18th line should be deleted for the reason that there is no evidence or finding by the Court that defendant combined to restrain other than foreign commerce.

[fol. 3070] (e) The word "production" in the 16th line should be deleted because there is no evidence nor finding nor decision relating to production.

Plaintiff's Proposed Decree, Section IV

4. Defendant objects to the following portions of Paragraph A of Section IV:

(a) The words "and is hereby terminated" in the 2nd and 3rd lines should be deleted, for the reason that the Court has no jurisdiction of the other parties to the contracts which the plaintiff proposes to terminate and, therefore, has no jurisdiction to terminate them effectively as against the parties thereto other than defendant.

(b) The words "or enforcement of any of the provisions, including those involving rights and obligations upon

termination", appearing in lines 5 to 7, inclusive, should be deleted, for the reason that the words do not add anything to the general provision enjoining performance of any of the provisions of the agreements, and the inclusion of these words might result in confusion in determining the rights of defendant not covered by the provisions of these contracts. If defendant is enjoined from the further performance of the agreements and from taking any further action pursuant to the combination and conspiracy which the Court found to exist, this is certainly all that should be required to prevent any future law violation by it, and it is all that is sought by the plaintiff in its amended complaint. Defendant should not be enjoined from enforcing any rights or obligations under the agreements in so far as British Timken and French Timken are concerned. This action was not brought to protect them. These companies were found by the Court to have been independent units and parties to illegal agreements, and to a combination and conspiracy, with the defendant and with each other, in such a manner to make them just as much law violators and wrongdoers as the defendant. The rights and obligations of these two companies, as between them and the defendant, separate and distinct from the question of whether there is here presented a violation of law, are not before the Court, and there is no valid reason why in its [fol. 3071] decree in this action the Court should attempt to adjudicate such rights. Nor is the Court, for the reasons already stated, called upon to settle or establish the rights as between British Timken and French Timken and defendant upon termination of the contracts.

5. Defendant objects to Paragraph B of Section IV in its entirety, for the following reasons:

First, in so far as this section would terminate, or restrain performance by defendant of its March 22, 1948 agreement with Dewar, it would deprive defendant of valuable property rights. They are (1) defendant's right to acquire, at its option, Dewar's presently owned 25 per cent of the total voting stock of British Timken, in the event of his death, incapacity for six months as managing director of British Timken, or desire to sell the stock, and (2) its right to control the voting of that stock combined with its own in the event that the average annual profits of

British Timken for 3 consecutive years are reduced below £50,000. The destruction of these rights is not reasonably necessary to suppress the practices found by the Court to have been unlawful, or to preclude their revival. These provisions and similar provisions in previous contracts between the defendant and Dewar, which are in evidence, were first made, as the record discloses, for the purpose of protecting the defendant's investment in British Timken. The defendant should be permitted to continue such protection if it is permitted to retain that investment. The very nature of these provisions, which are operative only in the future, has prevented, and at present prevents, them from being utilized to further any practices found illegal. There can be no inference from past practices that they would be utilized for illegal purposes in the future. The disposition of these valuable contract rights should be reserved until the Court, which is to have continuing jurisdiction under Section XV, first determines whether other measures provided by the decree will preclude effectively revival of the alleged unlawful practices in which the defendant has been found by the Court to have participated.

[fol. 3072] Second, the continuation of the undated agreement between the defendant, Dewar and Timken Holdings, Ltd. could not in any way assist in reviving the practices found by the Court to have been contrary to the Sherman Act. This agreement merely freed Dewar's shares of British Timken from their control by Timken Holdings, Ltd.; transferred Timken Holdings, Ltd., thus holding only defendant's British Timken stock, to defendant exclusively, as its wholly-owned subsidiary; and cancelled certain pre-existing agreements between defendant and Dewar respecting Timken Holdings, Ltd. Moreover, the agreement has been completely executed, and does not call for further performance and, therefore, there is no point in terminating it or restraining further performance or enforcement of any of its provisions.

Third, the words "each of the following agreements entered into during the trial of this action, is hereby terminated; and" should be deleted for the reason that, since Dewar is not before the Court, the Court has no jurisdiction to terminate the agreements effectively for reasons previously stated.

6. Defendant objects to the following portions of Paragraph C of Section IV:

(a) The words "adhering to" in the 2nd line should be deleted for the reason that they are too vague and, therefore, place the conduct of the defendant's business at the peril of a summons for contempt.

(b) The words "or furthering" in the 3rd line should be deleted for the reason that they are too vague and are redundant.

(c) The words "directly or indirectly" in the 3rd line should be deleted for the reason that they are too vague. Such a provision would cause endless confusion in the conduct of defendant's business because of the necessity of its determining from time to time what constituted an "indirect" continuance, revival or renewal of the pre-existing agreements.

[fol. 3073] (d) The words, "or claiming any rights under" in the 3rd and 4th lines should be deleted for the reason that the Court should not undertake to adjudicate, in advance, rights under future agreements, etc. The injunction against performance of agreements in restraint of trade, etc., is sufficient for reasons stated in support of Objection 4(b).

(e) The words "or B" in the 8th line should be deleted for reasons stated under Objection 5.

Plaintiff's Proposed Decree, Section V

7. Defendant objects to the following portions of the introductory part of Section V:

(a) The words "adhering to" in the 2nd line should be deleted for the reason that they are too vague.

(b) The words "or furthering" in the 3rd line should be deleted for the reasons that they are too vague and are redundant.

(c) The words "directly or indirectly" in the 3rd line should be deleted for the reason that they are too vague.

(d) The words, "or claiming any rights under" in the 3rd line should be deleted for reasons stated in support of Objections 4(b) and 6(d).

(e) The words "any subsidiary, successor, assign, agent, sales representative or distributor thereof" in the 6th and

7th lines should be deleted for the reason that they are too indefinite and vague.

(f) The words "or any other person engaged in the production of anti-friction bearings" in the 7th and 8th lines should be deleted for several reasons.

First, the inclusion of these words will, in effect, enjoin defendant from combining, etc., with any "individual, partnership, firm, association, corporation or other business or legal entity" (for "person" is so defined in Paragraph F of Section I) in the world. Such a broad injunction is entirely outside of the issues in the case and, therefore, is beyond the authority of the Court.

[fol. 3074] Second, it would place defendant in the future, in a class different from that occupied by other companies and would place it outside the protection of the law of the land, in that defendant would be subject to contempt proceedings for violation of the Court's decree in the case at bar for any alleged infraction of the antitrust laws of the nature specified in the balance of Section V, in combination with business or legal entities entirely different from those involved in the case at bar, instead of being subject to trial in the ordinary manner.

Third, this provision is not necessary to preclude revival of the combination in restraint of trade found by the Court to have taken place and is not necessary in the public interest. If Section V is limited to an injunction against combination with British Timken and French Timken, this will be sufficient to prevent revival of the practices found to have been illegal.

8. Defendant objects to Paragraph A of Section V in its entirety, for the reason that it is too broad and indefinite, and undertakes to declare unlawful the performance of agreements, such as patent licenses, which under appropriate circumstances, are lawful and within the legal rights of defendant. It thus places defendant for the future in a class different from that occupied by other people, and prohibits it from conducting normal and usual business transactions not related to the violation of law here found to have occurred.

The word "production" in the 1st and 2nd lines should be deleted for the reason stated in support of Objection 3(e).

9. Defendant objects to Paragraph B of Section V in its entirety for the following reasons:

It is too general in form and is indefinite. Moreover, it is of such a character as would prevent defendant from asserting its legal rights to prevent the importation into the United States and other countries where defendant owns the trademark of anti-friction bearings stamped with the mark "Timken".

10. Defendant objects to the following portions of Paragraph C of Section V:

[fol. 3075] (a) The words "production" in the 1st line and "through quotas or otherwise, or to apportion customers for anti-friction bearings" in lines 2 to 4, inclusive, should be deleted, for the reason that they are not necessary to prevent the resumption by defendant of any practices found by the Court to have been illegal. These words can only relate to the agreements found to have been entered into by British Timken and French Timken with the subsidiaries of SKF in England and France. There is no evidence that defendant itself ever engaged in such practices and, while the Court has found that defendant knew about them and approved them, the record discloses that such arrangements were terminated prior to the commencement of World War II in 1939 and have not been renewed.

(b) The words "or otherwise" in the 3rd line should be deleted, in any event, as being too indefinite to apprise defendant of the acts and conduct which might be considered a violation of this paragraph.

(c) The words "in any territory or market" in the 5th line should be deleted for several reasons, because they apparently extend the scope of the Court's decree to domestic intrastate and interstate commerce of the United States, as well as to foreign commerce.

First, the Court has no authority to make such an order under the issues involved in the case at bar. The Court has not found or decided that defendant entered into any combination in restraint of domestic commerce.

Second, the Court has no jurisdiction to make such an order in so far as it relates to intrastate commerce, because the Sherman Act cannot, constitutionally, and does not

purport to, confer jurisdiction upon the Court to deal with intrastate commerce.

Third, this provision would place defendant, in the future, in a class different from that occupied by other companies, and would place it outside the protection of the law of the land, for the same reasons as those specified in support of Objection 7(f).

Fourth, this provision would not be limited to the type [fol. 3076] of unlawful practices found to have been committed, in that the Court's decision was limited to practices in foreign commerce, whereas the provision would relate to domestic intrastate and interstate commerce as well. Moreover, the provision would not be reasonably necessary to preclude revival of such practices. Indeed, as was pointed out at the trial of the case, the Court has judicial notice from its own records that defendant, with other domestic and anti-friction bearing manufacturers, was investigated in a grand jury proceeding in connection with alleged violations of the Sherman Act in domestic commerce, and no action was taken against it, although others were indicted.

11. Defendant objects to the following portions of Paragraph D of Section V:

(a) The words "or to leave any person free from competition", in the 1st and 2nd lines, should be deleted for the reason that there is no evidence nor decision nor finding by the Court that defendant combined with others to leave any person free from competition other than British Timken and French Timken. The provision in Paragraph D which prohibits defendant from agreeing with those two companies "To refrain from competing" is sufficient to prevent resumption of the type of practices found to have occurred in this respect.

(b) The word "production" in the 2nd line should be deleted for the reason stated in support of Objection 3(e).

(c) The words "in any territory or market" in the 3rd line should be deleted for the reason that they would apparently extend the scope of the Court's decree to domestic intrastate and interstate commerce, as well as to foreign commerce, and are objectionable for the reasons stated in support of Objection 10(c).

12. Defendant objects to the following portions of Paragraph E of Section V:

The words "from any territory or market" appearing twice, in the 2nd and 4th lines, respectively, should be deleted for the reason that they apparently extend the scope of the Court's decree to domestic intrastate and interstate commerce of the United States as well as its for-
[fol. 3077] eign commerce, and are objectionable for the reasons stated in support of Objection 10(c).

13. Defendant objects to Paragraph F of Section V in its entirety for the following reasons:

It would deprive defendant of its right under the Miller-Tydings Act, 15 U. S. C. A., Section 1, and legislation enacted in many States of the United States dealing with the maintenance of resale prices, to fix minimum prices for the resale of bearings under its trademark. Literally, it would even prevent defendant from agreeing on a price for bearings produced by it and to be sold to another producer thereof, such as British Timken, which has purchased them in the past, as the record shows. Therefore, this provision would prohibit defendant from conducting normal and usual business transactions not related to the violation of law which the Court has found to have been committed, and would place it, for all time, in a class different from that occupied by others, including its competitors.

14. Defendant objects, subject to its general Objection 13 thereto, to the following portions of Paragraph F of Section V:

(a) The words, "other terms and conditions of sale or resale", in the 1st and 2nd lines, should be deleted, for the reason that there is no evidence, and no finding by the Court, that defendant engaged in practices of this nature.

(b) The words "in any territory or market", in the 4th line, should be deleted, because they would apparently extend the scope of the Court's decree to domestic intrastate and interstate commerce of the United States, as well as to its foreign commerce, and are objectionable for reasons stated in support of Objection 10(c).

(c) The words "by any other person", in the 4th and 5th lines, should be deleted, for reasons stated under Objection 7(f).

15. Defendant objects to Paragraph G of Section V in its entirety for the following reasons:

[fol. 3078] First, this provision would be beyond the scope of this action, and the authority of the Court, for the reason that, as the Court stated in its opinion, "there is no charge made in the complaint that the parties engaged in the practice of exclusively exchanging present and future know-how and inventions, patented or unpatented."

Second, such a drastic provision, which would deprive defendant, in the future, of valuable property rights, is not reasonably necessary to suppress the unlawful practices found to have taken place or to preclude their revival, but instead would result in unnecessary injury to defendant's rights of private property. This provision would prevent defendant from either receiving or granting an absolute assignment of a patent, or an exclusive license thereof, in such a way as to prevent any third person (as broadly defined in Paragraph F of Section I) from having access thereto. It would, in effect, destroy defendant's property rights in any existing patents or patent applications which it may now have or may obtain in the indefinite future. If it could not assign a patent in such a way as to deny the rest of the world access thereto, its right to sell any patent would be practically destroyed. If it could not license a patent exclusively, its valuable property right to grant such a license providing for higher royalties than can be obtained for a non-exclusive license, would be destroyed. Under this proposed provision, if the defendant, at any time in the future, should obtain a patent relating in any respect to anti-friction bearings, it could not, no matter how valuable, important or revolutionary the subject matter of the patent might be, ever grant an exclusive patent license relating thereto. The same is true conversely as to assignments or licenses of patents to defendant. No distinction is made between existing patents, or classes of patents and patents which may be obtained on anti-friction bearings, or processes or machines relating thereto, in the future. This practical dedication of defendant's patents, and right to obtain patents, to the public, is to endure forever. No provision is made for

the reciprocal licensing of patents owned by third persons [fol. 3079] as a condition precedent to access to defendant's patents.

Third, this provision prohibits defendant from engaging in normal business transactions with respect to the assignment and licensing of patents not related to any violation of law found to have been committed by it.

Fourth, it places defendant in a class different from that occupied by others, including its competitors, for all time. The latter will be able to obtain assignments of patents and exclusive licenses thereof relating to anti-friction bearings without the necessity of disclosing the inventions to defendant. This may well put it at a serious competitive disadvantage.

There is no possible connection between this very drastic suggested provision and the violation of law which the Court has found to have been committed; on the contrary, it is solely punitive and destructive in its nature and should be rejected.

16. Defendant objects, subject to its preceding general Objection 15 thereto, to the following portions of Paragraph G of Section V:

(a) The phrase "in such a way as to deny any third person access thereto" is too indefinite and vague. If, however, it means that defendant cannot receive, grant or exchange a patent or patent license without providing for what amounts to a free license to any business or legal entity in the world desiring to obtain the same, then the provision is beyond the authority of the Court to make. If the intention is to provide against grant or receipt by defendant of an exclusive license, appropriate words should be used.

(b) The words "any third person" in the 2nd line should be deleted as being too broad. Under such a provision defendant would have no discretion. If it desired to receive or grant a patent license, it would be required to make it available to anyone, including representatives of foreign powers unfriendly to the United States.

[fol. 3080] (c) The words "relating to" in the 4th line are too vague and indefinite.

17. Defendant objects to Paragraph H of Section V in its entirety for the following reasons:

First, this provision as to "know-how" is beyond the scope of this action and the pleadings herein. There is no claim that the exclusive exchange of know-how was one of the illegal practices adopted by defendant and its alleged co-conspirators. See Objection 15.

Second, this provision, which destroys for all time valuable property rights of defendant, is not reasonably necessary to suppress the unlawful practices found to have been committed, nor to preclude their revival. Defendant would be denied the right to sell, buy or exchange information, advice, assistance or rights with respect to every phase of know-how relating to the production of anti-friction bearings in such a way as to deny any business or legal entity in the world access thereto. The same would be true of any material or machinery used in the production of bearings or any information, assistance, advice or rights with respect thereto. This amounts, in practical effect, to a destruction of defendant's right to buy or sell know-how. For example, if defendant desired to purchase secret information it could not do so except upon terms which would make the information available to all others. Obviously, the prospective vendor would not sell any such information to defendant on such conditions, and would prefer to make a sale to a competitor of defendant not handicapped by a court decree of this nature. Thus, this provision might effect, in and of itself, unjustifiable restraints upon competition by defendant. Conversely, if defendant attempted to sell such information, a prospective purchaser might well refuse to buy it if the information sold were not given to it exclusively. In any event, the price to be paid for non-exclusive information would be much less than that to be paid for exclusive information.

Literally, this provision would prevent defendant from selling its special steel used in the manufacture of bearings, [fol. 3081] or a machine owned by it, except upon terms which would give any business or legal entity in the world *physical* access thereto. This would destroy entirely, as a practical matter, defendant's right to sell material or machinery used in the production of anti-friction bearings since obviously no one would want to buy them under such conditions. No distinction is made between the type of

know-how, material and machines transferred in the past, and that to be transferred in the future, and reciprocal transfer of know-how, material and machines by third persons, as a condition precedent to access to defendant's, is not to be required.

There is no evidence and no finding or decision by the Court in this action that the exclusive exchange of know-how served as a direct instrument to eliminate competition. On the contrary, the Court found that: "The know-how furnished by defendant to the other companies was not a secret process for the manufacture of tapered roller bearings. Other manufactureres were admitted to the plants of British and French Timken, where they could observe all the know-how put into operation. In the extensive record of the testimony dealing with the assistance given by the officials and technical staff, there is no trace of any secret process which was imported by them. No contention was made at any time that such was the case. The know-how consisted of designs, data showing how defendant manufactured its product, the advice of defendant's employes and help of like nature." There is no evidence nor finding that material or machines were sold exclusively for illegal purposes. Therefore, irrespective of any provisions in the contracts between defendant and the other Timken companies, there is, in fact, no history of practices which requires such a drastic provision to prevent their recurrence.

Third, this provision prohibits defendant from engaging in normal business transactions with respect to the transfer of know-how, machinery and materials not related to the violation of law found to have been committed.

[fol. 3082] Fourth, the effect of this paragraph would be to prevent defendant from becoming a registered user of the trademark abroad and of preventing any manufacturer from becoming a registered user of defendant's mark either in this country or abroad, because the transfer of know-how by the licensor to the licensee of a trademark is necessary in order to insure that the licensee's product is of a quality similar to that of the product of the licensor. But, since the goodwill represented by the licensor's trademark depends largely upon the licensor's know-how, persons might not desire to be licensed to use a trademark if the know-how to be transferred in connection with the license

must be made available to all third parties who desire to have access to it.

Fifth, it places defendant in a class different from that occupied by others, including its competitors, for all time.

18. Defendant objects, subject to its general Objection 17 thereto, to the following portions of Paragraph H of Section V:

(a) The phrase "in such a way as to deny any third person access thereto" as applied to know-how, material and machinery, is objected to, for the same reasons as are set forth in support of Objection 16(a). It is completely analogous to the similar provision with respect to patents.

(b) The words "any third person" in the 2nd line should be deleted as being too broad for reasons identical with those stated in support of Objection 16(b).

Plaintiff's Proposed Decree, Section VI

19. Defendant objects to Section VI in its entirety. Defendant will be sufficiently enjoined and restrained from performing any act in furtherance of the conduct which the Court has found to have been unlawful, first by Section IV which enjoins it from the further performance of the existing agreements between it and British Timken and French Timken; and second, by Section V by which defendant is [fol. 3083] enjoined specifically and in great detail from taking any action in furtherance of any agreement, combination or conspiracy of a nature which the Court has found to have been in violation of law. In this situation, there is no necessity for encumbering the decree in this case with the provisions of Section VI.

20. Defendant objects to Paragraph A of Section VI in its entirety, for the following reasons:

First, this provision places defendant in a class different from that occupied by other people, and prohibits it from engaging in normal and usual business transactions not related to the acts found to have been illegal. Many conclusive objections to this suggested provision are too obvious to require much discussion concerning its detailed terms. If British Timken and French Timken are to be regarded as units wholly independent of defendant, there is no good reason why in the future defendant, in the absence

of any agreement or arrangement in violation of law, should not refer an order for bearings to them or, in any event, refer an inquiry to them which might relate to bearings which it does not make, or have on hand presently. It is difficult to imagine any possible basis for including this provision in the proposed decree, or any justification for attempting to induce the Court to so circumscribe and restrict the operations of defendant in the transaction of its business as to make it unlawful for it, at any time, to refer to any other producer any order or inquiry concerning anti-friction bearings.

Second, while the record discloses that defendant, acting pursuant to its contracts with British Timken and French Timken, referred orders and inquiries for anti-friction bearings from customers in their respective territories to them, the imposition of such a drastic prohibition is not reasonably necessary to insure that that practice will not be revived if further compliance with the contracts is prohibited. Further performance of the contracts having been prohibited, if it is to the financial advantage of defendant to fill orders or inquiries instead of [fol. 3084] referring them, it is natural to suppose that it will do so. Under the power of access to defendant's correspondence established by Section XIV, it will be simple for the Department of Justice to determine whether defendant is continuing the prior practice in this respect. Such a provision should not be imposed unless in the future the Court determines that such drastic action is necessary to secure compliance with its decree.

21. Defendant objects, subject to its general Objection 20 thereto, to the following portions of Paragraph A of Section VI:

(a) The word "subsidiary" in the 2nd line is too vague and indefinite.

(b) The words "or any subsidiary, agent, sales representative or distributor thereof" in the 3rd line, should be deleted, for the reasons that they are too indefinite and vague, and there is no evidence of any past practice in relation to them. Moreover, defendant might well have agents, sales representatives or distributors who also serve British Timken, French Timken or other manufacturers of anti-friction bearings, for reasons to be discussed hereinafter under Objection 28, and should be free to refer orders

or inquiries to them even if it should be prohibited from referring orders directly to either British Timken, French Timken or any subsidiary thereof.

(c) The words "or to any other producer of any anti-friction bearings", in the 3rd and 4th lines, should be deleted for the reason that there is no claim asserted in the pleadings, no evidence, and no finding or decision by the Court that defendant referred orders or inquiries to, or otherwise combined with, others than British Timken and French Timken. This Court's own records demonstrate the contrary, as previously demonstrated in the fourth reason in support of Objection 10(c). These words should not be included for the same general reasons as those set forth in support of Objection 7(f).

(d) The words "or any subsidiary, agent, sales representative or distributor for such producer" in lines 4 to 6, in-[fol. 3085] clusive, should be deleted for the same reasons as those given in support of Objection 21(b).

(e) The word "subsidiary" in lines 4 and 5 is too vague and indefinite.

22. Defendant objects to Paragraph B of Seciton VI in its entirety, for the following reasons:

First, this Section, by enjoining defendant from "refusing to sell" bearings "to any person" for resale in territory of British Timken or French Timken constitutes, in effect, a mandatory injunction requiring defendant to sell bearings, irrespective of its own desires, to any business or legal entity which desires to purchase them for resale in these territories. Such a provision is beyond the authority of the Court, conferred by 15 U. S. C. A., Section 4, to "prevent and restrain violations" of the Sherman Act. The power to remove restraints of trade does not include the power to compel defendant to engage in trade or to prevent it from selecting its customers. If the Sherman Act, including 15 U. S. C. A., Section 4, should be interpreted and applied by the Court as authorizing the granting of such a decree, it would be unconstitutional and void as contravening the Fifth Amendment to the Constitution of the United States in that it would deprive defendant of its property without due process of law.

Second, this provision would require defendant to engage in business transactions, not normal and usual, be-

cause performed under duress imposed by the Court's decree, and which are not related to the violations of law found to have been committed, in that it would prohibit defendant from refusing to sell for any purpose even if such refusal is not the result of an illegal combination in restraint of trade.

Third, this provision would enjoin defendant from refusing to sell bearings, not only in the United States, but also anywhere else in the world, to persons purchasing them for resale in certain foreign countries, at prices, terms and conditions of sale the same as those offered to purchasers of the same classification for resale in American [fol. 3086] domestic commerce. This would constitute an unwarranted regulation of defendant's business of a legislative character amounting to a private, individual Robinson-Patman Act. The provision would deprive defendant of its liberty and property without due process of law in contravention of the Fifth Amendment of the Constitution of the United States, in that it would prevent it from obtaining higher prices for bearings sold for resale in foreign markets if it were able to do so in competition with others. It must be obvious, and the record discloses, that conditions surrounding the sale of bearings for distribution in the United States are in many respects different from those incident to their sale for foreign distribution. This provision is not even so limited as to permit defendant to allocate its sales among customers for resale in its own territory and in British Timken and French Timken territory, so that if, at any time, its supply should be insufficient to meet the demands of all purchasers for resale, it would be required to fill orders from purchasers for resale in foreign territory before filling orders for resale in domestic territory. This provision would be impractical and impossible of enforcement, because, as the record demonstrates, in the overwhelming majority of instances, defendant does not know, and cannot determine, whether bearings purchased by its customers are to be used for original equipment or resale in domestic or foreign commerce. Moreover, the provision is not limited in time and would handicap defendant forever.

Finally, this provision would require defendant, without any discretion in the matter, to prefer, at the expense of domestic customers, exporters to nationals of unfriendly

foreign nations, even at times when such nations might be preparing for war against the United States, contrary, not only to defendant's policy, but also to the national public interest.

23. Defendant objects to Paragraph C of Section VI in its entirety for the following reasons:

First, this provision is legislative in character and creates [fol. 3087] new duties, the prescribing of which is the function of Congress, in that it prohibits defendant from selling at "preferential" prices to British Timken and French Timken.

Second, the word "preferential" is too indefinite and vague. For example, it might be interpreted as preventing defendant from selling to these two companies at prices which are lower than those offered to certain other customers because of the saving in cost resulting from their volume buying, a legal practice unrelated to any violation of the Sherman Act.

Third, the provision prevents defendant from engaging in normal business transactions with these two companies not related to the violation of law found to have occurred, in that it prevents sales at preferential prices, which would not be illegal otherwise, even though they are not made preferential for the purpose of carrying out an illegal combination in restraint of trade.

24. Defendant objects to Paragraph D of Section VI in its entirety for the following reasons:

First, the provision, in so far as it prohibits defendant from "paying any commission * * * or other payment" to either British Timken or French Timken in connection with the sale or distribution of anti-friction bearings, prohibits ordinary and usual transactions in instances where British Timken or French Timken might act as agent for defendant in making sales or in performing engineering services in connection with such sales.

Second, this provision is not reasonably necessary to prevent the recurrence of past allegedly illegal practices in this respect because such payments were made only by virtue of the contracts, further performance of which the Court will have enjoined. There is no reason to suppose that defendant will pay commissions which it is not required

to pay, merely to benefit British Timken and French Timken.

25. Defendant objects, subject to its general Objection 24 thereto; to the following portion of Paragraph D of Section VI:

[fol. 3088] The words "in any territory or market" in the 5th line should be deleted, and the words "in foreign commerce" substituted, for the reason that the provision would be applicable to domestic intrastate and interstate commerce of the United States and, therefore, beyond the issues in the case.

26. Defendant objects to Paragraph E of Section VI in its entirety for the following reasons:

First, there is no evidence nor finding by the Court that defendant used either British Timken or French Timken, or any other purchaser of anti-friction bearings, as an agent, sales representative or distributor, either as a means of carrying out the alleged combination in restraint of trade, or otherwise. Therefore, the prohibition of such a practice is not reasonably necessary to prevent its adoption in the future.

Second, the provision would prohibit for all time normal and usual business transactions not related to violations of the antitrust laws found to have been committed. It might be to defendant's advantage to adopt such a practice at some time in the future, and it should not be prohibited from doing so unless it should be determined at that time that the practice is illegal. There is no reason why, if British Timken and French Timken become independent and competing units, defendant should be enjoined forever, and under all circumstances and conditions, from having them, or one of them, act as its agent, sales representative or distributor. And, certainly, there is nothing in the record, or in the relief required to put an end to any law violation which the Court may have found to have been committed, to make it necessary for the Court to say by judicial decree that defendant shall at no time and under no circumstances designate another producer of bearings as its agent, sales representative or distributor for any purpose or in any territory.

Third, it is not within the scope of the Court's authority, in a case involving the defendant and specific, named per-

sons, to make an order applicable to the possible future conduct of the defendant with unnamed and unknown third [fol. 3089] persons.

Fourth, this paragraph is not limited to transactions in foreign commerce and, therefore, is beyond the scope of the issues involved in the case and is beyond the authority of the Court in so far as it may relate to domestic intrastate commerce of the United States.

27. Defendant objects, subject to its general Objection 26 thereto, to the following portions of Paragraph E of Section VI:

(a) The words "or any other producer of anti-friction bearings" in the 3rd and 4th lines and in the 9th and 10th lines should be deleted, for the reasons, in addition to those stated in Objection 26, that the provision would be entirely outside the issues of the case; would place defendant, in the future, in a class different from that occupied by other persons; and would place it outside the protection of the law of the land for the second reason stated in support of Objection 7(f).

(b) The word "subsidiaries" in the 4th and 10th lines, respectively, is too indefinite and vague.

28. Defendant objects to Paragraph F of Section VI in its entirety for the following reasons:

First, defendant adopts and re-asserts in support of this objection all of the reasons set forth in support of Objection 26 to Paragraph E of Section VI.

Second, this provision would impose great hardship upon defendant, in that substantially all of its replacement business is conducted by authorized distributors. This method of transacting business is recognized as the most effective in getting the anti-friction bearings of the producer into the hands of their ultimate purchaser. The authorized distributors in this connection transact a distinctive business of great importance and value to the trade generally and of a nature wholly free from any taint or suggestion of restraint on trade or competition. It is a matter of common and accepted practice for authorized distributors to act for and represent more than one producer of bearings. They must do this in order to be able to offer a complete line [fol. 3090] of bearings, as well as to conduct a profitable

business. If the proposed provision under discussion is adopted as a part of the Court's decree, not only will great damage be done to defendant and to the other producers, but even greater injury will be suffered by the authorized distributors. If it be illegal for defendant, as a producer, to designate as its agent, sales representative or distributor any person who also acts for another producer in a similar capacity it would seem to be equally illegal for an authorized distributor to act as the agent, sales representative or distributor for more than one producer at the same time. This provision would practically require defendant to revise its method of making replacement sales by setting up its own system of exclusive distributors, involving tremendous expense. Even then, since defendant manufactures only tapered roller bearings, this method of distribution would be inefficient and would put defendant at a disadvantage in competition with distributors handling complete lines of anti-friction bearings. The tremendous injury which this provision would deal to defendant's replacement business, not only would not be justified as a means of preventing the resumption of non-existent prior practices, but also would be definitely against the public interest, in that it would tend to place defendant's competitors in a commanding position, and create a restraint of competition—by defendant. Moreover, if defendant obtained independent exclusive distributors, the Court's decree would accomplish the system of exclusive distribution condemned in *U. S. v. Standard Oil Company of California*, — U. S. —, 69 S. Ct., 1051 (June 13, 1949), while, if defendant itself undertook replacement sales this would deprive authorized distributors of the business, a result deplored by the minority of the court in that case.

29. Defendant objects, subject to its general Objection 28 thereto, to the following portions of Paragraph F of Section VI:

(a) The words "or is connected with" in the 6th and 7th lines should be deleted for the reason that they are too indefinite and vague. The type of connection is not set forth in reasonable detail.

[fol. 3091] (b) The words "subsidiaries" in the 9th line should be deleted as too indefinite and vague.

30. Defendant objects to Paragraph G of Section VI in its entirety, for the following reasons:

Defendant adopts in support of this objection all of the reasons set forth in its Objection 26 to Paragraph E of Section VI, because they apply to this situation, which is merely the reverse of that set forth in that paragraph, in that Paragraph E would prevent defendant from appointing British Timken, French Timken, or any other producer as its sales representative, etc., while Paragraph G would prevent defendant from accepting employment by those parties in a similar capacity.

31. Defendant objects, subject to its general Objection 30 thereto, to the following portions of Paragraph G of Section VI:

(a) The words "or any other producer of anti-friction bearings or subsidiaries thereof" should be deleted, for reasons set forth in support of Objections 26 and 27(a) to Paragraph E of Section VI.

(b) The words "or subsidiaries thereof" in line 5 should be deleted as too indefinite and vague.

32. Defendant objects to Paragraph H of Section VI in its entirety for the following reasons:

First, it is unnecessary. Other parts of the decree provide sufficient remedy against the practice therein described.

Second, the words "Reserving or protecting" are too indefinite to apprise defendant as to its duty. If they mean that it must compete in order not to "reserve", the provision is beyond the authority of the Court.

Third, it relates to "any other producer of anti-friction bearings", and is thus beyond the issues in this action, not supported by evidence, and is unnecessary to prevent resumption of past practices found to have been illegal.

Fourth, it relates to "any market or territory" including intrastate domestic commerce, and is beyond the issues [fol. 3092] in this respect, and the authority of the Court.

The words "or subsidiaries thereof" are too indefinite and vague.

The word "production" should be deleted for the reason given in support of Objection 3(e).

Plaintiff's Proposed Decree, Section VII

33. Defendant objects to Section VII in its entirety, for the following reasons:

First, the apparent object of its provisions is sufficiently attained by Sections IV and V, as amended to meet defendant's objections thereto. Section IV prevents defendant from further performance of the existing contracts which provide for allocation of territory, etc., while Section V prohibits defendant from entering into any agreements, etc., to do any of the things which are listed in subparagraphs 1 through 8 of Section VII. The language used in defining the specific practices prohibited is identical, and Section V, which relates to agreements generally, includes the specific types of agreements covered by Section VII.

Second, it is not limited to foreign commerce in its scope, but relates to domestic intrastate and interstate commerce as well.

34. Defendant objects, subject to its general Objection 33 to Section VII, to the following portions of the introductory paragraph thereof:

(a) The words "adhering to" in the 2nd line, should be deleted as being too indefinite and vague.

(b) The words "directly or indirectly" in the 3rd line, should be deleted as being too indefinite and vague.

(c) The words "with any other person" should be deleted for the reason that they are beyond the scope of the issues in the case, and put defendant in a class by itself outside the protection of the law of the land, for reasons stated under Objection 7 (f), second reason; and are not reasonably necessary to prevent the revival of practices found to have been illegal. Moreover, the inclusion of persons, other than those referred to in the amended com- [fol. 3093] plaint makes it impossible to determine from the language employed throughout the entire section whether express or implied conditions, or both, are referred to.

35. Defendant objects to Paragraph A of Section VII and to subparagraphs 1, 6, 7, 8 and 9, in their entirety, for the following reasons:

First, Paragraph A and subparagraph 1, together, might be interpreted as preventing defendant from requiring a licensee of a patent to operate in a restricted territory. This denies to defendant rights conferred by the patent laws; is unnecessary to prevent recurrence of non-existent past practices; and would prohibit defendant from engaging in normal and usual transactions in business not in violation of law. Moreover, it would give extra-territorial effect to American law.

Second, Paragraph A and subparagraph 6, together, would prevent defendant, as a patent licensor, from fixing prices to be charged by its licensee, which it has the legal right to do under certain circumstances. Defendant should not be deprived of this right for the reasons asserted in support of the objection to Paragraph A and subsection 1, next preceding.

Third, Paragraph A and subparagraph 7, together, would prevent cross-licensing of patents by defendant with any person, except on a basis which would not deny to any third party access thereto. This is objectionable for all of the reasons stated in support of Objection 15 to Paragraph G of Section V, which is identical with subparagraph 7 of Section VII, and to which reference is made.

Fourth, Paragraph A and subparagraph 8, together, would deny to defendant the right to exchange know-how, material or machinery for the assignment or licensing of a patent, in such a way as to deny any third person access thereto. This provision is objectionable for the same reasons as those given in support of Objection 17 to Paragraph H of Section V, which is identical with Paragraph 8 of Section VII, and to which reference is made.

Fifth, Paragraph A and subparagraph 9, together, would [fol. 3094] prevent defendant from assigning or licensing patents in such a way as would restrict the use or disposition of any bearings bought from defendant. There is no evidence nor finding by the Court that defendant ever engaged in such a practice, and there is, therefore, no necessity for any such provision.

36. Defendant objects to Paragraph B of Section VII and subparagraphs 7, 8 and 9 thereof, in their entirety for the same reasons as those specified in Objection 35 above. The only difference between the application of Paragraphs A and B, and these subparagraphs, is that the former prevents defendant from imposing certain conditions in the transfer or licensing of patents, while the latter restricts defendant similarly in the transfer of know-how, material or machinery.

37. Defendant objects to Paragraph C of Section VII and subparagraphs 1, 2, 5, 7, 8 and 9, in their entirety, for the following reasons:

First, Paragraph C and subparagraph 1, together, might be interpreted to provide that defendant could not agree to license its trademark in an exclusive territory under any circumstances whatsoever, even though it is not done for the purpose of furthering a combination in restraint of trade. This language violates the fundamental conception of the ownership of a trademark, which is territorial in extent, and goes far beyond the issues of the case as disclosed in the amended complaint and by the evidence.

Second, Paragraph C and subparagraph 2, together, because of the generality of subparagraph 2 and because no limitation is contained therein, would have the effect of making unlawful the use by defendant of its property right in its trademark; would prevent defendant from asserting rights which it has under its trademark in the United States to prevent the importation into this country of bearings having a similar trademark; and would prevent defendant from exercising its legal rights in the United States and elsewhere to grant an exclusive license of its trademark.

[fol. 3095] Third, Paragraph C and subparagraph 5, together, cover matters not in issue in the case, matters too indefinite for enforcement, and would preclude defendant from asserting its property right in its trademark.

Fourth, Paragraph C and subparagraph 7, together, would prevent defendant from granting or receiving in exchange for transfer, etc., of the trademark or trade name a patent or patent license in such a way as to deny third parties access thereto, and are objectionable for reasons stated in support of Objection 15.

Fifth, Paragraph C and subparagraph 8, together, would prevent defendant from granting, receiving or exchanging

know-how, material or machinery in exchange for a trademark or trade name in such a way as to deny access to third parties thereto, and are objectionable for reasons stated in support of Objection 17.

Moreover, their provisions would preclude defendant from becoming or creating a registered user of trademarks and would thereby restrain competition and preclude defendant from exercising its rights under the law, for the fourth reason stated in support of Objection 17.

Sixth, Paragraph C and subparagraph 9, together, would prevent defendant from agreeing with a third party to restrict the use or disposition of bearings bought from defendant as a condition to grant or receipt of a trademark or trade name, and thus would prevent defendant from engaging in normal business transactions not related to the violations of the law here found to have been committed.

38. Defendant objects subject to its general Objections 35-37, inclusive, thereto, to the portions of subparagraphs 1 and 3 through 8, inclusive, of Section VII, which correspond to the portions of Paragraphs A and C through H, inclusive, of Section V, which were objected to for reasons set forth in Objections 8, 10, 11, 12, 14, 16 and 18, and which are adopted in support of this objection as though rewritten herein.

Subparagraphs 1 and 3 through 8, inclusive, are identical in form, respectively, with Paragraphs A and C through H of Section V, and certain portions thereof should be [fol. 3096] deleted as set forth in the objections to Paragraphs A and C through H of Section V. The following table shows where these objections, and the reasons in support thereof, may be found:

Section VII	Section V	Objection
1	A	8
3	C	10
4	D	11
5	E	12
6	F	14
7	G	16
8	H	18

Plaintiff's Proposed Decree, Section VIII

39. Defendant objects to Paragraph A of Section VIII, in its entirety, for the following reasons:

This provision would require defendant to divest itself of its 30.25 per cent common stock interest in British Timken, and its 50 per cent common stock interest in French Timken. Moreover, it might require defendant to dispose of its interest in the considerable indebtedness to it from French Timken represented by promissory notes which, as the record shows, are held in trust for defendant in England, and in the indebtedness to it from Dewar for French Timken stock purchased by him from the defendant and to be paid only out of his one-half of French Timken's profits.

First, divestiture would impose undue hardship upon defendant, which is not justified by any necessity for such a provision in order to insure effective and fair enforcement of the law—not punishment.

As to hardship, (1) it would be extremely difficult, if not impossible, to find a purchaser at any price for stock of a bearing company located in England, due to the program for nationalization of industry in that country; and (2) it would be extremely difficult, if not impossible, to withdraw part or all of any purchase price received for such stock from England to this country, due to English foreign exchange regulations. In addition, due to defendant's low cost basis of its stock in British Timken, even if it were able to realize a fair price therefor based upon the actual present value of British Timken, defendant would be taxed heavily [fol. 3097] on its capital gain, even though it would be unable to bring to this country all of the money obtained from the sale of the property with which to pay the tax. Moreover, it might be subjected to substantial tax under Section 102 of the Internal Revenue Code for improperly accumulating surplus as a result of being unable to get the purchase price of its stock out of England, and pay it out in dividends to stockholders of the defendant.

Aside from the imminent possibility of nationalization of industry, similar difficulties would be involved if defendant were obliged to sell its half interest in the stock of French Timken.

As to the amount now owned by French Timken to defendant, namely, approximately $241,000 with interest,

there is deposited approximately $29,000 in the Westminster Bank to be applied against this indebtedness, but it cannot be applied until the notes become due. This Court, having no jurisdiction over any of the other parties to the Westminster trust, cannot accelerate the indebtedness as to them. If the Court requires defendant to divest itself of the notes, it cannot sell them to anyone for dollars because the $29,000 cannot be withdrawn to this country as a result of British foreign exchange regulations. The same result would obtain if they were sold in England or France. No more than the amount deposited to secure their payment could be realized because the indebtedness of French Timken, a small company employing approximately 500 people, and supported by defendant and Dewar since its organization, is not an attractive investment.

It would be costly, if not impossible, to dispose of Dewar's indebtedness to the defendant for his French Timken stock, now reduced to approximately $120,000, for the same reasons.

Divestiture is not a proper or permissible remedy. There is no issue in this case involving the legality of defendant's acquisition of stock of British Timken or French Timken. The record shows that British Timken was purchased jointly by defendant and Dewar in 1927, and that French [fol. 3098] Timken was organized jointly by them in 1928. The amended complaint contains no allegations that the acquisition of stock in British Timken or French Timken constituted a violation of the antitrust laws in any respect, although it does refer to defendant's ownership of stock in those companies as part of the "Background." It is alleged that defendant combined with British Timken and French Timken, principally by means of the business agreements of 1928 and thereafter, to eliminate competition between them, etc. Therefore, divestiture is not reasonably necessary to suppress the unlawful practices alleged and found to have taken place, and would be beyond the scope of the issues involved in the case if it were granted for any such purpose.

The only other reason for which divestiture might be granted within the power conferred upon the Court by 15 U. S. C. A., Section 4, to "prevent or restrain" violations, would be to remove the effects of unlawful practices, in this respect found to have taken place. In cases in which divestiture of stock as a remedial measure has been sus-

tained, there have been findings that stock control was the means of carrying out the combination found to have been illegal. It is not alleged in the amended complaint in the present case that this was the fact, nor is there any evidence nor finding to that effect. Evidence, introduced by defendant for an entirely unrelated purpose, shows that defendant and Dewar agreed that Dewar was to have control of the ordinary affairs of British Timken, as long as it was profitable, in 1927 prior to the time of, and as a condition to, the joint acquisition by them of British Timken's stock. British Timken's corporate structure was altered to carry these agreements into effect, and, as the record discloses, it has always been profitable, so defendant has never been in a position to exercise control over British Timken through its ownership of stock even if it had desired to do so. Nor has the defendant ever exercised stock control with respect to French Timken since the time defendant and Dewar first agreed jointly to organize it.

[fol. 3099] Thus, there has been no history of stock control of British Timken and French Timken by defendant for the purpose of carrying out the combination. The combination has been, by agreement between defendant and Dewar, carried out by British Timken and French Timken. The portions of the decree which enjoin further carrying out such agreements should be sufficient to accomplish the plaintiff's purpose. If not, then the Plaintiff, is at liberty to seek a more drastic remedy upon application to the Court.

If it be suggested that the virtual destruction of defendant's large investments in British Timken and French Timken is desirable to remove any incentive which it might have not to compete with these companies, the answer is twofold. First, no court has ever gone so far as to attempt to justify divestiture of stock upon any such basis. The Court should confine itself to remedying and preventing future resumption of the types of practices found to have been illegal. Second, it would seem logical that, if defendant could compete with British Timken or French Timken at any time on a basis by which it could make a reasonable profit, either on original equipment or service sales, the opportunity to take 100 per cent of the profit, as distinguished from the 30 per cent (which represents defendant's share as a stockholder) in the case of British Timken, or 50 per cent in the case of French Timken, should cause it to seek to obtain such business in competition with them.

40. Defendant objects, subject to its general Objection 39 thereto, to the following portion of Paragraph A of Section VIII:

The words "other financial interest, direct or indirect" are too uncertain and vague to enable defendant to determine of what interests it must divest itself.

41. Defendant objects to subparagraph 1 of Paragraph B of Section VIII in its entirety, for the following reasons:

There is no history of any past practice of control of British Timken or French Timken by defendant by means of stock, or otherwise, which makes this provision neces- [fol. 3100] sary to prevent the resumption of past illegal practices. For no good reason it places defendant in a position different from that occupied by others. It prohibits defendant from engaging in normal business transactions not in the course of law violation, in that it would be unable to purchase assets or stock of British Timken or French Timken for legal purposes. In so far as this provision prevents defendant from purchasing stock of British Timken or French Timken through the exercise of any option, or otherwise, it is objectionable for the same reasons as those given in support of Objections 4 and 39.

42. Defendant objects, subject to its general Objection 41 thereto, to the following portions of subparagraph 1 of Paragraph B of Section VIII:

(a) The words "directly or indirectly" in the 1st line should be deleted as being too vague and indefinite.

(b) The word "securities" in the 3rd line is too indefinite and vague. If it is intended to include bonded indebtedness, it would prevent defendant from taking mortgage bonds to secure the indebtedness of French Timken to it, and this would penalize defendant instead of providing effective law enforcement.

(c) The words "or any subsidiary, successor or assign thereof" in the 5th and 6th lines, should be deleted for the reason that there is no history of past practices in this respect, the provision would be beyond the scope of the issues in this action, and the application of these words to particular entities is too indefinite and vague to enable defendant to be properly guided in carrying out the decree.

43. Defendant objects to subparagraph 2 of Paragraph B of Section VIII in its entirety, for the following reasons:

First, there is no evidence nor finding by the Court that defendant ever exercised any influence or control over the production, sales or other business policies of British Timken or French Timken, or their subsidiaries, etc., so that this provision is not necessary to suppress illegal practices [fol. 3101] or to prevent their resumption. The Court's decree should be limited to the type of practices found to have been engaged in by the defendant, and, if it goes farther, it constitutes, not effective and fair enforcement of the law, but punishment.

Second, the provision is so vague and indefinite that it would hamper defendant seriously in the future conduct of its business and put it at the peril of a summons for contempt. For example, assume that defendant should bring an action to enjoin British Timken from engaging in unfair trade practices in this country, or should even attempt to compete with British Timken for bearing business in this country or abroad—literally, such conduct by defendant would constitute exercising "influence or control" over the sales of British Timken.

Third, the word "production" in the 2nd line should be deleted for the reason stated in support of Objection 3(e).

Fourth, the words "subsidiary, successor, assign, sales representative or distributor thereof" in lines 3-5, inclusive, are too vague and indefinite and should be deleted for reasons previously stated.

44. Defendant objects to subparagraph 3 of Paragraph B of Section VIII, in its entirety, for the following reasons:

First, there is no evidence nor finding or decision by the Court that any officer, director or employee of defendant ever served as an officer, director or employee of British Timken or French Timken, so that this provision is not necessary to suppress or prevent the resumption of illegal practices. The record discloses merely that Duncan, an English solicitor, has represented defendant on the board of directors of British Timken. There is no reason why defendant should not be permitted to follow the usual and normal practice of a large stockholder in being represented on the board of directors of a company in which it owns stock. If the Court permits defendant to retain its stock,

it should be permitted to have such representation; if it decrees divestiture then, no doubt, defendant will have no representative on the board in the natural course of events.

45. Defendant objects, subject to its general Objection 44 [fol. 3102] thereto, to the following portion of subparagraph 3 of Paragraph B of Section VIII:

The words "or of any subsidiary, successor, assign, agent, sales representative, or distributor thereof" in the 5th and 6th lines, should be deleted as being too indefinite and vague.

Plaintiff's Proposed Decree, Section IX

46. Defendant objects to Section IX in its entirety, for the following reasons:

This section, which compels defendant to sell bearings to any person for export, without discrimination as to availability, price, etc., is punitive and destructive and serves no purpose except to inflict serious injury upon defendant's business operations. It is objectionable for all of the reasons set forth in support of Objection 22 to Paragraph B of Section VI, which would impose a similar provision in favor of purchasers for resale in British Timken and French Timken territory. It has no relation to the issues in this action or to the relief necessary to carry into effect the Court's decision. The Court does not have constitutional authority to compel defendant to engage in business or to deprive it of its right to choose its customers, as is here sought to be done. This provision would require defendant to engage in business transactions not normal and usual, because it would be required to do so by the Court's decree. The provision would constitute an unwarranted regulation of defendant's business of a legislative character amounting to a private, individual Robinson-Patman Act in so far as it prohibits discrimination between prospective purchasers. It would be impractical and impossible of enforcement, because, in the overwhelming majority of instances, defendant does not know whether bearings are purchased by its customers for export or domestic consumption. Moreover, even if the defendant should decide to conduct its business in British or French territory by establishing a wholly-owned plant there, it would still be required to sell bearings manufactured in

[fol. 3103] this country for export, and this would result in duplication of investment in production facilities and inefficiency and confusion in the conduct of the defendant's business.

Like Paragraph B of Section VI, this provision might put defendant in a situation in which it would be required to sell bearings for export to nationals of unfriendly foreign powers at the expense of its domestic customers, even in the course of preparation for war with such foreign powers.

47. Defendant objects, subject to its general Objection 46 thereto, to the following portions of Section IX:

(a) The words "in such quantities as may be reasonably required" in the 3rd and 4th lines are too indefinite and vague.

(b) The words "and regardless of any intermediate prices or transactions which may take place prior to such export" in lines 8 through 10, inclusive, are not only too vague and indefinite, but are also unintelligible.

(c) The last sentence in the section is vague and indefinite in that it is not clear whether defendant would be permitted to allocate bearings between its domestic customers and purchasers for export, or must fill orders for export in preference to orders of domestic customers.

Plaintiff's Proposed Decree, Section X

48. Defendant objects to Section X in its entirety, for the following reasons:

Generally speaking, Sections X, XI, XII and XIII relate to the question of trademarks and, in practical effect, would destroy any rights which defendant has in the name of its founders, and its trademark "Timken", in the United States and the rest of the world, with the obvious effect of benefiting two foreign corporations, namely, British Timken and French Timken.

[fol. 3104] These sections and each of their paragraphs should be rejected whether considered in their entirety or one at a time.

They relate generally, first, to the use of the trademark "Timken" by defendant, British Timken and French Timken, and second, to certain specific acts which the Court is asked to compel defendant to perform under the guise of enabling it the more readily to sell and distribute its bear-

ings in territory heretofore, under the contracts between the parties, granted to British Timken and French Timken; and, ostensibly, to expedite the sale and distribution by British Timken and French Timken of their bearings in the United States and the rest of the world.

A conclusive objection to the provisions relating to the trademark "Timken", is that, by the express provisions of Paragraph B of Section IV, defendant is already sufficiently enjoined from performing any act in furtherance of the agreements, combination and conspiracy found to have been illegal, so that it is wholly unnecessary for the Court to enjoin defendant from doing any act in violation of the Antitrust laws by means of the trademark. And, if this is not deemed sufficient and further assurance is needed, resort might be had to Section V, by which defendant is enjoined, in great detail, from committing any of the illegal acts therein enumerated, by means or in furtherance of an agreement, etc., which would include an agreement as to trademarks.

If the Court does not conclude that the provisions of the earlier sections of the proposed decree are sufficient to cover this phase thereof, an examination and analysis of the sections now under consideration will disclose many compelling reasons why they should be rejected.

The adoption of these sections, with their use of such terms as "confusing mark" and "British and French trademark territory", and their great multitude of detail and complex technical limitations and restrictions upon the conduct of defendant would eventually result, without any justification in law or fact, and, although wholly unneces- [fol. 3105] sarily in so far as the enforcement of the Court's decree is concerned, in great damage to the business of defendant, not only with relation to foreign commerce, but to a very considerable extent to domestic commerce of the United States as well.

These sections recognize in British Timken and French Timken a dominant right, as against defendant, in the trademark "Timken", not only in Great Britain and France and their dependencies, but in any foreign territory in which either British Timken or French Timken has owned or controlled the mark, or in territory in which it has claimed or now claims an interest therein. And a superior right in the mark in the United States, in the first instance, is likewise conferred upon British Timken and

French Timken, by imposing upon defendant the burden of taking such action as may be necessary to avoid, in its use of a trademark, confusion with the mark "Timken" in the hands of British Timken or French Timken. And, more than this, defendant must use its own corporate name in such a way as to prevent its being confused with the use of the trademark "Timken" by British Timken and French Timken. In short, defendant may not use its trademark "Timken" or its corporate name "The Timken Roller Bearing Company", or its family name, which has been associated with its business ever since its creation many years ago—unless defendant can take such action as will make it certain that any trademark or name it does use will not be confused with the names used by British Timken or French Timken, or the trademark "Timken". These provisions cannot be reconciled with any constructive or even justifiable purpose.

The Court's decree in this case should be limited to a lifting of the restraints upon foreign commerce which it has found to have been imposed illegally in the transactions between defendant and British and French Timken, and to free from restraint the export of defendant's bearings to foreign countries and the import into the United States of their bearings by British Timken and French Timken. The Court is not, in this case, to be concerned with adjudicating rights to the trademark, or otherwise, as between the [fol. 3106] defendant and British Timken and French Timken. The provisions of the sections under consideration, imposing, as they do, so many restrictions and limitations upon the use by defendant of the trademark "Timken" in the sale and distribution by it of its bearings in foreign countries, and their export from the United States, should all be rejected for the conclusive reason that, if adopted, they would tend to reduce and obstruct such action by the defendant. The most efficient method, with relation to the trademark, to stimulate the export by the defendant of its bearings from the United States to foreign lands, is to leave the defendant free to use the trademark for that purpose in so far as the decree of the Court in this action is concerned.

And there is no reason why defendant should assume the burden of taking action to prevent confusion as between it and British Timken and French Timken in the use of the trademark in connection with the sale and distribution by

them of their bearings in the United States. Defendant, over many years, has built up in the United States a valuable business and goodwill by the use of the trade name and trademark "Timken". British Timken and French Timken have never done business in this country and have never used a trademark of trade name in connection therewith, nor established any goodwill by so doing. In this situation, it seems too clear for contradiction that, if any action is needed to avoid confusion in the use of the trademark in the United States by the three Timken companies, it should be taken by British Timken and French Timken and not the defendant. The proposed decree would take from defendant, and give to them, something they never had before, merely because defendant is found to have combined with them to violate the law. This is punishment, not law enforcement.

Altogether aside from the unnecessary injury to the property rights of the defendant in its name and trademark, these sections of the proposed decree might result in unjustified injury to the public, including other manufacturers of anti-friction bearings. First, the American [fol. 3107] buying public would be injured, if anyone other than the defendant were given the right to sell anti-friction bearings under the trade name "Timken". To American purchasers this name and mark denote the product of the defendant, to which they are entitled when that name is used. If the Court's decree should enable and invite British Timken and French Timken to use defendant's name in the domestic market, the public might be misled to buy one product when it sought another. Moreover, since the decree will put an end to the agreements under which the defendant has been enabled to control the quality of anti-friction bearings manufactured by the foreign Timken companies, their product may become substantially different from that of the defendant in the future. Thus, the decree might foster that unfair competition which the law, in part for the protection of the consumer, condemns. Second, the decree, to the extent that it would give to British Timken and French Timken the valuable goodwill developed by the defendant under the trademark and name "Timken", would injure the American anti-friction bearing industry as a whole by conferring on those two companies a distinct advantage, over the defendant's com-

petitors in domestic commerce, which those competitors do not now enjoy. This would go far beyond enabling British Timken and French Timken to compete in this country on the same basis as any other competitor of the defendant—which is the most the plaintiff can seek properly to obtain. Third, the decree would put all American manufacturers of anti-friction bearings at a disadvantage in competing in those foreign markets in which the defendant has developed goodwill under its name for the same reasons which would place them at such a disadvantage in the American market. Thus would be frustrated the purpose of the antitrust laws as to foreign commerce, namely, the fostering of American commerce in foreign markets, not the business of foreign manufacturers therein. So, to the extent that the proposed decree would require the defendant to take such steps as would enable British Timken and French Timken to use the name "Timken" either to the exclusion of, or jointly [fol. 3108] with, the defendant in areas, such as the United States, in which the defendant has acquired the exclusive right to use the trademark and name, it would frustrate the law of unfair competition and hinder the development of American commerce—results to be deplored rather than sought.

49. Defendant objects to subparagraph 1 of Paragraph A of Section X, in its entirety, for the following reasons:

First, it injects a new term, "confusing mark", into the case, which is neither necessary nor proper under the pleadings and evidence in the case, and is designed to deprive defendant unlawfully of the use as its trademark of the name of its founders.

Second, the definition of the term "confusing mark" is not limited to a name or mark used in the sale of anti-friction bearings, but it is unlimited. In the application of this term made in certain of the subsequent portions of the proposed decree, defendant might have to give way to British Timken or French Timken, if they should decide to manufacture and sell rock bits or special steel now manufactured by defendant but not by them, or any other products which defendant might develop in the future throughout its existence.

Third, the definition is not limited to marks, etc., which might be identified or confused with defendant's present corporate name. The only claim made by the plaintiff is

that the contracts which have required British Timken and French Timken to use the trademark "Timken" have limited them to developing goodwill under that name. Presumably, it will assert that the provisions as to the trademark and name are necessary to enable those companies to compete by using such goodwill. But this necessity could not justify this provision, which would require defendant to give up marks and names entirely unrelated to the goodwill which British Timken and French Timken may have developed up to the present time.

50. Defendant objects to subparagraph 2 of Paragraph A of Section X in its entirety, for the following reasons: [fol. 3109] It is too indefinite and does not accurately describe or define countries or areas in which British Timken, French Timken or otheir subsidiaries, successors or assigns, own control or in any way claim or have owned, controlled or in any way claimed a confusing mark.

51. Defendant objects, subject to its general Objection 50 thereto, to the following portions of subparagraph 2 of Paragraph A of Section X:

(a) The words "or their subsidiaries" in the 3rd line should be deleted for the reason that they are too indefinite and vague for reasons previously stated.

(b) The words "successors, or assigns" in the 3rd and 4th lines should be deleted for the reason that their inclusion makes this section impracticable and its operation might be against the public interest. Assuming, for the sake of argument, that the Court decides that drastic action should be taken in favor of British Timken or French Timken, as presently constituted, with respect to the trademark and trade name, why should it make the provisions of the decree run in favor of their successors or assigns in the indefinite future? Assume that Dewar, cut off from the support which defendant has furnished to French Timken over the years, should decide to dispose of French Timken and should sell it to SKF. Should SKF, the largest bearing manufacturer in the world, be given, as successor or assign of French Timken, all of the benefits of the decree relating to the trade name and trademark which the Court might be willing to confer upon French Timken for the purpose of enabling it to compete with defendant?

(c) The words "control" in the 4th line and "have

controlled" in the 5th line, should be deleted for the reason that they are too indefinite and vague. How is defendant to determine what marks British Timken or French Timken control? How is the control to be evidenced,—by ownership, registration, license, contract or mere friendship with the person who owns the mark?

[fol. 3110] (d) The words "or in any way claim" in the 4th line and "have in any way claimed" in the 5th line, should be deleted. The application of this definition of "British or French trademark territory" in certain of the subsequent portions of the decree relating to the trademark would be particularly drastic and unwarranted if this phrase were included, since it would turn over the defendant's name and trademark to British Timken and French Timken, wherever they might claim, whether in good or bad faith, a particular mark which defendant might own. It might be interpreted as relating to new marks developed by defendant in the future which might be entirely unrelated to the name "Timken"; if so, defendant would have to give up such marks if British Timken or French Timken in any way claimed them. What possible justification could there be for such a provision in the decree?

(e) The words "have owned" in the 5th line should be deleted. If British Timken or French Timken no longer own or use a particular mark, it will not assist them in competing with defendant to prevent it from using such a mark.

52. Defendant objects to Paragraph B of Section X in its entirety, for the following reasons:

It is a mandatory injunction requiring defendant to take steps to permit and enable it to fill orders and inquiries for export sales of bearings by various means specified therein, and is beyond the authority of the Court as defined in Title 15 U.S.C.A., Section 4; it would be unconstitutional as contravening the Fifth Amendment to the Constitution of the United States; it is not within the scope of the issues in this action; and it would constitute an unwarranted regulation of defendant's business of a legislative character, in that it specifies in detail a course of action to be followed by defendant in the conduct of its business.

53. Defendant objects, subject to its general Objection

52 thereto, to the following portions of the introductory paragraph of Paragraph B of Section X:

[fol. 3111] (a) The words "all steps and measures needed in fact and in law" should be deleted as being so vague and indefinite as to require defendant to conduct its business at the peril of a summons for contempt.

(b) The words "including but not limited to" in the 7th line should be deleted as being too indefinite and vague for the same reasons, because they implement the words sought to be deleted under (a) above.

54. Defendant objects to subparagraph 1, of Paragraph B of Section X in its entirety for the following reasons:

First, it has the purpose and effect of requiring the defendant to make sales without reference to its ability so to do, and, as a result, goes far beyond the pleadings and evidence in this action and constitutes a type of relief not sanctioned by the law.

Second, this section is too indefinite and vague to enable intelligent compliance therewith. The words "taking all actions necessary" are too indefinite and vague. The words "non-compliance with which would prevent or impede" exports and imports are too indefinite and vague, and would make defendant determine at its own peril with what laws it must comply, or what would constitute an impediment to imports and exports.

55. Defendant objects to subparagraph 2 of Paragraph B of Section X in its entirety for the following reasons:

First, this provision is tantamount to requiring defendant to abandon the use of its trademark, trade name or corporate name, or in the alternative, to make agreements with third parties who are not bound by the decree of the Court.

Second, the words "taking all actions necessary" in the 1st line should be deleted, because they are too indefinite and vague.

Third, the words "where such confusing mark is or has been owned, controlled or in any way claimed in British or French trademark territory" in lines 11-13, inclusive, are objectionable for reasons stated in support of Objections 50 and 51 to subparagraph 2 of Paragraph A of Section X.

[fol. 3112] Fourth, the words "such actions shall include, but are not limited to," in the 13th and 14th lines, are too indefinite and vague.

56. Defendant objects to subparagraph 3 of Paragraph B of Section X in its entirety, for the following reasons:

First, it requires defendant to violate the laws of foreign countries governing trademarks and unfair competition, or in the alternative, to abandon use of its trademark, trade name or corporate name therein.

Second, it deprives defendant of its constitutional right under the Fifth Amendment to the Constitution to determine what costs it is able to incur in connection with the making of sales, to select its customers, or not to deal with any customers if it so desires. It requires defendant to advertise everywhere, forever, on the same basis as it does in the United States, regardless of the volume of trade anticipated or the results obtained. For example, defendant advertises in the Saturday Evening Post at a cost of thousands of dollars a year. Under this provision it would be required to advertise in a similar journal in England, perhaps costing as much, when, as the record discloses, it would be unable to sell any substantial volume of bearings in England at the present time and perhaps for years, due to the restrictions on trade imposed by the English government which prevent the export of bearings to that country unless they cannot be obtained from local manufacturers, including British Timken. This monumental folly is to be repeated in other foreign countries, for all time, in the face of uncontroverted evidence in the record that there is no substantial export trade to be obtained therein upon a competitive basis, and without any discretion on defendant's part to avoid the expense, if that seems to be the prudent thing to do.

Third, the words "appropriate size and prominence" in the 4th line should be deleted as too indefinite and vague, for obvious reasons.

[fol. 3113] 57. Defendant objects to subparagraph 4 of Paragraph B of Section X in its entirety for the following reasons:

First, the purpose of this provision is to require defendant to make sales in violation of its constitutional right to refrain therefrom, without reference to whether the making of such sales would constitute unfair competition, and without reference to whether such sales would be in violation of the policy of the United States Government, or of the policy of defendant properly arrived at.

Second, this provision would require defendant, not only to offer to sell bearings to all persons who have made written inquiries of it since July 1, 1945, but also to state the terms and conditions upon which they "may now become a distributor of defendant" altogether without reference to whether defendant needs or desires such distributors. Aside from the obvious objections to the authority of the Court and the constitutionality of such action, its impracticability is, indeed, staggering. Assume that it should develop that five persons from one marketing area had written defendant desiring to become distributors of its bearings. Defendant is then obliged to offer to permit all of them to become its distributors, regardless of their credit, financial stability, ability to render the type of service which defendant requires in order to preserve its goodwill, and of the all important fact that, if all five accept, there will not be enough business for any of them and all will be forced eventually to forego the representation. Such a provision is, indeed, regulation of a legislative nature which goes far beyond anything the Congress of the United States has ever enacted.

58. Defendant objects to subparagraph 5 of Paragraph B of Section X in its entirety for the following reasons:

This mandatory injunction, requiring defendant to render services to prospective purchasers for export, or foreign [fol. 3114] users, at what amounts to less than cost properly determined, is beyond the authority of the Court and would deprive defendant of its constitutional rights under the Fifth Amendment. This clearly penal provision that defendant's charges for services shall not exceed its cost "without allocating any overhead or general administrative expense", depriving defendant of its right to determine the proper elements of its cost of operation, is perhaps the most outstanding illustration of the punitive nature of the entire proposed decree. It is beyond the scope of the issues, unnecessary, and would impose undue hardship on defendant.

59. Defendant objects, subject to its general Objection 58, to the following portions of subparagraph 5 of Paragraph B of Section X:

(a) The word "prospective" in the 3rd line should be deleted. It would require defendant to furnish services to a person before any purchase of bearings has been made from defendant.

(b) The words "foreign user" in the 3rd line should be deleted. They would require defendant to provide services to a foreign user of bearings produced by it, who had not purchased them from defendant. Moreover, foreign users are not limited to those in British and French Timken territory, so this provision is not within the scope of the issues in this action.

(c) The words "shall be consistent with defendant's prevailing practice", in the 12th and 13th lines, are too vague and indefinite to enable defendant to know when and whether it has committed what might be considered a violation of the decree.

Plaintiff's Proposed Decree, Section XI

60. Defendant objects to Paragraph A of Section XI in its entirety, for the following reasons:

If Paragraph A of Section XI were adopted, defendant would be restrained from at any time for any cause, instituting any legal action in any court of the United States against any person based upon a "confusing mark" owned, [fol. 3115] controlled or "in any way" claimed by British Timken or French Timken, and from making any claim hereafter in any suit in this regard. In short, defendant is to be denied, for all time, access to the courts of the United States, and cannot even make a claim against British Timken or French Timken, or any third person no matter how flagrantly it may consider, in good faith, its rights to have been violated, without incurring contempt of court!

First, this provision would deprive defendant of its constitutional right to resort to the courts for the protection of its property rights in the trademark "Timken" and in its trade name and corporate name, and any other trademarks, trade names or corporate names which it might adopt and develop in the future. Any order in such form is beyond the authority of this Court. If the Sherman Act,

including Title 15 U. S. C. A., Section 4, should be so interpreted and applied by the Court in approving such a provision in its decree, it is unconstitutional and void as contravening the Fifth Amendment to the Constitution of the United States in that it would deprive defendant of its property without due process of law.

Second, this provision is unnecessary, is beyond the scope of the issues involved in the case, and would place defendant forever in a position different from that occupied by others, outside of the protection of the law of the land.

Third, due to the definition of "confusing mark", this provision would deny defendant access to the courts to protect any mark which it might have irrespective of whether it be used in the sale of products other than anti-friction bearings. Moreover, the use of the words "or in any way claimed" in the 5th and 6th lines would prevent defendant from obtaining any relief, even if it should change its trademark or name entirely, and British Timken or French Timken should "claim" the new trademark or name. If British Timken or French Timken should do business in the United States and sue defendant on the ground

[fol. 3116] Plaintiff's Proposed Decree, Section XII

63. Defendant objects to Paragraph A of Section XII in its entirety, for the following reasons:

First, this provision would prevent defendant from engaging in a usual and normal business transaction in the absence of any violation of the Antitrust laws, namely, granting a license for the use of its trademark limited to a specified territory.

Second, in so far as this provision would prevent defendant from restricting "any person," it is beyond the scope of the issues of this action, and would put defendant in the future in a class different from that occupied by other companies, and would cause it to be outside of the protection of the law of the land for reasons stated in support of Objection 7(f).

Third, the words "controlled, or in any way claimed" in the 5th and 6th lines, are too indefinite and objectionable for the reasons stated in support of objections 51(c) and (d), respectively.

Fourth, the words "or any other person" in the 6th and 7th lines, are objectionable for the reason that they would cause the provision to be beyond the scope of the issues involved in this action and beyond its proper scope, namely, to prevent resumption of past illegal practices, in that there is no evidence nor finding nor decision by the Court that defendant has ever made any agreement which would require British Timken, French Timken, or any one else to restrict its use of trademark or names to any name or mark other than "Timken."

64. Defendant objects to Paragraph C of Section XII in its entirety, for the following reasons:

First, this section undertakes to deprive defendant of its statutory right to apply to the United States Patent Office for registration of its trademark and therefore is beyond the authority of the Court.

[fol. 3117] Second, this provision seeks to give to the Court's decree extra-territorial effect in respect to jurisdictions, countries and areas over which it has no authority, since it is not limited to the United States, and undertakes to deprive defendant of its right to establish trademarks in the United States and elsewhere.

Third, the words "likely to be confused with," in the 3rd line, make this provision so indefinite and uncertain as to impose an impossible standard of compliance by defendant.

Fourth, it would prevent defendant from establishing new trademarks or names, etc., likely to be confused with those known by defendant to be owned, controlled or in any way claimed by British Timken or French Timken. In this respect it is, not only not limited to marks or names used in connection with the sale of anti-friction bearings, but also unlimited in the time of its application, and relates specifically to types of marks and names which have no relation whatsoever to the issues involved in this action. Even if it be assumed, for the sake of the argument, that there could be justification for a provision which gives to British Timken and French Timken, in the United States, goodwill in the existing trademark and name "Timken," which they never had before, and at the expense of defendant, upon the theory that they were required to build up their foreign goodwill based upon such existing trademarks and trade names by virtue of the business agreements with defendant, how could donation to them of new trademarks and trade

names, either in the United States or in their own territories, be justified upon any such basis? This provision would not prevent the resumption, nor cure the effect, of past illegal practices, and would obviously result in injury to defendant.

Fifth, the word "controlled" in the 5th line should be deleted for reasons stated in support of Objection 51(c).

Sixth, the words "or in any way claimed" in the 5th and [fol. 3118] 6th lines should be deleted for reasons stated in support of Objection 51(d). The use of these words in this provision would be particularly drastic, since it would prevent effectively defendant's building up any goodwill under new trademarks or trade names anywhere at any time. It would be necessary only for British Timken or French Timken to claim such marks or names, irrespective of their good faith in so doing, and defendant would be helpless. This would be contrary to the public interest, because it would hamper or destroy competition by defendant with British Timken and French Timken.

Plaintiff's Proposed Decree, Section XIII

65. Defendant objects to the following portion of Section XIII:

(a) The words "British Timken and French Timken" in the 5th line should be deleted, for the very practical reason that defendant has no way of knowing who the directors, officers, subsidiaries, agents, sales representatives and distributors of British Timken and French Timken are, unless those companies desire to give it this information and, therefore, defendant should not be charged with the duty of providing copies of the decree to them. It should be sufficient if defendant provides copies to its own directors, officers, etc., and to British Timken and French Timken.

(b) The words "subsidiaries" in the 4th line should be deleted as too indefinite and vague, and as being unnecessary.

Plaintiff's Proposed Decree, Generally

66. Defendant objects generally to the plaintiff's proposed decree because, if adopted, it would be impractical in

[fols. 3119-3120] its operation and impose too many duties and burdens upon the Court.

Respectfully submitted, (S.) Luther Day, 1759 Union Commerce Building, Cleveland, Ohio; (S.) John G. Ketterer, First National Bank Building, Canton, Ohio, Attorneys for Defendant.

A copy of the foregoing defendant's objections to the draft of judgment proposed by the plaintiff was served upon the plaintiff on the 13th day of September, 1949.

(S.) George H. Rudolph, Attorney for Defendant.

[fol. 3121] IN THE DISTRICT COURT OF THE UNITED STATES FOR THE NORTHERN DISTRICT OF OHIO, EASTERN DIVISION

Civil Action No. 24214

UNITED STATES OF AMERICA, Plaintiff,

vs.

THE TIMKEN ROLLER BEARING CO., Defendant

Reporter's Transcript of Hearing on Exceptions to Proposed Judgment

APPEARANCES:

For the Plaintiff:

Sigmund Timberg, Esq., Special Assistant to the Attorney General; W. Perry Epes, Esq.; Burt C. Dedman, Esq.; Robert B. Hummel, Esq.; and Stanley D. Rose, Esq., Attorneys, Anti-trust Division.

For the Defendant:

Luther Day, Esq.; John Ketterer, Esq.; George Rudolph, Esq.; and Robert Rybolt, Esq.

[fol. 3122] The Clerk: If your Honor please, we have for your consideration the hearing on exceptions to the proposed decree in the Timken Roller Bearing Company case.

COLLOQUY BETWEEN COURT AND COUNSEL

Mr. Timberg: If your Honor please, we served the defendant with a subpoena on the 28th calling for the

production of certain documents, and I would like to request the Court to call on the defendant for response to that subpoena so that we may examine the documents and determine what use we want to make of them, if that is agreeable to your Honor.

The Court: Do you have those documents?

Mr. Ketterer: Yes, we have them.

The Court: Would you turn them over to Government's counsel?

Mr. Ketterer: (Handing documents to counsel) Some of these are original contracts. We have the originals here and also photostatic copies of them and I would like to have the originals returned, with the Court's permission, for the company's file, and substitute photostatic copies.

The Court: I think we used that method in the course [fol. 3123] of the trial and I see no reason why it should not be done.

Mr. Timberg: If the Court please, I have another suggestion which may expedite the conduct of this hearing. We have for the convenience of the Court and our own convenience, and that of defense counsel numbered the paragraphs in your Honor's opinion, on a mimeographed copy thereof, and I should like to hand a copy of the opinion as numbered to your Honor and to the defense counsel with the suggestion the Clerk be requested to put the numbers on the original copy on file in court. Reference will doubtless [fols. 3124-3126] be made to the opinion and to the findings, which are findings of fact and conclusions of law here, and I think it would expedite the references if we were all referring to the same numbers on the same pages.

Mr. Day: We are very glad to agree to that, very glad to receive a copy with the numbered paragraphs.

[fol. 3127] The Court: You may now proceed.

Thereupon the defendant called as a witness Whitley Benjamin Moore, who, being first duly sworn, testified as follows:

Direct examination of Whitley Benjamin Moore.

By Mr. Ketterer:

Q. Will you state your name, please?

A. Whitley Benjamin Moore.

Q. I believe you testified, Mr. Moore, at the time of the trial of this case in 1948?

A. I did.

Q. You are still in the employ of the Timken Roller Bearing Company?

A. I am.

Q. And your present position with the company is what?

A. Vice-president in charge of sales.

Q. Have you for a number of years been acquainted with the method by which antifriction bearing companies in the American market have handled the distribution of bearings?

A. I am.

Q. And I would like to ask you what the practice has been in the antifriction bearing industry in this country as to [fols. 3128-3129] whether distributors of antifriction bearings handle the product of more than one manufacturer?

A. The distributors do handle more than one product.

Q. And as a matter of practice do they handle more than two or do they confine their representation to two companies?

A. It varies with the interests that they may have in antifriction bearings, but I can safely say that all distributors handle two or three makes of antifriction bearings and many of them a dozen or more.

[fol. 3130] Q. Now, I have here two books, Mr. Moore, that have been marked for identification as Defendant's Exhibit A (decree) and B (decree) and I will ask you if you can identify those?

A. Exhibit A is a catalog published by the Detroit Ball Bearing Company of Detroit, Michigan.

Q. And Exhibit B is what?

A. Exhibit B is a similar catalog of antifriction bearings distributed by the Minnesota Bearing Company of St. Paul, Minnesota.

Q. Will you tell the Court the general nature of these two companies to which you referred, the Detroit Ball Bearing Company and the Minnesota Bearing Company?

A. Both of these companies are in business for the distribution of antifriction bearings and to an extent also the distribution of so-called friction or plain bearings.

Q. Now I will direct your attention to the first divider in the book marked Defendant's Exhibit A, which has the heading of "Ball Bearings" and has a list of names there. Can you identify the names that appear on that page?

A. I can identify the names of Fafnir, Kilian, McGill, [fol. 3131] M-R-C, New Departure, Nice, Norma-Hofffan, Schatz, SKF.

Q. What business are those companies in?

A. They are manufacturers of antifriction bearings.

Q. And looking at the next divider under the heading of "Roller Bearings" in Section 2 in the same exhibit can you identify the companies whose names appear on there as to whether or not they are manufacturers of roller bearings?

A. I can identify the names of these manufacturers, American, DBB, Hyatt, McGill, Norma-Hoffman, Orange, Rollway, SKF, Timken and Torrington, who are manufacturers of roller bearings.

Q. To your knowledge does Detroit Ball Bearing Company represent all these various companies that are listed in their catalog?

A. To the best of my knowledge that is the current representation.

Q. On an unnumbered page in the forepart of Defendant's Exhibit B there is a list of companies under the heading "We are the authorized distributors for the following manufacturers of ball and roller bearings", and would you identify the companies whose names appear there as manufacturers of ball and roller bearings in this country? [fol 3132] A. I can identify as manufacturers of ball and roller bearings Aetna, Bantam Bearings Company of America, Fafnir, Hyatt, Kaydon, M-R-C, McGill, Nice, The Roller Bearing Company of America, Rollway Bearing Company, Schatz, SKF, Timken Roller Bearing Company and Torrington Company.

Mr. Ketterer: We offer at this time Defendant's Exhibits A and B.

The Court: They may be received.

[fol. 3133] Q. Now, is the practice of authorizing distributors in the antifriction bearing industry in the United States, of which these catalogs are illustrative, general among other authorized distributors?

A. Quite general. There are many distributors I might mention handle not only antifriction bearings of one type or another but handle also other automotive and industrial parts.

Q. Along with the——

A. Along with the bearings.

Q. Now, to your knowledge has there been at any time in the matter of the representation of the antifriction bearing industry in the United States any representation by manufacturers of other manufacturers of antifriction bearings?

A. I can't recall of any such instance.

Q. Well, do you know of any instance in which the Timken Roller Bearing Company has had as its representative for the sale of bearings any manufacturer of tapered roller bearings?

A. No, sir.

Q. You don't recall any instance of that kind. Do you remember as to whether Ahlberg at any time represented the Timken Roller Bearing Company?

[fol. 3134] A. Oh, a number of years ago the Ahlberg Bearing Company did represent Timken Roller Bearing Company on the replacement of Timken bearings. I think that arrangement was concluded, oh, perhaps in 1937 or 1938.

Q. And is the Ahlberg Company a manufacturer of antifriction bearings?

A. They were, and I believe are, currently.

Q. Do they currently represent the Timken Roller Bearing Company in the distribution of bearings?

A. They do not.

Q. Do they represent any other manufacturer of antifriction bearings in this country to your knowledge for distribution of bearings?

A. Yes, they represent the Bower Roller Bearing Company, and I believe certain other ball bearing companies.

The Court: What is that—the Bower?

The Witness: The Bower, B-o-w-e-r.

Q. And that Bower Company is located where?

A. In Detroit, Michigan.

Q. Are there any other instances you know of in which manufacturers of bearings have acted as distributors of bearings for the Timken Company in the past?

A. Well, there are some instances. For example, I can mention the National Supply Company at Torrance, Cali-

[fol. 3135] fornia, who have a division for the manufacture of antifriction bearings, but which also operate as distributors of Timken bearings.

Q. What type bearings do they manufacture?

A. They make tapered roller thrust bearings.

Q. Are there any other instances you know of in which that practice has been followed?

A. There is a company in Los Angeles, I think the name is Bearings Service Company, who manufacture certain ball bearings and at the same time are distributors of Timken bearings. There is a similar organization, I believe the name is Bearings Supply Company in Pittsburgh, who manufacture ball bearings and who also have distributed Timken bearings.

Q. Do any of the automobile manufacturers to whom Timken sells bearings manufacture bearings of their own?

A. Yes, sir.

Q. And who are they?

A. Currently—by automobile, I presume you wish to include trucks—currently there is a truck producer, the International Harvester Company, Chicago, Illinois, who have their division of their company manufacturing ball and tapered roller bearings. A few years ago International had a department for the manufacture of tapered roller bearings and at the same time were purchasing and dis-
[fol. 3136] tributing Timken bearings. I think Ford Motor Company at one time had a division for the manufacture of roller bearings and at the same time were buying roller bearings from Timken and other producers.

Q. What is the fact as to whether the International Harvester Company also buy bearings from other producers besides Timken?

A. Yes, sir, they do.

Q. At the same time that they manufacture bearings?

A. That is right.

Q. Do those other people to whom you referred, the Bearings Service Company and the Los Angeles Company and the Pittsburgh company also buy bearings from other sources than Timken?

A. They do.

Q. And act as distributors of other companies as well as Timken?

A. That is right.

Q. In the foreign field, Mr. Moore, what has been the general practice in the antifriction bearing industry as to having distributors who represent more than one company?

A. I would say the foreign practice is very similar to that domestically. These foreign distributors handle more than

one make of bearing and generally handle in addition other automotive or industrial parts.

[fol. 3137] Q. And your knowledge of that practice goes back for how many years?

A. Well, as long as I remember, I would say at least 25 years.

Q. In selecting foreign distributors to represent the Timken Company has the Timken Company made any effort to select distributors that act for one company rather than another or any one company rather than another or any other companies?

A. I am not sure I understand your question.

Q. I will withdraw that question. Do you, in selecting foreign distributors make any effort to line up the distributor that represents Timken with their representation of any other particular bearing manufacturer?

A. No, we choose distributors who we think are best qualified to represent us.

Q. And that has been the practice to your knowledge for 25 years?

A. That is right.

Mr. Ketterer: I think that is all.

Cross-examination of Whitley Benjamin Moore.

By Mr. Timberg:

Q. Mr. Moore, I would like to ask you, as to the names of companies that you read from Defendant's Exhibits A and B as being manufacturers of products that were [fol. 3138] handled by two distributors, were any of those manufacturing companies engaged in the manufacture of tapered roller bearings?

A. Some may be. Bantam, for example; Torrington Company of Minnesota, they also manufacture tapered roller bearings. There may be others that I don't recall that also manufacture tapered roller bearings.

Q. You have no distributors in the territories that have been serviced largely by British Timken or French Timken, do you, Mr. Moore?

A. No distributors in the territories represented by these companies?

Q. I am speaking of your testimony about the foreign distribution system.

A. No, that is right.

Q. You have no distributors in those territories?

A. Not to my knowledge.

Q. If you found equally qualified distributors in Latin America, one of them was going to just plug your own product and another was going, say he wanted to handle a full line of products and competing products as well, which one would you choose?

A. Well, we naturally would not choose a distributor handling a competing line.

[fol. 3139] Q. You wouldn't choose a distributor handling a competing line?

A. That's right.

Q. Are you concerned, Mr. Moore, with the sales on the original installation basis as well as with sales on the replacement basis?

A. I am.

Q. And that is within your province. Do you have any company policy with respect to doing business through your own manufacturing subsidiaries as opposed to doing business through distributors?

A. Well, I am not sure that I know to whom you refer when you say "manufacturing subsidiaries".

Q. Well, I understand that the record in this case shows you have a subsidiary in Brazil.

A. Subsidiary?

Q. It is not a manufacturing subsidiary but a subsidiary to whom you——

A. They do not manufacture.

Q. —to whom you lend technical engineers and who were concerned with the original installation business as well as replacement sales.

A. That's right.

Q. Now, would you favor in the allocation of your foreign business such a subsidiary over an independent distributor?

[fol. 3140] A. Well, in Brazil, for example, our South American company would in turn appoint certain other distributors for handling our bearings in Brazil and in fact any other companies in South America. In other words they act as our sales department down there.

Q. Well, you would prefer a sales department that was being supplied with your sales engineers and was under

your control to one that was an independent sales distributor?

A. Well, that is certainly true with reference to the sale of bearings for original equipment, not necessarily for replacement bearings.

Q. That is right. I understand you, Mr. Moore. My question was limited to original installation sales. Now, what are the reasons you prefer to do business through this non-independent distributor subject to your control and a distributor to whom you had given technical assistance, as over and above an independent distributor?

A. Well, the application of Timken bearings to original equipment is quite a technical matter and insofar as possible we want to have fully qualified sales engineers to handle the sales so that we can be sure the bearings used by the customers are going to perform satisfactorily and be a credit to them and to us.

Q. And you are more certain of that service being rendered to the foreign users when you have had an opportunity [fol. 3141] to give to those distributors the benefit of your technical assistance?

A. Such organizations are quite carefully trained by us and the men in them.

Q. With respect to original sales in a country where you have been investing your own technical manpower and supplying these services, would you be willing in quite the same way to supply those services to a distributor who was also getting technical services form another company and who was representing another company on original installation business?

A. We would not.

Q. You would not?

A. That is right.

Mr. Timberg: I think that is all.

Redirect-examination of Whitley Benjamin Moore.

By Mr. Ketterer:

Q. Mr. Moore, as a matter of practice in this country, isn't it a fact so far as the original installations of bearings, or in other words, dealing with manufacturing customers, that is a type of trade that is not handled by these authorized distributors; isn't that right?

A. That is right. Authorized distributors such as we know them, do not sell to original equipment manufacturers [fol. 3142] but handle bearings for replacement purposes.

Q. In other words, they service the retail trade, if you use that term?

A. Yes.

Q. On the matter of making sales to manufacturing customers, is it a fact that is something handled directly by the company rather than through any intermediary?

A. Yes, that is right.

Q. How long has that been the practice of the Timken Company?

A. Well, as far as I know, continuously.

Q. And is that the practice that is followed by all other antifriction bearing manufacturers to your knowledge?

A. Why, it is very generally the practice by the major producers, at least.

Q. In the respect of foreign sales, to what extent do they in fact contact original manufacturing customers?

A. The authorized distributors have very little contact with manufacturers. I would say if they have any contact at all it is a lia-son matter; in other words, they may put us in direct touch with manufacturers but have no financial interest in the further negotiation of the sale, so far as the engineering work is concerned in laying out the bearings and the design, and that sort of thing.

Q. What is the fact as to whether foreign distributors [fol. 3143] are trained to have that know-how, or is that something handled out of the company's main sales department?

A. To the best of my knowledge the foreign distributors do not have men technically trained on the application of bearings. There may be exceptions to that, but as far as I know they do not.

Mr. Ketterer: That is all.

Recross-examination of Whitley Benjamin Moore.

By Mr. Timberg:

Q. Mr. Moore, just to clarify the economic significance of your testimony, I would like to ask you what the percentage of business is that is done through authorized

distributors who do replacement sales, are engaged in replacement sales transactions?

A. Are you talking domestically or foreign sales?

Q. Well, I would like the foreign sales.

A. Well, by far the greater percentage of our foreign sales are replacement sales. I think it is quite obvious that the United States and the European countries are the world's principal producers of automotive and industrial equipment, and consequently our sales have been largely for replacement purposes.

Q. That has been equally true in the Latin American countries?

A. That is rght.

[fol. 3144] Q. When you say largely, could you express that in terms of the dollar volume of your business in Latin America?

A. Express it in terms of what?

Q. Of the dollar volume of your business in Latin America.

A. I can't give you those figures offhand, I am sorry. I could get them for you; I couldn't give them offhand.

Q. There was some testimony in the trial that domestically 95% of your business was on original installation.

A. Percentage-wise?

Q. And 5% on replacement sales.

A. Percentage-wise about 5% are for replacement and 95 for original equipment.

Q. Wasn't there some testimony that the figure would be actually higher than that in the original hearing, or would you venture a statement as to that, speaking of the Latin American or South American concerns?

A. I don't recall.

Q. You are not aware of the figures on that. Now, would you in trying to make a foreign sale utilize the services of a foreign manufacturer who manufactured a line competing with yours?

A. No, we would not use the services of a foreign manufacturer.

Q. Would you utilize the services of a foreign manufacturer's agent?

A. Well, it might possibly be.

[fol. 3145] Q. But not so likely?

A. That is right.

Q. Would you utilize the services of anybody who was a full-time employee or sales representative of a foreign manufacturer?

A. No.

Q. You probably would not. Would you utilize the services of any technical engineers that were supplied, that were on the payroll of foreign manufacturers? You are probably staggered by the question because as I gather from the testimony you feel your own engineering is better.

A. I am trying to turn over in my mind the circumstances where that might be the case. I don't recall.

Q. There would not be any situation where you would do that. It is a fact, is it not, that you have made such technical assistance available to British Timken?

A. Yes.

Q. You have also made your advertising literature available to British Timken?

A. Yes.

Q. And on a few occasions when British Timken was trying to promote original sales, I believe, original sales within its own territory, they took along your American Timken technical representative?

[fol. 3146] A. Yes.

Mr. Timberg: I think that is all.

Mr. Ketterer: That is all.

[fol. 3147] Thereupon the defendant called as a witness William Robert Timken, who, being first duly sworn, testified as follows:

Direct examination of William Robert Timken.

By Mr. Ketterer:

Q. Your name is Robert Timken?

A. William Robert Timken.

Q. I believe you testified, Mr. Timken, at the trial of this case in 1948?

A. I did.

Q. Have you made any investigation of the figures as to the value of the Timken Roller Bearing Company's investment in the British Timken Company as of the present time?

A. Yes, I have.

Q. What is that, please?

A. The current market value, as judged by the British Stock Market quotations, is about $1,350,000.

Q. And that is held in what form?

A. Chiefly in common stock of British Timken, but there is some preference stock included in that figure.

Q. How many shares of common stock are there?

A. We own or control 121,040 shares of common stock.

Q. How many shares of preferred stock?

[fol. 3148] A. 10,000 shares.

Q. Now, when were the shares of preferred stock acquired?

A. They were acquired when the stock was sold to the public in late '48.

Q. That is when the preferred stock was sold to the public in '48?

A. Yes.

The Court: Your reference there is only to the preferred. The common was not bought at that time?

The Witness: No, sir.

Q. The common stock represents what as to time of acquisition, and so forth?

A. Well, we have held part of it since we acquired the interest in British Timken. That has been increased and decreased. First we sold some with Dewar on the market in England. At that time we bought a portion of what was offered to the general public, and since that time there have been stock dividends paid, so it has increased that way.

Q. The total you gave represents the present total of common shares held by Timken Roller Bearing Company in British Timken?

A. No, that is the total held by us and by Timken Holdings, which holds some.

[fol. 3149] Q. Who is the owner of Timken Holdings as of the present time?

A. We are.

Q. That is, the Timken Roller Bearing Company owns all of Timken Holdings?

A. Yes.

Q. Originally did Mr. Dewar have any interest in Timken Holdings?

A. Yes, originally he had an interest in it.

Q. And his interest was dissolved out of the Timken Holdings Company when?

A. In 1948.

Q. And the purpose of his withdrawal from Timken Holdings was what?

A. I believe it effected a saving in his taxes.

Q. As to the physical location of the shares of stock in British Timken, where are they located as of the present time?

A. Most of them are in England but we have in this country the 10,000 preference shares and 16,000 common shares, those being the 10,000 common shares we bought when the stock was offered to the public, plus the stock dividends that have been paid on those since.

Q. And the balance of the stock is in England?

A. The balance is in England.

[fol. 3150] Q. As to the French Timken holdings, will you tell the Court the present market value of the investment of the Timken Roller Bearing Company in French Timken?

A. Well, there is really no market value because the stock is not quoted on any exchange, but based on the book figures of French Timken our half interest is worth approximately $650,000.

Q. And you have against that what cost basis?

A. We have a cost of $300,000.

Q. As to the British Timken investment, did I ask you what your cost base against that was?

A. No, you didn't. It was about $330,000.

Q. As to the present time?

A. Yes.

Q. Now, in what form does the investment of French Timken stand at the present time?

A. Well, it is in a number of forms; there are notes, preferred stock and common stock.

Q. By notes you refer to what?

A. Promissory notes of French Timken.

Q. And they are payable to whom?

A. The Dewar and ourselves.

Q. And where are those notes located?

A. In England.

Q. And can you tell the Court the breakdown in the in-
[fol. 3151] vestment as between common stock, preferred stock and notes?

A. I haven't got those figures exactly.

Q. But the total investment is the figure that you gave here a while ago?

A. Yes.

Q. Now, in addition to that did you have any notes of Mr. Dewar in respect of the establishment of the French company?

A. We do. We hold a note which he originally gave us when he purchased enough of the French company to make his holding a full 50%.

Q. And that was given as of what time?

A. About 1935.

Q. Has that note been repaid?

A. Not entirely; there have been payments on it.

Q. The face amount of that originally was how much?

A. $150,000.

Q. There is currently due how much on it?

A. About $120,000.

Q. Is there a copy of the note in this country to your knowledge?

A. No, that is in England.

Q. Is that note payable absolutely by Dewar or is the payment restricted to a specific source?

A. The payment is to be made out of, first, the profits
[fol. 3152] of French Timken, as distributed, but the stock of Dewar in French Timken is held as collateral to the collateral agreement.

Q. How many shareholders does the Timken Roller Bearing Company have?

A. Just under 20,000.

Mr. Ketterer: I think that is all.

Cross-examination of William Robert Timken.

By Mr. Timberg:

Q. Mr. Timken, would you tell me something of the security arrangement that you have underlying the indebtedness of the French company? That is, you referred to promissory notes, and to common stock indebtedness. I should

like to know from you what security is there underlying that?

A. What the security is that underlies the notes? Well, the company, the plant.

Q. There was a pledge of the business, pledge of the shares of stock?

Mr. Day: He said the plant.

The Witness: What I meant is for the promissory notes.

Q. This is an unsecured promissory note or a secured promissory note?

A. Unsecured, I believe. There are several notes; it is [fol. 3153] not one.

Q. What is the date of those notes?

A. I can't give you that exactly. It was in the early '30's, I believe, between '30 and '34 or '35, along in those years.

Q. Has the indebtedness of those notes been reduced from time to time?

A. They did make, I believe, one payment on the notes.

Q. In what form was that payment made?

A. I think it was made in gold.

Q. Shipped to this country?

A. No, shipped to England.

Q. Did I understand you to say, Mr. Timken, that there were no copies of these notes available in the United States?

A. We have none.

Q. You have no copy. I understood you to say you have the preferred shares of the British Timken in the United States?

A. Yes.

Q. Did I understand you to say you did not have the originals of your shares of common stock in this country?

A. No, we have a part of the common stock,—16,000 shares of common.

Q. As with respect to the part of the common stock you don't have in this country, do you have any stock certifi- [fol. 3154] cates, anything you can point to as evidence of ownership of the stock?

A. No, that stock is held by Timken Holdings. We own the stock of Timken Holdings.

Q. And therefore, by virtue of the stock ownership of the stock of Timken Holdings—is that 100%?

A. Yes.

Q. Therefore you are in position to dictate the policies of Timken Holdings, Limited, pretty completely?

A. Yes.

Q. You mentioned the fact that the Timken Roller Bearing Company had how many stockholders?

A. Exactly about 19,500.

Q. In view of the fact that you have the indebtedness from British Timken and claims to the profits of British and French Timken, and an interest in the equity of French Timken, do you have any explanation as to why you don't have available in this country the evidences, the physical evidences of the indebtedness and the physical evidences of the shares of stock that are in England?

Mr. Ketterer: We object to that.

The Court: What is the objection?

Mr. Ketterer: That is immaterial and irrelevant why they [fol. 3155] haven't the shares of stock in this country.

The Court: I think the Court would be interested in what if any evidences there are, or what the reason for it is that those shares are held in England. Maybe there is some reason.

A. Well, Timken Holdings——

Q. I was merely inquiring as a matter of ordinary corporate practice. It is usual for a corporation to have in its possession the evidences of indetedness and the evidences of the equity interest that it has in foreign corporations or in domestic corporations for that matter.

Mr. Ketterer: I object to that. I don't know whether that is an inquiry or an observation or advice. I ask it be stricken from the record.

The Court: It may be stricken.

A. (Continued) Shall I answer the first one? In the first place British Timken stock in England is owned or held for us by Timken Holdings, which is an English corporation. It is natural they would handle the stock. In the second place, Mr. Duncan is our attorney over there and he has handled our interest in those matters for a number of years.

Q. Who are on the Board of Directors of Timken Holdings, Limited?

[fol. 3156] A. I don't know who is on except I believe Dewar has gotten off; Duncan, certainly.

Q. Duncan is on, and is the choice of the other directors up to Mr. Duncan or how many directors are there in Timken Holdings?

A. I think there are three.

Q. I would judge he would have his men as the other two?

A. His representatives.

Q. Do you issue any instructions to Mr. Duncan or to the other directors as to how you want the stock voted?

A. The stock of British Timken?

Q. The stock of British Timken.

A. Yes, we have told them. I don't know that we issue specific instructions but he understands we go along with Dewar as long as the company is successful.

Q. What is the other nature of the instructions which you issue to the directors of Timken Holdings, Limited?

A. I don't believe there is any others.

Q. Would you say that the arrangement that you had was in economic effect similar to that of a voting trust, in which by and large, Mr. Duncan exercises discretion as long as Mr. Dewar didn't rock the boat?

A. No, I wouldn't say Mr. Duncan did exercise discretion.

Q. He did not exercise discretion?

[fol. 3157] A. He followed our wishes. He knew we were to go along with Mr. Dewar as long as the company was successfully managed.

Q. Could you tell us what the due dates are of the promissory notes which you referred to?

A. They are serial notes. No, I couldn't tell you what they were.

Q. You couldn't tell us what the due dates of the notes are?

A. That is information I can get.

Mr. Timberg: In connection with this transaction, from our standpoint, we have the necessity of examining considerable material that counsel have been good enough to furnish us, and we have subpoenaed Mr. Timken on our own account. I do wish to return to Mr. Timken later on, if there are details that haven't been cleared up in the interim; and this examination of mine is only confined to clarify the matter.

The Court: You want to reserve the right to cross-examine Mr. Timken further?

Mr. Timberg: I want to reserve the right to cross-examine him further.

The Court: That may be done.

Redirect examination of William Robert Timken.

By Mr. Ketterer:

Q. Mr. Timken, Timken Holdings was organized when? [fol. 3158] A. I think it was in 1934.

Q. And that was at the time that the stock or part of the stock that had previously been owned by the Timken Roller Bearing Company and Mr. Dewar was offered for public sale?

A. That's right.

Q. And the purpose of the organization of the company was to place the stock under common control in connection with the management agreement that had been worked out with Mr. Dewar?

A. Yes, sir.

Q. That was merely a matter of continuing the management agreement with Dewar that had been worked out at the time of the acquisiton by Dewar and the Timken Company of the British Timken Roller Bearing Company?

A. Yes.

Q. At the present time does the Timken Holdings have any business aside from the holding of the stock of the Timken Roller Bearing Company?

A. That is all it ever did have.

Q. In respect of the handling of the Timken stock as of the present time what is the fact as to whether it is subject to the management agreement as currently in effect?

A. Yes, we have an agreement with Mr. Dewar.

Q. And in the voting of that stock anybody who acts for [fol. 3159] or on behalf of Timken Holdings is bound by that management agreement, is that not the fact?

A. Yes.

Mr. Ketterer: That is all.

If I said the Timken Holdings is holding the stock of the Timken Roller Bearing Company, that was an inadvertance; it is the stock of Britsh Timken.

The Court: I understood that was what you meant.

Recross-examination of William Robert Timken.

By Mr. Timberg:

Q. Is this management agreement you have referred to in evidence in this proceeding?

A. I think it is.

The Court: That is the agreement to which reference was made in the course of the trial?

Mr. Ketterer: Yes, there is a copy in evidence.

Mr. Timberg: I just wanted to be sure we were talking about the same agreement.

Q. Does Mr. Duncan have physical possession of the notes that are held in your name?

A. No, they are held by the Westminster Bank.

[fol. 3160] Q. By the Westminster Bank and the account is in your name?

A. That account is in joint names.

Q. That account is in joint names. Are the dividends of the French Timken stock being paid currently?

A. They were paid up to the war and at that time it was agreed mutually to suspend the French Company. The fact is we didn't even have a plant. I don't believe there have been any payments since the war as dividends.

Q. Has that been because of the financial operating condition?

A. Yes, they have been under very difficult conditions.

Q. They have been under difficult conditions. What is the general understanding with respect to French Timken stock as to what happens if dividends are not paid?

A. It is not so much the dividends. The agreement we have with Dewar is that $24,000 a year be paid, and as long as that is done he is in control of the company—similar to the management agreement for the British Timken.

Q. But your testimony is to the effect no payments have been made since the war?

A. We have gone along on that because of current conditions.

Q. But you do have the option to assume control of French Timken provided he would not make up the back payments?

A. Provided he would not make up the back payments.

Q. Do you have any notion how long the notes and the [fol. 3161] stock that we have been talking about as located

in England have been there? Has that been from the date of their issuance?

A. I think the big majority has been there. There have been qualifying shares held in France.

Q. Qualifying shares were held in France, and the stock owned by American Timken in French Timken has been held in England since the original shares were issued?

A. The biggest majority of them.

Q. Is the only exception to that the qualifying shares?

A. I believe it is.

Q. With respect to the notes, when they were originally entered into, where they deposited in England?

A. Yes, I think they have been there since that.

Q. Since issuance, and in this same Westminster Bank account?

A. Yes.

Q. Now, did I understand you to say that Mr. Dewar no longer has any holdings in Timken Holdings, Limited?

A. He has no ownership in Timken Holdings.

Q. Does he have any other interest in Timken Holdings?

A. In Timken Holdings?

Q. Timken Holdings, Limited?

A. No, he has no interest.

Q. Neither as a director?

A. I believe he has resigned as a director.

[fol. 3162] Q. You believe he has resigned as a director. What is the extent of Dewar's present interest in British Timken?

A. I have that here. (Refers to paper) To the best of our knowledge he owns 94,960 common shares. He may hold a few shares of preferred but it is purely a nominal interest. Of this 94,960, it is possible Pascoe owns some. In other words we consider Pascoe and Dewar as one.

Q. What is the current market value of that holding, Mr. Timken?

A. I believe the latest quotation on British Timken common stock is 77 shillings. I would have to work that out.

Q. In other words he has 94,960 shares worth 77 shillings, and you would have to work it out on the new currency system?

A. That is right. It dropped quite a bit on account of the devaluation.

Q. What is the extent of his holdings; does he hold common or preferred shares?

A. A very nominal amount of preferred, a hundred shares, probably.

Q. What is the market value of the preference shares held by your company?

A. The last quotation on that was a British paper issued [fol. 3163] before the devaluation in pounds, and at that time it was quoted at 19 shillings and 9 pence.

Q. So that your 10,000 shares would be——

A. Oh, roughly 25 to 30,000 dollars, depending on what happens to quotations after the devaluation.

Q. Do these preference shares have voting rights?

A. Only in the case of the dividends not being paid.

Q. What is that dividend?

A. 4½%.

Q. Do you have any indication of the worth of the stock in Timken Holdings, Limited? You have indicated that is so closely held it is hard to get quotations on it, but the stock of British Timken is of different nature, it is traded?

A. It is traded in.

Q. Listed on the Exchange. Do you have any knowledge how actively it is traded in on the Exchange?

A. I couldn't tell you how active; it is quoted occasionally as being sold.

Q. Transactions do take place?

A. I wouldn't say it is an active stock, it is traded in.

Q. Your estimate of the value of the shares was based on the stock market quotation?

A. Yes.

Mr. Timberg: That is all.

[fols. 3164-3168] The Court: What is the total amount of common stock outstanding at the present time?

The Witness: Of British Timken?

The Court: Yes.

The Witness: 400,000.

Mr. Ketterer: I think, if your Honor please, the facts as to the percentage of stock that is owned by Mr. Dewar and American Timken in British Timken is already in the record. I didn't want to encumber it further.

The Court: That is the reason I accepted it. I understood the interest of Timken Roller Bearing Company was approximately 30%.

Mr. Ketterer: That is correct.

The Court: I didn't know whether it had changed.

Mr. Ketterer: No, it remained the same. The holdings as between Dewar and Timken is approximately 50% in British Timken.

[fol. 3169] Thereupon the defendant called as a witness Imrie De Vegh, who, being first duly sworn, testified as follows:

Direct Examination of Imrie De Vegh.

By Mr. Ketterer:

Q. Will you state your name?

A. Imrie De Vegh.

Q. You testified, Mr. De Vegh, I believe at the trial of this case previously?

A. Yes, sir.

Q. I believe at the time you testified before you made a distinction between what you referred to as competitive trade as distinguished from administered trade?

A. That is so, sir.

Q. As a preliminary, will you explain just briefly to the Court what you meant when you referred to those two terms?

A. I meant competitive trade in the conventional sense as freely competitive on a price or quality basis among competitors having more or less equal access to the market. In the case of administered trade this competition on a price basis with equal access to market is removed by administrative action by government. This is a phenomenon that has become prevalent. That first appeared after the [fol. 3170] First World War and has become very prevalent after the Second World War, until at the present time the bulk of the foreign countries of the world trade on a strictly administered basis. In other words, on a basis in which, for instance, a market is allocated among suppliers not on the basis of who the most efficient or lowest cost supplier is but on the basis of what currency the payments are to be made in which the supplier would require.

Q. And I believe you testified before that that condition was very general throughout the world outside of the United States of America?

A. Since the Second World War very general, yes, sir.

Q. Now, since you have testified in the spring of 1948 has there been any change in respect of the manner in which trade is conducted, as to whether there is more or less administered trade or more or less competitive trade?

A. Very disappointingly since April, 1948, the situation has become worse, in the sense that the administered restrictions especially in Great Britain have become worse.

Q. By worse you mean what?

A. I mean that today there are more limitations on imports from the United States into the United Kingdom, and [fol. 3171] quantitatively the trade is more restricted than it was in April, 1948.

Q. Have you made a check on the Government statistics on the subject of exports of antifriction bearings from the United States into the United Kingdom and other countries of the world?

A. At the time of the trial I believe that was introduced in evidence.

Q. Have you checked since that time to bring the figures down to date as taken from the Government figures on exports?

A. I have checked the total exports of bearings from the United States to all countries for '47—well, '47 was already in the record—for '48 and the first part of '49.

Q. I hand you here a paper marked for identification as Defendant's Exhibit C (decree) and I will ask you if you can identify that?

A. This is the tabulation that I have prepared.

Q. And shows the exports of antifriction bearings from the United States to the United Kingdom and other countries of the world?

A. That is right.

Mr. Ketterer: We offer Defendant's Exhibit C in the record.

[fol. 3172] The Court: It may be received.

Q. Now, looking at Defendant's Exhibit C will you explain to the Court what that shows in respect to exports from the United States to the United Kingdom of antifriction bearings, as to whether there has been a decline or as to whether there has been an increase in such exports?

A. The peak was reached in 1948 when 5 million dollars worth were exported. In the first half of 1949 the quantity

was down to slightly over 1 million, to be precise $1,175,000, in round figures, which is at an annual rate considerably less than half the rate of '48. However, during these six months there were no additional restrictions imposed on imports into the United Kingdom. Additional restrictions were imposed in July, 1949.

Q. When you say there were no additional restrictions——

A. Additional as compared to what the nature of the administration of trade was in the years 1946, '47 or '48.

Q. Now, have there been additional restrictions imposed on trade to the United Kingdom since July 1st, 1949, or immediately prior to that date?

A. On July 5, 1949, the Chancellor of the Exchequer announced a standstill on imports from the United States. [fol. 3173] This was further specified—this was a statement made in the House of Commons. On July 14th, there was a further statement elaborating this standstill which said that for the three months no new commitments to import from the United States will be allowed either on Government or on private accounts, excepting that the British Government may allow the honoring of existing commitments and that in special cases where it is apparent a loss or stoppage would result from not importing or where the importing is necessarily of a seasonal nature there will be exceptions made to this absolute rule of three months standstill. Further, he announced that for the following year there will be a 25% over-all reduction in total purchases from the United States. And, finally, he announced that there will be a re-programming of machinery and related imports from the United States after the British Government has seen what the result of these dollar-saving measures will have been.

Q. Now, after July 14, 1949, have there been any other steps taken by the government of the United Kingdom in respect of controlling or restricting imports from the United States of America?

A. A bi-lateral trade agreement was concluded with Argentine, which was so discriminatory against American products that the State Department I believe entered a [fol. 3174] protest against it but finally, I believe, approved it or accepted it as clearly inevitable under the present conditions. The most important feature of this is that it happened in spite of the ERP.

Q. When you say a bi-lateral trade agreement, you mean what: will you describe that briefly to the Court?

A. What I mean, sir, is when two countries agree to transactions among themselves, to concessions between themselves not available to other countries, only available to the two contracting parties, and that are not available on a multi-lateral basis to other countries.

As you know, the United States' policy is to promote multi-lateral trade and multi-lateral agreements wherever possible. That is clearly to the interests of the most efficient producer, if it can be put into operation. The reason why it has such difficulties in being put into operation is because the less efficient producing countries are all terrified of being swamped with merchandise on a multi-lateral basis and therefore they try to exclude and protect themselves and limit their trade to countries more their own size in economic competition.

Q. Now, has there been any recent conference in Washington in respect of the trade policy of the United Kingdom in respect of imports from the United States?

[fol. 3175] A. There has been the Three Power Washington conference which ended on September 12th, at the end of which a communique was issued, point 12 of which admits for further consideration the practice that the United Kingdom will be allowed to loosen its import restrictions discriminatorily in favor of other weak currency countries.

Q. In other words, does that mean the American Government has given recognition of this bi-lateral policy that was announced of the Argentine-United Kingdom bi-lateral agreement?

A. That is my opinion.

Q. Have you an opinion as to whether or not the restrictions as they currently exist on trade between the United States and the United Kingdom and the Sterling countries, generally are likely in the future to be relaxed or whether they may be intensified?

A. I believe that the policy of restriction is very unlikely to be relaxed except possibly under exceptionally favorable conditions for very short periods of time, which I do not specifically foresee at the present time. Consequently, I believe that the quantity of total trading is likely to diminish somewhat.

If I might give you my reason, it is this: that in recent

years the quantity of total trade and the value of total trade was at the record level. American exports in total [fol. 3176] quantity and value have never been as high as they have been in recent years, as my own exhibits show, but that was trade financed by the highest gift and loan appropriations that this country has ever made to foreign countries. Now, these foreign countries all suffered from this dollar drainage, which is the reflection of our immense productivity. The dislocation caused by the Second World War made them handle on an administered allocated basis whatever dollars they have. The quantity of dollars is determined to a limited extent by the amount they can sell to the United States, and in recent years, controllingly by the amounts that were made available as loans and gifts, which have been running in the amount of six or seven billion dollars a year. Now, I understand it is the policy of Congress and the Government to reduce the ERP appropriations yearly. I believe this year's proposed appropriation is somewhat lower than last year. I don't believe Congress has passed the final vote yet. I believe it is in the program, and it has been reiterated by the Administration all the time that by 1952 the ERP will terminate, and this can only mean that the supply of dollars to foreign countries is going to be reduced very substantially, because the amount involved is so large. Where else are there five or six billion dollars [fol. 3177] annually available to foreign countries additional to their present sources other than the ERP to fill the gap? I do not see these additional dollars forthcoming and therefore at the present time you have to conclude that the total amount of U. S. foreign trade has passed its peak.

Q. Has the recent action of the British Government in devaluing the pound any effect on the value of exports to the United Kingdom?

A. The purpose of the policy is to make American products more expensive for Britishers than they were before, and to make British products cheaper for Americans as well as Canadians and other foreigners that did not follow the devaluation of the Sterling, which of course wasn't very many.

Q. And if the effect of the policy is as you have indicated, namely, to make American products more expensive for Britishers, have you an opinion as to whether that will tend to increase or decrease exports from the United States?

A. I think, frankly my opinion is that it will not make much difference because the British are buying from the United States today everything for which dollars are available. If dollars were available in unlimited supplies they would probably buy two or three times as much. I should have said this in the past tense. When the pound [fol. 3178] was at $4 the demand in England for American products was notoriously very much greater than the dollars that the British Government could make available. Now, the fact is that the total number of dollars that the British Government is going to make available for the purpose of importing from the United States is going to be less next year than last year. Whether the devaluation of the pound and the resultant increase in the cost of American products is enough to cut out all this backlog of unsatisfied demand seems to me doubtful. I believe the controlling factor with respect to the value of trade will be what the British Government allocates, and there will be demand for every dollar the British Government can allocate.

Q. From the standpoint of imports into the United States of antifriction bearings have you an opinion as to whether or not the devaluation of the pound will have any effect on that?

A. You are referring specifically to antifriction bearings rather than generally?

Q. That is right.

A. I do not believe it will have a perceptible effect because I do not see where significant quantities of antifriction bearings would come from. The fact that antifriction bearings [fol. 3179] were so badly needed in Europe throughout recent years that they were a major item in—that bearings from the United States were a major item in their total supply of bearings, indicates, at least, some doubt as to how they could now suddenly produce a surplus of bearings that they could export to the United States when their own industrial activity not only has not declined but on the most recent figures was still on the increase. In other words whatever bearings they needed in '46, '47 and '48 they will continue to need this year and possibly some more.

Q. Now, are you familiar, Mr. De Vegh, with the policy of the British Government in respect of the transfer of capital from England into any other areas of the world?

A. Yes, sir.

Q. And specifically as to the policy of the Government of the United Kingdom as to transfers of capital from that country to the United States?

A. Yes, sir.

Q. Will you outline briefly for the Court what procedure or technique must be followed in respect of the transfers of ownership, for example, of stock of a British corporation, the shares of which are held in London?

A. Yes, sir. The British Government has an absolute [fol. 3180] rule that it will not allow, will not make available dollars for the transfer of capital. They are so short of dollars and they have been so short of dollars since September 1939, that it would have been really a criminal waste of dollars to give any of this short supply of dollars away for the purpose of capital transfers. Therefore——

Q. In other words, to interrupt you, Mr. De Vegh, if the owner of stock in a British company wanted to dispose of that stock and transfer the proceeds of the sale into dollars, as I understand from what you have said, the British Government would not permit that sort of transfer?

A. The British Government would not make dollars available for the purpose, and since nobody else is allowed legally to deal in dollars within the United Kingdom, that would be the end of it.

Q. Now, is there any step that can be taken or any procedure that might be followed by the owner of stock in a British company to on any basis transfer his ownership from Sterling or pounds into American currency or dollars?

A. Yes.

Q. Will you outline the way in which that may be done?

A. The British Government will allow, under license, the transfer of British assets owned by foreigners among [fol. 3181] foreigners. In other words, if I own a hundred shares of, let's say Imperial Chemical Industries in London, and you are willing to buy it from me, I can sell it by applying to the Bank of England for permission to transfer that stock from my name to your name. And as long as I can show that this transaction took place between foreigners, the British Government will license the listing of the stock, the switch in the Registry from my name to your name, but it has to be among foreigners, and specifically in the case

of dollars it has to be among either United States residents or foreigners who legally hold dollars. I assume a Venezuelan could do the same thing.

Q. In that case it would be up to the individual purchaser to make the switch of the investment from a Sterling basis to a dollar basis and make the currency available for that purchase, is that correct?

A. When I sold you my Imperial Chemical stock you would pay me in dollars, so where I used to have Sterling asset I will now have a dollar asset, and you who had a dollar asset will have a Sterling asset. We just change places, but that is the way in which individuals can export capital from the United Kingdom, although collectively no change took place.

[fol. 3182] Q. Is there any recognized market for that sort of transaction?

A. There exists a market, although an extremely small one, and very irregular and not a dependable one.

Q. And how small is it?

A. Well, like all these things it is very hard to make a dependable quantitative estimate but in British Government securities in New York you are usually able to buy and sell ten or twenty thousand dollars worth in a day without changing the quotation. That of course compares with transactions of hundreds of times that size on the New York Stock Exchange, or generally in American security markets.

Q. On what basis could a transaction of that sort be handled, only on the basis of the quoted Exchange value of the pound or on some other basis?

A. No, sir, it is on the basis of what is known as the "switch" pound.

Q. Switch pound?

A. Right. In other words the Sterling rate which governs securities.

Q. And what is that rate on the small transactions you have described as having taken place from time to time on the New York Market today?

A. Well, as of yesterday the switch pound rate for [fol. 3183] British Government securities was around 1.90, 1.95 per pound. Excuse me, I believe it was 1.85 bid and 1.90 offered approximately.

Q. As compared with the 2.80?

A. As compared with the 2.80 official rate. For West African pounds the rate is but a nickel higher. For industrial securities the rate is about 10 cents higher and for South African gold shares it is about 40 cents higher than the Government rate, because these constitute separate classes of securities. The British Government has carefully classified foreign balances in London. In other words pounds Sterling owned by foreigners, the English securities owned by foreigners, into a number of classes to which different regulations apply in order to prevent even indirect leakages of capital out of the United Kingdom, and that is the reason why there are so many rates.

The Court: I think we will stop at this point and resume at 2:00 o'clock.

(Noon recess taken.)

[fol. 3184] Wednesday, September 28, 1949, 2:00 O'clock P. M.

Direct Examination of Imrie De Vegh (Continued).

By Mr. Ketterer:

Q. I believe, Mr. DeVegh, before the noon adjournment you testified that the number of transactions in the switch pound market in New York, so far as volume is concerned, was negligible, is that correct?

A. It's very small, yes, sir.

Q. And have you any idea, or can you tell the Court in dollars, for example, for the year 1948, what the total or approximate total of those operations in New York would have amounted to?

A. I don't think I can give a reliable figure, because there are mostly small transactions involved. The total amount of trading in the leading English stocks on the New York Curb Exchange is, oh, it varies between 10 and 50,000 dollars in a year. But I am not absolutely certain that every one of those transactions goes through the Curb Exchange or that some of the transactions aren't among American owners in American cities not involving switches on the other side. I think in Imperial Chemical it was something like $40,000 all through the year 1948, 40, $45,000, something like that, or around 11,000 shares at about $4 a share.

[fol. 3185] Q. That was the total sales reported in that year?

A. On the New York Curb Exchange.

Q. Yes.

A. Now, as I said, there are two limitations there. Some of that trading may have been between Americans without involving switches in London, others may have involved switches in London and weren't put through the New York Exchange but handled over the counter. That's very hard to say. It is really a pretty disorganized thing, I mean individual transactions occur and then there is no transaction for a long time. It's not a regular market like in an active listed stock.

Q. What would be the effect of an effort to market the stock ownership the value of which was approximately $1,300,000 in this switch pound market?

A. Well, within any given short interval of time it couldn't be done. I mean there aren't bids of that kind or amounts. The bids run, oh, $3,000, $5,000, that kind of thing.

Q. In point of time you say it couldn't be done in a short time?

A. I don't believe so, no, sir.

Q. From the standpoint of realization, on the basis of your experience and observation of the switch pound market, on what basis could it be concluded even over a longer [fol. 3186] period of time, from the standpoint of realization?

A. Well, I believe that it would have a very depressing effect on the switch pound rate. How depressing would depend on the amounts in which it would be doled out, I mean to liquidate at the rate of $1,000 a day or $5,000 a day or $10,000 a day. I mean that kind of consideration would determine to what extent it pushed the rate down. But it is a thin market and nobody supports it. The British Government certainly won't support it. In fact—this isn't exactly to the question you asked me, but it has an indirect bearing on it—if the transaction threatened to be concluded in a way that would temporarily destroy the switch market quotation, the British Government might say it doesn't want to license it, because it isn't agreeable to it that that switch pound transaction should take place at a dollar a pound. After all at a dollar a pound you could sell it, presumably, to a speculator somewhere.

Q. As compared to the $2.80?

A. Yes, sir, or the $1.95 switch pound rate for small transactions.

Q. You have talked about the liquidating of a foreign investment and getting out of Sterling currency into dollar currency where the transaction would be handled between two Americans?

A. Yes.

[fol. 3187] Q. Suppose the stock of a British company was offered in London in the British Market, would the technique of getting out of Sterling and into dollars be any different from that you have described?

A. The difference consists in the additional permission required because one party to the transaction is a British resident.

Q. You mean by that it would be necessary, if a British resident were to purchase the stock, that he would have to get permission from the British Government?

A. Well, that goes without saying. I mean you couldn't transfer the stock as an American to anybody without a license, but there is this extra step, that the British resident couldn't possibly hold legally dollars that he could dispose of in the switch pound market. Therefore the disposal to an Englishman requires the additional step of disposing of the Sterling proceeds. In other words, to an Englishman you could only sell for Sterling, and the Sterling that you receive the Bank of England won't allow you to hold, of course, for more than a month, one or two months, I believe is the time limit within which you have to reinvest into equivalent securities.

Q. And by "equivalent securities" you mean what?

A. If it is a British industrial stock, another British [fol. 3188] industrial stock.

Q. By that I assume you mean that if an attempt was made to dispose of stock that the Timken Roller Bearing Company has in British Timken, and the sale was made to a British subject——

A. And the British Treasury licenses the sale.

Q. Assuming the procurement of licenses, it would be necessary, first of all, for the seller, the Timken Roller Bearing Company, to reinvest in some British security, is that correct?

A. In an equivalent security, a British security of the

same kind. In other words, if industrial stock, another industrial stock or a British Government bond. If it were a gold share, then you could reinvest in a gold share or an industrial stock or a Government bond. But you can't go backwards. In other words, you can't go out of a Government bond into an industrial, or out of an industrial into a gold share. That's the principle of these classifications. Consequently, you would have to reinvest in another British industrial stock, and then if you still wanted to get dollars in their place, dispose of those through the switch pound market.

Q. By the process that you have described?

A. Yes.

[fol. 3189] Q. Now, is the ownership—or the location, I should say, of the certificates themselves in England of any significance in connection with a transaction of that sort?

A. It is of some significance in that when a transaction takes place in New York entirely the British Government allows, as a matter of course, the licensed shipping in and out of the pieces of paper, whereas if the security is already in London then you have to arrange for the in-switch.

Q. And is that done by Government license?

A. Well, everything is done by Government license.

Q. And that, specifically, would have to have Government approval?

A. Yes, of course. As I said, these are transactions that occur in very small amounts all the time, and once in a blue moon somebody, dependent on market conditions, can arrange a slightly larger transaction. But usually it takes many months to work out, and it is really—I should almost compare it to the selling of great paintings. If Mr. Andrew Mellon is buying a painting it is worth $1,000,000. If he isn't buying it's worth $200,000. You can't tell whether Mr. Andrew Mellon will be buying when you want to sell your old master.

Q. Now, Mr. DeVegh, is the market in the switch pound market for British Government bonds any better sup-

[fol. 3190] ported or any stronger than it is for British industrials, if you wanted to get out of sterling into dollars through the means of the switch pound?

A. The market is just as unsupported. I mean nobody is going to buy for the British Government in order to

support the sterling bonds in New York. But, I have mentioned once before the approximate size of the market.

Q. And you also gave, I believe, a while ago, or perhaps it was before lunch, the present switch pound rate on British Government bonds at $1.80 per pound?

A. I said yesterday, I think it was, $1.85 to $1.90, approximately.

Q. I see. All right.

A. I can make a detailed calculation. I don't know whether it makes any sense.

Q. We are not interested in that especially, but suppose you had to liquidate a British Government bond holding of $1,300,000 and transfer that out of sterling into dollars. Would you think that the price of $1.80 would hold, or $1.85 would hold in connection with a transaction of that magnitude?

A. That would be quite inconceivable. In fact, in British Government bonds it would be even more inconceivable than in British industrial equities, because a speculative [fol. 3191] element may be lacking in the bond. I mean in the case of an industrial security they are always finding, especially if there is a bull market or strong market, that at one place a buyer will be found who at a price will take a gamble. On British Government bonds this gambling element of capital appreciation is present to a much lower degree and, therefore, I think that there it would be a question of peddling it out over a very long period of time and pushing the rate down.

Q. And the figure you gave a while ago on your estimate of perhaps a dollar a pound in respect of a transaction of that size, do you think you would be able to realize that much and to transfer out of British Government bonds through the switch pound market into dollars?

A. That's awfully hard to say, sir. I said that as a figure really representing a drastic price cut. With a transaction of such magnitude, from the present reports exactly as to what the rate would be nobody can tell.

Q. Now, if it were necessary to get out of a French investment in France, is the technique or the operation any different, or the market any different, than what you have described in respect of an investment in a British equity?

A. The technique is the same. The attitude of the

French Government is exactly the same as the attitude of the British Government. Recently—to be precise, a [fol. 3192] week ago Tuesday—the French Government revised its foreign exchange regulations and established a commercial rate of 350 francs to the dollar. I don't know what the present French switch franc rate is, how much below 350 it is, because there are practically no transactions in New York. I mean the French switch franc is something that is traded in Switzerland.

Q. Would the loss associated with such a transfer be generally of the same character that you have described in respect of the loss associated with the transfer out of pounds into dollars in connection with liquidation?

A. Yes, without doubt, but I don't know how much. That would depend on several things, and specifically it would depend on whether the French themselves are repatriating into francs or not.

Q. By that you mean what?

A. By that I mean that it is absolutely notorious and a matter of common knowledge that in France there has been a large clandestine export of capital during the last ten years, just as there had been a very large clandestine export of capital during and after the First World War; that French capital after 1926 went back into France, and with possibly increased proportions came out of France again before, during and after the Second World War. If [fol. 3193] the French start to repatriate their capital once more, of which there is no indication at present, the sale of French assets at a discount will be a very convenient way for them to come back into France. Then there might be a market for them in the future.

Q. When you talk about the French repatriating, you don't refer to the French Government?

A. No, no, French individuals.

Q. French individuals who have withdrawn capital from France during the period you referred to?

A. Yes, sir.

Q. Has there been any evidence of that repatriation up to the present time, to your knowledge?

A. Not to my knowledge.

Q. Now, is there any other consequence that would be associated with the liquidation of a British pound invest-

ment into dollars aside from the ones you have outlined here, assuming the obtaining of all the necessary permits?

A. I would say a substantial loss of income.

Q. Will you explain how that comes about to the Court?

A. Dividends and interests are transferred out of England at the official rate. In other words, on coupons you get $2.80. You used to get $4. Now, in England these [fol. 3194] securities are selling on a yield basis roughly comparable to American yields. If you take the loss of principal inherent in a switch pound rate of whatever it may be, whether it is a dollar or $1.50 or $1.75, you cannot possibly replace the yield in an equivalent domestic risk. Secondly, I don't know whether the realization on this particular block of securities involves a large capital gain and a capital gains tax. To the extent that the capital gains tax farther reduces the realization, the income will be proportionately more irreplaceable. There is less of an opportunity to replace that income in an investment of equivalent risk.

Mr. Ketterer: I think that's all.

Cross-examination of Imrie De Vegh.

By Mr. Timberg:

Q. Mr. DeVegh, before lunch today you testified concerning the import of the defendant's exhibit tabulation figures as to exports of antifriction bearings from the United States to the United Kingdom. That is a document compiled from official sources, is that correct?

A. That's right, sir.

Q. To-wit, the Department of Commerce, Bureau of Census Reports?

A. Yes, sir.

[fol. 3195] Q. Now, you testified as to the extent of the comparative drop in exports from the United States to the United Kingdom.

A. Yes, sir.

Q. I would like to hand you this exhibit and ask you what it shows wtih respect to the tabulation entitled "Roller Bearing Parts Except Rollers" if you were to subtract the United Kingdom total from the total for all countries? I'm just interested in your computation.

A. Don't tell me my arithmetic is wrong.

Q. No, no, your arithmetic is impeccable, but I am interested simply in your testimony as to what the figure would be here if you were to subtract the United Kingdom total from the total you have for all countries for the year 1948 and the first six months of 1949.

A. In other words, subtract 2.9 million from 11.6 million?

Q. That's right.

A. All right, sir. (Witness does as requested.) It shows that to other countries the exports—and I hope my arithmetic is correct—were 8.6 million in 1948 and 5.8 million dollars in the first six months of 1949. In other words, that there has been an increase in the rate of exports to other countries than the United Kingdom.

[fol. 3196] Q. There has been an increase in the rate of exports to other countries?

A. Yes.

Q. My computation came out slightly different, but only by a hundred thousand dollars, so I won't burden you, Mr. DeVegh.

A. All right, thank you, sir.

Q. You referred in your testimony this morning to the fact that—to a statement of July 6th by Sir Stafford Cripps.

A. Yes.

Q. Explaining the nature of import restrictions?

A. Yes, sir.

Q. That he was putting into effect.

A. Yes, sir.

Q. To your knowledge, did not that statement of Sir Stafford Cripps also emphasize the fact that this was a temporary adjustment, and that they hoped to be able to reach an accord that would be of a different nature than the one indicated on July 6th?

A. Well, of course, sir, after all a standstill on imports, if it means what it says, would mean that industry would begin to stop, so obviously a standstill, which was the July 6th statement, was a temporary measure, and the July 14th statement followed that up with the 25% cut and the announcement of re-programming.

[fol. 3197] Q. But it would have——

A. That was for the year 1950.

Q. Now, do you have any notion what the attitude of the British Government would be with respect to their re-programming?

A. I believe that Sir Stafford Cripps explicitly said that they will try to be reasonable about the re-programming, but the total program has to be lower. I have the text here, sir, if you would like to have me read it into the record. That's easily done.

Q. Well, I wondered whether you had the text, Mr. DeVegh, of Sir Stafford Cripps' message justifying the recent devaluation of the pound to the British public?

A. Yes, sir.

Q. I don't want to burden the record here, but could you check as to whether or not this is in the text:

> "With a low rate of exchange we can sell more of goods abroad and so ought to be able to earn more dollars in total"?

That was stated by Sir Stafford Cripps?

A. I don't remember the wording, but such a statement would be made. That is, of course, natural, except that I, however, immediately point out as a matter of arithmetic that this bigger return in dollars means more than 45% increase in sterling, because the 30% devaluation of ster- [fol. 3198] ling means a 44½%, or roughly 44% appreciation of the dollar. So that unless all British export prices are immediately raised to the level where they nullify the effect of the devaluation, the same quantity of exports will produce fewer dollars. So that the expansion in the volume of exports has to be more than proportionate to the decline in export prices in terms of dollars.

Q. Well, it is a fair statement, Mr. DeVegh, that the hope of the British Government in acceding to the devaluation, which has occasioned considerable internal stress and strain in England, was that they could increase their exports and thereby improve their dollar position?

A. That was their hope, that's right.

Q. That was their hope, therefore they are at least interested in the freedom of trade as far as their export trade is concerned?

A. Well, sir, of course they are. As a matter of fact, that's exactly the reason why they take such pains to expand their transferrable area within the sterling area, where they can trade more freely, because that is their most important market. As a strong industrial exporter.

Q. I understand.

A. Their interests, the interest of the weaker currency [fol. 3199] countries, is the same as the United States, to trade multi-laterally, because that's how they maximize their trade.

Q. Their interest is in multi-lateral trade and their interest is in trade with the United States, as well?

A. But those two interests are separate. They are interested in multi-lateral trade with weak currency areas, and they are interested in maximizing their segment of exports to the dollar area as a national policy but not as an individual business policy, insofar as it allows them additional dollar exchange.

Q. Well, regardless of the currency situation, they are interested in maximizing export trade in all areas, and there are two different techniques of doing it, is that it?

A. Not quite, sir, because I believe that the currency aspect is essential to their problem there because the British Government always in these negotiations has insisted that the balance of payment problem is their central problem, and the balance of payment problem is the new problem, the one that they did not have before the First World War—in fact, very few if any countries had.

Q. But the balance of payment problem with respect to the United States is a matter of maximizing exports?

A. Maximizing exports and minimizing their imports.

Q. And minimizing their imports?

[fol. 3200] A. Yes, sir.

Q. And they would be interested in maximizing exports to South American countries, or to any market they could get into?

A. Indeed, that's what the Anglo-Argentine Bi-lateral Agreement tries to do in Argentine.

Q. Would you also subscribe to the description of the devaluation of the pound that Mr. Paul Hoffman, the European Cooperation Administrator, gave? Are you aware of the statement he has made?

A. No, I don't remember his statement.

Q. Well, it is reported as describing the devaluation—and I can check the quote later on—as a dramatic evidence of earnestness of purpose, and recognition that Great Britain has decided to compete in a free world to capture dollars which are essential to her recovery, and to work

administratively towards conditions permitting a higher level of competitive trade.

A. Yes.

Q. You would not challenge that statement?

A. Oh, yes, I would.

Q. You would?

A. Yes, sir. I mean that's interpreting it in a way that is—on which difference of opinion exist within England.

[fol. 3201] Q. I am interested in establishing the official attitudes with respect to this question, because I think that is as important as your own opinion with respect to it, and I would like to have your opinion with respect to the official attitudes.

A. Well, sir, with respect to the official position, you see, in the spring of 1948 the ERP was voted on the basis of promoting multi-lateral trade and payments, and by August of this year the British were broke again without having made any effort to restore multi-lateral payments. In 1946 the British loan was voted on the basis of restoring multi-lateral trade and payments, and by August, 1947, the loan was gone, although then for 36 days they did have multi-lateral trade and payments. Now, therefore, while it is perfectly true that it is and has been the policy of the United States to drive for multi-lateral trade from the viewpoint of trying to persuade foreign countries to accept our principles of multi-lateral trade, for instance, in the Havana Charter dispute, as you know, these foreign governments are either not biting at all, or only for brief periods, or under very major exceptions. Now, Mr. Paul Hoffman, I believe, made that statement in order to express what he hoped this and the ERP might achieve, but insofar as the policies are concerned, the United States Government [fol. 3202] policy is to reduce ERP aid in the amount of $5,000,000,000 in aggregate over the next two and a half years. Now, it seems to me that in order to replace that by additional exports into the United States is not within the realm of the realistic future, and I feel sure if Mr. Hoffman were addressed on that specific point he would not make an identically hopeful statement with respect to those specific figures, the figures being $6,000,000,000 approximately, of imports into the United States last year and $13,000,000,000 of exports——

Q. Mr. DeVegh, may I interrupt you simply to make the point that I was asking you only with respect to the general level of competitive trade. I am perfectly willing to concede that Mr. Hoffman's statement was with respect to international trade generally and that, likewise, Sir Stafford Cripps' statement was with respect to international trade generally. Isn't it fair to say that the American attitude is that the international community will be a gainer by having world-wide system of international free trade, and that more recently the British are beginning to see that the same way? That's the question I would like to put to you. I'm no longer at the level of United States-U.K. balance of payment.

A. All right, sir. It is the attitude of the United States [fol. 3203] Government to seek agreements with foreign governments with respect to multi-laterality of trade. I do not believe it is the attitude of the British Government per se to go along with this policy, at least insofar as the dollar-sterling relationship is concerned. It is their policy to do exactly the same thing with respect to the sterling area on a dollar exclusive basis. In other words, there is a fundamental policy difference between the two governments which has not been reconciled except by verbal concessions that have to date not been substantiated, sir.

Q. Well, you referred to the charter of the International Trade Organization.

A. Yes.

Q. And that charter concerns not only the question of currency restriction but it also concerns the question of restrictive trade practices, does it not?

A. It concerns primarily restrictive trade practices.

Q. Primarily restrictive trade practices?

A. Yes, sir.

Q. And at least the diplomatic representatives of the United Kingdom, together with those of almost all of the United Nations, have signified their adherence to the charter of the International Trade Organization?

A. Two points in that connection. First of all, it was [fol. 3204] Great Britain and other weak currency countries whose delegations insisted on very extensive escape clauses which in many quarters have created the belief that the escape clauses nullify the practical value of the charter, because the charter——

Q. Where are those escape clauses?

Mr. Ketterer: Just a moment.

Let him answer the question.

A. I do not have the text of the charter with me, but at the time of the Havana conference there was extensive insistence on the part of weak currency countries on not being forced to establish non-discrimination until the balance of payments problem were resolved. This policy certainly holds with respect to all weak currency countries. Now, if balance of payment difficulties constitute a reason for suspension of operations of an international trade charter after its ratification, which has not yet taken place, then obviously in the relevant respect the charter is inoperative, the relevant respect being this specific problem of dollar shortage, the specific problem of diminution of total dollar trade market until new sources of dollars are opened up to foreign nations in sufficient quantities.

Q. With all due deference to Mr. Ketterer, I was going to try to save some time by interrupting you, because what [fol. 3205] I had wanted to inquire about specifically was Chapter 5 of this charter which deals with restrictive business practices and, as you are probably aware from this discussion, the confusing things that we have found to be antitrust violations in this country. Now, where are the escape clauses with respect to the chapter of the International Trade Organization Charter that deals with restrictive business practices?

A. I do not recall but, as a matter of fact, I was not testifying with respect to restrictive business practices I was testifying with respect to the general character of trade.

Q. Well, you were testifying with respect to currency—with respect to the general character of trade, and I am merely trying to inform the Court and myself on this——

A. Yes.

Q. —and it certainly is relevant, the question of currency, but there is also relevant the question of the type of commitments that foreign nations are making with respect to such things as international cartel agreements.

A. Yes.

Q. And, therefore, I have asked you that question, not with any desire of embarrassment, but simply because,

as I understood the escape clauses you talked about, they were limited to the currency transactions.

[fol. 3206] A. That is my recollection. Of course, I don't know to what extent the foreign countries have or are planning to implement any anti-cartel policies, but specifically on the question of the United Kingdom, I have no present knowledge of steps designed to implement any kind of anti-cartel policy, domestic or foreign. But that cartels, whether in domestic or international trade, are undesirable, that goes without saying. I'm sure we completely agree on that.

Q. Are you acquainted with the British Monopoly and Control and Inquiry Act? I have a copy here. The actual title of this legislation is "Monopoly and Restrictive Practices (Inquiry and Control) Act of 1948." I should like to hand it up for examination, then I would like at this point to ask you whether you are acquainted with this?

A. Now that you have refreshed my memory, I remember having read that there was such an Act. I am not familiar with its terms.

Q. Are you aware of the fact that the Act was passed in partial fulfillment of the obligations that the British Government had undertaken by virtue of its representatives signing the International Trade Organization's Charter?

A. No, sir.

Q. Would the President of the Board of Trade of the [fols. 3207-3216] United Kingdom be an authoritative source of opinion with respect to the policy of the British Government with respect to international trade?

A. With respect to international trade policy of the British Government? I should say yes.

Q. He, Mr. DeVegh, was the Minister in charge of presenting this legislation to the House of Commons——

The Court: Who was that?

Mr. Timberg: Mr. Harold Wilson, the President of the British Board of Trade.

Q. —presenting this to the House of Commons, and the hearings that were held in April of this year are also illuminating with respect to a possible shift in British attitude with respect to restrictive practices, and I would like to read you a few of those statements simply to ask you whether you think that those are legitimate expressions of

the British attitude toward international trade and cartels.

A. I would have no other knowledge or opinion than that which would follow from your comments, sir, since, as I indicated to you before, I was not familiar with the hearings and, therefore, I am not prepared to testify about them.

[fol. 3217] Q. I do want to ask you, Mr. DeVegh, as to what your definition is of administered trade.

A. I was referring specifically to trade administered by [fol. 3218] government regulation and government license and not administered by any private groups such as a cartel, whether existent or nonexistent, in any particular industry. I was referring to trade administered by government units for the purpose of regulating the distribution of foreign exchange and the distribution of imports as between foreign countries and the specific country in question, as in the case of the United Kingdom, and that is all that I was referring to, and that is why I was completely unprepared to say anything beyond that.

Q. What is your definition of competitive trade?

A. I believe, sir, that I made the definition when I began testifying, and I believe I said that it was a trade competitive as to price or quality in a market equally accessible to all suppliers. The distinction, I believe, that I made at that point was that administered trade is a trade that discriminates between the suppliers so that certain suppliers do have access to a market and other suppliers do not have access to the same market, even though these other suppliers might have a better price or a better quality.

Q. One last question on this score. Do you feel that any system whereby restrictive practices and cartels are tolerated falls within your definition of competitive trade [fol. 3219] or administered trade, as a question of definition?

A. Do I feel that any——

Q. System of private controls or so-called restrictive trade practices, does that system fall within your definition of competitive trade or administered trade?

A. I have not considered private restrictions as any kind of trade, since the restrictions means that there is no trade. A zero cannot be any part of any sum.

Q. If the restriction is with respect to trade in certain territories, would that be an administered restriction and

a nullification of trade, would you consider that to be administered?

The Court: The question is administered as distinguished from monopolies?

Mr. Timberg: Yes.

A. I was referring to administered trade as trade administered by government units. If private units restrict trade, they are obviously not competing, and, therefore, it couldn't be competitive trade. But they certainly aren't administered, either, because they are not administered by government, and I was addressing myself solely to government administration.

Q. In your last testimony before the Court several months ago you referred, did you not, to the pendency of a [fol. 3220] certain trade negotiation that might have the effect of reducing the tariffs with respect to roller bearings or antifriction bearings in this country?

A. I don't remember that, sir, now. What was it I said?

Q. Didn't you refer to certain Geneva trade negotiations that were going on, and that there was a possibility that as a result of those negotiations there might be a reduction in tariffs with respect to that?

A. I believe we put in a record of the whole tariff history of the United States, and I don't remember now what other matters were mentioned, whether we brought up the Geneva point. But, of course, those negotiations did exist whether they were brought up or not.

[fol. 3221] Q. I understand your testimony, Mr. DeVegh, to be that the disposal of an American interest on the [fol. 3222] British Exchange would be possible but that it would have a restrictive effect on the value of shares if it were accomplished through the London Exchange?

A. That point was not covered, I believe, in my direct examination.

Q. It was not covered?

A. Insofar as what would happen to the pound, shilling and pence quotation of a stock when offered in London in large blocks. That is a separate question, with respect to which I do not see a fundamental difference between an offer in London of sterling securities and an offer in New York of dollar securities. When the stock market in London is strong you can sell securities at a good price. When

it is weak, you cannot sell new issues at all, or only at price concessions. That is just as true on the London Stock Exchange as the New York Stock Exchange.

Q. But that is no legal restriction?

A. There is a legal restriction, namely, the New Issue Committee of the Treasury has to pass on all new issues above a certain minimum amount, which I think is on the order of 10 or 15,000 pounds—I don't remember the figure, but it is a low figure—and that New Issue Committee would govern all public issues of stock offered to the public, whether it covers private sales or not I do not know, but [fol. 3223] in any case even for a private sale a Treasury license would be necessary, so it amounts to the same thing.

Q. But that restriction would apply only to new issues, would not apply to the sale of existing stock?

A. To the distribution of blocks, yes, sir.

Q. To the distribution of blocks of stock?

A. Yes, sir.

Q. I understood you also to say that the question of the depreciation or appreciation that might take place in this case on a sale of stock was dependent to a certain extent whether there was a strong market or a thin market.

A. Now, the two expressions refer to different things.

Q. Yes.

A. A thin market or a wide market means a large volume of transactions or a small volume of transactions. A strong market and a weak market means a market that is going up or going down. The implication in both cases, I believe, is obvious.

Q. And the market would depend upon the rate at which the stock was to be disposed of?

A. At the price—well, really, the price would depend on the market.

[fol. 3224] Q. But by "rate" I meant the market, even a thin market, can be sustained if not too many shares of stock are unloaded at any one time?

A. On the contrary, the thin market is the one that can not be sustained. The thin market is the one that breaks down if you put a lot of——

Q. If you put a lot, but if you put a little even a thin market can absorb it?

A. As long as there is a market you can always sell some.

Q. As long as there is a market?

A. Yes.

Q. Now, I won't bother you with the converse of that situation. I think the same conclusions would apply with respect to sales on the New York Exchange.

A. As London sales.

Q. As a generalization they would apply, would they not?

A. That's right.

Q. You made reference, I believe to the New York Curb Exchange. Did you mean the curb exchange or stock exchange?

A. I meant the curb exchange.

Q. Do you have trading on the curb exchange?

A. Oh, no, sir. You mean British Timken?

Q. British Timken.

[fol. 3225] A. Oh, no. There is no market in British Timken in this country. What I was referring to was that on the New York Curb Exchange several leading English companies are quoted, and there is a market in them. But the volume of the transactions in these individual stocks is very, very small. There is a general statement that there is no market in New York in the British stocks. They are left-overs of a happier age in the 1920's and for a brief period in the 1930's when there was active trading between New York and London and at most, oh, I think about half a dozen British issues were introduced on the curb Exchange and there is this little bit of residual trading in them there. This residual trading is also one of the easiest sources of verifying switch pound quotations.

Q. When you spoke, were you generally cognizant of the fact that the British Timken stock had a fairly high value and had a good dividend earning ratio?

A. The British Timken stock, as far as I know, is selling in London for about 4 pounds a share, roughly speaking.

Q. And its par value is what?

A. I don't know.

Q. About a pound, I believe?

A. That's possible.

Q. And there has been no default with respect to the [fol. 3226] payment of dividends with respect to British Timken?

A. So far as I know, it's a profitable enterprise, but I haven't studied its figures.

Q. Then I believe you made a reference to the fact that

from the time of the devaluation all the dividends and interest payments on British securities, if transferred to foreign holders, would be transferred at the new rate?

A. At $2.80.

Q. At $2.80.

A. That is correct.

Q. Does that mean to that extent the investment of British Timken has already in a sense—rather, of American Timken in British Timken has already depreciated?

A. Well, I think the paradox is that the income has been reduced, but to what extent the reduction of income affects the value of the principal is a separate question.

Q. That's right.

A. I mean, for instance, the other day I noticed that Union Oil of California cut out its dividend and the stock went down, I think, 1 point or 1½ points. I forget exactly which, but it was a negligible reduction because people were anticipating, apparently, the dividend cut. There were several such dividend cuts in New York that have been anticipated at the present and, therefore, when the [fol. 3227] cut in dividends materialized the price went down half a point or 1 point, I mean a negligible percentage as compared to the quotation of the stock.

Q. You are distinguishing, then, between earnings ratio and the profit on stock and its basic equitable value as a capital proposition?

A. What I'm distinguishing between is the impact on the value of the equity on a change that the owners have discounted in advance. The switch pound did not decline when sterling was devaluated from $4 to $2.80 because every owner of switch pounds, apparently, felt that a depreciation sooner or later was inevitable.

Q. If American Timken sold—had an equity in England and were——

A. You mean common stock?

Q. Common stock.

A. Yes, sir.

Q. Well, assuming that it owned the plant directly in England——

A. Yes, sir.

Q. And it sold its capital interest therein, would it be permitted to take the proceeds out of the country under

the current interpretation of the British Exchange Control Act and its regulations?

A. If the British Government licensed the sale. The [fol. 3228] British Goverment has a right to license or not to license the sale, and the British Government has the right to license what should be done with the sterling proceeds. It is the policy of the British Government to allow switches only, switches among foreigners only. In other words, then the situation still would be the same, that you have to find a foreigner that will want to invest in an equivalent amount of sterling, in an equivalent British security. Now, what would constitute an equivalent in the case of a wholly-owned plant, I do not know. In other words, whether the British licensors would say that the wholly-owned plant proceeds would have to be reinvested in British Government bonds or not, I don't know.

Q. But the restriction would apply equally if American Timken voluntarily sold its holdings, either of the plant or of stock interest, in England and tried to withdraw the proceeds of the capital sale, as if it were a sale that they were compelled to make? The British Treasury's attitude wouldn't differ with respect to that, would it, Mr. DeVegh?

A. I don't know whether it would or wouldn't. I mean I can't interpret the policy of the British Treasury. I don't see that a forced sale or a voluntary sale would make any logical difference.

[fol. 3229] Q. You don't think it would make any logical difference?

A. It might make a difference as to the price, of course.

Q. What are the British regulations with respect to the actual transfer of securities, Mr. DeVegh? I am not speaking now of the proceeds from sales of securities, but what are the British regulations with respect to the transfer of stock interests, ordinary shares?

A. Well, as far as I know, there is a form that has to be filled out which the Treasury licenses, approves or doesn't approve. As I indicated in the case of the transaction between foreigners outside the country, the approval is pretty much routine, as far as I know.

Q. Then, if the transfer of securities is purely a routine question which doesn't involve a change in ownership of securities but merely a change in the location, in other words, if you had certain shares of stock in London——

A. Yes.

Q. —and they were in the foreigner's name——

A. Yes.

Q. —and he wished to repossess himself of those shares of stock in the United States——

A. And have them physically in his possession?

Q. And have them physically in his possession, that would not raise a problem with the British Treasury, would it, Mr. DeVegh?

[fol. 3230] A. I have no idea. Such a case has not occurred in my experience. I have no idea. I don't know, sir, whether they would license the physical export of certificates.

Q. If there were no change in title and no currency passing?

A. On purely deductive reasoning, it would seem to me that in the light of their general policy, they would want assurances as to the disposal or non-disposal, because otherwise anybody could ship out certificates and realize dollars and just laugh at the British Government from outside their borders. So on the basis of this deductive reasoning, I believe that the attitude of the British Government in the case of such a license would be that they would allow it as a switch only.

Q. Were you in the courtroom earlier when Mr. Timken, I believe, said that certain preferred shares that had been issued in about 1948 were in this country?

A. I was in the courtroom. I wasn't listening to every word. I don't remember exactly what was said, but it's possible.

Mr. Timberg: That's all, I have nothing further.

Mr. Ketterer: That is all.

(Recess taken.)

[fol. 3231] Thereupon Stephen Ladas, called as a witness, being first duly sworn, was examined and testified as follows:

Direct examination of Stephen Ladas.

By Mr. Ketterer:

Q. Dr Ladas, I believe you testified in the prior hearing of this case?

A. I did, sir.

Q. At that time you testified about the trademark law in various foreign jurisdictions. I would like to ask you whether or not there would be any effect under English law on a declaration by this Court that the contract between American Timken and British Timken made in 1938 was illegal under American law, insofar as that contract affected the ownership of American Timken in the mark "Timken"?

A. Well, the declaration by a United States court of the illegality of that contract would not necessarily be conclusive in England. However, if the American party, American defendant party to the contract fails to perform under the contract and proceeds to act in contravention of the contract, as directed by the decree of the United States Court, then we have the situation which British law describes as frustration of contract. There is an Act which [fol. 3232] is entitled "Law Reform (Frustration of Contract) Act, 1943". That Act was passed particularly with respect to contracts between British and enemy nations, and where performance thereunder became illegal or unlawful. But the Act is general and covers all situations where one party to the contract is unable to perform because the contract has become illegal as to that party.

Q. And so far as the ownership of the trademark is concerned, that would have what effect?

A. If the contract is frustrated, then any covenant by the British company under such contract to do certain acts or to omit certain acts in recognition of the ownership of the trademark by the American Timken Company, that covenant then becomes unenforceable and, therefore, any right that the American Company may have under such contract to claim rights in the trademark vanishes.

Q. But if there was the mere declaration of illegality of the contract, under American law, that result would not obtain?

A. No.

The Court: I didn't get the answer.

The Witness: No, your Honor.

Q. I believe you also testified about the matter of licensing under the law of the United Kingdom and various other [fol. 3233] jurisdictions, that is, licensing of trademarks, did you not?

A. Yes, I did.

Q. And I think at the time of the trial you gave the

opinion that it was proper to license a trademark under English law, as the result of the 1938 Trademark Act in England, is that not right?

A. Yes, I did.

Q. Now, is there such a phrase as "Registered User" under the English law?

[fol. 3234] A. The British Act of 1938 does not really use the term "licensing of trademarks", it uses the term "permitted user of trademark." With respect to a permitted user of a trademark granted by the owner of the trade-

[fol.3235] mark, it qualifies such permitted user as a registered user of the trademark.

The Court: I see. There is no mention of licensing the trademarks, insofar as that term is applied in England?

Mr. Ketterer: That's right.

A. The procedure under the Act is as follows. Whenever the owner of a registered trademark wishes to license another person to use the same trademark, both the registered owner and the licensee apply to the Patent Office in England for the entry of the licensee as a registered user of the trademark. If both parties are affiliated, in other words, if the registered proprietor of the trademark has a controlling interest in the licensee, in the sense that it can appoint the majority of the Board of Management, Board of Directors of the company, then the Registrar does not require anything else but a statement of the case that that is the relation between the parties. Whenever, however, the licensee is not so controlled by the registered proprietor, then the Registrar of the Patent Office in England requires a statement between the two parties setting forth the conditions under which the licensee shall use the trademark, and those conditions must prescribe two things: first, that the specifications for making the product by the licensee [fol. 3236] shall be approved by the registered proprietor of the trademark and, second, that the registered proprietor of the trademark shall have the right of inspection of the finished product. Therefore, the question of licensing of trademarks in England is very definitely regulated in that way, so that only when the Registrar approves the conditions of the use of the trademark by the licensee, then and then only the license is granted and entered in the Register.

Q. If a person establishes himself as a registered user of the mark, what is the fact as to whether or not he could sell readily in the English market in competition with the owner of the mark, or the licensor?

A. Under the law a registered user can be exclusive or non-exclusive. In other words, the right to use the trademark may be granted to the licensee alone, or several licensees, and the owner may reserve the right to use the trademark himself, or may not.

Q. So that, applying the matter specifically to a case of this kind, if American Timken were to qualify as a registered used of the mark "Timken" in the United Kingdom, it would be possible for American Timken to sell in England without infringing the mark, the registration of which the record shows is in the name of the British Timken Company?

[fol. 3237] A. Without any question.

Q. Without any question?

A. That's what the law provides.

Q. So that would not disturb the situation in respect of the ownership of the mark, is that correct?

A. No, the British Company shall remain the registered owner of the trademark and the American Company would be the registered user of the trademark, so they both use the same trademark.

Q. In other countries that are part of the British Empire, does that same registered user or licensee relationship exist?

A. Yes, the law of most of the important British Dominions has been changed in accordance with the British law. Today, New Zealand, South Africa, Australia, Indja, Pakistan and Singapore have exactly the same provisions as the British law. Moreover, a party who has been entered as registered used under British registration may also be entered as a registered user in fourteen other British colonies.

Q. Automatically?

A. Automatically, by application—by just application alone.

Q. That is, by just setting forth the fact?

A. To present the fact to the fourteen colonies, one could —let us say the British Honduras, for example, you would [fol. 3238] get a certificate from the British Registrar showing that American Timken is the registered user of the

trademark "Timken" in England. You present that certificate to the British Honduras Registrar and he enters the same fact in his record, so that the American Company becomes automatically a registered user or licensee of the trademark in the British Honduras as well.

Q. Would the same situation prevail in respect of the mark in France?

A. In France the law was always that you can license the user of a trademark without any restrictions or conditions whatsoever.

Q. How about Germany?

A. And the same is true there.

Q. And on the Continent of Europe generally?

A. Generally in all of the Continent there are two countries, Italy and Switzerland, where a requirement is made that the licensor, the owner of the trademark, must exercise control of the products made by the licensee.

The Court: I did't get that.

The Witness: In Switzerland and Italy, those two countries are the only exceptions, where the license for the use of the trademark is permitted provided the proprietor of the trademark exercises some control over the quality of [fol. 3239] the goods made by the licensee, whereas in the other European countries no such effort to control is made.

Mr. Ketterer: That is all.

Cross-examination of Stephen Ladas.

By Mr. Timberg:

Q. Dr. Ladas, I understood you to be testifying to what a licensee could do who was registering the mark concurrently with the registered owner in England.

A. If I may correct you, the licensee does not register his trademark concurrently with the owner. He is merely permitted by the Registrar to be entered on the records as a person who is allowed to use the trademark of the proprietor.

Q. Are you referring to any situation that relates to what American Timken did in the past, or what it may do in the future?

A. So far as I am aware, American Timken is not registered as the registered user.

Q. American Timken is not registered as the registered user, and the Court in this case has found that it is not the equitable owner of the mark.

Mr. Ketterer: I object to that. That is not what the Court found.

Mr. Timberg: Sole equitable owner.

Mr. Ketterer: I beg your pardon. That is not what the [fol. 3240] Court said in the memorandum opinion. If you will read it, Mr. Timberg, you will find it isn't.

The Court: Well, I think the Court certainly ought to know.

Mr. Timberg: Supposing we leave that to the Court.

Mr. Ketterer: Well, I object to phrasing a question directed to a witness that the Court found so and so, and then ask the witness to proceed from that point.

The Court: I think that ended the question.

Mr. Timberg: That ended the question, yes.

The Court: I don't believe you are going to be harmed in the slightest by what counsel's remark may have been. The Court ought to understand what he found.

Q. I was simply referring to whether you were referring to anything that related to the position of American Timken in the past or as to its legal rights in the future, and your answer is as to its legal rights in the future. Such a writing-in of the name of American Timken as licensee would require the consent of the British owners?

[fol. 3241] A. Definitely.

Q. Definitely. It could only be done by consent?

A. Yes.

Q. Is it your understanding that the British Company is in any respect at present the licensee of the American Company in England?

A. I testified to that effect.

Q. That it is a licensee of the American Company?

A. Equitably.

Q. Equitably?

A. Only.

Q. So that what you are contemplating for the future is a reversal of the roles, that is, the British Company to become the licensor and the American Company to become the licensee?

A. That would not necessarily conclude the matter. In other words, under the existent contract the American Company could always instruct the British Company to transfer the trademark to the American Company, so that conceivably you could have the American Company the owner of the British registration and then the British Company becomes the registered user or licensee.

Q. Yes, but that right is exercisable upon termination of the contract?

A. Yes.

[fol. 3242] Q. It wouldn't be exercisable in this case unless the parties decided to terminate the contract, otherwise until 1965, as far as the present contractual obligations of the parties stand?

A. That's right.

Q. If the British Company should refuse its consent it could sue the American Company for infringment?

A. Correct.

Q. If the American Company wished to use the trademark as part of its corporate name, and the British Company did not consent, could the British Company sue in infringement or in unfair competition?

A. Yes, sir.

Q. Could it sue in both?

A. Well, depending on the manner of the use, it could sue in both.

Q. It could sue in both?

A. Because, as you know, under British law the registration of a trademark makes a statutory monopoly, which is entirely different from——

Q. From the American?

A. Yes.

[fol. 3243] Q. What would such a cause of action be if brought by the British Company against the American Company, what facts would the British Company have to prove in order to maintain an action for unfair competition?

A. It would prove that it is the proprietor of the trademark registration of "Timken", which is seven years old and, therefore, incontestable, and that the use by the American Timken of the word "Timken" alone or of "Timken" as a prominent part of its corporate name, should be an infringement of its trademark, and it would be wise, prob-

ably, for the company to also sue for passing off on that evidence.

Q. What would the passing off action be based on?

A. Confusion as to origin.

Q. Confusion as to origin?

A. And deception of the public.

Q. Would it be relevant in a British court to also bring in the fact that the British Company had had a pre-existing goodwill in the territory in the United Kingdom?

A. Naturally, but with respect to registration, as you know, the company doesn't have to prove it. It stands on its statutory right.

Q. If the registration is acknowledged, it may not have to prove it?

A. That's right.

[fol. 3244] Q. But if it were an ordinary action in unfair competition, it would establish that its goodwill was being impaired?

A. That's right.

Q. And would seek both injunctive relief and damages, accordingly?

A. That's right.

Q. And that is, roughly speaking, the law that prevails in the Continental countries, or would you make any qualification on that, Dr. Ladas?

A. I will say in Continental countries the law is stricter, in other words, you would have technically a trademark infringement because the laws of those countries have no similar restriction as the British law has against registration of surnames, and the law, wherever the surname may be protected—put it this way, wherever the scope of protection of the surname may be smaller than the scope of protection on passing off a trademark, that would apply in this case because Timken is so foreign to the surnames in those countries, so that the average Frenchman, for instance, or German, doesn't understand that "Timken" is a surname.

Q. The thing that would have to be established would be confusion as to product or property in Germany, for example, just to follow it out, if they establish there was confusion in the matter of property as to origin——

[fols. 3245-3246] A. If it is on trademark infringement,

perhaps you could prove the ownership of the trademark, and you stop right there.

Q. But if it is on unfair competition, you would say it would be possible to establish that there was confusion of origin?

A. That's right.

Q. And intent would be immaterial in that type of situation?

A. Definitely, yes.

Mr. Timberg: That is all.

Mr. Ketterer: That is all.

Mr. Ketterer: That concludes our testimony, your Honor.

[fol. 3247] The Court: You may proceed.

Mr. Timberg: If it please your Honor, I'm ready to proceed with the examination of Mr. Robert Timken.

The Court: Mr. Timken, will you take the stand, please?

Mr. Timberg: I should like first to introduce into evidence, your Honor, a letter of March 23, 1949, from W. Robert Timken to Mr. A. J. M. Duncan in London, and a letter of April 7, 1949, from Mr. Duncan to Mr. Timken, together with attachments containing a directors' report of Timken Holdings, Limited, and a revenue account of that company. These have been marked for identification as Plaintiff's Exhibit 1 (decree).

[fol. 3248] Cross-examination of William Robert Timken.

By Mr. Timberg:

Q. Mr. Timken, I should like to hand you this correspondence and ask you whether it refreshes your recollection as to who the directors of Timken Holdings, Limited, were in April, 1949, of this year?

A. Yes, from this it appears the directors were Dewar, Duncan and Pascoe.

Mr. Timberg: I should like to offer this in evidence.

The Witness: They were at the date of that.

Mr. Timberg: At the date of the letter.

The Court: Who were those, again?

The Witness: Michael Dewar, Pascoe and Duncan.

Q. Have there been any changes in those directorships since April of this year, Mr. Timken?

A. I couldn't say.

Q. You did testify, did you not, that Timken Holdings was a hundred per cent wholly owned subsidiary of American Timken?

A. I believe that is true.

Q. And that it held no stock on behalf of British Timken [fol. 3249] or on behalf of Mr. Dewar?

A. I said I didn't believe that it had, because the purpose of Dewar selling his stock in Timken Holdings was to break out of the company, out of Timken Holdings.

Q. Did this sale of stock take place at the same time as the March, 1948 agreement?

A. I believe one of those agreements had provisions for disposition of his Timken Holdings stock to us. Whether the sale actually took place at that time I don't know, but we agreed that it would.

Q. And, despite that fact, Mr. Dewar and Mr. Pascoe still remained as directors of Timken Holdings, Limited, after Mr. Dewar's interest in Timken Holdings, Limited, had been disposed of?

A. Apparently they did.

Q. And to your knowledge they may still be directors?

A. For all I know.

Q. Now, was not the original purpose of Timken Holdings, Limited, to furnish a method of maintaining the control arrangement that you had with Michael Dewar?

A. I would say that was one of the main purposes.

Q. What other purpose did it have?

A. I think it did provide some tax saving to Mr. Dewar.

Q. And you had no other purpose for American Timken, for your company?

[fol. 3250] A. No, I don't believe so.

Q. Now, if Mr. Dewar has no further interest in Timken Holdings, Limited, how does this wholly owned subsidiary of yours, Timken Holdings, Limited, serve as a method of maintaing the control arrangement with Mr. Dewar?

A. It doesn't any longer.

Q. What purpose or function does it now serve to your company?

A. Well, it holds some of our stock outright and some as nominee, actually it is just to maintain the status quo.

Q. In other words, it is simply a holder of your stock in England?

A. It would be our intention to dissolve it.

Q. And when you dissolve it you would have complete control over the stock that it held?

A. Well, complete control no more than we have now; it is a wholly owned subsidiary.

Q. What is the nature of the control you have over the wholly owned subsidiary?

A. Well, its assets are really our assets; it is a wholly owned subsidiary.

Q. You have a hundred per cent of its stock so you can do anything with it you wish?

A. Subject to Government regulation.

[fol. 3251] Q. Subject to Government regulation.

Mr. Timberg: I should also like to offer in evidence executed copies of two agreements dated March 2, 1948, both of them have been marked for identification as Plaintiff's Exhibits 2 and 3 (decree).

The Court: They will be received.

[fol. 3252] Q. Now, I would like to read to you Paragraph 1c of the March 22, 1948, agreement, that is marked Plaintiff's Exhibit 3 (decree), and I would like to ask you to tell me what its legal effect is:

> "In the event of the Canton Company or its successors or its or their assigns (hereinafter referred to as the 'Canton shareholders') desiring to sell all or any of the ordinary shares in British Timken now belonging to the Canton Company and numbered 1 to 4 and 205 to 52700"—I won't bother reading the serial numbers—"all inclusive (hereinafter referred to as the Canton shares) Mr. Dewar shall have an option to purchase all or any of such shares".

Is the effect of this provision to give Mr. Dewar an option on your stock in British Timken if you should desire to sell that stock?

Mr. Ketterer: We object to that.

The Court: Well, doesn't the agreement speak for itself?

Mr. Timberg: I thought so.

The Court: Objection sustained.

Mr. Ketterer: Well, then, there is not any point in asking the witness about it.

[fol. 3253] The Court: I sustained the objection.

Mr. Ketterer: I beg pardon, I didn't hear that.

The Court: I asked Mr. Timberg a question and he said he thought so and I said objection sustained.

Mr. Ketterer: I beg pardon I didn't hear what the Court said.

Q. Now, I should like to read Paragraph 2 of this agreement:

> "Notwithstanding anything hereinbefore contained Mr. Dewar or any of the other Dewar shareholders shall be at liberty to sell all or any of the Dewar shares and the Canton Company or any of the other Canton shareholders shall be at liberty to sell all or any of the Canton shares to a transferee on purchase or otherwise who has been previously approved in the former case by the Canton Company and in the latter case by Mr. Dewar or his legal representatives provided that the transferee delivers in the former case to the Canton Company and in the latter case to Mr. Dewar or his legal representative an undertaking addressed in the former case to the Canton Company [fol. 3254] and in the latter case to Mr. Dewar or his legal representative declaring that the shares transferred and the transferee shall be subject to the conditions to which such shares and the transferor in respect of the same were subject previous to the transfer, and binding the transferee to perform and observe said conditions accordingly."

That is a long provision and I should like you to examine it.

A. (Witness examines same).

Q. Is the effect of that provision, Mr. Timken, to give Mr. Deware the power to block a sale of your stock in British Timken should you desire to sell the stock?

Mr. Ketterer: We object to that.

The Court: That is the same objection as applied to the previous question. Does not the instrument itself or the contract determine that and make that a matter for the Court to construe regardless of what Mr. Timken might say about it?

Q. What was your purpose in entering into this provision in this agreement?

Mr. Ketterer: We object to that.

The Court: What is your objection to that?

[fol. 3255] Mr. Ketterer: Well, the purpose is immaterial, is it not? The contract speaks for itself.

The Court: A great deal was said in the course of the trial about the purposes and the underlying reasons for making these contracts. I think you repeatedly contended in the course of the trial that all of these agreements in respect of the division of territories, fixing of prices, was to carry out the Heads of Agreement that you had referred to, and constantly in the entire course of the trial that proposition was uppermost in the discussion and in the argument of counsel, and I think it is perfectly proper to ask the purpose of the execution of this agreement, what was to be accomplished by it.

Q. What did you intend to accomplish, what was the background of his provision?

A. Why, to continue the arrangements of our control agreement, as in any normal partnership, in other words, if one partner wants to sell he would offer it to the other.

Q. You say this continues the control that you had in your prior agreement, or does it expand the control that [fol. 3256] you had in your prior agreements?

A. (No response).

Q. Let me help a little bit by saying this is intended to replace your existing agreement on the subject, is it not?

A. That is right.

Q. And the question I am asking you is whether in replacing those agreements you have expanded your control or you have expanded Mr. Dewar's control with respect to the disposal of stock that you hold?

A. I don't believe it was our intention to do so.

Q. It was not your intention to do so, but it was your intent to give Mr. Dewar an option to purchase?

A The way that option to Dewar came about, he suggest [illegible] that he had the same right we had and we therefore conceded.

Q. But that was a novel suggestion of Mr. Dewar as of his 1948 agreements; that was not in any of the agreements you were replacing?

A. No, I don't suppose it was.

Mr. Timberg: Now, I should like to introduce, to offer in evidence an exhibit which has been marked as Plaintiff's Exhibit 4(decree) which is an agreement dated September

7, 1935, between the Timken Roller Bearing Company and [fol. 3257] Michael Bruce Dewar.

Q. May I read you Paragraph 1 of that agreement and then hand it to you:

> "Each of them" (to-wit the two contracting parties) "the American Company and Mr. Dewar hereby declares by way of honorable understanding and not as a legally binding agreement that if the other of them or any of his nominees or any company controlled by him shall give a transfer notice under Article No. 28 of the Articles of Association of the Holdings Company in respect of any or all of the shares in the Holdings Company owned by the other party or his nominees or any company controlled by him with or without participating rights connected therewith and the shares comprised in such transfer notice or any of them with the connected rights (if any) are not purchased by the other members of the Holdings Company to whom the same are offered pursuant to the said Article, then, a, the declaring party will not unreasonably stand in the way of the other party or his nominees or the controlled company aforesaid selling such unpurchased shares or any of them with the connected rights (if any) to any person (not being a per- [fol. 3258] son to whom the declaring party shall object on reasonable grounds) at any price not being less than that at which such shares and rights (if any) shall have been offered to the members pursuant to the said transfer notice".

Now, do you recall what the purpose of that provision was?

A. May I read it? (Witness refers to provision). I would say it was obviously to make way for a possible sale of the stock of Timken Holdings.

Q. What are the "honorable understandings" that are referred to in the second sentence here? You recall this agreement says this is a declaration by way of "honorable understanding" and not as a legally binding agreement".

A. I would say it was an understanding that honorable men would use with their partners.

Q. You intended to underscore the fact it was not a legally binding commitment. You weren't referring to any prior understanding between you and Mr. Dewar?

A. I wasn't with the company at the time this was written.

Q. This is one of the agreements that was replaced by the 1948 agreement, is that right?

A. Yes.

Q. Why wasn't this provision carried forward into the [fol. 3259] 1948 agreement?

A. Well, there was no holding company involved in the 1948 agreement. Timken Holdings had by then become a wholly owned subsidiary of our own.

Q. But the entire purpose of Timken Holdings was merely to be a holding company for your stock interests in British Timken, is that right?

A. Yes.

Q. So in the 1935 agreement you were to be subject to this honorable understanding and option to sell your stock?

A. Which stock?

Q. In Timken Holdings.

A. Yes.

Q. And in 1948 the only purpose of the stock, of having any stock in Timken Holdings was to hold the stock in British Timken?

A. Yes, sir.

Q. For you. And in the course of the 1948 agreement you in effect decided it was in your own best interests to convert an honorable understanding into a legally binding commitment to allow Mr. Dewar to object to the purchase of the stock?

A. I don't see that there is much difference in binding your own partner between an honorable agreement and [fols. 3260-3261] a legally binding one.

Q. I am appealing for background on this question and apparently the draftsmen of the agreement did think there was a distinction between an honorable understanding and a legally binding commitment.

A. But this provision is providing for the sale of shares of Timken Holdings. There would be no point in providing for that in the 1948 agreement.

Q. Yes, but you have just stated that as a result of the 1948 agreement Timken Holdings in effect became a subsidiary that you intended to dissolve, and you were going to repossess your shares.

A. Yes.

Q. Now, there was nothing in 1935 that permitted Mr. Dewar to object to the sale of your shares in British Timken, was there?

A. Why, it says he can reasonably object to it.

[fol. 3262] Q. You are in charge of the financial affairs of Timken Roller Bearing Company, are you not?

A. Yes.

Q. And those affairs are subject to your complete control?

A. Subject to the Board of Directors.

The Court: I might say it is my recollection from the testimony Mr. Timken was not with the company in '35.

[fol. 3263] The Witness: A very few days afterward.

The Court: Not holding an official position with the company at the time. For that reason I don't know how he could testify to any matters that transpired prior to the execution of the '35 agreement.

Mr. Timberg: I thought that perhaps he might be able to tell me in view of the fact this was the agreement that governed the relationship between the American and British Company, how he would have gone about performing his obligations under this agreement. I don't intend to go to the fact of what the legal effect is.

Q. If at any time between the time you joined the company and 1948 the question had arisen, you would have been the proper official to have asked about the interpretation of it?

A. Yes.

Q. And the company's policies with respect to the contract?

A. Subject to Mr. Umstattd and the Board of Directors.

Q. In the light of your discretion as the top financial executive of Timken Roller Bearing Company, what would you have thought the effect of this provision would be if you decided to sell your stock, that is the stock of the Ameri-

[fol. 3264] can company, and let me reread "a":

> "The declaring party will not unreasonably stand in the way of the other party or his nominees or the controlled company aforesaid selling such unpurchased shares", and so on.

Mr. Ketterer: I want to object to that question. It is perfectly unfair to ask this witness a question of that sort

and read that part of the agreement because that doesn't carry the part of the language which obviously explains the point which the plaintiff is trying to make that is, the preceding paragraph which starts out by saying,—"Each of them, the American company and Mr. Dewar, hereby declares by way of honorable understanding not as a legally binding agreement that if the other of them or any of his nominees or any company controlled by him shall give a transfer notice under Article No. 28 of the Articles of Association of the Holdings Company in respect of any or all of the shares in the Holdings Company owned by the other party or his nominees or any company controlled by him". Unless you have Article 28 of the Articles of Association of the Holdings Company you don't know what the rights are.

[fol. 3265] The Court: Read the question that was asked of the witness.

(Previous question read.)

Mr. Timberg: May I ask your Honor's permission,—I am not concerned whether Mr. Timken answers the question with respect to "a" or in the light of the total context of "1" and "a" underneath it. In other words I would like him to give the answer in any way he sees fit.

The Court: He may answer.

A. You better let me read that. (Witness refers to contract.) Well, it seems to me, taking "1" into it, under "1" they would first be offered to the other partner. If the other partner did not want to buy them then under "a" we would not reasonably stand in the way of Dewar's selling them.

Q. Not unreasonably.

A. Not unreasonably stand in the way of Dewar's selling them to a party not being a party to whom we could object on reasonable grounds.

Mr. Timberg: In explanation of why we have asked Mr. Timken some of these questions, I do wish the record to reflect that in Article 6 of our subpoena we asked for the [fol. 3266] Articles of Association and By-laws of British Timken, Limited, in effect as of September 7, 1935, and all amendments, modifications and supplements thereto, also in this subpoena we asked for the minutes of the meetings

of the Board of Directors with reference to the 1948 transaction.

Mr. Day: Not of British Timken?

Mr. Timberg: Timken Holdings, Limited.

Mr. Day: That is, you asked for documents of both those British companies?

Mr. Timberg: That is right. But we did ask for minutes of meetings in which Mr. Timken might have explained some of these transactions, and the documents were not forthcoming on the return so necessarily we have asked Mr. Timken a lot of questions in order to clear it up.

The Witness: As I recall this transfer in this Article 28, it was a simple provision providing an offer to the other party, which was in the 1948 agreement.

Q. But as Mr. Ketterer has directed attention to, the controlling provision being Paragraph 1, that recites it is a matter of honorable understanding and not a legally binding [fol. 3267] commitment, is that right?

A. Yes.

Q. Now, 1b of this agreement says:

> "In the event of the other party or his nominees or the controlled company aforesaid effecting a sale the declaring party will do all acts and things in his power in order to procure the registration of the transfer of the said shares and rights (if any) to the purchaser thereof and in particular will exercise the voting rights conferred by any shares in the Holdings Company controlled by the declaring party in such manner and give all consents and sanctions as may be reasonably required and secure any directors of the Holding Company to pass all resolutions necessary for procuring the registration of said shares."

A. What is the question?

Q. Now, if in your capacity as chief financial executive of Timken Roller Bearing Company you decided to sell the stock that your company held in Timken Holdings, Limited, what would you conceive the right, the obligation of the other party to be with respect to that?

A. As of the present date?

[fols. 3268-3270] Q. As of that date.

A. Well, in other words, this would follow along, "b"

would make possible what "a" had provided for. For instance, if we had offered our shares to Dewar and he had refused them, and we had found a party to whom he could not reasonably object, he or his nominees would have to do their best to carry out the agreement.

Q. In other words, it was a facilitating device should either of the parties desire to sell their interests?

A. And the other not desire to buy.

Q. And the other not desire to buy.

Mr. Timberg: May this be received as Exhibit 4?

The Court: Yes.

[fol. 3271] Q. Mr. Timken, if your company decided to sell its stock under the present 1948 agreement what would Mr. Dewar's rights be with respect to this agreement?

Mr. Day: I object to that, what his rights would be.

Q. Well, what would be the nature of the negotiations you would have to undertake with Mr. Dewar?

A. We would have to offer them to Mr. Dewar, just as we would have had to offer them to Dewar beforehand.

Q. And if Dewar had turned down the offer would that have put an end to your ability to dispose of the stock?

A. No, he has an option to purchase. If he turns down that stock when we offer it it would not put an end to our ability to sell, any more than it would have under the previous arrangement.

I would like to say that I testified earlier that under the previous arrangement we did not have to offer our stock to Dewar, but I now recall that we did under this '35 agreement.

[fol. 3272] Q. May I read you Paragraph 2 of the '48 agreement:

> "Not withstanding anything hereinbefore contained Mr. Dewar or any of the other Dewar shareholders shall be at liberty to sell all or any of the Dewar shares and the Canton Company or any of the other Canton shareholders shall be at liberty to sell any or all of the Canton shares to a transferee or purchaser of shares who has been previously approved in the former case by the Canton Company and in the latter case by Mr. Dewar or his legal representatives."

A. What was the question?

Mr. Timberg: I would like the reporter to read your last answer just to see whether this refreshes your recollection on that point.

(Previous questions and answers read by reporter.)

A. This clause is mainly for the purpose if Dewar wanted to sell stock to a man who came into the company, like Pascoe, that was the main reason. In other words, a man entering the management and Dewar wanted him to have a stock interest in the company, he could then with our consent transfer some of his stock to Pascoe, which I believe [fol. 3273] he had done in the past. We considered it all Dewar stock whether Pascoe's or Dewar's.

Q. Dewar could do that. What was your interest in having the reciprocal right? I mean what was your purpose in agreeing to this provision?

A. There, again, it was chiefly a matter of quid pro quo, you could do it.

Q. So you feel the effect of this provision is it is just a method of allowing employees to get shares, and the like?

A. That was the prime purpose.

Q. Can you point to any of the language here which expresses that purpose? That is, unfortunately, not having any of the background, this doesn't seem to be so limited; it applies to all shares.

A. The reason I said that is because I was there when we negotiated the contract.

Q. That is the interpretation which you would place on that?

A. That is right.

Mr. Timberg: I would like to offer for the record two exhibits that have been marked Plaintiff's Exhibits 5 and 6 (decree) containing agreements entered into on June 5, 1943, between the Timken Roller Bearing Company and Mr. Dewar.

[fol. 3274] Q. These agreements were two of the agreements that were replaced by the 1948 agreement; or, would you rather examine these to see whether they are, Mr. Timken?

A. (Examines same.)

Q. Would it refresh your recollection further if I show you the text of the 1948 agreement?

A. Yes, that would. In other words this states it.

Q. Is there any provision in either of these two agreements that gives Mr. Dewar an option on American Timken's holdings of British Timken stock should your company decide to sell it?

A. I don't think you understand my statement. That option was contained in the Articles of Timken Holdings. Article 28 provides if either party was to sell, the method of offering to the other party.

Q. That is contained in Article 28?

A. To the best of my recollection.

Q. We haven't had Article 28, we only had the agreement to go on.

What is the basis of your information that that option is in the Articles of Association? You have read those Articles of Association or do you have copies of them anywhere available?

A. I either read them or read the report indicating that was the purpose.

[fol. 3275] The Court: I didn't get that.

The Witness: I have either read that or read the reports that was the purpose of the Holdings Company.

Q. You are not certain whether you read the provision itself or read the reports?

A. I couldn't say I had read the Article itself.

Q. What was the nature of the reports you have read about the provision? From whom did they come?

A. I assume they were reports made at the time it was drawn up.

Q. '43?

A. No, in '35, when the Holdings Company was formed. You see, I was not with Timken, Limited at that time.

Q. Are these reports still available in the files of the company?

A. I couldn't say as to that. They should be if I read them there. I couldn't say as to that but they should be if I read them there. Of course it may have been in a conversation with Dewar and Pascoe.

Q. What do the Articles of the Association briefly provide?

A. Well, they provide a holding company which will hold Dewar's stock and our stock and the method of voting.

Q. What is that method of voting?

A. Practically that the majority of the A stock which [fol. 3276] Dewar owned had more votes as long as profits were maintained. Then the B stock, which we had the majority took over. That was the control arrangement, but I should say the other arrangement provided if one wanted to sell it should be offered to the other party, and the method of offering.

Q. What provision was made for the selection of directors in those Articles of Association?

A. The holders of the majority of the A stock had the right to elect two directors and the B stock one; so long as the A stock had the most votes, in other words.

Q. Then when the positions were reversed the voting right changed and the B stock took control?

A. It was purely a control device.

Q. Was there any provision in those Articles of Association—I take it for granted it is not in these contracts—giving Mr. Dewar the right to approve any persons to whom you wanted to sell the stock?

A. You mean outside of Pascoe or employees?

Q. Well, outside of—well, what were the rights of the parties with respect to that? I don't know the first thing about these Articles of Association.

A. I believe that the Articles of Association provided in effect exactly what this 1948 agreement provides.

Q. Exactly?

[fol. 3277] A. For all major purposes. In other words the '48 agreement was simply the old agreement without Timken Holdings Limited.

Q. Did it also include a special arrangement for transferring stock to employees, for example, that you have referred to under Section 2?

A. I don't recall about that. Of course Dewar was a much younger man in '35 than he was in '48 and he was more active, he was running the business himself and didn't have the younger men coming along as he does now.

Q. Does that mean you have given him or more or less discretion?

A. He would have had less concern to provide for that.

Q. He would have had less concern to provide for that?

A. But I don't know whether it was in the Articles or not; I can't recall that.

Q. Well, we don't have the Articles of Association, I think they are probably the determinative part of this question, but you have already answered part of it. You don't really believe you had given Dewar in 1935 the right to block any arrangement you may have made for the sale of the stock?

A. To whom?

Q. To Mr. Dewar. Would you have required his approval?

A. If he wanted to dispose of the British Timken stock or Timken Holdings?

[fol. 3278] Q. Yes. Would you have entered into an agreement?

A. Yes, he had the right, he could have had them offered to him.

Q. I understand he had the right to an option to have them offered to him, but did he have the right to approve the purchaser who would get the stock in the event he decided not to take it on his own option?

A. As I said, I believe it provided exactly what the '48 agreement provided. You can see there he has not got the right absolutely to block the sale of the stock.

Q. Well, under the '35 agreement I understood he didn't but under the '48 agreement he at least has the right to block the sale of the stock, and then, by your statement, if you decided to sell to one of your employees, as far as the language of this is concerned, I don't see where it is so limited, it seems as though on the basis of the '48 agreement he has the right to approve of any transferee of the stock, which is a sort of right under any partnership arrangement. I wish you would examine this language again, because that is all we have to go on.

A. Under 1a.

Q. I understand what 1a says. I would like you to reexamine 2.

[fol. 3279] Mr. Day: Have you the '35 agreement?

Mr. Timberg: No, the '48 agreement.

A. Well, I can only repeat what I said; that was put in there primarily by Dewar for his purposes if he wanted to transfer some of his stock to an employee or potential employee of the company.

Q. So you would not construe this provision, you would not think that this stood in the way of your disposing of shares of stock abroad in British Timken?

A. Not that one.

Q. That this one would not stand in your way?

A. Not that clause.

Q. Now, what would stand in your way?

A. Well, the earlier one where he could reasonably object.

Q. Supposing you thought his objection was unreasonable, then that would be the end of it?

A. I don't know. I am no lawyer. I don't know how I would interpret that.

Q. At the same time you are the financial executive, and it is hardly a legal question, and I think in the context here is a business question as well. How do you interpret that?

A. If he objected and we didn't think his objections were reasonable I should think we would have a court suit to determine whether it was or not.

[fol. 3280] Q. A court suit?

A. Or a case.

Q. To decide the fact this was an honorable understanding and not a legally binding commitment?

A. (No response).

Q. Well, might I ask you by whom these '48 agreements were negotiated? Were they negotiated by you?

A. Yes; primarily. Mr. Umstattd was at the earliest meeting.

Q. But primarily by you?

A. Yes.

Q. Did Mr. Dewar negotiate them himself or by representative?

A. Mr. Dewar was there, yes.

Q. Did he have any representative?

A. Mr. Pascoe was there.

Q. And did you have any other representative?

A. Mr. Duncan and Mr. Ketterer were there.

Q. Were negotiations conducted orally or by correspondence with these others?

A. Well, they were held in England.

Q. And there was no correspondence in connection with these agreements between England and Canton?

A. Well, there may have been correspondence but the

main negotiations were conducted orally among the people I have mentioned in England.

[fol. 3281] Q. Did you make any memorandum of these conferences?

A. Yes, I think I did. I think I made a memorandum after my return indicating the nature of the negotiations.

Q. Were these negotiations discussed at a Board of Directors meeting?

Mr. Day: What Board of Directors—American Timken?

Mr. Timberg: American Timken. About Mr. Timken's participation.

A. I don't know whether they were actually discussed at a formal Directors meeting but the Board of Directors were familiar with it.

Q. You kept the Directors informed?

A. Yes.

Q. But apparently in an informal way, not at a Board of Directors meeting?

A. I said I couldn't say.

Q. Did the Board of Directors ever pass a resolution approving the agreement?

A. I don't recall that. You see our Board of Directors eat lunch together practically every day.

Q. Over what period of time did your correspondence about these negotiations extend, how long were the negotiations carried on?

A. I couldn't say exactly. I would say a year or so.

[fol. 3282] Q. About a year or so. Then in the course of that year there was correspondence?

A. Well, but the main negotiations were—Mr. Umstattd made one trip with me to England; I made a second trip. I was afforded the opportunity of negotiating the agreement.

Mr. Timberg: Once again, I would like the record to reflect we asked for all minutes, reports, resolutions, instructions, memoranda, notes and internal correspondence in Paragraph 12 of our subpoena.

Q. Now, if there were these memoranda and these correspondence, why weren't they returned under this subpoena, Paragraph 12?

A. I didn't say I knew there was any except I said I thought I had written a memorandum.

Q. You said you had written a memorandum.

A. I said whether it had been done by a Board of Directors resolution or whether I had informed them informally.

Q. I just have a few more questions and then I will be through. How would one go about reconstructing the background of the transaction if, for example, you weren't around?

A. Well, I informed the directors.

[fol. 3283] Q. You informed the directors and they carried it under their hats as you carried it under yours?

A. I don't like the phrase "under their hat". They knew about it. It is just a continuation of our years' old relation with Dewar; there is no change.

Q. You testified yesterday you didn't know the due dates of the promissory notes of French Timken to American Timken?

A. No, I don't know those.

Q. You don't know those. Do you know within any range of approximation?

A. I think they fall due in the amount of about $500,000, annually.

Q. When? Just the due date I am interested in. Do you remember that?

A. No.

Q. You testified you didn't have the information with respect to the due dates of various notes to American Timken?

A. I don't believe there is any due date on that.

Q. That is payable out of profits?

A. That is my recollection.

Q. You don't know if anybody else would have this information?

A. No. I can give you an estimate on the due dates of those French Timken Company's notes because I believe there was about 4½ or 5 million francs falling due, so they [fol. 3284] would extend over normally a period of nine years. As to when the first notes fell due I would say they might have five to six years to run till the last note was due at the present time.

Mr. Timberg: If your Honor please, my colleague, Mr. Dedman would like to ask Mr. Timken some questions.

Further Cross-examination of William Robert Timken

By Mr. Dedman:

Q. Mr. Timken, was the Timken Roller Bearing Company served with a subpoena requiring the production of documents in this case?

Mr. Day: I believe it was, yes.

Q. Was that subpoena served upon you or the Secretary?

A. I am not the Secretary.

Q. Do you know whether or not of your own knowledge there was a search made in compliance with this subpoena to produce these documents?

A. I understood some documents were required and we were trying to locate them, but it wasn't arranged under my direction.

Q. Under whose direction?

A. I assume it would be under Mr. Brower's, the Secretary and Treasurer.

Q. Is Mr. Brower in the courtroom?

[fol. 3285] Mr. Day: No, he is not.

Mr. Dedman: The reason I am asking the witness the questions is because of the fact the subpoena very definitely called for all minutes, reports, resolutions, instructions, memoranda, notes and internal correspondence, and so forth relating to the negotiation of the 1948 agreement. I find it rather hard to believe there is not something in the files of the Timken Roller Bearing Company with reference to those matters.

If Mr. Timken is unable to testify as to whether or not a search was made, I suppose the Government will have to call Mr. Brower or who ever was responsible for complying with the subpoena.

The Court: It is —— proper, I believe, if a subpoena was issued and no reply is made to the subpoena some explanation should be made by someone in authority that proper search was made, and whether a document was not found, as Mr. Timken is in no position to make the statement.

Mr. Ketterer: This subpoena was served on Mr. Day [fol. 3286] in Cleveland as counsel. It was not served on any officer of the Timken Company. When copy was sent to me I undertook to have an examination of the files made

to find out whether the documents were available. I told counsel yesterday the ones we did not produce pursuant to the subpoena were not in the company's files. In view of his disbelief about whether or not they were or were not there I don't know whether he is willing to accept my professional statement in open court or not but that is the fact and that is what I told them yesterday.

The Court: You yourself have given instructions to make the search?

Mr. Ketterer: That is correct.

The Court: Mr. Ketterer, do you know who made the search?

Mr. Ketterer: Yes, I do.

The Court: And was it some responsible party?

Mr. Ketterer: It was the assistant secretary of the company.

The Court: And the report was made to you they are not in his possession?

Mr. Ketterer: Not only reported it to me but I went [fol. 3287] over the documents he found and checked with him against the ones that were requested and I was assured those documents were not in the company's files and that is what I told Mr. Dedman yesterday.

The Court: Well, I think your statement to the effect you have made that is satisfactory.

Mr. Dedman: I am satisfied with that.

The Court: Anything further?

Mr. Ketterer: I don't believe so.

The Court: We will take a fifteen minute recess.

(Recess taken.)

Mr. Ketterer: If your Honor please, we, and when I say "we" I mean the Timken Company, defendant in this case, and none of counsel want this Court to think that there has been any withholding of documents or records in connection with Timken Holdings Limited, or any other facts of this lawsuit, and Mr. Timken has suggested, and I want to make the suggestion to the Court and to the Government, we will arrange to have Mr. Dewar send over here the Arti- [fol. 3288] cles of Association of Timken Holdings, Limited. If they want to have a copy of that introduced in the record, there is nothing mysterious about it and we are perfectly willing to have that introduced if they want that done.

The Court: Is there any desire on the part of the Government that that be done?

Mr. Timberg: I should think we would like to have that. There is so much of Mr. Dewar's testimony resting on the Articles.

Mr. Ketterer: There is no part of Mr. Dewar's testimony resting on the Articles of Association.

Mr. Timberg: We would like to see a copy and have the privilege of inserting it in the record.

The Court: I would imagine it would require some time.

Mr. Timken: We could have it by Air Mail.

The Court: Is it your thought that those papers should be made available and then that this hearing be postponed?

Mr. Timberg: I think that these articles of Association [fol. 3289] were executed about ten days before the '35 agreement. We are simply at a loss to understand why ten days after the Articles of Association were entered into agreements were entered into which carried specific provisions such as we have already pointed out, if the subject matter had been covered in the Articles of Association.

Mr. Ketterer: As far as the agreement is concerned there is nothing mysterious about that because the record already discloses that the '35 agreement was merely a reproduction of the earlier agreement between the parties.

Mr. Timberg: We simply request the privilege of leaving the record open to insert the Articles of Association as of 1935, if we feel it would be at all helpful in clarifying Mr. Timken's testimony, because I am frankly confused by it.

The Court: It seems to me that this hearing could be concluded and then if those documents are made available and if anything should be put into the record it may be done.

Mr. Ketterer: We are not suggesting the hearing be adjourned or anything of that kind.

[fol. 3290] The Court: I think that may be done, and that will be sufficient.

Redirect examination of William Robert Timken.

By Mr. Ketterer:

Q. Mr. Timken, you were asked a while ago about this "unreasonable provision" that appeared in the 1935 agreement between the Timken Roller Bearing Company and Mr. Dewar in respect of approval of sales of stock. Now, you have said you weren't with the company before 1935. I

want to hand you a document which has been marked Defendant's Exhibit 200, and which is already in the record, and I want you to look at the first paragraph of that instrument and observe the date of that.

A. By that you mean No. 1?

Q. That is correct.

A. Well, that language in the 1928 agreement is practically identical with the language of this later agreement.

Q. And the language to which you refer in here is this:

"It is hereby agreed as follows:

1. Each of them, the American Company and Mr. Dewar, hereby declares by way of honorable understanding but not as a legally binding agreement that if the other of them or any of his nominees shall give a trans- [fol. 3291] fer notice under Article 26 of the British Company new Articles of Association adopted by one of the said special resolutions in respect of all or any of the shares of the British Company owned by that party and the shares comprised in such transfer notice or any of them are not purchased by the other members of the British Company to whom the same are offered pursuant to said Article, then a, the declaring party will not unreasonably stand in the way of the other party selling such unpurchased shares or any of them to any person not being a person to whom the declaring party shall object on reasonable grounds at any price not being less than that at which such shares shall have been offered to the members pursuant to said transfer notice; and, b, in the event of the other party effecting a sale the declaring party will do all acts and things in his power in order to procure the registration of the transfer of said shares to the purchaser thereof, and in particular will exercise the voting rights conferred by any shares in the British Company held or controlled by the declaring company in such manner and give all consents and sanctions [fol. 3292] as may be reasonably required and procure any directors of the British Company controlled by the declaring party to pass all resolutions necessary for procuring the registration of such shares."

That is the resolution to which you referred?

A. Yes.

Q. And that language is the same in form as the language which appears in the 1935 agreement, under date of September 7, 1935, on the question of approval of or withholding of approval by either Dewar or the American Timken Company in respect to the sale of shares to any outside parties?

A. Yes, sir.

Q. Prior to 1935 was British Timken a public company or private company?

A. No stock was sold to the public.

Q. That is, in 1935 and prior to that British Timken was what, a public or private company?

A. Private company; Dewar and ourselves owned the stock.

Q. There were only two shareholders from 1928 to '35, unless there were qualifying shares?

A. Qualifying directors shares.

Q. Now, I want to direct your attention to Defendant's Exhibit 199, that was offered in evidence, reference to Paragraph 26 of which appeared in this language of the [fol. 3293] contract marked Defendant's Exhibit 200 that I just read to you. I would like for you to look at that.

A. What was the question on this?

Q. I just asked you to look at that. Did you also examine Paragraph 25 of the Articles of Association?

A. Yes.

Q. Now, was the provision made in Articles 25 and 26 for the option to the respective parties and the proced e set out for the transfer of the shares?

A. Yes.

Q. In the Articles of Association of British Timken?

A. Yes.

Q. Now, when the company was changed from a private company to a public company in 1935, when the sale of stock was made to the public, what is the fact as to whether that option had to be removed from the Articles of Association of British Timken?

A. Yes, it was removed and replaced by the establishment of Timken Holdings Limited.

Q. And it was there that the option provisions that had been in the original Articles of Association were transferred to the Articles of Timken Holdings, the agreement between Dewar and American Timken with respect to the stock they still jointly retained in the company?

[fol. 3294] A. Yes.

Q. Now, when the agreement was negotiated in 1948, the one that has been offered here in evidence I believe as Exhibits 2 and 3, when the provision was made for the sale of stock and the offering of it, was it your intention to change the procedure that had been provided for from the inception of British Timken and the relationship between Dewar and that company?

A. No, it was our intention to carry it on, as I have said, as it had been before.

Q. I am not sure I understood what you said on the examination of counsel for the Government about Pascoe acquiring qualifying shares. Was he acquiring qualifying shares or interest in the company?

A. No, an interest in the company.

Mr. Ketterer: That is all.

Recross-examination of William Robert Timken.

By Mr. Timberg:

Q. Mr. Timken, did I understand you to tell Mr. Ketterer that it was the intention in executing the 1935 agreement to preserve the pre-existing relationships between the parties that had been prevalent?

A. Yes, sir.

Q. On what basis did you form that impression, acquire that understanding?

[fols. 3295-3373] A. Well, through discussions that we had carried it along but once it became a public company it was not longer possible to use the exact form we used in the past, it had to be changed through the use of Timken Holdings and their Articles of Association rather than what has now become a public company.

Q. Well, you have told me you were not aware of the background of the '35 agreement.

A. No, I said I wasn't employed by the company at that date.

Q. Wasn't employed by the company. Now, your explanation for the disappearance of the language that had been in the earlier agreement is what? What is your explanation for it?

A. My understanding is when British Timken became a public company it was no longer possible to have that

language remain in their Articles of Association, therefore in the formation of Timken Holdings the language was transferred to that and to the agreements having to do with Timken Holdings.

Q. But the language with respect to Timken Holdings, Limited, is different from that in the 1928 and 1935 agreements.

A. Essentially, but it has the same purpose.

[fols. 3374-3384] EXCERPT FROM ARGUMENT FOR DEFENDANT

. . . . . .

We also found out by transatlantic phone, and I don't think we had this in the record, that British Timken has four to five thousand common stockholders and 1100 preferred stockholders.

[fol. 3385] EXCERPT FROM ARGUMENT FOR PLAINTIFF

. . . . . .

We do not conceive it to be the function of the relief in this case to compel competition or to stimulate competition. We conceive it to be the function of this decree, [fols. 3386-3390] as in the National Lead case, to restore the manufacture and sale of tapered roller bearings on international markets to a system of free competition; and we think that, in order to make that restoration possible, once again to paraphrase the language of the National Lead case, the means of preventing such a development must be destroyed, and the power to prevent it must be shorn from those who by combination have acquired it.

[fol. 3391] The Court: I don't want to interrupt you in the course of your discussion, but I have a question that I wish to put to you and I do hope you will discuss it. The hardships that were mentioned by the defendant aside, the difficulty of sale of the securities aside, the tax question aside, the loss aside, in order to eliminate the restraint found to have existed in this case by the court, is it necessary to decree divestiture, to terminate those restraints and to see to it that no such restraints will occur in the future, and to stimulate competition?

Mr. Timberg: I will be very glad to answer that and, as a matter of fact, your Honor, it was my thought that

[fol. 3392] that discussion should precede any discussion of the hardships which were urged by defense counsel, and I should like, with due deference, to submit this as the reason why we think that such divestiture is necessary.

First, as to the evidentiary basis which I don't intend to go into in other connections, but I think in this connection it is probably desirable, the original acquisition by the defendant of its stock in British Timken was part and parcel of the 1927-28 agreements which provided for the continuation of the pre-existing territorial agreements between the defendant and British Timken. These agreements the court found were—and conclusively found—were entered into for the purpose of preventing competition in the sale of bearings. The acquisition of the stock in French Timken likewise was simultaneous with the division of territory agreement entered into with French Timken, and was also, I believe, in the language of your Honor's finding, on the model of the one between defendant and British Timken.

Now, Michael Dewar frankly acknowledged his motivation in entering into the agreement. As the court found, he did not think that an investment on his part would be wise without obtaining extensions of the prior business agreement that he had with the defendant. In fact, when [fol. 3393] defendant's London counsel discussed this transaction with respect to the drafting of the formal agreement, he said, "The main advantage derived by the English company under the agreement will be the advice and information received from you," that is the know-how, "the right to use the name Timken," which is their trade mark, "and the absence of your competition."

Defense counsel has also stated that not only was this a proper motivation for Dewar but it was a proper motivation for the defendant. As Mr. Day said in his summation, there wasn't anything that could be expected in common sense that Michael Dewar would compete if he had a company of his own with British Timken, or for defendant to compete with British Timken.

The same thought is expressed in the defendant's brief on page 207, where counsel says: "American Timken would have been unwise not to have secured itself against an increase of competition of its own creating by investing

its money and efforts in British Timken"—and I'm reading this to be sure I don't misquote counsel. And a page or so earlier there is the statement: "American Timken would have been using not only the money with which it [fols. 3394-3396] purchased stock in British Timken, but also the know-how which it was obligating itself to impart to it, such patents as it might have, and the trade-mark 'Timken' to create competition for itself."

[fol. 3397] I wish to say just one thing more about the Paramount case, that in decreeing the divestiture in the [fol. 3398] Paramount case the Court specifically found that it was not material whether the acquisitions were lawful, provided they were used in furtherance of an unlawful conspiracy.

The Court: There is just one other phase of that request for decree by the Court and that is in respect of the divestiture.

The thesis of my decision was that these companies were separate and distinct entities; that, contrary to what was urged by the defendant, it was a joint venture. I found that British was a separate company, that France was a separate company, that this was a conspiracy and an agree-[fol. 3399] ment between three separate entities to restrain foreign trade.

I want to get your reaction and your discussion on the proposition of whether or not a decree of divestiture would be in conflict with such finding.

Mr. Timberg: Your Honor, I sincerely believe that there would be no such conflict. The finding that your Honor made with respect to joint venture was a finding that related to the control that the American company had over the British and the French companies. I have been very careful——

The Court: I very much dislike to interrupt you. By "control" I meant not only stock control but in discussing the joint venture defense—and, of course, there was great objection made as to the joint venture defense—that there not only was no control in so far as stockholdings were concerned but that there was no control by American Timken of British Timken or French Timken. And, as a matter of fact, Mr. Day in argument cited Dewar's rather striking comment regarding British Timken.

[fol. 3400] I do want to get your comments and your dis-

cussion of that proposition, because in resolving that question of joint venture I made it very definite that there was no joint venture, that it did not constitute a joint venture, that it was solely and entirely an investment in a British company and an investment in a French company. I pointed out the fact that whereas originally there was a holding of 6 percent in British Timken it eventually became a public company and became 30 percent. I don't know whether it was at that time or eventually it became a 30 percent holding.

I do want you to give me your views on the Government's position on that proposition, whether or not, in view of that very thesis which underlies my finding, an order of divestiture would be directly in conflict with such a finding.

Mr. Timberg: Well, your Honor, it is the Government's view that it could not and would not be in conflict with the detailed and extensive and thorough going analysis that your Honor made of the joint venture arguments in the broadest sense of the term, not merely fiscal but managerial and otherwise.

[fol. 3401] I think the record will reflect at this point that in discussing the evidence here and the law I have not used the word "control" once. What I have said is that the investment was an inducement and an incentive not to compete. I believe that is what the Crescent and the Paramount cases were devoted to as well.

The Court: Is that the heart and core of the Government's contention, then, that the investment is an inducement not to compete?

Mr. Timberg: Well, that is the heart and—that's the core of it. I would like to put a little body around it.

The Court: But you don't like to say the heart and core, then?

Mr. Timberg: I'd like to allow——

The Court: Possibly the use of those two words may not be quite apt, but it would seem that to me at the moment.

Mr. Timberg: I think it is, your Honor. Forgive me for confusing the distinction between geometry and physiology.

Roughly, that is the core of our contention.

And in terms of the international scene it is a very important contention and probably more significant than [fols. 3402-3403] it is on the domestic scene, because, as I think was pointed out to your Honor in the trial in chief,

these contractual commitments not to compete, these contractual commitments to reserve territories, in a great number of international cartel cases are fortified by additional financial and fiscal sanctions. And those cases are not cases of 51 percent or 90 percent, those cases are cases of 10 percent or 20 percent or, as in this case, 30 percent, let us say.

Once again, the parallel with the National Lead case is in point. National Lead was a minority interest, and there those stock investments were described as part and parcel of the agreements not to compete.

[fol. 3404] Your Honor found in paragraph 15 on page 31, after having exhaustively analyzed the respective contentions of both parties, that "The only conclusion which may properly be drawn is, that the restraints were not ancillary to the 'joint venture'. To the contrary, the arrangements were made to carry on effectively the combination: to eliminate competition between the parties and to frustrate any competition of outsiders."

The significance of that, I think, is this: that both your Honor and the defendants concede that there is a linkage between investment and competition, and the question is, "What is the nature of that linkage?" And your Honor held that the "joint venture" was ancillary to the restraint of trade, whereas the defendants contended that the restraint of trade was ancillary to the joint venture.

With respect to your Honor's more specific question as to what account we take of the fact that the restraints had [fols. 3405-3559] been in existence since 1909 and the stock investment was acquired in connection with the 1928 agreements, I likewise would like to go back to earlier findings of your Honor, to wit, Finding No. 38 on page 6, which, I think fairly bears the construction that the older arrangements were expiring and that the question was up to the parties as to what new arrangement should replace the pre-existing arrangements.

We are not contending that patents or trademarks or the investment were the only factors that entered into the renewal of the pre-existing conspiracy, but we are contending that the stock investment was a factor, and I believe that the later findings of your Honor and the statements that have been made earlier in the trial confirm the fact that they were definitely a potent consideration.

[fol. 3560] REPORTERS' CERTIFICATE

We hereby certify that the above and foregoing is a true and accurate transcript, embodying the changes and corrections pursuant to stipulation of counsel filed herein.

Civil Action No. 24214

UNITED STATES OF AMERICA, Plaintiff,

vs.

THE TIMKEN ROLLER BEARING COMPANY, Defendant

FINAL JUDGMENT—Filed February 15, 1950

This cause came on for trial March 22, 1948 and the trial was completed on April 27, 1948. The Court filed its opinion on March 3, 1949, finding and adjudging the defendant to have violated Sections 1 and 3 of the Sherman Antitrust Act. By order filed June 20, 1949 the Court adopted said opinion as the findings of fact and conclusions of law herein, pursuant to Rule 52 of the Rules of Civil Procedure;

Now, therefore, after hearing plaintiff and defendant by their attorneys, it is hereby

Ordered, adjudged and decreed as follows:

1. As used in this judgment:

A. "Anti-friction bearings" means rotating devices for reducing friction between moving mechanical parts,

wherein rollers of various shapes or balls are inserted between containers which are inserted between the moving parts; and includes ball bearings and all types of roller bearings, such as, but not limited to, straight and tapered roller bearings, and accessories and parts of such bearings.

B. "Tapered roller bearings" means anti-friction bearings employing conical or truncated conical rollers.

C. "British Timken" means British Timken, Limited, a joint stock company organized and existing under the laws of the United Kingdom, with its principal office and place of business at Birmingham, England.

D. "French Timken" means Societe Anonyme Francaise Timken, a corporation organized and existing under the laws of France, with its principal office and place of business at Asnieres, France.

[fol. 3588] E. "United States" means the United States and its territories and possessions.

F. "Person" means an individual, partnership, firm, association, corporation, or other business or legal entity.

G. "British territory" means those parts of the world allocated in 1938 as production and sales territories to British Timken by the agreements referred to in Subsection A of Section IV of this judgment, including (1) the United Kingdom, Eire, and all countries other than France and Russia on the continent of Europe; (2) all dominions, colonies, mandates, and dependencies of the United Kingdom, and of all other European countries, in any part of the world, except (a) those of France, (b) those located in or adjacent to North or South America, and (c) by later agreement, Hong Kong.

H. "French territory" means those parts of the world allocated in 1938 as production and sales territories to French Timken by the agreements referred to in Subsection A of Section IV of this judgment, including France, its dominions, colonies, mandates, and dependencies in any part of the world, other than those located in or adjacent to North or South America.

I. "Defendant's territory" means those parts of the world allocated in 1938 as production and sales

territories to defendant by the agreements referred to in Subsection A of Section IV of this judgment, including (1) the United States, as herein defined, (2) Canada, Mexico, Central America, and the West Indies, (3) South America (4) the rest of the world not allocated to British Timken or French Timken, and (5) by later agreement, Hong Kong.

II. The provisions of this judgment applicable to defendant shall apply to the defendant, its officers, agents, servants, employees, and attorneys, and upon those persons in active concert or participation with them who receive actual notice of this judgment by personal service or otherwise.

III. Defendant has violated Sections 1 and 3 of the Act of Congress of July 2, 1890, 26 Stat. 209, 15 U.S.C. Sections 1 and 3, entitled "An Act to protect trade and com- [fol. 3589] merce against unlawful restraints and monopolies," commonly known as the Sherman Antitrust Act. Said violation has consisted of defendant and its co-conspirators, British Timken and French Timken, engaging in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings between the United States and foreign nations, and of defendant and said co-conspirators entering into unlawful contracts, agreements and understandings, and planning and acting together to eliminate competition among themselves and with others in the production, sale and other distribution of anti-friction bearings in all markets of the world.

IV.

A. Each of the following agreements is unlawful under Sections 1 and 3 of the Sherman Antitrust Act and is hereby terminated; and defendant is hereby enjoined and restrained from the further performance or enforcement of any of the provisions, including those involving rights or obligations upon termination, of said agreements and of any agreements amendatory thereof or supplemental thereto:

1. Agreement dated November 28, 1938 between defendant, British Timken and French Timken, entitled "Business Agreement"; and

2. Agreement dated November 29, 1938 between defendant, Michael B. U. Dewar, Esq., and British

Timken, entitled "Supplemental Business Agreement."

B. Each of the following agreements, entered into during the trial of this action, is hereby terminated; and defendant is hereby enjoined and restrained from the further performance or enforcement of any of the provisions of said agreements and of any agreements amendatory thereof or supplemental thereto;

1. Agreement dated March 22, 1948 between defendant and Michael B. U. Dewar, Esq., entitled "Agreement with respect to British Timken Limited";

[fol. 3590] 2. Undated agreement between defendant, Michael B. U. Dewar, Esq., and Timken Holdings Ltd., entitled "Agreement cancelling previous Agreements and Bye-Laws of Timken Holdings Ltd. and for transfer by Mr. Dewar to the Canton Company of his shares in Timken Holdings Ltd."

C. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under any contract, agreement, arrangement, understanding, plan or program for the purpose of or with the effect of continuing, reviving or renewing any of the agreements listed in Subsection A or B of this Section IV.

V. Defendant is hereby enjoined and restrained from entering into, performing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under, any combination, conspiracy, contract, agreement, arrangement, understanding, or concerted plan of action with British Timken, French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof:

A. To allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

B. To limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

C. To refrain from, restrain or limit production, sale or other distribution of anti-friction bearings, through quotas or otherwise, or to apportion customers for anti-friction bearings, in any territory or market;

D. To refrain from competing or to leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;

E. To exclude any producer or distributor of anti-friction bearings from any territory or market, or to interfere with or restrict any such producer or distributor in competing in any territory or market;

[fol. 3591] F. To fix, maintain or adhere to prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings produced by defendant for sale or other distribution in any territory or market, or produced by any other person for sale or other distribution in the United States.

G. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

H. To receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, (1) information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method or other technical information, relating to the production of anti-friction bearings, or (2) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery.

VI. Defendant is hereby enjoined and restrained from:

A. Referring any order or inquiry for anti-friction bearings to British Timken or French Timken, or any subsidiary, agent, sales representative or distributor thereof;

B. Refusing to sell anti-friction bearings to any person at prices and on terms and conditions of sale corresponding to those regularly offered to purchasers of the same classification for resale or other distribution

in defendant's territory, as herein defined, where the reason for such refusal is that such bearings are for resale or other distribution in British territory or French territory, as herein defined;

C. Selling or offering for sale to, or purchasing or offering to purchase from British Timken or French Timken, anti-friction bearings, at preferential prices, discounts or terms and conditions of sale;

[fol. 3592] D. Offering or paying to, or receiving or accepting from British Timken or French Timken any Commission, rebate, penalty, or other payment in connection with the sale or other distribution of anti-friction bearings to any other person in any territory or market;

E. Appointing, designating, or employing, or continuing the appointment, designation or employment of British Timken, French Timken or subsidiaries thereof, as an agent, sales representative or distributor of defendant in connection with anti-friction bearings, or in any way selling or otherwise distributing anti-friction bearings through British Timken, French Timken or subsidiaries thereof;

F. Acting for or representing as agent, sales representative or distributor, in connection with anti-friction bearings, British Timken, French Timken, or subsidiaries thereof;

G. Reserving or protecting for British Timken, French Timken, or subsidiaries thereof, any market or territory for the production, sale or other distribution of anti-friction bearings.

VII. Defendant is hereby enjoined and restrained from entering into, performing, enforcing, adhering to, maintaining, furthering, or renewing, directly or indirectly, any contract, agreement, combination, understanding or arrangement with British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof which provides for:

A. An assignment, license or grant of immunity under any patent or patent application;

B. The receipt, grant, disclosure, rendering available or exchange of information, advice, assistance or rights with respect to any invention, discovery, im-

provement, practice, formula, pattern, device, process, method or other technical information relating to the production of anti-friction bearings, or of any material or machinery used in the production of anti-friction [fol. 3593] bearings, or of any information, advice, assistance or rights with respect to any such material or machinery; or

C. The transfer of any right or immunity under a trade mark or name, relating to the production of anti-friction bearings,

upon the condition or requirement that British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof shall:

1. allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

2. limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

3. refrain from, restrain or limit production, sale or other distribution of anti-friction bearings, through quotas or otherwise, or apportion customers for anti-friction bearings, in any territory or market;

4. refrain from competing or leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;

5. exclude any producer or distributor from any market for anti-friction bearings, or interfere with or restrict any producer or distributor in competing in any such market;

6. maintain or adhere to fixed prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings;

7. receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto, any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings;

8. receive, grant, disclose, render available or exchange, in such a way as to deny any third person ac-

[fol. 3594] cess thereto, (a) information, advice, assistance, or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information relating to the production of anti-friction bearings, or (b) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to such material or machinery;

9. restrict the use or disposition of any anti-friction bearings bought from defendant.

VIII. A. Within two years from the date of this judgment, defendant shall divest itself of all stock holdings and other financial interests, direct or indirect, in British Timken and French Timken. Within one year from the date of this judgment, defendant shall present to the Court for its approval a plan for such divestiture.

B. Defendant is hereby enjoined and restrained, from the date of this judgment, from:

1. Acquiring, directly or indirectly, any ownership interest in (by purchase or acquisition of assets or securities, or through the exercise of any option, or otherwise), or any control over, British Timken or French Timken, or any subsidiary, successor or assign thereof;

2. Exercising any influence or control over the production, sales or other business policies of British Timken or French Timken, or any subsidiary, successor, assign, agent, sales representative, or distributor thereof;

3. Causing, authorizing or knowingly permitting any officer, director, or employee of defendant or its subsidiaries to serve as an officer, director, or employee of British Timken or French Timken or of any subsidiary, successor, assign, agent, sales representative, or distributor thereof.

[fol. 3595] IX. Defendant is hereby enjoined from refusing to sell anti-friction bearings to any person or discriminating as to availability and prices, terms, and conditions of sale of such bearings or failing to provide services and assistance relating to the distribution or use of such bear-

ings comparable to the services and assistance made available to distributors and users of such bearings in defendant's territory, where the reason for such refusal, discrimination, or failure is that such bearings are for use, resale, or other distribution, either in their original form or incorporated in another product, in some country or area other than defendant's territory as herein defined.

X. Defendant is hereby ordered and directed:

A. Beginning three months from the date of this judgment and for a period of six months thereafter to insert at reasonable intervals in trade journals of appropriate circulation in British territory and French territory advertisements advising the bearing purchasing public of the nature of this judgment insofar as it concerns the removal of the restrictions which had previously prevented the sale of bearings by the defendant in British and French territory.

B. To give similar notice in writing to all persons who have made written inquiry to defendant regarding the purchase or distribution of anti-friction bearings for export since July 1, 1945.

XI. Defendant is hereby ordered and directed within ninety days from the date of this judgment, to provide copies thereof to British Timken and French Timken; and to all directors, officers, subsidiaries, agents, sales representatives and distributors of defendant, British Timken and French Timken.

XII. For the purpose of securing compliance with this judgment and for no other purpose, duly authorized representatives of the Department of Justice shall, upon written request of the Attorney General, or an Assistant Attorney General and on reasonable notice to the defendant, made to its principal office, be permitted, subject to any legally recognized privilege, (1) access during the office [fol. 3596] hours of said defendant to all books, ledgers, accounts, correspondence, memoranda, and other records and documents in the possession or under the control of said defendant relating to any matters contained in this judgment, and (2) subject to the reasonable convenience of said defendant and without restraint or interference from it, to interview officers or employees of said defendant, who may have counsel present, regarding any such matters. No

information obtained by the means provided in this Section shall be divulged by any representative of the Department of Justice to any person other than a duly authorized representative of such Department, except in the course of legal proceedings to which the United States is a party for the purpose of securing compliance with this judgment or as otherwise required by law.

XIII. Jurisdiction is retained for the purpose of enabling any of the parties to this judgment to apply to this Court at any time for such further orders and directions as may be necessary or appropriate for the construction or carrying out of this judgment, for the modification or termination of any of the provisions thereof, and for the purpose of the enforcement of compliance therewith and the punishment of violations thereof.

XIV. Judgment is entered against the defendant for all costs to be taxed in this proceeding.

(S.) Freed, United States District Judge.

IN THE UNITED STATES DISTRICT COURT

[Title omitted]

Defendant's Motion for a New Trial; and Objections and Exceptions to, and Motion to Amend and to Make New and Additional, Findings of Fact and Conclusions of Law—Filed February 24, 1950

MOTION FOR A NEW TRIAL.

The defendant, The Timken Roller Bearing Company, moves the Court to set aside its final judgment entered in this action, and to grant to the defendant a new trial herein, upon the grounds and for the following reasons, to-wit:

1. The judgment of the Court is contrary to law.

2. The judgment of the Court is contrary to the weight of the evidence, not sustained by any evidence, and clearly erroneous.

3. The Court erred in the admission of evidence offered by the plaintiff and in the exclusion of evidence offered by the defendant.

4. The Court erred in not granting defendant's motion at the conclusion of the plaintiff's evidence to dismiss this action and to enter judgment for the defendant; and in not granting a similar motion at the conclusion of all of the evidence.

5. The Court erred in adopting, over the objection of the defendant, the Court's opinion as its findings of fact and conclusions of law in this action.

6. The Court erred in not making, as requested by the defendant, findings of fact and conclusions of law as required by law and by the Rules of Federal Civil Procedure and of this Court.

7. The Court erred in overruling the motion of the de- [fol. 3598] fendant to reject and disregard a document lodged by the plaintiff with the Court denominated "Findings of Fact and Conclusions of Law."

8. The statements, arguments, discussions and observations of the Court in its opinion are not lawful or sufficient findings of fact and conclusions of law as required by law and by the Rules of Federal Civil Procedure and of this Court.

9. If the statements, arguments, discussions and observations of the Court in its opinion are determined to be sufficient and lawful in form as findings of fact and conclusions of law, then, as such findings and conclusions, they are manifestly against the weight of the evidence, not sustained by any evidence and clearly erroneous in the respects and particulars appearing in the objections and exceptions of the defendant thereto, hereinafter set forth, to which reference is hereby made.

10. The finding and judgment of the Court that the defendant has violated Sections 1 and 3 of the Sherman Antitrust Act as set forth in section III of the Court's final judgment are contrary to law, against the weight of the evidence, not sustained by any evidence, and clearly erroneous.

11. The finding and judgment of the Court as set forth in section IV, subsections A and B, of the Court's final judgment that the certain agreements therein described are unlawful under sections 1 and 3 of the Sherman Anti-

trust Act and should be terminated are contrary to law, against the weight of the evidence, not sustained by any evidence, and clearly erroneous.

12. The finding and judgment of the Court enjoining and restraining the defendant from doing or performing any of the acts or things set forth and enumerated in sections IV, V, VI, VII, VIII and IX of the Court's final judgment are contrary to law, against the weight of the evidence, not sustained by any evidence, and clearly erroneous.

13. The judgment of the Court that within two years from the date of the Court's final judgment, the defendant shall divest itself of all stockholdings and other financial inter-[fol. 3599] ests, direct or indirect, in British or French Timken as set forth in section VIII of the Court's final judgment is contrary to law, against the weight of the evidence, not sustained by any evidence, and clearly erroneous.

14. The judgment of the Court by which the defendant is ordered and directed to do and perform the acts and things set forth and enumerated in sections X and XI of the Court's final judgment is contrary to law, against the weight of the evidence, not sustained by any evidence, and clearly erroneous.

15. The judgment of the Court is contrary to law, against the weight of the evidence, not sustained by any evidence, and clearly erroneous in that the Court should have found and concluded as follows:

(a) The defendant and British Timken and French Timken have not been and are not now engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and with foreign nations and between territories of the United States and foreign nations in violation of Sections 1 and 3 of the Sherman Antitrust Act.

(b) The defendant and British Timken and French Timken have not entered into and are not now parties to contracts, agreements and understandings, and have not planned and acted together, to eliminate competition, between them unreasonably, and with others, in the manufacture and sale of anti-friction bearings in all markets of the world, including the United States.

(c) The defendant and British Timken and French Timken have not formed and effectuated by the means, methods,

agreements and understandings set forth in the plaintiff's amended petition a combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and between the United States and foreign nations in violation of Sections 1 and 3 of the Sherman Antitrust Act.

(d) The restraints of trade, if any, resulting from the [fol. 3600] business agreements, contracts and understandings between the defendant and British Timken and French Timken have been at all times, and are, reasonably ancillary to the creation and maintenance of a lawful joint venture and enterprise by the defendant and Dewar; to the transfer by the defendant to British Timken, French Timken, and German Timken, of know-how with respect to the manufacture of bearings, the quality of steel used in connection therewith, and the various manufacturing processes specified; and to the licensing of the trademark "Timken" by the defendant to British Timken, French Timken, and German Timken (including the supplying of exclusive information as to the production of anti-friction bearings in connection with such trademark licenses). The provisions of the business agreements, contracts and understandings between the parties imposing such restraints of trade, if any, were for the purpose of, and lawful as, protecting the parties thereto to an extent reasonably necessary as incident to the joint venture and enterprise, the transfer of know-how, and the licensing of the name and trademark "Timken".

(e) The restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant, British Timken and French Timken, were not imposed for the purpose or with the intention, and did not have the legal effect, of prejudicing the public interest by unduly restricting competition or obstructing the course of trade in violation of the Sherman Antitrust Act, there being at all times during the existence of such agreements, contracts and understandings substantial and vigorous competition between the defendant, British Timken and French Timken, on the one hand, and other manufacturers of all types of bearings, on the other, in all markets of the world.

(f) The defendant and British Timken and French Timken did not enter into or effectuate the joint enterprise and

venture to which they were parties, provide or exchange know-how, grant, or agree to grant, exclusive patent licenses, or assign, or agree to assign patents or patent rights, to each other, or use the trademark "Timken" or the [fol. 3601] licensing thereof; in furtherance of a combination and conspiracy in restraint of trade and commerce in anti-friction bearings in violation of the Sherman Antitrust Act.

(g) Since there is now no appreciable or substantial import or export trade of the United States in anti-friction bearings on a competitive price basis with the territories served by British Timken and French Timken under the business agreements, contracts and understandings between the parties, there does not exist that present illegality which is essential to equitable relief such as is prayed for by the plaintiff in this case.

(h) The defendant and British Timken and French Timken are not now engaged in an unlawful combination and conspiracy with others in restraint of trade and commerce in the manufacture and sale of anti-friction bearings in violation of the Sherman Antitrust Act.

16. The judgment of the Court as set forth in paragraphs XII, XIII and XIV of the Court's final judgment, is contrary to law and clearly erroneous.

17. The judgment of the Court should have been in favor of the defendant and against the plaintiff herein and the Court erred in not dismissing the amended complaint of the plaintiff and rendering judgment for the defendant.

OBJECTIONS AND EXCEPTIONS TO, AND MOTION TO AMEND AND TO MAKE NEW AND ADDITIONAL FINDINGS OF FACT AND CONCLUSIONS OF LAW

1. The defendant objects to the action of the Court in adopting, over the objection of the defendant, the Court's opinion as its findings of fact and conclusions of law in this action, and to the action of the Court in overruling the motion of the defendant for an order rejecting and disregarding a document lodged by the plaintiff with the Court denominated "Findings of Fact and Conclusions of Law" and requiring the plaintiff to submit a draft of findings of fact and conclusions of law in this action as required by

the Federal Rules of Civil Procedure and the rules of this Court.

[fol. 3602] 2. The opinion of the Court does not set forth nor contain findings of fact and conclusions of law as required by the Rules of Civil Procedure and the rules of this Court in that any statements of fact set forth in the Court's opinion are so intermingled with discussion of the evidence, inferences by the Court, arguments and observations of the Court, as to make it impossible to determine which statements, if any, in the Court's opinion are to be regarded as its findings of fact.

3. The opinion of the Court, adopted by it as its findings of fact, does not contain complete findings of all of the ultimate and subsidiary facts essential to a determination of all of the issues of fact necessarily involved in the final decision of this action.

4. The opinion of the Court, adopted by it as its findings of fact does not contain findings of fact found specially and separately from any conclusions of law made by the Court.

5. The opinion of the Court adopted by it as its conclusions of law in this action does not contain nor set forth conclusions of law as required by the Federal Rules of Civil Procedure and rules of this Court.

6. The opinion of the Court adopted by it as its conclusions of law does not contain conclusions of law found specially and separately from any findings of fact made by the Court.

7. The opinion of the Court adopted by it in its conclusions of law does not contain conclusions of law essential to a determination of all of the issues necessarily involved in the decision of this action.

8. If the numbered paragraphs, or any of them, set forth in the Court's opinion, adopted by it as its findings of fact, are determined to be sufficient in form to constitute findings of fact under the law as required by the Federal Rules of Civil Procedure and the rules of this Court, then the defendant objects and excepts to the following numbered paragraphs, and parts of paragraphs, of the Court's opinion for the reason that, regarded as findings of fact, they are against the weight of the evidence, not sustained by any evidence, and clearly erroneous: 15; 19; 20—1st sentence; 22—2nd sentence; 23; 33; 34; 35—3rd sentence;

[fol. 3603] 36—except 5th sentence; 45; 48—1st sentence; 53; 65; 67; 69; 70; 71—3rd sentence; 72; 78; 79; 88; 89; 92; 94; 95; 96; 97; 98; 99—1st line (not entire testimony); 103—1st sentence; 104; 106; 107; 110; 112—1st two lines; 116; 117; 119; 120; 121; 122; 123; 124; 125; 126; 127; 129; 131; 132; 133; 134; 135; 136—2nd sentence; 137—2nd and 3rd sentences; 143; 144—except 1st sentence; 145—insofar as it suggests defendant made a *defense* on the basis of good intentions; 146; 147; 148; 149; 150; 151—3rd sentence; 152; 153; 154; 155; 156; 157; 158; 159; 160; 177—2nd sentence; 180; 182; 183; 185; 186; 187—4th sentence, including quotation; 188; 190; 202—last sentence; 204; 205; 206; 207; 208; 210—except last sentence.

9. If the numbered paragraphs, or any of them, set forth in the Court's opinion, adopted by it as its conclusions of law, are determined to be sufficient in form to constitute conclusions of law under the law as required by the Federal Rules of Civil Procedure and the rules of this Court, then the defendant objects and excepts to the following numbered paragraphs, and parts of paragraphs, of the Court's opinion for the reason that they are not sound propositions of law as applied to this action, are not sustained by any evidence, and are clearly erroneous: 67—2nd sentence; 120; 126; 127; 128; 129; 130; 131; 132; 134; 135; 136—1st sentence; 143; 145—insofar as it suggests defendant made a *defense* on the basis of good intentions; 150; 153; 154; 161; 162; 172; 174; 175; 176; 177; 178; 180; 182; 183; 184; 190; 193; 194; 195; 196; 197; 198; 199; 200; 210—last sentence; 211—1st sentence.

10. And the defendant moves the Court to amend its findings of fact, if any, as set forth in the Court's opinion and to make new and additional findings of fact and conclusions of law, by adopting as its findings of fact and conclusions of law the document attached hereto and made a part hereof, marked "Exhibit A", entitled "Defendant's Proposed Findings of Fact and Conclusions of Law."

Wherefore, the defendant, The Timken Roller Bearing Company, prays the Court to set aside its final judgment in this action; to grant to the defendant a new trial herein, to adopt as the Court's findings of fact and conclusions of [fol. 3604] law in this action the findings of fact and conclusions of law set forth in the document attached hereto

marked "Exhibit A" and made a part hereof; and to enter judgment for the defendant in this action.

(S.) Luther Day and John G. Ketterer, Attorneys for Defendant, The Timken Roller Bearing Company.

NOTICE OF MOTION

To:
Robert B. Hummel, Esq.,
Attorneys for Plaintiff,
237 Leader Building,
Cleveland Ohio:

Please take notice that the defendant has filed in the above entitled case a motion for a new trial; objections and exceptions to, and motion to amend, the Court's findings of fact and conclusions of law; and motion to make new findings of fact and conclusions of law; that the same will be heard by the District Court for the Northern District of Ohio, Eastern Division, at the Federal Courts Building, Corner of Public Square and Superior Avenue, Cleveland, Ohio; and that, if oral argument thereof is desired by the Court, you will be notified of the time thereof.

(S.) Luther Day and John G. Ketterer, Attorneys for Defendant.

ACKNOWLEDGMENT

Receipt of copy of the foregoing motion, and memorandum in support thereof, is hereby acknowledged this 24th day of February, 1950.

(S.) Robert B. Hummel, Attorney for Plaintiff.

MEMORANDUM

The reasons supporting motion for a new trial, aside from grounds 5, through 8, appear from the oral arguments and briefs of the defendant with respect to the merits of the case, and from the defendant's "Objections to Draft of Judgment Proposed by Plaintiff", filed September 13, 1949, and brief and evidence and oral argument in support thereof.

[fol. 3605] The reasons in support of grounds 5 through 8 of the motion for a new trial, and the objections and exceptions of the defendant to the Court's findings of fact and conclusions of law appear in the oral arguments and brief

in support of the defendant's motion, filed June 13, 1949, for an order "Rejecting and Disregarding the Document Lodged By the Plaintiff Denominated 'Findings of Fact and Conclusions of Law' and Requiring Plaintiff to Submit a Draft of the Findings of Fact and Conclusions of Law Required by Rule 52(a) of the Federal Rules of Civil Procedure."

To avoid duplication we respectfully refer the Court to the foregoing evidence, briefs, and arguments and adopt them in support of this motion and objections.

The reasons for the motion to amend Court's findings of fact and conclusions of law and to make new findings of fact and conclusions of law (by adopting the proposed findings of fact and conclusions of law submitted with the motion as "Exhibit A" thereto) are obvious, in view of the defendant's position with respect to the Court's action in adopting the Court's Memorandum Opinion as its findings of fact and conclusions of law, as set forth in the foregoing argument and brief in support of its motion filed June 13, 1949, above referred to.

The reason for Finding No. 162 is that, for reasons disclosed in the record (pp. 2580-2582, Incl.) the Court proposed to include such a statement in the Memorandum Opinion. Since only this Court takes judicial notice of proceedings before it, we respectfully request that such a finding be made.

The Court has full authority under Rule 52 (b) to "amend its findings or make additional findings" and "amend the judgment accordingly", and under Rule 59 (a), "On a motion for a new trial in an action tried without a jury", to open the judgment if one has been entered, and "amend findings of facts and conclusions of law or make new findings and conclusions, and directly the entry of a new judgment."

Respectfully submitted, (S.) Luther Day and John G. Ketterer, Attorneys for Defendant.

[fol. 3606] EXHIBIT "A" TO MOTION

IN UNITED STATES DISTRICT COURT

[Title omitted]

DEFENDANT'S PROPOSED FINDINGS OF FACT AND CONCLUSIONS OF LAW

FINDINGS OF FACT

The defendant,
British Timken
and French Timken

1. The defendant, The Timken Roller Bearing Company, is an Ohio corporation with its principal offices located at Canton, Ohio. It was organized by, and took its name from, H. H. Timken and W. R. Timken and their father, Henry Timken, Senior, about 1898 or 1899. It employs upwards of 16,500 employees at its various plants located in Ohio and in Colorado in the United States, and in St. Thomas, Ontario, in Canada. Defendant manufactures tapered roller bearings, alloy steel, seamless tubing and removable rock-bits. It owns all of the stock of The Timken Roller Bearing Service and Sales, Ltd., a Canadian corporation which handles sales of tapered roller bearings for service purposes in Canada, and of The Timken Roller Bearing Company of South America, an Ohio corporation authorized to do business in Brazil. It ships tapered roller bearings manufactured by it from its plants in Ohio to customers located in other states and territories of the United States, and to many foreign countries.

2. British Timken, Limited, named a co-conspirator (hereinafter referred to as British Timken), is a British joint stock Company organized June 4, 1920 and maintains its principal office at Birmingham, England. In 1947 it employed a weekly average of 1963 production employees and a weekly average staff of 527. It manufacturers tapered roller bearings and axle boxes for rail-[fol. 3607] road cars. It also manufactured ball and straight roller bearings from 1933 or 1934 to 1940, but thereafter discontinued its own production of these types of bearings in 1940 when it acquired its wholly owned subsidiary, Fischer Bearings Company, Limited, which presently manufactures straight roller bearings and ball bear-

ings: Michael B. U. Dewar is Chairman and chief Executive Director of British Timken.

3. The defendant owns 30.25% of the ordinary shares of British Timken. Under an agreement (Defendant's Exhibit 240) between the defendant and Dewar made in March, 1948, which superseded previous similar arrangements between them, it has an option to purchase all ordinary shares now owned by Dewar (constituting 25% of the ordinary shares of British Timken outstanding) in the event of his death or his being incapacitated for six months as director of British Timken, or in the event he desires to sell the shares, and also has the right to control the vote of a majority of the combined shares presently owned by defendant and Dewar if at any time the profits of British Timken available for payment of dividends upon an average of three consecutive years are reduced below £50,000 for one year, and Dewar has the option to purchase defendant's stock in British Timken if it desires to sell.

4. Societe Anonyme Francaise, named a co-conspirator (hereinafter referred to as French Timken) is a French corporation organized July 11, 1928, with its plant and offices at Asnieres, France. In 1947 it employed approximately 510 production employees and staff members. It manufactures tapered roller bearings.

5. The defendant and Dewar each own 50% of the capital stock of French Timken and of certain promissory notes issued by it. Under an agreement (Defendant's Exhibit 228, 15th document) between the defendant and Dewar made in 1935 which superseded previous similar arrangements between them, Dewar is given the right, during his lifetime and active management of French Timken, to elect a majority of its board of directors until it shall [fol. 3608] fail to pay annually $24,000 in dividends or other distributions from accumulated earnings; in the event of Dewar's death or retirement from active management of French Timken, or in the event of its failure to make such annual payments, voting control of French Timken passes to the defendant; and the defendant and Dewar are each given options to acquire the stock of French Timken held by the other in the event of proposed sale thereof.

The Position of the Timken Companies in the Bearing Industry.

6. The defendant inaugurated the manufacture of tap-

ered roller bearings, which were invented by the joint efforts of Henry Timken, Senior, and one Heinzelman, and patented by them.

7. Bearings consist, generally, of friction bearings and anti-friction bearings. Friction bearings, or plain bearings as they are sometimes called, slide over the shaft and depend entirely on oil or other similar substances to reduce friction. Anti-friction bearings consist of a circular group of steel rollers or balls revolving between two circular raceways which reduce friction between moving mechanical parts.

8. Among the types of anti-friction bearings are roller bearings and ball bearings. Tapered bearings are a style of roller bearings. Other styles of roller bearings consist generally of straight roller, spherical, spherangular, barrel shape, and hourglass bearings.

9. Bearings are subjected to one or both of two kinds of pressure, radial and end thrust. The radial load on a bearing consists of pressure from the top while the end thrust load consists of pressure from the side, such as the pressure which tends to push the occupants out of an automobile as it rounds a corner. In many instances, such as that of a bearing on the front axle of an automobile, there is a resultant load which is both radial and end thrust. The design of bearings differs in accordance with the function to be performed by them, depending upon the type of load or loads to which they will be subjected.

10. All types of anti-friction bearings compete with each [fol. 3609] other and can be used in almost any kind of position in which anti-friction bearings can be used. While straight roller bearings are designed primarily to take radial load, some are designed particularly to take end thrust as well as radial load. Tapered roller bearings are designed to take both radial and end thrust load. Ball bearings are designed to take both radial and end thrust load.

11. All types of roller bearings, including tapered roller bearings, can be used in almost any type of work where an anti-friction bearing can be used, and compete with each other in almost every place where there is any mechanical movement.

12. Aside from a field in which small ball bearings, such as the miniature types which can be seen only with a

magnifying glass are used almost to the exclusion of roller bearings, and a field in which large roller bearings are more practical due to the bulky housing required for ball bearings, roller bearings (including tapered roller bearings) and ball bearings compete, and in at least 90% of the places where anti-friction bearings are used either ball bearings or roller bearings can be applied, and the success of the anti-friction bearing manufacturer in competition depends upon salesmanship or economy of the bearing.

13. Price of the bearing and cost of the mounting for the bearing are the considerations which determine the economy of the bearing.

14. Ball bearings were brought to the United States from Europe and were used in the United States a number of years before tapered roller bearings were developed and for many years the major problem of the defendant in competition was to persuade prospective customers to replace ball bearings with tapered roller bearings on automobile applications.

15. In the United Kingdom and Europe the tapered roller bearing competes with the ball bearing in 90% of the applications in which anti-friction bearings are used. British Timken and French Timken have been engaged at all times in pioneering the sale of tapered roller bearings in the markets in which they have sold, because far more ball bearings than tapered bearings were used. The ball bearing companies were very well known and the sale of [fol. 3610] tapered bearings has been developed largely by displacing ball bearings.

16. Anti-friction bearings compete with friction bearings on many applications. Roller bearings, including tapered roller bearings, compete with friction bearings on heavy applications such as steel mill rolls, while ball bearings compete with friction bearings on lighter applications such as vacuum cleaners. Many more friction type bearings are manufactured than anti-friction bearings by well over 1,000 companies in the United States. Since 1935 an increasing part of the business of all anti-friction bearing manufacturers has been to induce users of friction bearings to substitute anti-friction bearings.

17. The defendant is the largest manufacturer of tapered roller bearings in the world. Net sales of bearings

by the defendant and its subsidiaries in 1947 were $77,097,756.

18. In 1927 defendant's output of tapered roller bearings constituted approximately 27.7% of the total production of anti-friction bearings in the United States.

19. Most manufacturers of ball and roller bearings belong to the Anti-Friction Bearing Manufacturers Association, which was organized to enable compliance with the National Industrial Recovery Act. According to figures compiled by that association, defendant's percentage of tapered roller bearings manufactured in the United States was as follows:

Year	
1941	71.0%
1942	77.9%
1943	82.2%
1944	80.3%
(7 months) 1945	78.9%

At present, the defendant's output of tapered roller bearings constitutes 25% of the total production of anti-friction bearings, and 50% of the production of roller bearings, in the United States.

20. In 1927 the defendant was competing with eight manufacturers of tapered roller bearings as well as manufacturers of other types of bearings. At the present time the defendant competes in the United States with 14 manu- [fol. 3611] facturers of tapered roller bearings, 18 manufacturers of straight roller bearings, 25 manufacturers of ball bearings and 6 manufacturers of special type bearings such as the SKF barrel type bearing and spherangular bearing. The number of manufacturers of tapered roller bearings in the United States is greater than it ever was before and certain of them, such as Bower and New Departure, have grown more than the defendant since 1927. These competitors include Hyatt, a manufacturer of tapered and straight roller bearings which is a division of General Motors Corporation, American SKF, a subsidiary of Swedish SKF, and Bower, which sold $20,000,000 (worth) of bearings as compared with the defendant's $70,000,000 (worth) in 1947.

21. British Timken, during the period from 1927 to

date, produced a large portion of all the tapered roller bearings in England. It manufactured more than 90% in 1927, the percentage decreased to 70%, and later returned to more than 90%. It produces approximately 20% of all British anti-friction bearings. British Timken's sales, including those made by its subsidiary, Fischer Bearings Co., Ltd., were estimated at $14,700,000 for 1947. British Timken's sole competitor in England in the manufacture of tapered roller bearings has been Skefko, the subsidiary of SKF which operates in England. Its other competitors in England in the sale of anti-friction bearings have been such companies as Hoffman and Ransome & Marles.

22. French Timken manufactures about 80% of the tapered roller bearings in France, which constitutes 10% of all the anti-friction bearings. Its sales in 1947 totaled $2,274,723. Other manufacturers of tapered roller bearings in France which compete with French Timken are Rossi, the French subsidiary of SKF, and Renault, companies which also manufacture ball bearings and other types of anti-friction bearings.

23. Estimating the present volume of production of anti-friction bearings in the United States, England and France from the percentages thereof produced by the defendant, British Timken and French Timken, in the amount [fol. 3612] of 25%, 20%, and 10%, respectively, the combined volume of sales of the above three companies represents approximately 23.2% of the combined anti-friction bearing industry in those three countries, as shown by the following table:

TABLE NO. 1

	Volume of Bearing Sales	Industry % of National	Estimated Volume of National Industry
American Timken	$70,000,000	25	280,000,000
British Timken	11,000,000	20	55,000,000
French Timken	2,274,723	10	22,747,230
Total	83,274,723		357,747,230
Total % of Combined Industry			23.2%

24. SKF's pre-World War II production of anti-friction bearings was about one-third of the world's supply; as of 1945 SKF's subsidiaries in France and Germany were the

largest producers of anti-friction bearings in those countries; and, of 20 to 30 manufacturers of anti-friction bearings in the United States; the largest was a subsidiary of an automobile manufacturer (Defendant's Exhibits 173 and 184).

The Method of Marketing Bearings

25. Bearings are sold for original installation in equipment and for the replacement of bearings therein. Original installation sales constitute approximately 95% of the output of bearings, and replacement sales the balance of 5%.

26. The customer is most likely to order a replacement bearing from the company which manufactured the bearing originally installed in certain equipment, so that the manufacturer making the sale of the bearing originally installed is most likely to make the sale of the bearing which replaces it. Therefore, the sale of bearings for original installation provides the basis for replacement business.

27. Sales of bearings for original installation are made as follows. The bearing manufacturer's sales engineers contact the prospective customer to ascertain whether any new designs of machinery are being considered, and ob- [fol. 3613] tain from the customer's design engineers who are designing the machinery prints which show the points at which bearings are to be located. The bearing manufacturer's engineers then prepare layouts which show how its bearings can best be used in the customer's machinery, which are submitted to the customer accompanied by a proposition. Layouts and propositions are submitted by the various bearing companies manufacturing ball, straight roller, tapered roller, and other types of bearings, respectively, who are competing for the original installation business on a particular machine. The defendant maintains a staff of sales engineers, who are all graduates in the different branches of engineering trained in its factories, in sales offices located in the principal cities of the United States for the purpose of securing original installation business in this manner, and British Timken and French Timken do the same.

28. Competition between the different types of anti-friction bearings for original installation business ends at the point of the adoption in a design of a specific type of bearing. Once that particular type of bearing is in-

corporated other types cannot be substituted for replacement. The replacement bearings must be of the same size and character as the original bearing.

29. Tapered roller bearings manufactured by competitors of the defendant are interchangeable with the defendant's bearings. Almost all tapered bearing manufacturers copy the defendant's bearings dimensionally, and also, as a convenience to customers, use the same system of part numbers on their bearings as that used by the defendant. Bearing assemblies, manufactured by the defendant and its competitors, consisting of cup and cone, fit the same opening and are interchangeable and cups manufactured by the defendant's competitors are sometimes combined by its customers with cones made by defendant, or vice versa.

30. Replacement business is conducted by the defendant, British Timken and French Timken, through authorized distributors and stocking jobbers who purchase and stock [fol. 3614] various sizes of bearings and parts for the purpose of servicing customers pursuant to a system of discounts from list price which are changed from time to time in order to meet competition. In addition to that which comes to dealers or jobbers, replacement business consists of unsolicited inquiries to the manufacturer which originate with persons who had had no previous contact with its sales organization. Such unsolicited inquiries made to the defendant ordinarily run between $15,000 and $25,000 in value per year.

Foreign Commerce in Anti-Friction Bearings

31. The foreign countries in which the world's machinery, aside from that built in the United States, is chiefly manufactured, are located in western Europe. Bearings are invariably components of such machinery, and the demand for anti-friction bearings outside the machinery producing countries consists of replacement business.

32. The principal foreign countries in which anti-friction bearings have been produced during the period covered by the complaint in this case, namely 1928 to date, are Sweden, Germany, Italy, the United Kingdom, France and Switzerland (Defendant's Exhibit 173), all of which are located in western Europe.

33. Exports of anti-friction bearings by United States

anti-friction bearing manufacturers have been made principally to Canada with lesser amounts going to European countries, Latin-American countries, Japan, Australia, and the Philippine Islands, and occasional large shipments to Soviet Russia. They consist principally of bearings used in the manufacture of automobiles in Canada in plants affiliated with American automobile producers. The balance of the exports are largely repair and replacement parts for American made machines and devices, and types of bearings not produced in Europe (Defendant's Exhibits 173 and 184). Exports of anti-friction bearings to the United Kingdom and western European countries have constituted a relatively small part of total exports. Exports by all United States anti-friction bearing manufacturers to the United Kingdom averaged 3.6% of exports from 1927 through 1938, while exports to Europe, aside from [fol. 3615] the years 1929 through 1931 in which the Russian Government purchased abnormally large amounts, averaged 13.9% of total exports. Total exports from the United States for the years 1925, 1927, 1929, 1931, 1933, 1937, and 1939 averaged only 2.3% of anti-friction bearings produced therein as shown by the following table:

Table No. 2.

Year	Total U. S. Exports (DX 176)	Total U. S. Production (DX 178)	Export % of U. S. Production
1925	1,270,125	99,418,000	1.3%
1927	1,804,701	99,849,000	1.8
1929	3,236,217	120,034,000	2.7
1931	1,750,845	50,528,000	3.4
1933	777,492	40,530,000	1.9
1937	3,028,515	124,014,000	2.4
1939	3,061,466	104,874,000	2.9
Average U. S. Export percentage of total U. S. Production			2.3%

34. Imports into the United States from Europe (where the principal foreign producers of anti-friction bearings are located) are principally from the SKF plants and from Hoffman of England. These imports go largely to the American affiliates of these companies and are largely sizes and types which they do not produce advantageously in the United States (Defendant's Exhibits 173 and 184). Imports of anti-friction bearings into the United States averaged less than 1% of the total United States production of anti-friction bearings for the years 1925, 1927,

1929, 1931, 1933, 1937, and 1939 as shown by the following table:

Table No. 3.

Year	Total U. S. Imports (DX 177)	Total U. S. Production (DX 178)	Import % of U. S. Production
1925	846,000	99,418,000	.85%
1927	913,000	99,849,000	.91
1929	1,416,000	120,034,000	1.20
1931	392,000	50,528,000	.77
1933	295,000	40,530,000	.73
1937	1,216,000	124,014,000	.98
1939	493,000	104,874,000	.47
Average U. S. Import percentage of total U. S. Production			.84

[fol. 3616] 35. From the commencement in 1914 of World War I to date there has evolved a complete change in foreign trade from free competition on the basis of price regulated only by tariff restrictions to a trade administered and controlled by governments under rigid licensing systems in which price competition has no place because these systems are administered according to the political and economic theories of the particular countries which impose them. As a result of this change, there is no substantial free competition on the basis of price in foreign trade today, and there is no likelihood of a return thereto in the future.

36. During World War I systems for trade control by administrative action were established by the belligerent and neutral countries which related both to the importation and exportation of goods and also to the control of foreign exchange.

37. After World War I, termination in 1919 or 1920 of an inter-allied agreement, by which the United States supported the pound sterling at the official rate of $4.86 per pound, caused the collapse thereof. This resulted in continuation by the United Kingdom of measures to protect British industry, passage of the Safeguarding of Industries Act in 1921, and emphasis on the "Buy British" movement the purpose of which is to procure insistence upon British components in industrial production and to cause people in England and the rest of the British Empire to buy British goods in preference to goods manufactured in other countries wherever possible.

38. Termination of the inter-allied agreement caused the French franc to collapse, resulting in reinstatement of

the French system of controls of imports from 1922 to 1925, when French currency was stabilized, a high protective tariff was put into effect, and trade on a free competitive basis was resumed during a period of four years. The French Government, maintaining the largest army in Europe and therefore a large customer for France's metallurgical production, was insistent upon production of everything necessary for defense in France, and even controlled the location of bearing plants in France. This resulted in a highly nationalistic attitude in France that bearings incorporated [fol. 3617] in French equipment should be manufactured in France.

39. In Germany imports and foreign exchange transactions were subject to direct controls during the early 1920's to 1925, at which time an attempt was made to return to normal free price competition until 1930. During the period from 1925 to 1930 Germany's high protective tariff was continued and there were great German nationalistic pressures to require German purchasers to buy only goods manufactured in Germany.

40. During the period from the end of World War I to 1930, other European countries underwent violent inflation, international trade did not commence immediately, and from 1925 to 1930 an attempt was made to get back to normal trade, but each country had an essentially defensive point of view with respect thereto.

41. In the summer and fall of 1931, a financial collapse caused by runs on Austrian and German banks occurred in both countries which caused the institution of foreign exchange controls prohibiting foreign exchange transactions except under license in both countries, and put an end to the effort to get back to normal free trade on a competitive basis.

42. Germany organized an elaborate system of payments and clearing agreements with other countries which made international exchange transactions unnecessary, and resulted in increasing the volume of trade between those countries, who were such parties to agreements, and excluding trade between them and countries not parties thereto. The coming into power of the Nazis in Germany in January, 1933, completely removed its international trade from free price competition. Thereafter, it was influenced by considerations of foreign policy, economic penetration and aggression, and preparation for war.

43. In the British Empire, and certain other countries within its sphere of influence, similar restrictive practices took place between the banking collapse of 1931 and World War II. Collapse of the German banking system in 1931 started a run on the English banks, which were forced to [fol. 3618] suspend gold payments, resulting in collapse of the pound sterling. Most of the British Empire, the Scandinavian and the Baltic countries also suspended gold payments and pegged their currency to the pound sterling, thus creating a sterling area, consisting of the United Kingdom, all of the rest of the British Empire except Canada and Newfoundland, the Irish Free State, Sweden, Norway, Denmark, the Baltic countries, Portugal and Iraq, whose members transferred credit balances in dollars into sterling rather than gold, and kept these reserves on deposit in London, thus keeping available for themselves pounds sterling at a fixed rate of exchange. Creation of the sterling area impeded exports by American manufacturers, because fluctuation in the rate of exchange between the dollar and the pound sterling, which was not pegged to the dollar, made it more desirable for business men in the sterling area group to trade with those in other countries who were members of that group. Also, depreciation of the pound sterling in terms of the dollar resulting from suspension of payment in gold was equal in effect to a 50 to 70 per cent tariff on American goods sold in the sterling area countries. In 1932, England imposed a blanket tariff of 10 per cent and an additional tariff of approximately 33-1/3 per cent overall on a large variety of manufactured products, and the Government was given power to modify rates to impose quantitative restrictions on imports, and in the same year the principle of Imperial Preference, which gave preferential tariff rates to nations members of the British Empire with the effect of diverting trade from non-empire to Empire countries, was established at the Ottawa Conference of British Empire Nations. During the period from the 1931 banking collapse to World War II, the United Kingdom also made clearing and payments agreements, similar to those made by Germany, with nine countries.

44. In France, during the period from the 1931 banking collapse to World War II, two-thirds of imports were subject to quantitative controls in addition to tariff pro-

tection, the franc collapsed to 4 cents in 1933 and 2 cents at the time World War II started, and in the serious [fol. 3619] depression which took place during this period in France the French metallurgical industry was almost completely dependent upon French Government orders for railroad and military purposes.

45. During the period from the 1931 banking collapse to World War II, Spain, Portugal, and Italy had controls, and the countries of eastern Europe were linked economically with Germany pursuant to its system of clearing agreements. As of March, 1939, 38 countries, not including the United States, were parties to clearing and payments agreements. Germany was party to 35, Italy to 28, France to 12, and the United Kingdom to 9. The result of such agreements was to increase the difficulty of trade between the United States and countries party thereto.

46. During World War II, such foreign trade as took place was subject to export licenses at both ends, and in European countries usually to import licenses, and was government controlled and completely subordinated to war requirements in each country.

47. Since the end of World War II the war time control system in England has been maintained virtually intact, including internal production controls and the entire exchange control system, with the result that imports into England are controlled, and foreign exchange is not made available to pay therefor unless their purpose is approved by Government authorities, which regulate imports in a way considered best to implement Government policy. Licenses for foreign exchange to pay for imports will not be given for goods which are produced in sufficient quantity in the United Kingdom.

48. Since 1945, the United Kingdom has made a series of agreements with other countries which divide the countries of the world into five groups to which different treatment is given by the United Kingdom. Generally speaking, these groups are as follows:

(a) The sterling area group consists of the United Kingdom and all of its colonies, protectorates and mandates, the British Empire Dominions except Canada and Newfoundland, India, Pakistan, Iceland, the Farroe Islands, Iraq, [fol. 3620] and Trans-Jordan. Among these countries sterling is interchangeable. Transfers of funds out of the ster-

ling area countries to those in the other four groups are prohibited except under license.

(b) American area accounts are sterling accounts derived from current transactions, belonging to residents of the United States and its possessions, the Philippine Republic and sixteen of the twenty Latin-American Republics. Sterling in American area accounts is transferable into dollars, and dollars and other currency in such accounts are transferable into sterling and other currencies of countries in the next group, which is called the transferable account area.

(c) The transferable account area consists of agreements with certain countries by which they are included within a British sterling area. Transfers from the American area accounts into currency of a country in the transferable account area do not work in reverse, i.e., a transfer of sterling in the account of a country located in the transferable account area could not be made into the currency of a country located in the American account area, the purpose being to give the United Kingdom an increasing area of transferable accounts, included in a British sterling area, in which multilateral payments and trade can take place along organized patterns to the exclusion of American area accounts and to the benefit of the transferable account area.

(d) Bilateral account countries are those with which strictly bilateral arrangements exist so that transfers from their currency into sterling, and from sterling into their currency, are permitted either unconditionally or under very liberal licensing agreements, but no transfers into or out of other currencies, including the transferable accounts currencies, are permitted.

(e) Residual accounts countries constitute the balance and the Soviet Union is the only country of any importance included in this category.

The effect of these agreements, and the foreign exchange regulations thereunder, is to change trade of a country like the United States, which is listed as an American area [fol. 3621] account, from normally competitive to strictly "administered" trade in the sense that the British Government, considering only the public interest and disregarding comparative cost and competitive prices, will administer it according to the amount of dollars available. In deciding whether to permit importation from the United States, it

will first determine whether the product can be obtained in England, the sterling area, or the transferable account area in that order of preference, and as a last resort will go to an American account area country for it.

49. The situation in France and other European countries since World War II has varied in detail, but at the present time all countries of the world have provisions for import or exchange licensing, or both (summarized in Defendant's Exhibit 181), except the United States, Cuba, the Dominican Republic, El Salvador, Haiti, Liberia, the Philippine Republic, and Tangier.

50. At the present time the United States licenses exports from this country in accordance with regulations (Defendant's Exhibit 248).

51. At the present time each foreign country has a full employment policy which results in establishment of classifications of imports by which domestic production is first assured in order to obtain full employment and essential imports are then obtained from countries with which the particular country has mutual payments and clearing agreements. Only after the exhaustion of these sources are additional imports allowed, to the extent necessary, from other areas, such as the American accounts area.

52. So far as can be seen at the present time, the presently existing restrictions on the foreign export trade of the United States in anti-friction bearings, as well as other products, will continue in spite of efforts of the United States to bring about a return to free trade on a competitive price basis because, upon termination of the European [fol. 3622] Recovery Program, the subsidies which give the beneficiaries of that plan American dollars with which to buy goods will end, the domestic manufacturing capacity of countries which benefit by the plan will have substantially increased, and so long as the western European countries consider themselves menaced by Russian power, it is likely that the nationalistic shells in which those nations live will continue.

53. At the present time many foreign countries impose substantial tariffs upon imports of anti-friction bearings. Latest tariffs of the principal foreign countries which manufacture machinery, and also anti-friction bearings, are as follows. The tariff of the United Kingdom imposes 33-1/3 per cent *ad valorem* on roller bearings; that of

France, suspended January 1, 1948, ordinarily imposes 28 per cent, plus additional levies on imports of approximately 12.36 per cent which have not been suspended; that of Germany (1938) imposes a progressive rate depending upon weight, ranging from 150 Reichsmarks per 100 kilograms for bearings weighing 100 grams or less to 50 Reichsmarks for those weighing over 1 kilogram each; that of Italy imposes a progressive rate depending upon weight ranging from 52.80 lire per 100 kilograms for roller bearings weighing up to 50 grams to 4.60 lire for those weighing more than 4 kilograms plus 10 per cent import license fee and 4 per cent sales tax; that of Sweden imposes 10 per cent *ad valorem;* and that of Switzerland imposes a progressive rate ranging from 80 francs in import duty, plus 85 francs sales tax per 100 kilograms for bearings weighing less than 250 grams, to 50 francs import duty, plus 44 francs sales tax for those weighing 1 kilogram or more, with 15 per cent additional Tare percentage (Defendant's Exhibit 180).

Results of Restrictions on Export Trade in Anti-Friction Bearings

54. As a result of the various restrictions imposed by foreign countries over the period since the commencement of World War I in 1914, consisting of the nationalistic policies of the various nations to enforce local purchase of domestic goods, tariff regulations, formation of the sterling [fol. 3623] bloc, fluctuation of currency values, and government regulation and licensing of exports, imports, and foreign exchange, American manufacturers of anti-friction bearings, including the defendant, from 1927 to date, could not have exported bearings manufactured in the United States to the United Kingdom, France, Germany, or the other European machinery manufacturing countries in successful price competition with anti-friction bearings manufactured in those countries.

55. At all times from 1927 to date, it has been necessary for an American manufacturer of anti-friction bearings, including the defendant, in order to do a successful foreign business therein, to establish plants to produce bearings in the foreign countries in which original installation sales are to be made. Since practically all of the manufacturing of machinery outside of the United States has taken place

in the western European nations from 1927 to date, it was necessary to establish plants in those countries to obtain original installation bearing business therein, and the only foreign countries in which it was profitable to establish such plants were England, France, Germany, and possibly Italy.

56. Replacement sales of anti-friction bearings, constituting 5 per cent of its anti-friction bearing business, have a natural tendency to follow original installation business and to go to the manufacturers located in those countries in which bearings to be replaced were originally manufactured and installed.

57. In order to obtain original installation bearing business in England, France, and Germany, it has been advisable from 1927 to date, not only to operate plants in those countries, but also to operate them under local management and with local personnel, accompanied by investment of local capital, for the following reasons.

(a) The method of selling bearings for original installation requires the services of engineers who are familiar with the engineering practices of the particular country in which sales are to be made and with the temperament of the customers of that nationality.

[fol. 3624] (b) Manufacturers of machinery are reluctant to purchase bearings from bearing manufacturers who are not located nearby because they desire to have available speedy technical advice and service.

(c) There is a strong national interest in each country in having an economy which is as nearly integrated as possible, and is not dependent upon an outside source of supply for such an important item in its economy, from an industrial and military standpoint, as anti-friction bearings.

(d) There is a national hostility toward the product of foreigners in those countries and a pronounced national interest in supporting the product of local manufacturers therein which has always been of special importance to the defendant, because of the fact that the tapered roller bearing was first developed by it and has been essentially an American product competing largely with the ball bearing, essentially an older product developed locally in those countries before tapered roller bearings were sought to be produced therein.

(e) Bearings in European countries are manufactured largely to metric rather than to inch measurements, which makes it much more practical to have plants in those countries if sales are to be made there.

(f) High tariffs in the United Kingdom, France, and Germany have made it advisable to establish plants therein. A high French tariff constituted one reason for a recommendation by an officer of the defendant in 1927 that it establish a plant in France.

(g) The various restrictions on imports, exports, and foreign exchange have made it necessary to manufacture bearings in the countries in which they are to be sold for original installation.

Results of Restrictions on Import Trade in Anti-Friction Bearings

58. Neither British Timken nor French Timken could have sold anti-friction bearings on a competitive price basis for original installation or replacement business in the United States from 1927 to date because of the United [fol. 3625] States tariff, and because of their higher costs of production.

59. The United States tariff on anti-friction bearings and parts from 1927 to date has been as follows (Defendant's Exhibit 183):

	Balls and Rollers		Ball Bearings and Parts		Roller Bearings and Parts	
	Per lb.	Ad valorem	Per lb.	Ad valorem	Per lb.	Ad valorem
1927–1936	10¢	35%	10¢	45%	10¢	45%
1927–1939	8	35	8	35	8	35
1939	8	25	8	35	8	35

The tariff on balls and rollers has varied, from 66.6 per cent of the declared value thereof averaging 46.3 cents per pound in 1932, to 26.1 per cent on balls and rollers averaging $5.119 per pound in 1943; on ball bearings and parts, from 61.4 per cent on bearings averaging 60.8 cents per pound in 1932, to 39.1 per cent on bearings averaging $1.887 per pound in 1943; and on roller bearings, from 61.8 per cent on bearings averaging 59.6 cents per pound, to 39.9 per cent on bearings averaging $1.618 per pound (Defendant's Exhibit 183).

60. The cost of manufacture of anti-friction bearings by foreign manufacturers, including British Timken and

French Timken, has always been much higher than that of American manufacturers, including the defendant, due to higher actual labor costs resulting from the fact that orders for bearings in foreign countries are much smaller than those in the United States, which prevents "long runs" on bearings on particular orders and thus necessitates much more frequent interruptions in setting up of different tooling on machines to take care of different orders for different sizes, with resultant loss of time by machine operators.

Relations Between the Defendant, Subsidiaries of Vickers, Ltd., and La Societe Mechanique de Gennvilliers (1909-1927).

61. On June 16, 1909, the first of a series of written agreements (Plaintiff's Exhibit 6) licensing the production [fol. 3626] and distribution of tapered roller bearings, was concluded between the defendant and Electric & Ordnance Accessories Company, Ltd. (hereinafter called E. & O. A.), a predecessor of British Timken and a wholly-owned subsidiary of Vickers, Ltd., a British enterprise comprised of many companies and described as manufacturing everything from battleships to baby carriages. Under its provisions defendant granted to E. & O. A. the exclusive license to "make, use, exercise and vend" in the United Kingdom and the Isle of Man roller bearings of all kinds made pursuant to the specifications of three British patents which defendant then owned or under patents later to be granted to or acquired by defendant. This agreement contained definite territorial restrictions. Defendant was prohibited from making or selling to others, or from licensing others to sell, or from selling its own manufactured bearings for shipment into the territory of E. & O. A. It was, however, permitted to make and sell, or license others to make and sell, bearings for vehicles manufactured outside and shipped into the territory of E. & O. A. E. & O. A. was prohibited from selling bearings outside of its territory, and from selling bearings in its territory knowing them to be for shipment outside. E. & O. A. was allowed to sell bearings in its own territory for vehicles manufactured there for export elsewhere. The license was so conditioned that E. & O. A. was prevented from manufacturing or selling any anti-friction bearings, except those

made under the licensed patents and except those assembled in other articles produced or sold by E. & O. A. E. & O. A. was obliged to use the designation "Timken" exclusively on all the bearings made or sold by it. It was incumbent on E. & O. A. to use the instructions for manufacture given to it by defendant, which defendant agreed to supply.. Defendant in turn was privileged to utilize any improvements made by E. & O. A. in its manufacturing process. E. & O. A. had the right to determine the sale price for its bearings, provided that the deficiency between its lowest price and the lowest sale price of defendant would not be in excess of the United States tariff chargeable on the bearings from [fol. 3627] any part of E. & O. A.'s territory. The licensee agreed to pay to the defendant a royalty of 15 per cent of the net invoice price of all sales.

62. In another agreement (Plaintiff's Exhibit 7) executed on the same day, defendant granted to E. & O. A. the full and exclusive "license and authority to make, use, exercise and vend" roller bearings of all kinds under certain French and Russian patents, and under a German patent application as soon as the patent or other equivalent grant should have been obtained, in the territories covered by the patents. It provided that so long as the agreement was in force, E. & O. A. should have "full and exclusive right license and authority until all the said Patents shall have been granted or after all or any of the said Patents shall have ceased to exist (but only so far as the Licensor can then lawfully do so) to make use exercise and vend articles embodying the subject matter of such patents or patent and roller bearings of every kind whatsoever in that part of the said territory where the Patents or Patent shall not have been granted or shall have ceased to exist." Defendant also granted to E. & O. A. until such patents should be obtained, "so far as the licensor lawfully can do so in the absence of such patents or grants", an exclusive license to manufacture and sell articles embodying the subject matter of the British patents referred to in the first agreement and roller bearings of every kind whatsoever (whether covered by patents or not) throughout Europe (except the United Kingdom, France and Russia and except Germany after the patent or grant shall be issued or made there) and throughout the whole of the British Colonies, Protectorates and Dependencies except

Canada. It contained the identical restrictions set forth in the first agreement in respect of sales in the other party's territory. The provisions of the first agreement pertaining to royalty, price regulations, the compulsory use of the mark "Timken" by E. & O. A., to the requirement that E. & O. A. use instructions as to method of manufacture, to the furnishing of data by defendant, and to the privilege [fol. 3628] of defendant to utilize improvements made by E. & O. A. were embodied in the second agreement in identical language.

63. E. & O. A. at the time the 1909 contracts between it and the defendant were executed was not, and it never was at any time, an actual or potential competitor of the defendant in the manufacture and sale of anti-friction bearings. At the time it entered into the contracts with the defendant, it was not, and it never theretofore had been, a manufacturer of anti-friction bearings. It was engaged in the manufacture of electrical motors and equipment, and fuses for the British Government. In 1909 its plant was located in Aston, Birmingham, and it carried on its bearing manufacturing operations in a shop about 20 feet x 40 feet. When it started on bearing work, it employed not more than a couple of dozen people thereon. By 1919 or 1920, when Wolseley Motors came into the picture, the number of employees of E. & O. A. employed in the manufacture of bearings had increased to from 350 to 400 people, and it was making 60 or 70 different types thereof.

64. Some time prior to 1920 a French company named La Societe de Mechanique de Gennvilliers (hereinafter called SMG) commenced to act as licensee of either E. & O. A. or Wolseley Motors in the sale of tapered roller bearings in France and its colonies. SMG was not at any time an actual or potential competitor of the defendant in the manufacture and sale of anti-friction bearings.

65. In 1920, Vickers, Ltd., sought to assign the rights of E. & O. A. to Wolseley Motors, Ltd., another wholly-owned Vickers' subsidiary. The defendant objected to the assignment because it did not view with favor having bearings being made by a motor car manufacturer and did not feel that the Timken business would be prosecuted by the new business rganization any better than it had been in the past, even though the directors of Wolseley Motors had de-

cided that bearings manufactured under the 1909 license agreements should be made under an entirely separate organization with separate officers, plants, officials and their staff and the organization to trade under an entirely different name.

[fol. 3629] 66. On March 29, 1920, a satisfactory agreement was reached between the defendant and Wolseley Motors, and the agreements of June 16, 1909 were modified on April 6, 1920, by two separate instruments (Plaintiff's Exhibits 8 and 9) between defendant and Wolseley Motors. The rights of E. & O. A. were assigned to Wolseley. The territorial divisions remained as they had been designated. The respective areas were redefined as licensor's area (defendant), and licensee's area (Wolseley). Defendant was permitted, however, to sell to manufacturers in defendant's territory who, in turn, were allowed to export bearings to Wolseley's territory for use in their products. Wolseley was granted the same privilege in its territory. The price for replacement sets for use in Ford cars in Wolseley's territory was fixed. Defendant and Wolseley placed on record their desire and intention that bearings made in their respective territories "shall not be sold at prices which shall be unreasonable and unfair to the party in whose territory the Roller Bearings are sold" without accepting any legal obligation for it. The modifying agreements further provided, that the defendant might rescind the 1909 license agreements if Wolseley should become bankrupt or fail to carry out its agreements in certain respects, and that, if they should be rescinded, Wolseley should abandon the use of the name "Timken" as part of its name (if so used) and in all other respects, and secure to defendant the exclusive use of the name "Timken".

Wolseley Motors, after succeeding E. & O. A. as a party to the contracts with the defendant, was not and never was thereafter an actual or potential competitor of the defendant in the manufacture and sale of anti-friction bearings.

67. On April 20, 1920, British Timken was incorporated as a wholly-owned subsidiary of Wolseley Motors, took over the production of bearings under the 1909 license agreements, and thereafter the rights of Wolseley Motors

under those agreements, as modified in 1920, were assigned to it.

[fol. 3630] 68. Shortly after the amendment of the 1909 license agreements, in May, 1920, the defendant, which has been careful, at all times, to preserve its rights in the trade name and trademark "Timken", the family name of its founders, sought advice from its American patent and trademark counsel regarding the use of the name "Timken" as stamped on bearings by the English and French companies, and was advised that it was possible for its British licensee to acquire ownership of the trademark in certain territories unless the matter were taken care of by a contract providing for licensing of the trademark to the British licensee and reversion thereof to the defendant at the termination of the license, that the supplemental agreement of 1920 with Wolseley Motors should be revised so that upon termination, by expiration of time or otherwise, of the 1909 agreements, the defendant's rights with respect to the trademark "Timken" should be the same as set forth in Article 10 of the 1920 supplemental agreement in event of the contracts being rescinded, and that registration of the surname "Timken" as a trademark could now be obtained in the United States under the Act of March 19, 1920, and in England under a new trademark act of December 23, 1919.

69. The defendant registered the trademark "Timken", which it had been using since 1912, in the United States in 1920.

70. Commencing in 1920, the defendant made efforts to secure registration of the trademark "Timken" in England but its American trademark counsel were advised by their English associate trademark counsel in January, 1921, that the registration could only be obtained by British Timken and that the defendant would have no rights therein unless some specific arrangement were made whereby, on termination of the license agreement under which bearings were being manufactured in England, the goodwill of the business in respect thereof must revert to the defendant. The defendant on August 22, 1921, instructed its American trademark counsel to proceed to obtain such an agreement from British Timken as the only way to get this registration was through its British licensee.

[fol. 3631] 71. In June, 1921, the defendant instructed its American trademark counsel to have the trademark registered in all civilized countries, and in August, 1921, to go ahead with this registration in other European countries without waiting for the British matter to be settled.

72. In December, 1921, the defendant was surprised to learn that SMG had already registered the trademark "Timken" in France. Under French law the first party to register a trademark in France owns it, subject to annulment by a prior user.

73. The defendant also found that one Max Prausnitzer, sales agent in Germany for E. & O. A. at the time, had registered the trademark "Timken" in Germany in 1916. Although Prausnitzer stated that he had registered the trademark to prevent its appropriation by third parties, he successfully resisted the defendant's application for registration in Germany. Under German law from 1918 to 1939 the first registrant of a trademark acquired incontestable title thereto regardless of the use thereof.

74. The defendant, after procuring registration of the trademark "Timken" in the United States, procured registration thereof prior to 1927 in the foreign countries hereinafter described in the years specified. At all times involved in this action, registrations of trademarks in certain of such countries either (a) could not be set aside by evidence of prior use by a contestant; or could be set aside by such evidence either (b) at any time, or (c) during a limited period after registration (except that a registration obtained with knowledge of the prior user's better right could be set aside at any time) as indicated. The right to set aside registrations in each of these countries could be waived by contract.

[fol. 3632]

	Country	Date of Defendant's Registration	Period for Setting Aside Registration
(a) Countries in which registration could not be set aside			
	Finland	1923	
(b) Countries in which registration could be set aside at any time			
	Belgium	1922	
	Greece	1926	
	Italy [1]	1922	
	Luxembourg [1]	1923	
	Netherlands	1922	
	Portugal [1]	1924	
	Roumania	1923	
	Sweden	1923	
	Switzerland	1923	
	Turkey	1923	
(c) Countries in which registration could be set aside during a limited period			
	Austria	1923	3 years
	Bulgaria	1923	1 year
	Czechoslovakia	1923	3 years
	Denmark	1923	5 years
	Yugoslavia	1924	2 years
	Norway	1922	3 years
	Poland	1926	1 year
	Spain	1923	3 years
Other Countries			
	Australia	1923	
	Hungary	1923	
	India	1923	

[1] Changed to limited periods in 1942, 1945 and 1938, respectively.

75. After the organization of British Timken in 1920, the defendant's officials concluded that British Timken was not advancing nearly as fast as the defendant in new fields of endeavor, was not taking full advantage of the technical information which the defendant was passing on to it, that its methods were inferior to those of the defendant, its costs were higher, and that the quality of bearing made by it was quite inferior to that made by the defendant.

76. Although the royalty payable under the existing 1909 license agreements had been reduced some years prior at the request of British Timken, or one of its predecessors, from 15 per cent to 10 per cent, British Timken again, commencing in 1923, asked repeatedly for a further reduction in royalty to not more than 2½ per cent, representing that its competitor, Skefko, was manufacturing and sell- [fol. 3633] ing tapered bearings at a profit at a price

equivalent to British Timken's cost, including royalty, and was doing a good business in cheap bearings, especially in replacements for bearings on Ford automobiles. Although the defendant continually suggested that British Timken remedy this situation by sending representatives to observe the defendant's improved manufacturing processes for the purpose of cutting its costs of manufacture, nobody was sent for two years after the suggestion was first made in 1923, and no employee of British Timken or its predecessors, visited the defendant for this purpose from 1920 to 1925.

77. In the early part of 1924, Lothrop, an official of the defendant, was sent to British Timken to advise it on cutting costs, and during his stay was told by British Timken that it did not think the defendant had any right to the trademark and trade name "Timken" in England.

78. The defendant wrote its English solicitor, Duncan, on March 25, 1924, authorizing him to negotiate with British Timken an adjustment of the royalty, and advised him that the one thing that it prized over all else was the name "Timken" and that it must have entire control of this name, that, if the matter of the Timken name could be satisfactorily settled, 5 per cent flat royalty on all business should be satisfactory to British Timken, but that as a last resort, in order to get everything that it desired in clearing the name "Timken", and in having entire control of it, it would consider even down to 2-½ per cent on the Ford business only, and 5 per cent on all other business.

79. Under English law there were, and are at present, common law trademark and statutory trademark rights, the former being protected by the Passing Off Act, and the latter by statutory provisions for registration. A common law trademark can be established in England by use of a trademark so that the public has identified the user's goods thereby. Prior to a change in the English trademark act in 1938, both under the statutory and common law of England, a trademark could be validly assigned only with the entire good will of the business in which it was used, but [fol. 3634] not if disassociated from the business with which it had been built up. This is still the English law as to assignment of a common law trademark. However, it was possible both before and after the change in 1938, under English law, to have a situation where the legal

ownership of unregistered trademarks belonged to one party and the equitable ownership to another.

80. On June 19, 1924, an agreement was reached by the defendant and British Timken by which royalties payable by British Timken were reduced to 5 per cent on ordinary business, and 2½ per cent on Ford business, and those payable by SMG were reduced to 5 per cent, commencing on the 1st of January, 1925; provisions as to ownership of the trademark were made; and the 1909 agreements were continued in existence to January 1, 1929. This agreement was evidenced by two formal contracts, one (Plaintiff's Exhibit 11) modifying the 1909 license agreement as to the continent of Europe and British Colonies, being dated December 31, 1924, and the other (Plaintiff's Exhibit 10) modifying the principal 1909 license agreement as to the United Kingdom and the Isle of Man, being dated as of January 1, 1925. Plaintiff's Exhibit 10 recited that the name "Timken" should belong exclusively to defendant and that during the continuance of the principal 1909 agreement as modified from time to time, British Timken should be deemed to be using it as a part of its exclusive license, upon the expiration of the principal agreement British Timken should change its name, and during the continuance and after the expiration of the principal 1909 agreement should otherwise do everything necessary to secure for defendant the exclusive right to the name "Timken". Plaintiff's Exhibit 11 was identical in this respect except that it contained provisions as to the sublicensees of British Timken which were the same as those applicable to British Timken.

81. At the time the amendments to the 1909 license agreements were made in 1924, all the basic patents pertaining to the tapered roller bearing had expired. The defendant was advised by its American patent and trademark counsel prior to the making of the amendments that the [fol. 3635] 1909 license agreements would not expire with the last of the defendant's three original British patents, but would be prolonged to the expiration of other British patents subsequently acquired by it, and that the license to British Timken contained therein to use the trademark and name "Timken" was of great value to British Timken.

82. After the amendment of the 1909 agreements in 1924, and some time prior to September, 1925, a joint ap-

plication for registration of the trademark "Timken" in England was made by the defendant and British Timken, and the defendant undertook to obtain, by agreement, joint registration by it, SMG and British Timken of the French trademark "Timken", and joint registration by it, Prausnitzer and British Timken of the German trademark "Timken", but such joint registrations were never obtained.

83. The joint application for registration of the British trademark "Timken" was abandoned in 1926 upon receipt by the defendant of advice from British trademark counsel that in their opinion it would be denied, that separate registrations by the defendant and British Timken for concurrent user possibly could be obtained, but that applications therefor probably would be denied on the basis of the facts as to user at that time; that, although the 1925 amendment to the 1909 agreement created a contract between the parties "deemed to be the subject of a license" which validly required British Timken to pay a royalty, it was inoperative in so far as it purported to determine ownership of the name "Timken" during the existence of the agreement, because use of the name "Timken" by British Timken was inconsistent with exclusive ownership by the defendant; that, since British Timken was not bound to assign its good will at termination of the 1925 agreement, the defendant thereafter would have to establish title to the trademark "Timken" in England by user as against third persons; and that in order to obtain registration, either a new agreement recognizing the existence of concurrent rights of the defendant in the trademark "Timken" and defining the conditions of user should be executed as a basis for obtaining registrations for concurrent user in [fol. 3636] the future, or the defendant and British Timken should be combined by one's absorbing the other.

84. On January 12, 1927, the defendant's American trademark counsel advised it that the difficulties with respect to the trademark "Timken" in England, New Zealand, France and Germany could be surmounted if it were to take over the business of British Timken, because such action would merge the somewhat conflicting titles of the defendant and British Timken, and, from a legal viewpoint, was by far the best way of handling the situation.

85. After the reduction in royalty in 1924, British Timken continued to ask for further reductions to 2½ per cent

on large orders other than those from Ford. Reports from British Timken demonstrated that it was just getting under way in the industrial bearing field in 1924, and that it was very disappointed with the business done by SMG in France.

86. In 1925 or 1926, Wolseley Motors fell into considerable financial difficulties which resulted in its reorganization.

87. In 1926, the defendant's chief engineer reported to it that on a visit to British Timken in that year he found that it was using antiquated equipment because the management was opposed to obtaining any new equipment on account of lack of funds, and that the average price of its bearings was 10 per cent higher than that of ball bearings, which were favored by British engineers and universally used so that the price handicap was very serious.

Joint Acquisition of British Timken by the Defendant and Dewar (1927).

88. In 1926 Dewar, who was then managing director of Vickers' largest subsidiary and chairman of Vickers committee which supervised all of its subsidiary companies dealing with sales, was made Vice-Chairman of its subsidiary, Wolseley Motors, in order to save as much money as he could for Vickers out of the Wolseley Motors reorganization. In this capacity he became acquainted with Wolseley Motors' wholly-owned British subsidiary, British Timken.

[fol. 3637] 89. As a member of a British commission, while on a visit to the United States to make an economic study, Dewar spent some time at defendant's plant. In 1927, shortly after his return to England, he became interested in acquiring personally an interest in British Timken. As an officer of Wolseley Motors, he knew of the existing agreements between defendant and British Timken, and of their provisions pertaining to territory, royalty and trademark. He also knew that the contracts were to expire on January 1, 1929.

90. On March 10, 1927, Dewar wrote to defendant's president, advising that he had become chairman of British Timken and raising the question of the continuation of the existing agreements between British Timken and defendant. In this letter he stated that he contemplated making an offer to Vickers for the purchase of British Timken and ex-

pressed the thought that it would require about £300,000. He commented, "I do not know whether your Company would care to be interested if I were to make such an offer either permanently or on the basis of the money loaned being repaid out of profits."

91. On March 28, 1927, Dewar cabled defendant, inquiring whether it would be prepared to extend its agreements with British Timken for ten years if he were to take it over, and stating that he had to make up his mind within the next ten days and should like to do it, but did "not think it wise without a ten year's arrangement with" defendant.

92. On March 29, 1927, defendant cabled Dewar in reply, that it was willing to consider an additional ten-year license and reduction of royalty, that with its cooperation costs could be reduced 25 per cent or more, and that it would be more interested in joining with him in purchasing British Timken from Vickers.

93. On March 30, 1927, Dewar replied stating that he was prepared to put up approximately half of the purchase price and that it was "essential that the company have British control of ordinary capital". Dewar was of this opinion because British Timken would then be a British [fol. 3638] controlled company so far as British companies and the British Government were concerned, and this was important because foreign-controlled companies always met with greater sales resistance in England than did British-controlled companies. This cable summarized British Timken's last balance sheet, of September 30, 1926, as follows:

Assets

Plant	£ 3,000
Debtors	39,000
Stocks	42,000
Cash	46,000

Liabilities

Shares	50,000
Sundry Creditors	18,000
Profits	63,000

The cable further stated that works and plant were leased from Wolseley, that a suitable works (factory) and plant

(machinery and equipment) could be purchased for £35,000 and £25,000, respectively, and that the business, with the profit from September, 1926, could be purchased for £260,000.

94. On March 31, 1927, the defendant cabled Dewar that it was willing to become interested in British Timken to the extent of one-half or more of the amount necessary to acquire and reorganize the business and offered to send its representative to close the deal. On April 1, 1927, Dewar acceded to the suggestion that the defendant send a representative, and on the same day the defendant wired its American trademark counsel stating that it was sending its representative to England to negotiate the purchase of a controlling interest in British Timken for it and asking for general suggestions as to what should be done regarding name registration.

95. Defendant sent Ely, a former executive of defendant, to confer with Dewar and instructed him, among other things, that "the registration of 'TIMKEN' must be definitely cleared up", either by obtaining registration for the defendant, or "if absolutely necessary" to obtain it in the name of British Timken, with provision that the registration come to the defendant "at the expiration of the main license agreement with British Timken", and instructed its English solicitor to consider the proper method of clearing up registration in England, France and Germany [fol. 3639] for its protection.

96. Ely conferred with Dewar covering every phase of the proposed undertaking. Ely insisted that the name "Timken" should be kept the property of the defendant in so far as possible. Dewar insisted on British control of the operations of British Timken because, in his opinion, a product made by foreigners, although produced in England, was unpopular, and therefore under foreign control his investment in British Timken would be in jeopardy. Ely acceded to Dewar's insistence on this point, provided that the defendant should be protected, in the event that Dewar's control should prove to be unsuccessful, by reversion of control to the defendant if the profits of British Timken should fall below a certain figure; and it was agreed that control of British Timken should go to the defendant if Dewar should become incapacitated or die, and that the parties should have options on each other's shares of stock

in British Timken in the event of sale. Dewar and Ely also decided that a company owned and operated by the defendant and Dewar should be organized to manufacture tapered roller bearings in France, because SMG was operating in an unsatisfactory manner, because of the French tariff, because of sales resistance by the French people to products of foreign corporations due to their anxiety to have products used in their engineering industry manufactured in France, and because the largest automobile manufacturer in France had decided to use tapered roller bearings. They also decided that a German company owned and operated by the defendant and Dewar should be inaugurated to manufacture tapered roller bearings and operate in Germany in the same way as the company to be organized in France. Since Prausnitzer had registered the German trademark "Timken" as his personal property, they decided to include him in the German business, if necessary, for the purpose of obtaining release of the name "Timken" in Germany by him.

97. During the course of these discussions Ely made his recommendations to the defendant in a letter (Defendant's Exhibit 17) in which he stated:

[fol. 3640] "I feel that there are three plans that should be given consideration.

"1st. Our complete control of British Timken or its successor, without other stockholders, other than qualifying directors' shares, and this is the plan I would recommend if there was available in our organization the proper person or persons, to spend a year to 2 years reorganizing plant, sales, etc. capable of contacting properly in Germany, and starting there a small company, and making entirely new arrangements in France. The present arrangement is most unsatisfactory.

"2nd. Our control with a working minority of British interest. This also requires time in making proper and suitable connections and would be probably the best plan, if Mr. Dewar, or a man of his type were available. To my straight question to Mr. Dewar on this set-up, he said 'No' without qualification.

"3rd. British control of new Company, only so long as British control operates Company with satisfactory profit

and dividends. This is the plan I now recommend, and will cover in more detail.

"In connection with the third plan its whole success depends upon the ability of the British control."

Ely then detailed Dewar's very favorable qualifications, including important business connections in Europe as well as the United Kingdom, which Ely's inquiries had disclosed, and further stated that Dewar desired to invest in British Timken because he felt that with his connections and business which he actually controlled, particularly on industrial work, and by cutting the costs 20 per cent to 25 per cent as Lothrop had advised him could be done, he could make British Timken profitable, and that "Mr. Dewar wants us very much as partners on account of our interest in the profitable operation of the company." Ely stated that agreement had been reached, subject to the defendant's approval, on major points, namely: (1) that Ely and Dewar would negotiate with Vickers for its British Timken shares, and (2) that, upon their purchase, certain arrangements, including changes in the corporate articles of British Timken, would be made to provide for control of British Timken, as between the defendant and Dewar. The substance of these arrangements, which Ely outlined, was subsequently incorporated in the Heads of Agreement of May 16, 1927, hereinafter discussed.

[fol. 3641] 98. The negotiations between Ely and Dewar eventuated in a written instrument denominated "Heads of Agreement", dated May 16, 1927 between defendant and Dewar. It was in effect a memorandum of the concurrence of the parties on the basic subject matter of the negotiations to be later "embodied in more formal documents as soon as practicable." It provided that defendant would contribute £52,500 and Dewar £47,500 for the purchase of the entire 50,000 shares of stock of British Timken, 26,250 to be issued to the defendant and 23,750 to Dewar; that the Articles of British Timken should be altered to provide for two classes of shares, Dewar to hold the majority of the "A" class which should control the company with respect to its ordinary affairs until a minimum net profit of £15,000 was not earned, and a dividend of "25% gross" was not paid, annually, in which event such control should pass to the defendant as owner of a majority of the shares of the

"B" class; that shareholders could transfer shares with the consent of the majority, but must first offer them to the other shareholders; that Dewar was to be the managing director while the shares he owned controlled the company; that upon his death or incapacity for six months to perform the duties of a director the defendant should have the right to purchase his shares; that a new agreement should be entered into between defendant and British Timken extending for ten years the terms of the existing Agreements between them subject to modifications and generally upon such terms and conditions to be mutually agreed, including among others, any practicable steps to be taken for the protection of the name Timken and securing the exclusive reversion on the name in all countries to the defendant at the termination of the Agreement, and arrangements to be made for the formation of continental companies for the manufacture and/or sale of bearings subject to a royalty to be divided between the defendant and British Timken.

99. The basic purpose and agreement of the defendant and Dewar was that the defendant, British Timken, and the companies to be acquired or organized by them in Germany and France, were to manufacture tapered roller [fol. 3642] bearings according to methods developed by the defendant and to sell them under the name "Timken" in their separate territories and to assist each other to sell such bearings everywhere in preference to bearings manufactured by other competing companies such as SKF and its subsidiaries. If one Timken company could not sell such bearings advantageously in a portion of its own territory, another was to make the sale. Provisions in the existing agreements between the defendant and British Timken which limited each to its own territory, were to be continued principally because Dewar did not wish to invest his money in the joint acquisition of British Timken with defendant and in the companies to be jointly acquired or organized by them in Germany and France without assurance that the defendant would not compete with those companies.

The Carrying Out of the "Heads of Agreement" of May 16, 1927

100. On the same day that the Heads of Agreement were executed, May 16, 1927, the purchase of British Timken

from Vickers was effected after waiver (pursuant to agreement between the defendant and Dewar to negotiate with Prausnitzer themselves) of a condition in the offer to purchase that Vickers should make an arrangement with Prausnitzer satisfactory to the purchasers.

101. At the date of the acquisition by the defendant and Dewar of British Timken, British Timken was not, and the defendant did not consider it to be, an actual or a potential competitor of defendant.

At this time British Timken owned virtually no manufacturing equipment, and leased from Wolseley Motors the buildings and machine tools used in the production of bearings. Substantially all of the manufacturing equipment which it owned was obsolete according to practice of the defendant in manufacturing bearings. British Timken had practically no assets other than a certain amount of good will and certain of its manufacturing operations were being carried out, under an agreement, by Wolseley Motors which was manufacturing motor cars on the same premises [fol. 3643] as those occupied in part by British Timken at that time. British Timken employed 300 to 350 people and manufactured not to exceed 100 sizes of tapered roller bearings, mostly "automobile sizes". Its largest net sales in its history of £240,202 in 1926, or in the neighborhood of $1,000,000, had increased only 13% over its next largest net sales in 1920 of £212,524. The defendant's net sales of bearings, alone, in 1926, were $24,362,805; it was employing between 3500 and 4000 persons as early as 1919; and as early as 1909 it was making 139 cone and 51 cup sizes, while in 1927 it was making 887 cone and 359 cup sizes and 54 thrust bearing sizes. A comparison of costs of the defendant and British Timken for the manufacture of three of the four sizes of bearings which British Timken manufactured in the largest quantities, made by the defendant in February, 1927, at Dewar's request before the purchase of British Timken was suggested (Defendant's Exhibit 3), demonstrated that British Timken's cost of manufacture was approximately 200% of that of the defendant on two sizes, and 135% thereof on the third. Ely advised the defendant prior to its purchase in 1927 that "The present British Timken Company is at present more or less asleep." The then existing contract between the defendant and British Timken had only about a year and a half to run and British

Timken could not have successfully continued the manufacture and sale of anti-friction bearings in the absence of the relation it had with the defendant.

102. The defendant acquired British Timken jointly with Dewar because the defendant desired to insure its control of the name and trademark "Timken" in England, the British Colonies, the French Empire, Germany, and elsewhere, and had been advised by its American and British trademark counsel that acquisition of British Timken was the best means of so doing; because it was dissatisfied with the manner in which business in tapered roller bearings had been conducted, under license, by the subsidiaries of Vickers, and their sublicensee, SMG; and because based upon the recommendation of its representative, Ely, it [fol. 3644] determined that the arrangement outlined in the "Heads of Agreement" of May 16, 1927, with Dewar, who had expressed a desire to have the defendant as his partner, and who was apparently exceptionally well qualified to undertake the business, constituted the best method for the defendant to develop the manufacture and sale for original installation of tapered roller bearings in the United Kingdom, France, and Germany, the principal manufacturing foreign countries in which original installation bearing business could be obtained, and the sale thereof for replacement purposes in the territories in which machinery produced in those countries was most likely to be sold. The defendant and Dewar did not purchase British Timken for the purpose or with the intention of preventing competition between the defendant and British Timken as an actual or potential competitor of the defendant in the manufacture and sale of anti-friction bearings.

103. On March 13, 1928, acting pursuant to the "Heads of Agreement" of May 16, 1927, to embody their agreements therein in a more formal document, the defendant, British Timken and Dewar entered into an agreement, (Defendant's Exhibit 197) to make effective, as soon as practicable, new articles of association and by-laws of British Timken, an agreement between British Timken and Dewar as to its managing directorship, an agreement between the defendant and Dewar as to options on shares of British Timken, all as already approved; reconstitution of German Timken pursuant to an agreement signed that day; formation of a French Company; and a license agreement between the de-

fendant and British Timken as already approved, and license agreements between British Timken and German Timken, and between British Timken and the French Company, on the model of, and in accordance with, the license agreement between the defendant and British Timken,

104. Acting pursuant to the agreement of March 13, 1928, the defendant and Dewar caused new articles of association of British Timken, (Defendant's Exhibit 199) to be adopted, section 26 of which gave shareholders first refusal on each other's stock; caused new by-laws of British Timken [fol. 3645] (Defendant's Exhibit 198) to be adopted as to the voting of stock and the powers of the directors which carried out the provisions contained in the Heads of Agreement of May 16, 1927, for control of the company by Dewar so long as it earned the specified minimum amount and dividend, and control by the defendant in the event that it should cease to do so; and caused an agreement (Defendant's Exhibit 24) to be made between British Timken and Dewar which made him Managing Director thereof upon terms provided in the Heads of Agreement of May 16, 1927.

105. Acting pursuant to the agreement of March 13, 1928, the defendant, Dewar and Prausnitzer caused changes to be made in the capitalization, articles of incorporation and by-laws of German Timken as a result of which the defendant became the owner of a majority of the common stock, Dewar of a substantial portion thereof, Prausnitzer 16½ per cent thereof, and British Timken a small amount thereof plus a share of preferred stock which had sufficient votes to control the management of German Timken in all cases where according to the provisions of the German law a simple majority of the votes was sufficient, but not in extraordinary matters where more than a majority vote was required. The defendant was given voting control, by its ownership of a majority of the common stock, on extraordinary matters. Stockholders other than Prausnitzer were given an option on his stock if he should die or become incapacitated, bankrupt or insolvent or should retire, and he paid for his new shares of common stock by the transfer of the trademark and was given an irrevocable contract to act as Managing Director for 5 years from January 1, 1928. A plant was acquired by German Timken, but its business was discontinued in 1934.

106. Acting pursuant to the agreement of March 13,

1928, Dewar, with the consent and cooperation of the defendant, caused French Timken to be organized by means of statutes of incorporation (Defendant's Exhibit 206) adopted on July 11, 1928. The defendant acquired and [fol. 3646] owned a majority, and Dewar a minority, of 9800 "A" shares of stock of French Timken, and British Timken acquired and owned 200 "B" shares which had sufficient votes to control at ordinary general meetings of shareholders, but not at extraordinary meetings to consider the basic affairs of French Timken at which the defendant, as holder of a majority of the stock controlled the vote. The sublicense to SMG was not renewed, and French Timken purchased the French trademark "Timken" from SMG. SMG was purchased by SKF in 1930. French Timken established a plant in France which commenced operations by importing semi-finished components from British Timken and finishing them, and four or five years later commenced to make all its own components. Dewar controlled the ordinary operations and supervised the business activities of French Timken. The defendant and Dewar did not organize French Timken for the purpose or with the intention of preventing competition between the defendant or British Timken with French Timken or SMG as an actual or potential competitor of the defendant or British Timken in the manufacture and sale of anti-friction bearings.

107. Acting pursuant to the agreement of March 13, 1928, the defendant and Dewar entered into an agreement, dated April 20, 1928 (Defendant's Exhibit 200) which provided that upon the death or incapacity of Dewar the defendant should have an option to buy all of his shares in British Timken and in any subsidiary companies (defined as "any Company controlled by" British Timken "so far as regards ordinary business whether by reason of its holding a clear majority of all the issued shares of such Company or shares carrying a voting control or otherwise") and that, if either party should purchase shares of British Timken offered to its shareholders by the other pursuant to Section 26 of its articles of association, such party should have an option to purchase the shares of the offeror in every subsidiary company. On the same day, April 20, 1928, the defendant, British Timken, and Dewar entered into an agreement (Defendant's Exhibit 201) supplemental

to this agreement, providing that each of the parties should have the right to at least one representative on the [fol. 3647] board of directors of any subsidiary Company and must offer its stock to the other before selling to anyone else.

108. Acting pursuant to the agreement of March 13, 1928, the defendant and British Timken entered into a "business agreement" as of January 1, 1928 (Plaintiff's Exhibit 12) to be in effect for a period of ten years. Simultaneously all existing contracts between them were cancelled. Under this agreement the world was divided into respective territories for the manufacture and sale of bearings in this language: "For the purpose of this Agreement the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all colonies or dependencies of said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deemed to be the territory of the American Company." An exclusive license was granted to British Timken under existing or future patents of defendant for the duration of the agreement. In turn British Timken was to assign absolutely and for all time its existing and future patent rights in defendant's territory. They agreed to inform each other in respect of all inventions and improvements regardless of whether they were patented or not patented. Advice as to methods of manufacture was to be furnished by defendant, and British Timken was obliged to follow it. Each party agreed not to sell bearings directly, or to others for shipment into, the other party's territory, except as assembled component parts of completed articles manufactured in its own territory and for bearing replacement purposes in such completed articles. In the event such sales in or into the other party's territory were made, the seller was obliged to advise the other of the details of the sales and pay the other party an amount of ten per cent of the net sales price. They agreed to endeavor to maintain the distinctive character of the trademark "Timken". British Timken agreed not to manufacture or sell bearings except under the trademark and only in accordance with the provisions of the agreement, [fol. 3648] and to eliminate the name "Timken" from its

corporate name and to refrain from its use as a trademark upon the termination of the contract.

109. The provisions of the 1928 business agreement between the defendant and British Timken relating to the trademark "Timken" established equitable ownership thereof in the defendant under English law, and amounted under English law to a waiver by British Timken of any right it may have had to set aside, on the ground of prior user by British Timken, registrations of the trademark "Timken" in any foreign countries in which the defendant had registered the trademark.

110. Acting pursuant to the agreement of March 13, 1928, the defendant and Dewar caused a business agreement (Plaintiff's Exhibit 16) to be entered into between British Timken and French Timken on June 16, 1928, on the model of the one between defendant and British Timken, allocating to French Timken France and her colonies, dependencies and mandates (except those in North and South America) as its exclusive territory for the manufacture and sale of anti-friction bearings.

111. Acting pursuant to the agreement of March 13, 1928, the defendant and Dewar caused a business agreement (Plaintiff's Exhibit 19) modeled upon the business agreement of January 21, 1928, between the defendant and British Timken, to be entered into in 1929 between British Timken and German Timken.

Maintenance of Relations Between the Defendant and Dewar and Changes in Contractual Relations Between the Timken Companies (1928 to Date)

112. At all times since the making of the Heads of Agreement of May 16, 1927 the defendant and Dewar have collaborated closely in the operation of British Timken and French Timken, and have maintained substantially the same system for control thereof, as between themselves and as to third persons, as that which was inaugurated at the time when they jointly acquired British Timken and jointly organized French Timken.

113. The defendant and Dewar have regarded, and have [fol. 3649] denominated each other, as partners in the operation of British Timken and French Timken, and German Timken, at all times since the making of the Heads of Agreement between them on May 16, 1927. The defendant

expressed in 1929 a desire to keep Dewar an "equal partner in growing business"; the defendant in 1934 referred to the fact that Dewar and it had been partners in the past, stated that more formal arrangements between the defendant and British Timken must be made due to contemplated sale of a portion of its stock to the public, that if Dewar should retire from British Timken in the future it might be unwilling "to continue the same relation with some future partner as in the past", and that it therefore desired to view the proposed new agreements "from the possible standpoint that some one other than Michael Dewar might eventually be a 'party of the other part' ", to which Dewar replied that he contemplated that his interest in British Timken would remain in his family, that when "there would be no Michael Dewar in the relations between British Timken and American Timken, there would be some other Dewar", and that for this reason he had "asked Mr. Pascoe to join the Company, in order to preserve continuity of management and association with yourselves"; and in 1936 Dewar referred again to "our partnership".

114. In 1929, when the defendant and Dewar desired to increase the capitalization of French Timken in order to handle increasing business, Dewar was unwilling to invest more of his own funds in French Timken. The defendant desired "to keep him equal partner in growing business", so Dewar proposed that the defendant advance the necessary funds to French Timken and that one third of British Timken's profits after 1929 be devoted to repaying the advances (French Timken common stock to be issued in their place), subject to the condition that the 1928 ten year business agreement between the defendant and British Timken should be extended to fifteen years. The business agreement was extended and Dewar's proposal was carried out by the parties.

115. The defendant and Dewar transferred their stock in French Timken to an American holding company, International and Commercial Investments, Inc. (hereinafter [fol. 3650] called ICI), in exchange for its common stock, and the defendant subscribed for 3,400 of ICI's $100 par preferred stock. ICI issued three common stock certificates, one to the defendant, and two to Dewar, the certificate for the controlling shares being issued in Dewar's name but put in escrow pursuant to an agreement (Defend-

ant's Exhibit 225) that, if French Timken should fail to earn a stipulated minimum amount on its invested capital, the certificate for such shares should be transferred to the defendant; that each party should have the option to purchase the others' shares of stock in ICI in the event that either should desire to sell, and that the defendant should have the option to purchase Dewar's stock in the event of his death or leaving the management of French Timken; that the defendant should subscribe for a specified number of additional shares of preferred stock of ICI upon demand by it, the proceeds to be applied to the purchase of additional stock or bonds of, or loans to, French Timken; and that, so long as such preferred stock of ICI was outstanding, a British Timken dividend of one-third of its profits was to be applied to the purchase of common stock of ICI. The defendant and Dewar contemporaneously entered into another agreement (Defendant's Exhibit 224) that Dewar, while in control of ICI, would not permit it to sell its French Timken stock, and would vote for the defendant's nominees to act as ICI's minority directors. At this time the controlling Class "B" shares of French Timken, formerly owned by British Timken, were transferred by it, 52.5 per cent to the defendant and 47.5 per cent to Dewar.

116. In 1934, when the value of British Timken had increased greatly, Dewar desired to realize part of his investment therein and to avoid the existing arrangement by which one-third of its profits was used to purchase common stock of ICI because he felt that it was hard on him "to receive a comparatively small dividend from British Timken with the obligation to put half of it aside for future investment in the anti-friction bearing industry in Europe." He also wished to settle the question of control of French Timken, which had lost money, and which the defendant, therefore, had the right to control. At this time the de- [fol. 3651] fendant's investment in French Timken, by way of stock and loans, was $822,128.80 as against Dewar's investment of $31,960.

117. After negotiations, the defendant and Dewar, on August 15, 1934, entered into Heads of Agreement (Defendant's Exhibit 228, 1st Document), which provided as follows:

(1) The capitalization of British Timken was to be changed to an increased number of shares all of one class

and the defendant and Dewar were each to sell one-half of their holdings thereof to the public at a specified price.

(2) Upon such sale, the remaining 50 per cent of the shares of British Timken owned by Dewar and the defendant was to be transferred by them to a holding company in exchange for its class "A" and class "B" shares, respectively, which should have the same rights as to voting control thereof, based upon profits and dividends of British Timken, as had been provided formerly by the articles of association and by-laws of British Timken, and with the same options of the parties on each other's shares in the event of sale.

(3) Adjustment was to be made by the defendant and Dewar, contingent upon consummation of the sale of the British Timken stock, of their interests in French Timken, German Timken, and ICI and its wholly owned subsidiary, International Bearings Investments, Inc. (hereinafter called IBI), so that each would own a one-half interest in each of these corporations. Dewar was to pay the defendant $250,000 in cash and give his note, without interest, in the amount of $150,000, payment of which was to be secured by pledge of his one-half interest in French Timken, German Timken, ICI and IBI, and payable only from distributions with respect thereto in excess of an amount equal to $7500 per year, to the extent of his half interest therein, and was to have the right to elect a majority of the French Timken Board of Directors during his lifetime and active management thereof until it should fail to pay annually $24,000 in dividends or other distributions from accumulated earnings. Control of French Timken was to pass [fol. 3652] to the defendant in the event of Dewar's death, retirement from active management thereof, or in the event of its failure to make such payments.

(4) The parties were "to cause" the 1928 business agreement between the defendant and British Timken to be amended so as to reduce commissions to 5 per cent, to reduce the royalty payable by British Timken to the defendant to ½ of 1 per cent, to permit either the defendant or British Timken to sell bearings in Russia on a basis whereby they would "share equally the expense of negotiating such sales by either company," the company securing the sale to pay the other 2 per cent of the net sale price and the agreement to continue in effect for 15 years after sale of the British Timken stock to the public.

(5) French Timken was to be freed of any obligation to pay royalty or service fees to the defendant or British Timken.

118. Acting pursuant to the Heads of Agreement of August 1934, the defendant and Dewar caused various agreeme. and other documents, which are included or described Defendant's Exhibit 228, to be executed for the purpose carrying out the agreements contained in the Heads of Agreement, contingent upon sale of the stock before August 3, 1935; caused sale in June, 1935, of 50 per cent of their stock in British Timken to outside parties (except 10,000 shares purchased by the defendant at the sale because it determined that it should "maintain somewhat greater ownership" in British Timken than was reached by its joint holdings with Dewar); caused the organization of a holding company known as Timken Holdings, Ltd., with provisions in its articles of association and by-laws which maintained the voting control arrangements between the defendant and Dewar as to British Timken dependent upon its earning the same minimum profits and paying the same minimum dividend as before, to which they transferred all of their British Timken stock, (except the 10,000 shares purchased by the defendant at the sale), and executed an agreement (Defendant's Exhibit 228, 14th Document) which gave the defendant an option on Dewar's shares in Timken Holdings, Ltd. in the event of his death or [fol. 3653] incapacity for six months to act as director of British Timken.

119. Acting pursuant to the Heads of Agreement of August 15, 1934, the defendant and Dewar caused the deposit in the Westminster Bank of London, England, in the joint names of the defendant, The Lux Company (a holding company wholly owned by Dewar) and Pascoe (Dewar's second in command of British Timken), as trustees, of all of the stock of, and 236 promissory notes issued by French Timken, and caused the execution by the defendant, The Lux Company, Pascoe, and Dewar of an agreement (Defendant's Exhibit 228, 15th Document), which provided for the pledge of Dewar's interest in French Timken and German Timken to secure payment of his note to the defendant, and for the control of French Timken as specified in the Heads of Agreement of August 15, 1934. This trust agree-

ment presently governs relations between the defendant and Dewar as to French Timken.

120. Acting pursuant to the Heads of Agreement dated August 15, 1934, the defendant and Dewar caused the defendant and British Timken to enter into a new business agreement (Plaintiff's Exhibit 20), effective January 31, 1935, which originally provided that it was to extend for a period of 16 years, but which was amended by a supplemental agreement dated June 6, 1935 (Plaintiff's Exhibit 24), to provide that it should extend for a period of 30 years from January 1, 1935, at the insistence of the English brokers with whom Dewar negotiated for the sale of stock of British Timken, because they felt that the stock could not be sold to the British public without a long-term agreement with defendant, "particularly for the use of the name" since the goodwill of British Timken "rested largely in the association with" the defendant. This business agreement was substantially the same as the 1928 business agreement between defendant and British Timken. In it were found however, the following provisions:

[fol. 3654] "The American Company (Timken) in its territory may accept and execute orders for bearings for ultimate destination in the British Company's (British Timken's) territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the British Company's territory or sales at prices in conflict with the wishes of the British Company and the American Company from time to time will notify the British Company of the details of the sales authorized under this paragraph and will pay to the British Company an amount equal to five per cent (5%) of the net sale price thereof."

Conversely the same provision was made as to prices and payments to defendant for sales of replacement bearings by British Timken in defendant's territory. Russia became the joint territory of defendant and British Timken. Business transacted there was conditioned as follows:

"The prices and terms at or upon which offers are made and orders are accepted shall so far as practicable be mutually agreed from time to time but nevertheless

either of the parties hereto shall be at liberty to quote and accept orders at low prices and extended times for payment without the consent of the other party after having first submitted the prices and other terms to the other party for its consideration and remarks provided that any such quotation or acceptance shall not involve under cutting some quotation already made by the other party."

121. Acting pursuant to the Heads of Agreement of August 15, 1934, the defendant and Dewar caused the 1928 business agreement between French Timken and British Timken to be superseded by a new business agreement between them (Plaintiff's Exhibit 25) dated July 15, 1935. It, too, provided that bearing replacement sales might be made by the defendant, French Timken and British Timken in, and into, their respective territories. The prices had to be satisfactory to the company into whose territory bearings were sold. French Timken was obliged to sell no bearings other than under the trademark "Timken".

122. In 1936, Dewar informed the defendant that it seemed probable that the French Government would require a declaration by French companies of their foreign assets and enforce compulsory repatriation thereof at existing exchange rates. He recommended that French Timken's promissory notes held under the trust agreement in the Westminster Bank depositary account be paid to the extent possible out of gold owned by it while exchange was favor-[fol. 3655] able, and that an agreement then be worked out for lending the money to French Timken in the future as required. He stated that this was "equivalent to paying the money away from the control" of French Timken, but "as far as our partnership is concerned" he was anxious to keep these funds available for French Timken, and that for the same reason he had borrowed personally funds of French Timken and would stand any loss which might result to him from this loan. The defendant agreed to this procedure, but insisted that half of the personal loan from French Timken to Dewar should be carried by its wholly owned subsidiary, Continental Bearings, Inc., so that it might "share any possible losses" which "might result" from the loan.

123. In 1938, the defendant and Dewar caused the defendant, British Timken, and French Timken to enter into a

business agreement dated November 28, 1938 (Plaintiff's Exhibit 22) which embodied the allocations of territory and certain of the other terms and conditions contained in the 1934 business agreement between the defendant and British Timken and the 1935 business agreement between British Timken and French Timken, and which provided that it should continue in effect for a period of 27 years from January 1, 1938. The defendant and Dewar also caused the defendant, British Timken and Dewar to enter into a supplemental business agreement (Plaintiff's Exhibit 27) which also contained certain terms and conditions which had been embodied in the 1934 and 1935 business agreements and provided, in substance, that the defendant and Dewar would cause French Timken to carry out the terms and provisions of the 1938 business agreement between the defendant, British Timken, and French Timken. Taken together, the provisions of these two agreements, in substance, are identical with the combined provisions of the 1934 business agreement between the defendant and British Timken, and the 1935 business agreement between British Timken and French Timken, which they superseded. These two agreements were executed to take the place of the 1934 and 1935 agreements on the advice of French counsel, and govern the present relations between the defendant, French Timken, and British Timken.

[fol. 3656] 124. In 1940, British Timken acquired a plant in England owned by the Fischer Company from the English Custodian of Enemy Property and Dewar consulted with, and obtained the consent of, the defendant in so doing.

125. On March 22, 1948, the defendant, Dewar, and Timken Holdings, Ltd., entered into an agreement (Defendant's Exhibit 239) which canceled existing agreements governing control of the ordinary shares of British Timken owned by the defendant and Dewar through Timken Holdings, Ltd. and, contemporaneously, the defendant and Dewar entered into an agreement (Defendant's Exhibit 240), which gives the defendant an option to purchase all of the ordinary shares of British Timken stock now owned by Dewar (which constitute 25 per cent of its voting stock) in the event of his death or his being incapacitated for six months to act as a director of British Timken, or in the event that he desires to sell the shares, and also gives the defendant the right to control the vote of a majority of those shares com-

bined with specified shares presently owned by it if at any time the profits of British Timken available for dividends upon an average of three consecutive years are reduced below £50,000 for one year. This agreement presently governs relations between the defendant and Dewar as to British Timken.

The Basic Plan of Co-operation between the Defendant, British Timken, and French Timken in the Manufacture and Sale of Bearings, 1927 to Date.

126. At all times since the joint acquisition by defendant and Dewar of British Timken, their joint acquisition of German Timken, and their joint organization of French Timken, the defendant and Dewar have caused those companies to co-operate to sell bearings under the trademark "Timken" all over the world in competition with bearings manufactured by other companies. Their policy has been that if for some reason the defendant, British Timken, or French Timken could not sell advantageously in a portion of its own territory due to inability to make deliveries, conditions of foreign exchange, or production facilities, another one of the three companies should make the sale. The sales forces of the defendant, British Timken, and French [fol. 3657] Timken have identical purposes, "that is, always to sell a Timken bearing whenever it can be done".

127. Tapered roller bearings manufactured by the defendant, British Timken, and French Timken are in most instances identical and interchangeable.

128. The defendant assigns the part numbers used by it, British Timken and French Timken, and keeps a record of them in its master book in its engineering department. Whenever the defendant develops a new bearing it assigns the part a symbol number and immediately sends the blueprints covering its design to British Timken as a matter of routine. If British Timken develops a new part it may assign a new part number; or if it varies the dimensions of an existing part it may use the existing number by adding the letter "X" after the part number; in each case advising the defendant. The symbol for a bearing consists of a number for the cone and a number for the cup, and identical bearings manufactured by the defendant, British Timken, and French Timken bear identical symbol numbers.

129. There has been a constant "stream of information" from the defendant to British Timken as to production methods, machines, products, and other matters. It has always been the policy of British Timken to carry out the suggestions of defendant and they have been departed from only after "an agreed decision as to what British Timken should do or should not do". In the opinion of Dewar it is "difficult to conceive" that British Timken "could have started" without the cooperation of the defendant along these lines. The same information has been communicated to French Timken, principally through British Timken after receipt from the defendant. British Timken has contributed very little such information to the defendant, consisting principally of one or two bearings which were invented and perfected in England within the war years. No such information has been received by the defendant from French Timken.

130. When British Timken develops a need for a certain bearing it usually cables the defendant for a bearing of a [fol. 3658] certain size, or a part number for a certain size which has already been selected, and designates the major dimensions. The defendant then works out the design of the bearing and sends British Timken the part number and detailed prints of the bearing as soon as possible, followed by the design of the tooling which is to be inserted in the machines which are to be used in manufacturing the particular bearing, and a gauge for each operation. The defendant assigns a part number to this bearing.

131. The defendant sends to British Timken a copy of the weekly report made by the defendant's industrial bearing application engineering department to the heads of its sales and engineering departments, which shows in detail the type of work and bearing applications being done for its customers. Occasionally British Timken advises the defendant that it is interested in a bearing application shown on the weekly report which is new to it, in which event the defendant sends to British Timken the same complete information which it would give to its "field man who originally requested the information".

132. At times the defendant has sent certain of its employes to British Timken, French Timken, and German Timken, to assist and instruct their engineers in the design

of new types of bearings, such as industrial and railroad bearings.

133. As soon as the defendant and Dewar jointly acquired British Timken, one of the defendant's executives was sent to British Timken in 1927 to help reorganize it to make tapered roller bearings as closely as possible according to the methods followed by the defendant. He made a thorough examination and report as to the various methods then in force at British Timken, and recommended changes in methods, acquisition of specified modern machinery, and that the minimum dividend for 1927, called for by the agreement between the defendant and Dewar, be passed in order to enable purchase of the machinery. These recommendations were carried out. Thereafter, in almost every year, some employe of the defendant has gone to British Timken and French Timken for the purpose of [fol. 3659] enabling them to cut costs and manufacture bearings more cheaply and of a better standard of quality. These employes have been instructed to introduce the defendant's methods as nearly as possible in various departments of the plants of British Timken and French Timken, and have done so.

134. Employes of British and French Timken have been instructed and trained in the defendant's plants at various times.

135. All methods worked out in the defendant's Research Department, which tests out new methods of manufacturing bearings, new designs thereof, new steels for use in the production thereof and new types of heat treatment, and develops new machine tools and tooling on machine tools, are passed on to British Timken as a matter of routine, although access to this department without a pass is limited to a small number of persons in the defendant's organization. Defendant's Research Department is five times the size of British Timken's.

136. The defendant has assisted British Timken and French Timken in the acquisition of new machine tools and equipment at no profit to itself.

137. Commencing in 1927, as a part of the program to reduce British Timken's costs by 25 per cent, the defendant made a study of British Timken's costs and set up a system by which British Timken and French Timken fur-

nished comprehensive cost data to the defendant, and were given reports comparing their costs with those of the defendant upon the basis of a standard cost. These comparisons resulted in pointing out the operations of British Timken and French Timken which were too costly in comparison with the standard cost determined by the defendant, and resulted in the sending by the defendant of its employes to British Timken and French Timken to cut the costs of certain of such operations by improvement thereof.

138. The defendant has sent its employes to British Timken and French Timken to assist them in selling new types of bearing applications, such as industrial [fol. 3660] and railroad bearings, has furnished copies of its engineering journals, and periodic additions thereto, to British Timken and French Timken, as a routine matter, and the engineering journals of British Timken, French Timken, and German Timken have been substantially the same as that of the defendant.

139. The defendant at all times since 1928 has supplied British Timken and French Timken with copies of its three mediums of advertising, namely, national advertising, trade paper advertising and booklets and pamphlets about different products, as soon as prepared.

140. The "know-how" furnished by the defendant to British Timken and French Timken was not secret. Other manufacturers were admitted to the plants of British Timken and French Timken where they could see it put into operation.

The defendant did not furnish know-how to British Timken and French Timken for the purpose or with the intention of restraining trade or preventing competition between the defendant and British Timken and French Timken, as actual or potential competitors of the defendant in the manufacture and sale of anti-friction bearings.

General Co-operation between
the Timken Companies

141. The defendant, British Timken, and French Timken have adhered substantially to their contractual obligations to operate in the separate territories assigned to them.

142. In 1932, the defendant arranged that British Timken should not quote prices on service bearings going into the defendant's territory, and should state in answer to inquiries that the product should be obtained from the de-

fendant except when the customer demanded a British product or when "SKF or FS are in competition".

143. Each of the parties has refused orders for shipment outside of its territory, referring them to the party in whose territory they were to be used. Thus, from July 1, 1945 to July 20, 1947, alone, the defend- [fol. 3661] ant transmitted 402 inquiries or orders to British Timken and French Timken.

144. In 1929, when The Ford Motor Company attempted to purchase a quantity of tractor bearings from the defendant for use in its Cork, Ireland, plant which was in British Timken territory, the defendant, instead of filling the order, made the bearings and shipped them to British Timken for resale to Ford.

145. In 1939 and in 1940, the defendant instructed its employes that, due to difficulty in obtaining SKF bearings, it was contemplated that American manufacturers who operated plants in British Timken's territory would probably call on the defendant to make deliveries of bearings from its plants, that such deliveries would be in direct violation of the contract with British Timken, and that where such requests were made they should be referred to the main office at Canton in case the defendant might want to effect some arrangement with British Timken to fill such requirements rather than have the customer buy one of the competing tapered roller bearings and have them shipped into British Timken territory, and that they should use their best efforts to persuade the customer that the defendant's "British and French associates" were able to supply their foreign requirements and manufactured "a product comparable in every way to our own".

146. In 1939 and 1940, the defendant instructed its employes that it was not permitted to sell or ship bearings in to, or known to be destined to, British Timken's territory without paying it a 5 per cent commission, and that under such circumstances its prices must be acceptable to British Timken, but that it had an understanding with British Timken that on unsolicited inquiries for bearings going into each other's territory the defendant could quote a 50 per cent discount from its list price on standard bearings and pay a 5 per cent commission on the net sale thereof to British Timken. This arrangement resulted from the defendant's demonstrating to Dewar in 1927 that British Timken's

[fol. 3662] discount on service business was not large enough to meet competition, which caused British Timken to adopt the 50 per cent discount from list price which was the defendant's discount at that time.

147. In 1940, the defendant was advised that the territorial limitations in the contracts applicable to Australia had become a matter of concern to British Timken's distributors due to British Timken's inability to supply sufficient bearings. Thereupon, the provisions of the contracts were relaxed and for the period of the war emergency the defendant was permitted to fill, first only Australian orders, and later orders emanating from any place in British Timken's territory, but only through British Timken's distributors. Prices of such bearings were established by the sellers, namely, British Timken's distributors, and the defendant paid to British Timken the difference between the price at which the bearings were sold by British Timken's representatives and the amount at which a sale would have been made to British Timken by the defendant. This difference was paid because British Timken had the expense of doing the selling and servicing job and the defendant had no selling expense.

148. When, in 1941, representatives of the Australian Government and of the British Purchasing Commission asked whether it would be interested in establishing a bearing plant in Australia to manufacture all types of anti-friction bearings, the defendant stated that Australia was controlled by British Timken and that it would not consider building a plant there, and pointed out that it would be almost impossible to obtain delivery of machine tools suitable for the manufacture of anti-friction bearings, but that if Dewar were interested representatives of the defendant would confer with him about the matter.

149. At the present time the defendant is operating under arrangements with British Timken and French Timken pursuant to which it proceeds to make bearing sales in their territories independently of them and at prices fixed by it "with American competition in mind" [fol. 3663] and not agreed to with them in any fashion.

150. In 1928, the defendant, at the request of British Timken, contacted The Timken-Detroit Axle Company, which purchased tapered roller bearings from the defendant, with a view to preventing its distributor in Hungary

from selling service bearings at prices lower than those established by British Timken. This was accomplished, but the defendant at the same time indicated that it would not undertake to contact American axle companies generally for the same purpose.

151. With respect to the territory of Russia, no Russian buying agencies sought quotations from the defendant and British Timken on the same business at any time.

152. The defendant and British Timken observed the provisions of the business agreement of 1928 between them which gave British Timken an exclusive license under British patents owned by the defendant when, in 1932, the defendant granted to The Ford Motor Company a license to manufacture bearings under its American patents, but advised that it could give it no such license for England or any European plant because British Timken was its exclusive licensee there.

153. The defendant, British Timken, and French Timken have cooperated to meet the competition of other manufacturers of tapered roller bearings. They have considered SKF as a common enemy, and their general policy has been that if a tapered roller bearing is sold it must be a bearing manufactured by one of the Timken companies and not an SKF bearing; their arrangement has been that if customers in British Timken's territory insisted on buying bearings from the defendant they would be permitted to do so, and vice versa, "in order to combat competition"; and an executive of the defendant testified that it was willing to sell bearings at a loss, if necessary, to compete with SKF in Australia and the East Indies during World War II, because it considers SKF's competition unethical (in that the defendant is of the opinion that SKF sells at prices below its cost to "freeze out" competitors). Although there are [fol. 3664] statements in the correspondence between officials of the defendant in evidence as to combatting competition, there is no evidence that the defendant ever sold bearings at below cost in competition with SKF or other competitors. On the contrary, the defendant once disclosed its price on mine wheel bearings to certain officials of New Departure in April, 1933 (Plaintiff's Exhibit 167), for the purpose of inducing them not to sell unfairly at a price admittedly below their cost of production.

154. The defendant, British Timken, and French Tim-

ken have contemplated selling bearings to each other on a most favorable basis to protect themselves from competition by outsiders. In 1929, the defendant suggested that British Timken supply bearings for its industrial requirements in Canada because there was a 15 per cent duty on English products in Canada in comparison with 30 per cent on the defendant's, and if British Timken could sell bearings at low enough base prices the business would be profitable. Dewar of British Timken replied that he would "love to help you compete with SKF in Canada" because he wanted "to take every possible step we can to keep SKF out of the taper roller bearing business anywhere", meaning that this should be done by "under-quoting them in price". In 1939, the defendant suggested to British Timken that it make the defendant its exclusive Canadian distributor for tapered roller, ball and straight roller bearings for new installation business as well as service business, because British Timken's bearings could be shipped free from England into Canada, whereas SKF's bearings shipped from Sweden into Canada were subject to a duty of 17½ per cent, as a means of "putting a club over the head" of SKF, which was making price reductions far below those which the defendant had ever extended in the United States, Canada, and in many foreign countries such as Japan and South America, and British Timken was willing to consider the matter but thought it unlikely that it could help.

155. Although the defendant has sold special alloy steel tubing which it has developed to its competitors who manufacture ball bearings, it stated to British Timken in 1934, that under no circumstances would it [fol. 3665] sell its tubing "to anyone in the world who might as a result harm British Timken, French Timken" or the defendant.

Co-operation by British Timken and French Timken with their Competitors

156. British and French Timken entered into the following agreements with their competitors abroad to share customers and sales in certain markets and to stabilize prices.

157. In 1932, British Timken entered into an agreement with SKF's subsidiary in England to split the Ford busi-

ness in England on a 70-30 basis. This agreement was, not only an arrangement on prices of bearings and the percentage of the total bearings each was permitted to sell, but the parties agreed not to sell replacements of the other's bearings. The division of business as to specific customers was set up on a quota basis. When one of the parties exceeded its quota on a certain customer that party was required to raise its prices until there was compliance with the agreement.

158. In 1932, French Timken entered into an agreement with SKF's subsidiary in France, CAM, which provided for division of all the French bearing business on a participating basis, French Timken only participating in the tapered roller bearing market and SKF in both the ball bearing and tapered roller bearing markets. It was stated in the agreement that "In order to arrive at the allocation of the market as provided in as precise a manner as possible, an intimate commercial collaboration will be established between the two contracting parties, which will have to determine by agreement the tariff prices and discounts for the retail market, the prices and delivery dates quoted for all large orders or important customers." The parties agreed to contact each other "at least every month" and to push the standardization of bearing sizes. This agreement was entered into when Citroen, French Timken's largest customer, fell into financial trouble and SKF financed it on condition that it should buy its steel from Sweden and all its bearings from SKF, with the result that French Timken was left with practically no orders at all and Dewar decided [fol. 3666] that it was better "to have some arrangement with SKF to keep the French Timken company alive rather than let it die, which it would have done without such an arrangement". The defendant was advised that French Timken consistently exceeded the quota provided for it in this agreement. Any bearings imported into France by CAM would have come from Sweden and not from the SKF subsidiary in the United States.

159. The agreements between British Timken and SKF, and French Timken and SKF, were formed without the defendant's execution of the actual agreements, but its officials were in consultation with the officers of British Timken and French Timken concerning them and approved the agreement between French Timken and CAM. These ar-

rangements did not relate to the United States and did not have the effect of restricting the export of tapered roller bearings from the United States or their receipt in the United States. They came to an end at the commencement of World War II in 1939 and have not been renewed.

160. Aside from the agreements by British Timken and French Timken with SKF subsidiaries, the defendant, British Timken and SKF had discussions in 1932 concerning prices in Canada, England and France, although there is no evidence that these discussions led to any agreements other than those referred to in Findings 156-158, inclusive.

161. The policy of the defendant is opposed to combination with competitors for the purpose of fixing prices. Thus, when the defendant was faced with patent litigation based on the Thurston patents, although it realized that the patents might be used as "a move to legalizing the fixing of prices," it nevertheless refused to take such a license with the result that it defended successfully patent litigation against it based upon these patents in Equity Case No. 576 on the Docket of this Court (Defendant's Exhibit 237).

Miscellaneous and Ultimate Findings.

162. Although in 1945 the defendant was subpoenaed to appear and produce books and records, and certain of its [fol. 3667] officials appeared and testified, before the grand jury in the case entitled *United States v. General Motors Corporation, et al.*, No. 18,895 on the Criminal Docket of this Court, involving combination to fix the price of anti-friction bearings in domestic commerce and trade of the United States, and certain other corporate and individual defendants were indicted therein for violations of the Sherman Antitrust Act, neither the defendant nor any of its officers or other employees was indicted therein.

163. The defendant and British Timken and French Timken have not been and are not now engaged in a combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and with foreign nations and between territories of the United States and foreign nations.

164. The defendant and British Timken and French Timken have not entered into and are not now parties to contracts, agreements and understandings and have not

plan[illegible] and acted together to eliminate competition, between [illegible] unreasonably, and with others, in the manufacture and sale of anti-friction bearings in all markets of the world, including the United States.

165. The defendant and British Timken and French Timken have not formed and effectuated by the means, methods, agreements and understandings set forth in the plaintiff's amended petition a combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and between the United States and foreign nations.

166. The restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant and British Timken and French Timken have been at all times, and are, reasonably ancillary to the creation and maintenance of a joint venture and enterprise by the defendant and Dewar; to the transfer by the defendant to British Timken, French Timken, and German Timken of know-how with respect to the manufacture of bearings, the quality of steel used in connection [fol. 3668] therewith, and the various manufacturing processes specified; and to the licensing of the trademark "Timken" by the defendant to British Timken, French Timken, and German Timken (including the supplying of exclusive information as to the production of anti-friction bearings in connection with such trademark licenses). The provisions of the business agreements, contracts and understandings between the parties imposing such restraints of trade, if any, protect the parties thereto to an extent reasonably necessary as incident to the joint venture and enterprise, the transfer of know-how, and the licensing of the name and trademark "Timken".

167. The restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant, British Timken and French Timken, were not imposed for the purpose or with the intention, and did not have the effect, of prejudicing the public interest by unduly restricting competition or obstructing the course of trade, there being at all times during the existence of such agreements, contracts and understandings substantial and vigorous competition between the defendant, British Timken and French Timken, on the one hand, and other manu-

facturers of all types of bearings, on the other, in all markets of the world.

168. The defendant and British Timken and French Timken did not enter into or effectuate the joint enterprise and venture to which they were parties; provide or exchange know-how; grant, or agree to grant, exclusive patent licenses, or assign, or agree to assign patents or patent rights, to each other; or use the trademark "Timken" or the licensing thereof; in furtherance of a combination and conspiracy in restraint of trade and commerce in anti-friction bearings.

169. There is now no appreciable or substantial import or export trade of the United States in anti-friction bearings on a competitive price basis with the territories served by British Timken and French Timken under the business agreements, contracts and understandings between the parties.

[fol. 3669] 170. The defendant and British Timken and French Timken are not now engaged in any combination and conspiracy with others in restraint of trade and commerce in the manufacture and sale of anti-friction bearings.

Conclusions of Law

1. The Court has jurisdiction of this action under the Act of July 2, 1890, c. 647, 26 Stat. 209, as amended, entitled "An Act to Protect Trade and Commerce against Unlawful Restraints and Monopolies", commonly known as the Sherman Antitrust Act.

2. The defendant and British Timken and French Timken have not been and are not now engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and with foreign nations and between territories of the United States and foreign nations in violation of Sections 1 and 3 of the Sherman Antitrust Act.

3. The defendant and British Timken and French Timken have not entered into and are not now parties to contracts, agreements and understandings, and have not planned and acted together, to eliminate competition, between them unreasonably, and with others, in the manufacture and sale of anti-friction bearings in all markets of the world, including the United States.

4. The defendant and British Timken and French Timken have not formed and effectuated by the means, methods, agreements and understandings set forth in the plaintiff's amended petition an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and between the United States and foreign nations in violation of Sections 1 and 3 of the Sherman Antitrust Act.

5. The restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant and British Timken and French Timken have been at all times, and are, reasonably [fol. 3670] ancillary to the creation and maintenance of a lawful joint venture and enterprise by the defendant and Dewar; to the transfer by the defendant to British Timken, French Timken, and German Timken, of know-how with respect to the manufacture of bearings, the quality of steel used in connection therewith, and the various manufacturing processes specified; and to the licensing of the trademark "Timken" by the defendant to British Timken, French Timken, and German Timken (including the supplying of exclusive information as to the production of anti-friction bearings in connection with such trademark licenses). The provisions of the business agreements, contracts and understandings between the parties imposing such restraints of trade, if any, are lawful as protecting the parties thereto to an extent reasonably necessary as incident to the joint venture and enterprise, the transfer of know-how, and the licensing of the name and trademark "Timken".

6. The restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant, British Timken and French Timken, were not imposed for the purpose or with the intention, and did not have the legal effect, of prejudicing the public interest by unduly restricting competition or obstructing the course of trade in violation of the Sherman Antitrust Laws, there being at all times during the existence of such agreements, contracts and understandings substantial and vigorous, competition between the defendant, British Timken and French Timken, on the one hand, and other manufacturers of all types of bearings, on the other, in all markets of the world.

7. The defendant and British Timken and French Timken did not enter into or effectuate the joint enterprise and venture to which they were parties; provide or exchange know-how; grant, or agree to grant, exclusive patent licenses, or assign, or agree to assign patents or patent rights, to each other; or use the trademark "Timken" or the licensing thereof; in furtherance of a combination and conspiracy in restraint of trade and commerce [fol. 3671] in anti-friction bearings in violation of the Sherman Antitrust Act.

8. Since there is now no appreciable or substantial import or export trade of the United States in anti-friction bearings on a competitive price basis with the territories served by British Timken and French Timken under the business agreements, contracts and understandings between the parties, there does not exist that present illegality which is essential to equitable relief such as is prayed for by the plaintiff in this case.

9. The defendant and British Timken and French Timken are not now engaged in an unlawful combination and conspiracy with others in restraint of trade and commerce in the manufacture and sale of anti-friction bearings in violation of the Sherman Antitrust Act.

10. The amended complaint of the plaintiff should be dismissed in its entirety, and a judgment in this action should be rendered for the defendant.

MOTION FOR STAY OF EXECUTION PENDING DISPOSITION OF DEFENDANT'S MOTIONS ADDRESSED TO JUDGMENT—Filed February 24, 1950

Defendant moves the Court for an order staying execution of and any proceedings to enforce the final judgment entered herein on February 15, 1950, pending disposition of defendant's motion for a new trial, defendant's objections and exceptions to and motion to amend the Court's

findings of fact and conclusions of law, and defendant's motion to make new findings of fact and conclusions of law. The ground for this motion is that irreparable injury might result to defendant if the requested stay be not granted.

(S.) Luther Day and John G. Ketterer, Attorneys for Defendant.

[fol. 3673] [Title omitted]

NOTICE OF MOTION

TO: Robert B. Hummel, Esq.,
237 Leader Building,
Cleveland, Ohio,
Attorney for Plaintiff

Please take notice that the undersigned will bring the above motion on for hearing before this Court at the Federal Building, Public Square, Cleveland, Ohio, on the 27th day of February, 1950, at 10 o'clock A.M., or as soon thereafter as counsel can be heard.

(S.) Luther Day and John G. Ketterer, Attorneys for Defendant.

Acknowledgment of Service

Receipt of a copy of the foregoing motion and notice of motion is hereby acknowledged this 24th day of February, 1950.

(S.) Robert B. Hummel, Attorney for Plaintiff.

[Title omitted]

STIPULATION CONSENTING TO GRANTING OF MOTION FOR STAY —Filed March 2, 1950

We, the attorneys for the respective parties, do hereby stipulate that the plaintiff consents to the immediate granting without bond of the defendant's motion for stay of execution pending disposition of the defendant's motion for

a new trial, and objections and exceptions to, and motion to amend and to make new and additional, findings of fact and conclusions of law; that the plaintiff may have leave to file its memorandum with respect to said motions, objections and exceptions on or before March 16, 1950; and that the Court may enter an order accordingly, notice by the Clerk being hereby waived.

(S.) Robert B. Hummel, Attorney for Plaintiff;
Luther Day, Attorney for Defendant.

It is so ordered:

(S.) Freed, U. S. District Judge.

Ruling on Motion for New Trial; Objections & Exceptions to, Motion to Amend Findings—June 13, 1950

Ruling:

"The instant pleading neither raises new questions nor presents problems different from those which were thoroughly considered in former hearings. The motion for new trial and the objections and exceptions to, and motion to amend and to make new and additional, findings of fact and conclusions of law are overrruled.

June 13, 1950.

(S.) Freed, U. S. District Judge."

STIPULATION AS TO CORRECTIONS IN TRANSCRIPT OF PROCEEDINGS—Filed June 21, 1950

We, the attorneys for the respective parties, do hereby stipulate that the transcript recording the proceedings in the above entitled case, including the trial thereof, the hearing on the motion as to findings of fact and conclusions of law, and the hearing relating to the form of final judgment to be entered therein, may be corrected in the respects and in the manner shown on Appendix A, attached hereto and made part hereof as if fully rewritten herein; that, if there are any discrepancies between quotations from exhibits in evidence in the above entitled case appearing in the transcript, or the record prepared therefrom, and such exhibits, then the exhibits shall govern; and that the Court may enter an Order accordingly, notice by the Clerk being hereby waived.

(S.) Robert B. Hummel, Attorney for Plaintiff; Luther Day and John G. Ketterer, Attorneys for Defendant.

It is so ordered.

(S.) Freed, United States District Judge.

PETITION FOR APPEAL—Filed July 28, 1950

Now comes The Timken Roller Bearing Company, defendant in the above entitled cause, and says that on the 15th day of February, 1950, this Court entered its Final Judgment against the defendant herein, that on February 24, 1950, the defendant filed its Motion for a New Trial; and Objections and Exceptions, and Motion to Amend and Make New, and Additional, Findings of Fact and Con-

clusions of Law, and that on June 14, 1950, this Court entered its order overruling said motions. The defendant, considering itself aggrieved thereby, does hereby pray that an appeal be allowed to the Supreme Court of the United States from said Final Judgment and from each and every part thereof. Pursuant to Rule 12 of the Supreme Court, the defendant presents to this Court herewith a stafement showing the basis of jurisdiction of the Supreme Court to entertain an appeal in this cause. The particulars wherein the aforesaid defendant considers the Final Judgment in this cause erroneous are set forth in an assignment of errors and prayer for reversal accompanying this petition, to which reference is hereby made.

Wherefore, the above named defendant prays that its appeal may be allowed; that citation be issued as provided by law; that execution against the defendant of all of the provisions of the Final Judgment entered herein, and compliance by this defendant therewith be suspended [fol. 3724] and stayed, and that a supersedeas be granted, pending the hearing and final determination and disposition of this cause upon appeal; that an order be made fixing the amount of the appeal and supersedeas bond and security to be given by the defendant as appellant herein conditioned as the law directs; and that a transcript of the record, proceedings, evidence and documents upon which said Final Judgment was based, duly authenticated, be transmitted to the Supreme Court of the United States in accordance with the rules in such case made and provided.

(S.) Luther Day, 1759 Union Commerce Building, Cleveland, Ohio; John G. Keterer, First National Bank Building, Canton, Ohio, Counsel for Defendant-Appellant, The Timken Roller Bearing Company.

ORDER ALLOWING APPEAL—Filed July 28, 1950

The Timken Roller Bearing Company, defendant in the above entitled cause, having made and filed its petition for an appeal to the Supreme Court of the United States from the Final Judgment of this Court herein, and from each and every part thereof, and having made and filed and presented its assignment of errors and prayer for reversal and its statement as to the jurisdiction of the Supreme Court of the United States on appeal, pursuant to the statutes and rules of the Supreme Court of the United States in such cases made and provided,

Now, therefore, it is hereby ordered that said appeal be, and the same is hereby, allowed and granted as prayed for.

It is further ordered that the amount of the appeal and supersedeas bond be and the same is hereby fixed in the sum of Two Hundred Fifty Dollars ($250.00), with good and sufficient security, and shall be conditioned as may be required by law, and that the execution against the above named defendant of all of the provisions of the Final Judgment entered herein, and compliance by the defendant with said Final Judgment be, and the same are, hereby suspended and stayed pending the hearing and final determination of this cause upon appeal.

It is further ordered that a duly authenticated transcript of the record, proceedings, evidence and documents upon [fol. 3726] which said Final Judgment is based be transmitted to the Supreme Court of the United States in accordance with the rules in such case made and provided.

It is further ordered that citation shall issue in accordance with law.

(S.) Freed, United States District Judge for the Northern District of Ohio, Eastern Division.

Dated: July 28, 1950.

[Title omitted]

CITATION—Filed July 28, 1950

To the United States of America, Appellee.

Greeting:

You are hereby cited and admonished to be and appear in the Supreme Court of the United States in the City of Washington, District of Columbia, within forty days from the date hereof, pursuant to an order allowing an appeal from the Final Judgment made and entered in the above entitled cause, to show cause, if any there be, why said Final Judgment rendered against The Timken Roller Bearing Company, defendant-appellant, should not be corrected, reversed and set aside.

(S.) Freed, United States District Judge for the Northern District of Ohio, Eastern Division.

Dated: July 28, 1950.

[Title omitted]

ASSIGNMENT OF ERRORS AND PRAYER FOR REVERSAL BY DEFENDANT—Filed July 28, 1950

The Timken Roller Bearing Company, defendant in the above entitled cause, in connection with its petition for an appeal to the Supreme Court of the United States in this cause, says that, in the record and proceedings, and in the entry of its final judgment, herein, the District Court committed manifest errors to the prejudice of this defendant, and in connection with its said appeal assigns the following errors upon which it relies to reverse the final judgment entered herein.

Holding of the Court

1. The District Court erred in finding, concluding and adjudging that this defendant has engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings between the United States and foreign nations with British Timken, Ltd. (a British joint stock company hereinafter called "British Timken") and with Societe Anonyme Francaise Timken (a French corporation hereinafter called "French Timken"), and has entered into unlawful contracts, agreements and understandings with, and has planned and acted with, British Timken and French Timken to eliminate competition among themselves and with others in the production, sale and distribution of anti-friction bearings in all markets of the world, in violation of Sections 1 and 3 of the Act of Congress of July 2, 1890, 26 Stat. 209, 15 U.S.C. §§ 1 and 3, known as the Sherman Antitrust Act (Final Judgment, Par. III).

[fol. 3732]

Failure to Hold

2. The District Court erred in failing to find as a fact and to conclude as a matter of law that the defendant and British Timken and French Timken have not been and are not now engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and between territories of the United States and foreign nations in violation of Sections 1 and 3 of the Sherman Antitrust Act.

3. The District Court erred in failing to find as a fact and to conclude as a matter of law that the defendant and British Timken and French Timken have not entered into and are not now parties to contracts, agreements and understandings, and have not planned and acted together, to eliminate competition, between them unreasonably, and with others, in the manufacture and sale of anti-friction bearings in all markets of the world, including the United States.

4. The District Court erred in failing to find as a fact and to conclude as a matter of law that the defendant and British Timken and French Timken have not formed and effectuated by the means, methods, agreements and under-

standings set forth in the plaintiff's amended petition a combination and conspiracy in restraint of trade and commerce in anti-friction bearings among the several states of the United States and between the United States and foreign nations in violation of Sections 1 and 3 of the Sherman Antitrust Act.

5. The District Court erred in failing to find as a fact and to conclude as a matter of law that the restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant and British Timken and French Timken have been at all times, and are, reasonably ancillary (1) to the creation and maintenance of a lawful joint venture and enterprise by the defendant and an English businessman, M. B. U. Dewar, through their joint acquisition and control of British Timken and German Timken (now defunct) and joint organization and control of French Timken, to develop foreign trade of the defendant in anti-friction bearings under the [fol. 3733] trademark "Timken"; (2) to transfer by the defendant to British Timken, French Timken and German Timken, of know-how with respect to the manufacture of bearings, the quality of steel used in connection therewith, and the various manufacturing processes specified in such business agreements; and (3) to the licensing of the trademark "Timken" by the defendant to British Timken, French Timken, and German Timken (including the supplying of exclusive information as to the production of anti-friction bearings in connection with such trademark licenses). The provisions of the business agreements, contracts and understandings between the parties imposing such restraints of trade, if any, were for the purpose of, and lawful as, protecting the parties thereto to an extent reasonably necessary as incident to the joint venture and enterprise, the transfer of know-how, and the licensing of the name and trademark "Timken".

6. The District Court erred in failing to find as a fact and to conclude as a matter of law that the restraints of trade, if any, resulting from the business agreements, contracts and understandings between the defendant, British Timken and French Timken, were not imposed for the purpose or with the intention, and did not have the legal effect, of prejudicing the public interest by unduly restricting competition or obstructing the course of trade in violation

of the Sherman Antitrust Act, there being at all times during the existence of such agreements, contracts and understandings, substantial and vigorous competition between the defendant, British Timken and French Timken, on the one hand, and other manufacturers of all types of bearings, on the other, in all markets of the world.

7. The District Court erred in failing to find as a fact and to conclude as a matter of law that the defendant and British Timken and French Timken did not enter into or effectuate the joint enterprise and venture to which they were parties, provide or exchange know-how, grant, or agree to grant, exclusive patent licenses, or assign, or agree to assign patents or patent rights, to each other, or use the trademark "Timken" or the licensing thereof, in furtherance of a combination and conspiracy in restraint of trade [fol. 3734] and commerce in anti-friction bearings in violation of the Sherman Antitrust Act.

8. The District Court erred in failing to find as a fact and to conclude as a matter of law that, since there is now no appreciable or substantial import or export trade of the United States in anti-friction bearings on a competitive price basis with the territories served by British Timken and French Timken under the business agreements, contracts and understandings between the parties, there does not exist that present illegality which is essential to equitable relief such as is prayed for by the plaintiff in this cause.

9. The District Court erred in failing to find as a fact and to conclude as a matter of law that the defendant and British Timken and French Timken are not now engaged in an unlawful combination and conspiracy with others in restraint of trade and commerce in the manufacture and sale of anti-friction bearings in violation of the Sherman Antitrust Act.

Final Judgment

10. The District Court erred in enjoining the defendant from receiving, granting, or exchanging any exclusive patent licenses from, to, or with British Timken or French Timken, "in such a way as to deny any third person access thereto" under any circumstances, in perpetuity, when it was not alleged, as the Court stated (Memorandum, Par. 137), that the parties engaged in this practice as part of

the combination and conspiracy alleged (Final Judgment, Pars. V, VII).

11. The District Court erred in enjoining the defendant from receiving, granting, or exchanging any exclusive patent licenses from, to, or with British Timken or French Timken, "in such a way as to deny any third person access thereto" under any circumstances, in perpetuity, in that the Final Judgment thus deprives the defendant of its property without just compensation and without due process of law, contrary to the Fifth Amendment of the Constitution of the United States (Final Judgment, Pars. V, VII).

[fol. 3735] 12. The District Court erred in enjoining the defendant from receiving, granting or exchanging exclusively, "in such a way as to deny any third person access thereto", any know-how consisting of information, advice and assistance with respect to any invention, discovery, improvement, practice, formula, advice, method or other technical information relating to the production of anti-friction bearings from, to, or with British Timken or French Timken, under any circumstances, in perpetuity, when, it was not alleged, as the Court stated (Memorandum, Par. 137), that the parties engaged in this practice as part of the combination and conspiracy alleged (Final Judgment, Pars. V, VII).

13. The District Court erred in enjoining the defendant from receiving, granting, or exchanging exclusively, "in such a way as to deny any third person access thereto", any know-how consisting of information, advice and assistance with respect to any invention, discovery, improvement, practice, formula, advice, method or other technical information relating to the production of anti-friction bearings from, to, or with British Timken or French Timken under any circumstances, in perpetuity, in that the Final Judgment thus deprived the defendant of its property without just compensation and without due process of law, contrary to the Fifth Amendment of the Constitution of the United States (Final Judgment, Pars. V, VII).

14. The District Court erred in enjoining the defendant from receiving, granting or exchanging exclusively, "in such a way as to deny any third person access thereto", any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or

rights with respect thereto, from, to, or with British Timken or French Timken, under any circumstances, in perpetuity, when it was not alleged, as the Court stated (Memorandum, Par. 137), that the parties engaged in this practice as part of the combination and conspiracy alleged (Final Judgment, Pars. V, Q, VII, A).

[fol. 3736] 15. The District Court erred in enjoining the defendant from receiving, granting, or exchanging exclusively, "in such a way as to deny any third person access thereto," any machinery or material used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect thereto, from, to, or with British Timken or French Timken, under any circumstances, in perpetuity, in that the final judgment thus deprives the defendant of its property without just compensation and without due process of law, contrary to the Fifth Amendment of the Constitution of the United States (Final Judgment, Pars. V, VII).

16. The District Court erred in enjoining the defendant in perpetuity from entering into any agreement with British Timken or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof, to fix resale prices of anti-friction bearings produced by the defendant for sale or distribution in any other territory or market, thus depriving the defendant of its rights under the Miller-Tydings Act of August 17, 1937, 50 Stat. 693, 15 U.S.C. 1 (Final Judgment, Pars. V, VII).

17. The District Court erred in enjoining the defendant from refusing to sell anti-friction bearings to any person at prices and on terms corresponding to those regularly offered to purchasers of the same classification for resale into defendant's territory where the reason for such refusal is that the bearings are for resale or for other distribution in the territory of British Timken or French Timken, in that the Final Judgment in this respect is beyond the jurisdiction of the Court to prevent or restrain violations of the Sherman Act under Section 4 thereof, and in that the Court's Final Judgment deprives the defendant of its right freely to exercise its own independent discretion as to the parties with whom it will deal and compels it to do business with persons other than those chosen by it, and thus deprives the defendant of its property without just compensation and without due process of law, con-

trary to the Fifth Amendment of the Constitution of the United States (Final Judgment, Par. VI).

[fol. 3737] 18. The District Court erred in enjoining the defendant from refusing to sell anti-friction bearings to any person or discriminating as to availability of prices and terms and conditions of sale of such bearings, or failing to provide services and assistance relating to the disposition or use thereof comparable to that made available to distributors or users of bearings in defendant's territory, for the reason that such bearings are for use, sale or distribution in some country other than the defendant's territory, as defined in the Court's Final Judgment, in that the Final Judgment in this respect is beyond the Court's jurisdiction to prevent or restrain violations of the Sherman Act, under Section 4 thereof, and in that the Final Judgment in this respect deprives the defendant of its right freely to exercise its own independent discretion as to the parties with whom it will deal, and compels it to do business with persons other than those chosen by it, and to enter into business and perform services in connection therewith, and thus deprives the defendant of its property without just compensation therefor and without due process of law, contrary to the Fifth Amendment of the Constitution of the United States (Final Judgment, Par. IX).

19. The District Court erred in ordering the defendant to divest itself of all of its stock holdings, either direct or indirect, in British Timken or French Timken, when the uncontroverted evidence in the record discloses, and the District Court found, that such stock holdings and interests were not acquired in connection with the conduct of the alleged combination and conspiracy (from 1928 to date of the complaint), and that the stock had not been used to control British Timken and French Timken, or otherwise, in the carrying out of such combination and conspiracy, and the only basis upon which the plaintiff urged such divestiture was that the ownership of such investments by the defendant in British Timken and French Timken constitute an inducement and incentive to the defendant not to compete with those companies, and the uncontroverted evidence in the record discloses that such divestiture would [fol. 3738] constitute an undue hardship and punishment to the defendant (Final Judgment, Par. VIII).

20. The District Court erred in ordering and decreeing

that the provisions of the Final Judgment herein applicable to the defendant shall apply to the defendant, its officers, agents, servants, employees, and attorneys, and upon those persons in active concert or participation with them who receive actual notice thereof by personal service or otherwise (Final Judgment, Par. II).

21. The District Court erred in ordering and decreeing that there be terminated, and that the defendant be enjoined from further performance and enforcement of any of the provisions, including those involving rights or obligations upon termination, of the "Business Agreement" dated November 28, 1938, between the defendant, British Timken and French Timken, the "Supplemental Business Agreement" dated November 29, 1938, between the defendant, Michael B. U. Dewar and British Timken, the "Agreement with respect to British Timken, Limited" dated March 22, 1948, between the defendant and Michael B. U. Dewar, and the undated "Agreement cancelling previous Agreements and By-laws of Timken Holdings, Ltd. and for transfer by Mr. Dewar to the Canton company of his shares in Timken Holdings, Ltd." between the defendant, Michael B. U. Dewar and Timken Holdings, Ltd., and any agreements amendatory thereof or supplemental thereto, and in declaring the first two of said agreements to be unlawful (Final Judgment, Par. IV).

22. The District Court erred in enjoining the defendant from entering into, performing, adopting, adhering to, maintaining or furthering, directly or indirectly, or claiming any rights under, any combination conspiracy, contract, agreement, arrangement, understanding, or concerted plan of action with British Timken, French Timken, or any subsidiary, agent, assign, sales representative or distributor thereof

(a) to allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

[fol. 3739] (b) to limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

(c) to refrain from, restrain or limit production, sale or other distribution of anti-friction bearings through quotas or otherwise or to apportion customers for anti-friction bearings in any territory or market;

(d) to refrain from competing, or to leave any person free from competition in, the production, sale or other distribution of anti-friction bearings in any territory or market;

(e) to exclude any producer or distributor of anti-friction bearings from any territory or market, or to interfere with or restrict any such producer or distributor in competing in any territory or market;

(f) to fix, maintain or adhere to prices or price ranges or other terms and conditions of sale or resale of anti-friction bearings produced by defendant for sale or other distribution in any other territory or market, or produced by any other person for sale or any other distribution in the United States;

(g) to receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto; (1) any assignment, license, or grant of immunity under a patent or patent application relating to anti-friction bearings; (2) information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information, relating to the production of anti-friction bearings; or (3) any material or machinery used in the production of anti-friction bearings, or [fol. 3740] any information, advice, assistance or rights with respect to any such material or machinery (Final Judgment, Par. V).

23. The District Court erred in enjoining the defendant from referring any order or inquiry for anti-friction bearings to British Timken or French Timken, or any subsidiary, agent, sales representative, or distributor thereof (Final Judgment, Par. VI, A).

24. The District Court erred in enjoining the defendant from refusing to sell anti-friction bearings to any person at prices and on terms and conditions of sale corresponding to those regularly offered to purchasers of the same classification for resale or other distribution in defendant's territory (defined in the Court's Final Judgment herein, as including the United States, Canada, Mexico, Central America and the West Indies, South America, the rest of the world not allocated to British Timken or French Timken in 1938 as production and sales territories by the Business

Agreement dated November 28, 1938 between defendant, British Timken and French Timken, and by the Supplemental Business Agreement dated November 29, 1938, between defendant, Michael B. U. Dewar and British Timken, and by later agreement, Hong Kong) where the reason for such refusal is that the bearings are for resale or other distribution in British territory (defined in the Court's Final Judgment herein as those parts of the world allocated in 1938 as production and sales territories to British Timken by the foregoing Business Agreements, including the United Kingdom, Eire and all other countries other than France and Russia on the Continent of Europe, and all dominions, colonies, mandates and dependencies of the United Kingdom and of other European countries in any other part of the world except those of France, those located in or adjacent to North and South America, and by later agreement, Hong Kong), or in French territory (defined in the Court's Final Judgment herein as production and sales territories allocated in 1938 to French Timken by the foregoing Business Agreements, including France, and its dominions, colonies, mandates and dependencies in any part of the world other than those located in or adjacent to North or South America) (Final Judgment, Par. VI, B).

[fol. 3741] 25. The District Court erred in enjoining the defendant from selling or offering for sale to, or purchasing or offering to purchase from, British Timken or French Timken anti-friction bearings at preferential prices, discounts, terms, and conditions of sale (Final Judgment, Par. VI, C).

26. The District Court erred in enjoining the defendant from offering or paying to, or receiving from or accepting from, British Timken or French Timken any commission, rebate, penalty or other payment in connection with the sale or the distribution of anti-friction bearings to any other person in any territory or market (Final Judgment, Par. VI, D).

27. The District Court erred in enjoining the defendant from appointing or employing as agent, sales representative or distributor of the defendant, or in any way selling or otherwise distributing anti-friction bearings through, or acting for, or representing as agent, sales representative,

or distributor in connection with anti-friction bearings, British Timken, French Timken, or subsidiaries thereof (Final Judgment, Par. VI, E and F).

28. The District Court erred in enjoining the defendant from reserving or protecting for British Timken, French Timken, or subsidiaries thereof, any market or territory for the production, sale or other distribution of anti-friction bearings (Final Judgment, Par. VI, G).

29. The District Court erred in enjoining the defendant from entering into, performing, enforcing, adhering, maintaining, furthering or renewing, directly or indirectly, any contract, agreement, combination, understanding or arrangement with British Timken and/or French Timken, or any subsidiary, successor, assign, agent, sales representative or distributor thereof, which provides for (1) assignment, license or grant of immunity under any patent or patent application, or (2) the receipt, grant, disclosure, [fol. 3742] rendering available or exchange of information or advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method or other technical information, relating to the production of anti-friction bearings, or of any material or machinery used in the production thereof, or of any information, advice, assistance or rights with respect to any such material or machinery, or (3) the transfer of any right or immunity under a trademark or name relating to the production of anti-friction bearings, upon the condition or requirement that British Timken and/or French Timken, or any such subsidiary, successor, assign, agent, sales representative, or distributor thereof, shall perform any one or more of the following acts, namely:

(a) allocate or divide territories or markets for the production, sale or other distribution of anti-friction bearings;

(b) limit, restrain or prevent importation into or exportation from the United States of anti-friction bearings;

(c) refrain from, restrain or limit production, sale or other distribution of anti-friction bearings, through quotas or otherwise, or apportion customers for anti-friction bearings, in any territory or market;

(d) refrain from competing or leave any person free from competition in the production, sale or other distribution of anti-friction bearings in any territory or market;

(e) exclude any producer or distributor from any market for anti-friction bearings, or interfere with or restrict any producer or distributor in competing in any such market;

(f) maintain or adhere to fixed prices or price ranges, or other terms and conditions of sale or resale of anti-friction bearings;

(g) receive, grant, disclose, render available or exchange, in such a way as to deny any third person access thereto [fol. 3743] (1), any assignment, license or grant of immunity under a patent or patent application, relating to anti-friction bearings; (2) information, advice, assistance or rights with respect to any invention, discovery, improvement, practice, formula, pattern, device, process, method, or other technical information relating to the production of anti-friction bearings; or (3) any material or machinery used in the production of anti-friction bearings, or any information, advice, assistance or rights with respect to any such material or machinery; or

(h) restrict the use or disposition of any anti-friction bearings bought from defendant (Final Judgment, Par. VII).

30. The District Court erred in ordering the defendant, within two years from the date of the Court's final judgment, to divest itself of all stock holdings and other interests, direct or indirect, in British Timken and French Timken, and within one year therefrom to present to the Court for its approval a plan for such divestiture (Final Judgment, Par. VIII, A).

31. The District Court erred in enjoining the defendant from acquiring directly or indirectly any ownership and interest in (by purchase or acquisition of securities, or through the exercise of any option or otherwise), or any control over, British Timken or French Timken, or any subsidiary, successor or assign thereof (Final Judgment, Par. VIII, B(1)).

32. The District Court erred in enjoining the defendant from exercising any influence or control over the production, sales or other business policies of, or causing, authorizing or knowingly permitting any officer, director or employee of the defendant or its subsidiaries to serve as an officer, director or employee of, British Timken or French Timken, or any subsidiary, successor, assign, sales repre-

sentative or distributor thereof (Final Judgment, Par. VIII, B (2) and (3)).

33. The District Court erred in enjoining the defendant [fol. 3744] from refusing to sell anti-friction bearings to any person, or discriminating as to availability and prices, terms and conditions of sale of such bearings, or failing to provide services and assistance relating to the distribution or use of such bearings comparable to the services and assistance made available to distributors and users of such bearings in defendant's territory (as defined in the Final Judgment herein), where the reason for such discrimination or failure is that such bearings are for use, resale or other distribution, either in their original form or incorporated in another product, in some country or area other than the defendant's territory as defined in said Final Judgment (Final Judgment, Par. IX).

34. The District Court erred in ordering that the defendant for a period of six months insert at reasonable intervals in trade journals of appropriate circulation in British territory and French territory advertisements advising the bearing purchasing public of the nature of the Final Judgment in so far as it concerns the removal of the restrictions which had previously prevented the sale of bearings by the defendant in British and French territory, and that the defendant give similar notice in writing to all persons who have made written inquiry to defendant regarding the purchase or distribution of anti-friction bearings for export since July 1, 1945 (Final Judgment, Par. X).

35. The District Court erred in ordering the defendant to provide copies of the Final Judgment to British Timken, French Timken, and all directors, officers, subsidiaries, sales representatives and distributors thereof and of the defendant (Final Judgment, Par. XI).

36. The District Court erred in ordering the defendant to permit representatives of the Department of Justice of the United States to have access from time to time to the defendant's books, ledgers, correspondence and other records and documents, and to interview its officers or em- [fol. 3745] ployees as to any matters contained in the Final Judgment (Final Judgment, Par. XII).

37. The District Court erred in retaining jurisdiction of this cause for the purpose of making further orders for the construction or carrying out of the judgment, for the

modification of any of the provisions thereof, and for enforcement of compliance therewith and punishment of violations thereof (Final Judgment, Par. XIII).

38. The District Court erred in entering judgment against the defendant for costs to be taxed in this cause (Final Judgment, Par. XIV).

Failure to Make Findings of Fact and Conclusions of Law

39. The District Court erred in overruling the motion of the defendant that Court reject and disregard a document lodged by the plaintiff with the Court denominated "Findings of Fact and Conclusions of Law" which was, in fact, a proposed journal entry adopting the memorandum of opinion theretofore filed by the Court as the Court's findings of fact and conclusions of law.

40. The District Court erred in adopting as its findings of fact and conclusions of law in this cause, over the objection of the defendant, the Court's memorandum of opinion, which contained intermingled statements of fact, discussion of the evidence, inferences, arguments and observations of the Court, and did not discuss, in large part, the uncontroverted evidence in the cause demonstrating the legality of the relations between the defendant, British Timken and French Timken.

41. The District Court erred in not making, as requested by defendant, findings of fact and conclusions of law as required by law and by the Rules of Federal Civil Procedure and by the rules of the Court.

Purported Findings of Fact

42. The District Court erred in finding as a fact, or holding, that there is a tapered roller bearing market and industry, in which the defendant, British Timken and French Timken occupy dominant positions, separate and distinct from the anti-friction bearing market and industry (Court's Memorandum, Pars. 9, 15 and 146).

[fol. 3746] 43. The District Court erred in finding as a fact, or holding, that command of approximately 71 to 82 percent of the "tapered roller bearing industry" in the United States during the years 1941 to 1945, and 25 per cent of total production of anti-friction bearings in the

United States by the defendant, of approximately 90 per cent of production of tapered roller bearings and 20 per cent of that of all anti-friction bearings in England by British Timken, and of about 80 percent of the production of tapered roller bearings, constituting 10 per cent of that of all anti-friction bearings in France by French Timken, "spells out the dominant position of defendant, British Timken and French Timken both in the tapered and anti-friction bearing industry" (Court's Memorandum, Pars. 11 to 15, inclusive).

44. The District Court erred in finding as a fact, or holding, that, "while tapered bearings compete with other types of anti-friction bearings and to a much lesser extent with friction bearings, tapered bearings, because of their design and applicability for particular use, enjoy freedom from competition, just as for certain definite uses, ball bearings are free from competition" and that there is competition between tapered roller bearings and other types of anti-friction bearings only to a limited extent (Court's Memorandum, Pars. 19 and 130).

45. The District Court erred in finding as a fact, or holding, that tapered bearings "constitute a distinctive type of anti-friction bearings which fulfills a requirement not supplied or satisfied by others" (Court's Memorandum, Par. 20).

46. The District Court erred in finding as a fact, or holding, that "in order to view the conduct of defendant in the proper perspective during the period of time when it is accused of violating the antitrust laws, it is essential to examine its prior activities which the Government claims culminated in the agreements, contracts and understandings to eliminate competition, assailed in this action" and that "against the backdrop" of its relations with Vickers, Ltd.'s subsidiaries, it must "view the conduct of defendant [fol. 3747] to resolve the questions raised by the charges of anti-trust violations beginning in 1928" (Court's Memorandum, Pars. 23, 32, second sentence).

47. The District Court erred in finding as a fact, or holding, that in 1927 British Timken was a prosperous and growing concern (Court's Memorandum, Par. 34).

48. The District Court erred in finding as a fact, or holding, that "since it was founded, defendant held a commanding position in its field of manufacture"; that "By

1928 it became the Titan of the roller bearing industry" and "It had purchased the assets of its principal competitors in the United States," and that its position in "the industry" in 1928 was the same as "its position therein" in 1941 (Court's Memorandum, Pars. 35 and 36).

49. The District Court erred in finding as a fact, or holding, that British Timken's potent leadership in "the industry" in 1928 "compared favorably with that of the defendant", that British Timken had shown "a substantial growth from the time the principal contracts were made," and "had increased its productive capacity, experience in manufacture and sales output to an extent that it became a potential formidable competitor in the field of roller bearings", and had "experienced a relatively greater growth in the business than did defendant," so that agreements made between the defendant and British Timken during the years between 1928 and 1938 "were made between two manufacturers who on the basis of the evidence, were properly characterized as the largest manufacturer in the world and the largest manufacturer in Great Britain respectively" (Court's Memorandum, Par. 36).

50. The District Court erred in finding as a fact, or holding, that "personal negotiations between an executive of defendant and Dewar" took place in 1927, when the uncontroverted evidence is that such negotiations were between defendant's agent, a former executive of defendant, and Dewar (Court's Memorandum, Par. 41).

[fol. 3748] 51. The District Court erred in finding as a fact, or holding, that the Business Agreement of 1928 between the defendant and British Timken "followed generally the pattern of those which preceded it." (Court's Memorandum, Par. 48).

52. The District Court erred in finding as a fact, or holding, that S.M.G. was exclusively licensed by British Timken or its predecessor, and that it was the only manufacturer of tapered roller bearings in France until 1928 (Court's Memorandum, Par. 53).

53. The District Court erred in finding as a fact, or holding, that defendant and British Timken organized a new German company with the same name as Prausnitzer's Deutsche Timken Gesellschaft—when the uncontroverted evidence in the record is that the defendant and Dewar

acquired jointly stock control of Prausnitzer's company (Court's Memorandum, Par. 57).

54. The District Court erred in finding as a fact, or holding, that defendant and British Timken own all the stock of French Timken—when the uncontroverted evidence is that the defendant and Dewar own all of such stock (Court's Memorandum, Par. 66).

55. The District Court erred in finding as a fact, or holding, that the 1938 "Business Agreements" between defendant, British Timken, French Timken and Dewar prevented the parties from selling in each other's territory, fixed prices on all replacement bearings sold in each other's territories, and fixed prices on bearings sold in Russia (Court's Memorandum, Par. 69).

56. The District Court erred in finding as a fact, or holding, that letters and memoranda of the contracting parties, and particularly of the officers of defendant show that "the respective trade provinces" of the defendant, British Timken and French Timken "were to be preserved regardless of the unsatisfied demand for bearings in the various parts of the world" and that "over the entire span of years during which the restrictions existed the parties did not deviate from their course of conduct." (Court's Memorandum, Par. 72).

[fol. 3749] 57. The District Court erred in finding as a fact, or holding, that strict adherence to territorial restrictions applicable to Australia contained in the Business Agreement between the defendant and British Timken, "because a matter of grave concern to British Timken's distributors and eventually to the British Purchasing Commission," that "There was a serious interference in Australian war production due to British Timken's inability to supply bearings," that "The threat of sales by competitors to supplant the meager amount of bearings, and the clamor of Australian distributors, eventuated in the relaxation of the theretofore inflexible provisions of the contracts" between defendant and British Timken, that defendant was permitted to fill orders from British Timken only at prices designated by British Timken, and that "the voluminous correspondence on the subject matter bears out the critical situation which existed and which required the reluctant alteration of established policy" (Court's Memorandum, Pars. 78, 79).

58. The District Court erred in finding as a fact, or holding, that certain communications demonstrated "that the parties not only sought the preservation of their respective sales fields, but that they supported the agreements by the maintenance of price fixing arrangements"; that "The protective discount policy insured the parties against competition from each other in replacement bearings" and that "Defendant sold at a 70% discount for export on its own territory, but quoted prices representing a 50% discount from the American list on standard bearings in response to unsolicited inquiries from British Timken's territory" in order to preserve their respective sales fields (Court's Memorandum, Par. 88).

59. The District Court erred in finding as a fact, or holding, that "other steps were taken to prevent outsiders from disturbing the agreements" between defendant and British Timken "as the particular situation required" (Court's Memorandum, Par. 89).

60. The District Court erred in finding as a fact, or holding, that the defendant, British Timken and French Timken "deviated from adherence to protective prices only in cases where competition of outsiders required that [fol. 3750] it be done" (Court's Memorandum, Par. 92).

61. The District Court erred in finding as a fact, or holding, that "In the joint territory of Russia, the pricing provisions spelled out in written contracts were carried out to the letter" (Court's Memorandum, Par. 94).

62. The District Court erred in finding as a fact, or holding, that, because the defendant, British Timken and French Timken construed their "contractual obligations for the interchange of information relating to the manufacture of bearings and of all inventions and discoveries, whether they were patented or not, as being for their mutual benefit only, to the exclusion of all others," any "information pertaining to their manufacture was denied to outsiders unless consent was obtained from the party affected" (Court's Memorandum, Par. 95).

63. The District Court erred in finding as a fact, or holding, that British Timken and French Timken have become identified as producers of "Timken" bearings and that the good will which they built up and the competitive position which they have acquired in the territories allocated to them is under the name "Timken", that the retention of the

good will and place of dominance of British Timken and French Timken in their respective business fields depends on the continued right to use the name "Timken" and that "The severance of contractual relations meant the termination of their ability to profit by the many years of experience in manufacture and successful business dealing with their customers." (Court's Memorandum, Par. 96).

64. The District Court erred in finding as a fact, or holding, that, "In addition to dividing the world into restricted manufacturing and marketing areas, maintaining price fixing arrangements, and interchange of discoveries, know-how and inventions to the exclusion of others, defendant, British Timken and French Timken co-operated to shut out the competition of other dealers in tapered roller bearings." (Court's Memorandum, Par. 97).

[fol. 3751] 65. The District Court erred in finding as a fact, or holding, that the territorial divisions between defendant, British Timken and French Timken were made for the purpose, in part, of eliminating the competition of other tapered bearing producers (Court's Memorandum, Par. 98).

66. The District Court erred in finding as a fact, or holding, that "Dewar's testimony in this regard was:

> 'We had a common enemy in the Swedish S. K. F. who had begun the manufacture of tapered roller bearings, and our general policy was that if a tapered roller bearing was sold it had got to be a Timken and not a S. K. F. To us it was really immaterial whether it was made in the United States or whether it was made in Great Britain or France, provided it carried the name 'Timken'. We used to sell at the request of the American Company in the Argentine and the American Company has sold at our request in our territories.'"

—whereas the record discloses that the testimony of Dewar quoted by the Court did not constitute all of his testimony as to the purpose of the provisions as to the divisions of territory contained in the agreements of defendant, British Timken and French Timken (Court's Memorandum, Par. 99).

67. The District Court erred in finding as a fact, or holding, that "the sales of bearings by defendant, British Timken, and French Timken to each other were on a most favorable basis to supplement the plan of strict compliance

with allocated areas and to protect themselves from competition by outsiders" (Court's Memorandum, Par. 103).

68. The District Court erred in finding as a fact, or holding, that "Defendant and British Timken made certain that the alloy steel made by defendant, especially adapted for the manufacture of bearings, was not made available for use by their competitors" (Court's Memorandum, Par. 104).

69. The District Court erred in finding as a fact, or holding, that "The collaboration of defendant, British Timken and French Timken to eliminate competition with each other and to eliminate the competition of other bearing producers was augmented by agreements with British Timken and French Timken with their competitors abroad to share customers and sales in certain markets and to stabilize prices" (Court's Memorandum, Par. 106).

[fol. 3752] 70. The District Court erred in finding as a fact, or holding, that certain agreements characterized by the Court as cartels made by British Timken and French Timken were "the result of the understandings and cooperation of defendant with British Timken and French Timken to bring them about," that "defendant's territory was affected" and " It was the beneficiary of their operations," and that its officials "prompted and approved the agreements" (Court's Memorandum, Par. 110).

71. The District Court erred in finding as a fact, or holding, that the lengthy recital of letters, reports and memoranda made by the Court in its Memorandum paints such a clear picture of the conduct of the accused companies, including the defendant, over the period of years that it leaves no room for dispute or contradiction on the salient facts (Court's Memorandum, Par. 116).

72. The District Court erred in finding as a fact, or holding, that the evidence conclusively establishes the assertions of the plaintiff, namely, that the defendant, British Timken and French Timken have imposed restraints on foreign commerce in anti-friction bearings "by (1) allocating trade territories throughout the world, each agreeing with limited exceptions not to manufacture or sell in the other's territory; by (2) fixing of prices on products sold by any party in the territory of the other party; by (3) mutual cooperation and assistance to protect each other's markets and to eliminate the competition of outsiders; and by (4) partici-

pation in foreign cartels which restrict exports by United States producers" (Court's Memorandum, Par. 117).

73. The District Court erred in finding as a fact, or holding, that the evidence in the instant cause "discloses an extensive and far-reaching combination to smother all competition between defendant, British Timken and French Timken, and to stifle or suppress competition of other manufacturers by joint effort against them or by agreement with them" (Court's Memorandum, Par. 119).

74. The District Court erred in finding as a fact, or holding, that the present relationship of the defendant, British [fol. 3753] Timken and French Timken "is not only the culmination of the successive agreements between them beginning in 1928", but also "the outgrowth of the principal agreements" made in 1909 between the defendant and Electric & Ordnance Accessories Company, Ltd. (predecessor of British Timken and a wholly-owned subsidiary of Vickers, Ltd., and hereinafter called E. & O. A.) "when world markets were divided and competition was eliminated" (Court's Memorandum, Par. 120).

75. The District Court erred in finding as a fact, or holding, that after the expiration of the principal patents owned by the defendant, the restrictions imposed (by the 1909 patent license agreements between the defendant and E. & O.A. and its successor, British Timken, prior to the acquisition of British Timken by defendant and Dewar in 1927) continued, but no longer revolved around the patents, and instead "were without pretense contracts for the avowed purpose of suppressing competition" (Court's Memorandum, Par. 121).

76. The District Court erred in finding as a fact, or holding, that, "When in 1928 the American, British and French companies agreed to continue their activities, British Timken had grown from infancy in the bearing industry to a position of dominance and was a potential competitor with whom defendant had to reckon" (Court's Memorandum, Par. 122).

77. The District Court erred in finding as a fact, or holding, that each of the defendant, British Timken and French Timken was "independent of the others, but joined for the sole and only purpose of mutual benefits" (Court's Memorandum, Par. 123).

78. The District Court erred in finding as a fact, or hold-

ing, that the territorial limitations imposed by the defendant, British Timken and French Timken on each other were designed for the purpose of preventing competition, and were reinforced by price agreements, that the word "Timken" had become synonymous with tapered roller bearings, and that in order "to eliminate the competition of other purchasers, defendant supplied British Timken and French Timken, and them alone, with [fol. 3754] know-how in the production of bearings", and insisted that the bearings produced and sold by them be identified by the name "Timken" (Court's Memorandum, Par. 124).

79. The District Court erred in finding as a fact, or holding, that "cartel agreements in France, England, and Italy were made by defendant, British Timken and French Timken with the knowledge, approval and cooperation of the defendant to effectuate the plan of excluding competition of others in the territories of the defendant, British Timken and French Timken" (Court's Memorandum, Par. 125).

80. The District Court erred in finding as a fact, or holding, that "The French anti-friction cartel, the English S.K.F.—British Timken cartel, and the agreements with Bock and R.I.V. fortified defendant in the over all plan of suppressing competition in the sale of tapered bearings" (Court's Memorandum, Par. 126).

81. The District Court erred in finding as a fact, or holding, that the combined relationship between defendant, British Timken and French Timken constitutes a pool of "separate firms to maintain prices above a competitive figure" commonly known as a "cartel" (Court's Memorandum, Par. 127).

82. The District Court erred in finding as a fact, or holding, that "The benefits of the competitive price system under the Sherman Act would be lost to the vast number of manufacturers whose machinery and equipment are geared to use only tapered bearings if the operation of the Act were to be construed otherwise than as prohibiting arrangements for dividing markets", and, therefore, inferentially, that the arrangements between the defendant and its associate companies prevent price competition in tapered bearings (Court's Memorandum, Par. 131).

83. The District Court erred in finding as a fact, or holding, that the defendant, British Timken and French Tim-

ken engaged in "the practice of selling only at prices agreeable to the party into whose territory the sales were made", carried out contractual provisions "for an agreed price on replacement parts", and entered into "other price [fol. 3756] fixing arrangements" (Court's Memorandum, Par. 132).

84. The District Court erred in finding as a fact, or holding, that "Both the territorial sales limitations and price fixing constitute a menace to international trade in tapered bearings," (Court's Memorandum, Par. 133).

85. The District Court erred in finding as a fact, or holding, that the "association of defenda t, British Timken and French Timken, for the purpose of protecting each other's markets, and the exclusion of outsiders from the tapered bearing market, is no less harmful and injurious to the unrestricted flow of commerce in bearings than territorial sales limitation and price fixing" (Court's Memorandum, Par. 134).

86. The District Court erred in finding as a fact, or holding, that the defendant participated in foreign cartels and that this participation "completed the circle within which the alleged combination between defendant, British Timken and French Timken operated to forestall competition" (Court's Memorandum, Par. 135).

87. The District Court erred in finding as a fact, or holding, that the cartel agreements between British Timken and French Timken and foreign competitors "had a direct and influencing effect on trade in tapered bearings between the United States and foreign countries" (Court's Memorandum, Par. 136).

88. The District Court erred in finding as a fact, or holding, that exclusive exchange of know-how and enforcement of trademark restrictions by and between the defendant, British Timken and French Timken "have been most helpful in buttressing the other illegal conduct to achieve the desired result" and "were integral parts of the general scheme to suppress trade" (Court's Memorandum, Par. 137).

89. The District Court erred in finding as a fact, or holding, that the defendant, British Timken and French Timken "are separate corporations who, in their respective territories both before and after their agree- [fol. 3756] ments, were potential competitors in the tapered

bearing market", and "occupied dominant positions in the entire anti-friction bearing industry" (Court's Memorandum, Par. 144).

90. The District Court erred in finding as a fact, or holding, that the evidence discloses "an intent to operate a smoothly running organization to control commerce in the tapered bearing industry throughout the entire world" (Court's Memorandum, Par. 146).

91. The District Court erred in finding as a fact, or holding, that "In the face of the numerous agreements and the clear expressions of defendant's officers in the volumes of letters and memoranda offered in evidence, it is difficult to understand how anyone can disclaim a clear intent to restrict competition", and that "It is likewise difficult to place credence in the assertion that there was no intent to restrain trade" in view of certain comments of the defendant's President (made in 1933), if the statements are to be construed as findings of fact or a holding that the defendant intended to restrict competition and restrain trade (Court's Memorandum, Pars. 147, 148).

92. The District Court erred in finding as a fact, or holding, that the common undertaking between the defendant and Dewar "was a joint venture only in the sense that they jointly undertook to continue the manufacture and distribution of bearings with all the limitations and restrictions which had theretofore been imposed" (Court's Memorandum, Par. 150).

93. The District Court erred in finding as a fact, or holding, that throughout the trial of this cause "All of the defendant's officers and employees" took great pains "to make reference time and again to 'our joint venture' and to 'our partners'" (Court's Memorandum, Par. 151).

94. The District Court erred in finding as a fact, or holding, that the relationship of the defendant with British Timken and French Timken, as to the manufacture and sale of bearings in issue in this cause, did not originate with the agreement between the defendant and Dewar, but that instead the "defendant had maintained the territorial market restrictions with the predecessors of British Timken and in [fol. 3757] France with the predecessor of French Timken" (Court's Memorandum, Par. 152).

95. The District Court erred in finding as a fact, or holding, that S.M.G. was the "predecessor" of French Timken (Court's Memorandum, Par. 152).

96. The District Court erred in finding as a fact, or holding, that the only substantial change in the relationship of the parties "resulting from the Dewar-defendant contract was, that defendant acquired a stock ownership in British Timken and French Timken," and that the execution of the 1928 contracts between the defendant and British Timken, and British Timken and French Timken, did not mark the beginning of new business contacts, but instead "merely extended the restrictive arrangements which had existed for almost twenty years between potential competitors" (Court's Memorandum, Par. 153).

97. The District Court erred in finding as a fact, or holding, that the restraints imposed by the business agreements between the defendant and British Timken and French Timken were not ancillary to a joint venture between the defendant and Dewar, but "To the contrary, the arrangements were made to carry on effectively the combination to eliminate competition between the parties and to frustrate any competition of outsiders" (Court's Memorandum, Par. 154).

98. The District Court erred in finding as a fact, or holding, that "the underlying motive of Dewar for making" the Heads of Agreement of May 16, 1927, between the defendant and Dewar, which outlined the arrangements to be carried on by the parties in connection with their joint acquisition of British Timken and proposed acquisition or organization of other corporations in other European countries such as France and Germany, was "Dewar's desire to escape defendant's competition and to continue the existing contracts" between the defendant and British Timken (Court's Memorandum, Par. 155).

99. The District Court erred in finding as a fact, or holding, that the defendant had no control over the business conduct of either British Timken or French Timken, and that all advice in respect of improved production and [fol. 3758] technical information supplied by the defendant to British Timken and French Timken, instead of being given in support of, and as a part of a joint venture between the defendant and Dewar to carry on the manufacture and sale of tapered roller bearings in foreign countries through the instrumentality of foreign corporations, such as British Timken and French Timken, was, instead "in support of the combination to eliminate competition among the parties and with others" (Court's Memorandum, Par. 156).

100. The District Court erred in finding as a fact, or holding, that British Timken and French Timken retained their corporate entities and jealously guarded their independence in dealing with the defendant; that Dewar regarded himself as synonymous with British Timken; that Hess, an executive of the defendant, "abandoned, even in name, the partnership fiction" in 1934, and that, even if the parties had thought they were engaged in a joint venture, "by 1934 neither believed that such relationship existed" (Court's Memorandum, Pars. 157 to 159, inclusive).

101. The District Court erred in finding as a fact, or holding, that the defendant "simply acquired substantial interests in a dominant manufacture of bearings in England, participated in the formation of, and invested in the stock of a potential competitor in France" (Court's Memorandum, Par. 160).

102. The District Court erred in finding as a fact, or holding, that in 1928 defendant had "serious doubt of its ownerships of the mark" in "the various territories assigned to British and French Timken", that "in some markets British Timken's predecessor was the owner of" the trademark "Timken"; that "In Germany one Prausnitzer was the sole owner of the trademark 'Timken'"; that "defendant could not use the mark in a great portion of the world"; that the defendant was primarily concerned "not in safeguarding the trademark rights which it then possessed, but rather in acquiring the rights obtained by other manufacturers, as a consequence of the early license agreements in areas where defendant had agreed not to manufacture and sell"; and that "Its own covenants not to make or sell [fol. 3759] bearings in territories allotted to others brought about the situation that the trademark 'Timken' was registered and owned by others" (Court's Memorandum, Pars. 182, 183).

103. The District Court erred in finding as a fact, or holding, that the agreements attempted to remedy the defendant's "dubious trademark" rights (Court's Memorandum, Par. 184).

104. The District Court erred in finding as a fact, or holding, that the defendant's "own counsel in England" brought the matter of the trademark situation to the defendant's attention in a letter on April 2, 1927,—when the uncontroverted evidence in the record is that this letter was

sent to the defendant by its American trademark counsel. (Court's Memorandum, Par. 185).

105. The District Court erred in finding as a fact, or holding, that "Despite counsel's optimism concerning world control of the mark, great difficulty was encountered in effecting registration in many countries." (Court's Memorandum, Par. 186).

106. The District Court erred in finding as a fact, or holding, that "the trademark provisions of the challenged contracts were subsidiary and secondary to the central purpose of allocating trade territories"; and that the defendant entered into the business agreements with British Timken and French Timken "not for the purpose of exercising its right to protect the trademark 'Timken' from its unlawful use by British Timken and French Timken, nor to protect the public from British or French Timken passing off their products as those of defendant, but for the purpose of preventing competition in the sale of bearings" (Court's Memorandum, Pars. 187, 188).

107. The District Court erred in finding as a fact, or holding, that the defendant's contention as to the trademark is founded "on the tenuous premise that it was the equitable owner of the mark outside of the marketing territory allocated to it"—when the uncontroverted evidence discloses that the defendant was the registered legal owner of the mark in many of the commercial areas in Europe and elsewhere all over the world outside of the territory [fol. 3760] allocated to it by the business agreements. (Court's Memorandum, Par. 189).

108. The District Court erred in finding as a fact, or holding, that the "repeated and persistent provisions of the successive contracts for territorial restrictions, contradict any claim" that defendant, British Timken and French Timken lacked the ability to compete with each other (Court's Memorandum, Par. 204).

109. The District Court erred in finding as a fact, or holding, that "the ingenuity of the American businessman, fortified by the advantages of free competition in many instances has been able to penetrate the strongest tariff walls", that "the evidence bears out the fact that there was and there is potential competition in the international roller bearing market" and the contracts were made "for the very purpose of regulating and restricting it"; and that had it

not been for the rigid restrictions provided in the contracts between the defendant, British Timken and French Timken and their strict enforcement in actual practice "the volume of business with foreign countries would have been of considerable size" (Court's Memorandum, Pars. 205-208, inclusive).

110. The District Court erred in finding as a fact, or holding, that the defendant, British Timken and French Timken have formed a world cartel in tapered roller bearings, have divided the world into exclusive sales territories, have fixed prices, have agreed to and did attempt to eradicate competition of outsiders, and combined with competitors to fix prices (Court's Memorandum, Par. 210).

Purported Conclusions of Law

111. The District Court erred in stating as a conclusion of law, or holding, that the defendant, British Timken and French Timken occupy, as a matter of law, dominant positions in the anti-friction bearing industry and a separate and distinct tapered roller bearing industry (Court's Memorandum, Pars. 15, 35).

112. The District Court erred in stating as a conclusion of law, or holding, that in the basic questions involved in [fol. 3761] this cause the reasons for the making of large numbers of contracts, why they were modified and extended from time to time, and various covenants were inserted in them, and why the present contracts have such long duration, are of no significance, but that, instead, "The controlling facts are that they were made and that they contained certain provisions which may bring them under the condemnation of the Sherman Act" (Court's Memorandum, Par. 67).

113. The District Court erred in stating as a conclusion of law, or holding, that the 1909 patent license agreements between defendant and E. & O. A. were illegal under the Sherman Act, if this is the inferential conclusion of law, or holding, of the District Court (Court's Memorandum, Par. 120).

114. The District Court erred in stating as a conclusion of law, or holding, that the extent to which alleged cartel agreements made by British Timken and French Timken were "successful in impeding competition is of no moment.

It is sufficient that that was the end sought to be accomplished" (Court's Memorandum, Par. 126).

115. The District Court erred in stating as a conclusion of law applicable to this cause, or holding, that "it is an imperative of the Sherman Act that all combinations in restraint of international trade and all agreements to restrict competition be condemned" (Court's Memorandum, Par. 127).

116. The District Court erred in stating as a conclusion of law, or holding, that the allocation of markets as between the defendant, British Timken and French Timken under their business agreements from 1928 to date were illegal under the Sherman Act (Court's Memorandum, Pars. 128, 129, 133).

117. The District Court erred in stating as a conclusion of law, or holding, that the provisions in the business agreements between the defendant, British Timken and French Timken, which required them, in making replacement sales in each other's territory only at prices agreeable to the party into whose territory the sales were made, and for other alleged price-fixing arrangements between them, were [fol. 3762] in violation of the Sherman Act (Court's Memorandum, Pars. 132, 133).

118. The District Court erred in stating as a conclusion of law, or holding, that "the association of defendant, British and French Timken for the purpose of protecting each other's markets and the exclusion of outsiders from the tapered bearing market" was in violation of the Sherman Act (Court's Memorandum, Par. 134).

119. The District Court erred in stating as a conclusion of law, or holding, that "the participation in the foreign cartels by defendant" under the circumstances outlined in the Court's Memorandum, constituted a violation of the Sherman Act, and that the fact that the agreements were made on foreign soil did not relieve the defendant from responsibility (Court's Memorandum, Pars. 135, 136).

120. The District Court erred in stating as a conclusion of law, that exclusive exchange of "present and future know-how and inventions, patented or unpatented" should be considered by the Court in deciding this case and granting relief therein, when the Court conceded that there was no charge made in the complaint as to this alleged practice (Court's Memorandum, Par. 137).

121. The District Court erred in stating as a conclusion of law, or holding, that the restraints of foreign commerce resulting from the agreements and action of defendant, British Timken and French Timken were not reasonable within the meaning of the Sherman Act, but instead were "unreasonable per se" (Court's Memorandum, Pars. 142, 143).

122. The District Court erred in stating as a conclusion of law, or holding, that any restraints imposed on commerce by the defendant, British Timken and French Timken were not reasonably ancillary to the close relation between the defendant and Dewar analogous to a partnership or joint venture, but instead constituted merely a continuation of restraints on commerce imposed by the 1909 agreements between the defendant and E. & O. A. and its successor subsidiaries of Vickers, Ltd., so that "The only substantial change in the relationship of the parties resulting from the Dewar-defendant contract was that defendant acquired a [fol. 3763] stock ownership in British Timken and French Timken", and instead of being restraints reasonably ancillary to a joint venture between defendant and Dewar, the restraints imposed by the 1928 business agreements between defendant, British Timken and French Timken "were made to carry on effectively the combination to eliminate competition between the parties and to frustrate any competition of outsiders" (Court's Memorandum, Pars. 149, 150, and 152 to 154, inclusive).

123. The District Court erred in stating as a conclusion of law, inferentially, if that was the District Court's intention, because Dewar managed and operated British Timken and French Timken and defendant had "no control over the business conduct of either", no joint venture to which restraints of competition could be reasonably ancillary existed (Court's Memorandum, Par. 156).

124. The District Court erred in stating as a conclusion of law applicable to this cause, or holding, if it so intended, that the "repeated assertion" by the defendant, in the course of its business relations with Dewar, that "it was in a joint venture or was a member of a partnership does not make it so" (Court's Memoraundum, Par. 160).

125. The District Court erred in stating as a conclusion of law, or holding, inferentially, if that was the District Court's intention, assuming that there could be a joint ven-

ture between the defendant and Dewar, the restraints imposed by the arrangements and action of defendant, Dewar, British Timken and French Timken cannot be justified because the association was not formed for the purpose of a lawful business enterprise involving restraints to protect established business interest, but, instead, was "formed for the purpose of continuing a combination to allocate exclusive sales territories in the world, to fix prices and to eliminate competition and fix prices both within and without the combination" (Court's Memorandum, Pars. 161 to 163, inclusive).

126. The District Court erred in stating as a conclusion of law, or holding, that the restraints imposed could not be reasonably ancillary to the transfer of know-how by the defendant to British Timken and French Timken, because [fol. 3764] one who possesses greater knowledge or superior skill in the manufacture of a product, while entitled to be fairly and adequately compensated if he furnishes his knowledge or skill to others, is not entitled to exact as a price for such contribution complete freedom from competition (Court's Memorandum, Pars. 165 to 178, inclusive).

127. The District Court erred in stating as a conclusion of law, or holding that the restraints imposed by the agreements, arrangements and conduct of the defendant, Dewar, British Timken and French Timken were not and could not be reasonably ancillary to the granting of a license by the defendant to British Timken and French Timken to use the trademark "Timken" (Court's Memorandum, Pars. 179, 180).

128. The District Court erred in stating as a conclusion of law, or holding, that in 1928 the defendant was primarily concerned in acquiring trademark rights obtained by other manufacturers, as a consequence of the early patent license agreements, in areas where the defendant had agreed not to manufacture and sell with the result that "The trademark 'Timken' was registered and owned by others", rather than in safeguarding the "trademark rights which it then possessed" (Court's Memorandum, Par. 183).

129. The District Court erred in stating as a conclusion of law, or holding, that "Defendant's assertion that it was the sole equitable owner of the mark is unimpressive", and that it "did not and could not have a right to license a

trademark in markets where it did not own the mark" (Court's Memorandum, Pars. 184, 190).

130. The District Court erred in stating as a conclusion of law, or holding, that the "trademark right is not comparable to the right an owner has in a chattel or realty" and is not a right "in gross or at large"; and inferentially, therefore, if this was the District Court's intention, that the right to use it cannot be licensed (Court's Memorandum, Pars. 193 to 196).

[fol. 3765] 131. The District Court erred in stating as a conclusion of law applicable to this cause, or holding, that "a trademark brands a product as to its origin" only (Court's Memorandum, Par. 199).

132. The District Court erred in stating as a conclusion of law applicable to this cause, or holding, that "If a trademark may be the legal basis for allocating world markets, fixing of prices, restricting competition, the unfailing device has been found to destroy any vestige of inhibition set up by the Sherman Act"; that "The rights pertaining to trademarks and trade names were well known long before that legislative act was passed by Congress"; and that "It is certain that it was never intended that the consequences of violations of the antitrust laws may be escaped by the licensing of trade marks" (Court's Memorandum, Par. 200).

133. The District Court erred in stating as a conclusion of law, or holding, that the repeated provisions of the successive contracts for territorial restrictions between the defendant, British Timken and French Timken contradict any claim of lack of ability to compete on a competitive price basis in their respective territories, that the facts that inquiries for bearings were made by foreign purchasers and that small competitors of the defendant in the United States made shipments abroad on a relatively large scale is convincing evidence of potential competition and the destructive effect of the alleged combination of the defendant, British Timken and French Timken, and that therefore the illegality which is essential to the granting of equitable relief in the instant cause exists (Court's Memorandum, Pars. 201 to 208).

134. The District Court erred in stating as a conclusion of law applicable to this cause, or holding, that "The defenses offered do not constitute justifications for such

patent violations of the antitrust laws" and that "the Government is entitled to a decree" (Court's Memorandum, Pars. 210, 211).

[fol. 3766] District Court's Failure to Make New and Additional Findings of Fact and Conclusions of Law

135. The District Court erred in overruling the motion of the defendant after final judgment to amend the Court's findings of fact and conclusions of law, and to make new and additional findings of fact and conclusions of law, by adopting as its findings of fact and conclusions of law those requested by the defendant in a document attached to and made part of said motion.

136. The District Court erred in failing and refusing to make the findings of fact and conclusions of law requested by the defendant in its motion after final judgment to amend the Court's findings of fact and conclusions of law and to make new, and additional, findings of fact and conclusions of law, which, to the extent that they do not duplicate findings of fact and conclusions of law purportedly made by the Court, are, in substance, as set forth in the following assignments of error, Nos. 137 to 196, inclusive.

Requested Findings of Fact.

137. Position of the Timken Companies in the bearing industry. The District Court erred in failing to find as a fact, that all types of anti-friction bearings compete with each other and can be used in almost any kind of position in which anti-friction bearings can be used; that all types of roller bearings, including tapered roller bearings manufactured by the defendant, can be used in almost any type of work where an anti-friction bearing can be used; and that, aside from the field in which small bearings, such as the miniature types which can be seen only with a magnifying glass, are being used, and the field in which large roller bearings are most practicable due to the bulky housing required for ball bearings, roller bearings (including tapered roller bearings) compete with ball bearings in the United States, the United Kingdom and Europe, in 90 per cent of the places where either ball or roller bearings can be applied, and the success of the anti-friction bearing manufacturers depend upon salesmanship or economy of the [fol. 3767] bearing; and that the price of the bearing and cost of the mounting for the bearing are the considerations

which determine the economy of the bearing (Requested Findings Nos. 10-13, inclusive).

138. The District Court erred in failing to find as a fact that anti-friction bearings compete with friction bearings on many applications; that many more friction type bearings than anti-friction bearings are manufactured in the United States, and that since 1935 an increasing part of the business of all anti-friction bearing manufacturers has been to induce users of friction to substitute anti-friction bearings (Requested Finding No. 16).

139. The District Court erred in failing to find as a fact that at the present time the defendant's output of tapered roller bearings constitutes 25 per cent of the total anti-friction bearings and 50 per cent of the production of roller bearings in the United States; that while in 1927 the defendant was competing with 8 manufacturers of tapered roller bearings as well as manufacturers of other types, at the present time it competes in the United States with 14 manufacturers of tapered roller bearings, 18 manufacturers of straight roller bearings, 25 manufacturers of ball bearings, and 6 manufacturers of special type bearings; that the number of manufacturers of tapered roller bearings in the United States is greater than it ever was before, that certain of them, such as Bower and New Departure, have grown more than the defendant since 1927, and that its competitors include Hyatt, a manufacturer of tapered and straight roller bearings, which is a division of General Motors Corporation, American S.K.F., a subsidiary of Swedish S.K.F., and Bower, which sold $20,000,000 worth of bearings as compared with the defendant's $70,000,000 worth in 1947 (Requested Findings Nos. 19, 20).

140. The District Court erred in failing to find as a fact that British Timken, while it manufactures and has manu- [fol. 3768] factured approximately 90 per cent of tapered roller bearings produced in the United Kingdom and its sole competitor therein in the manufacture of tapered roller bearings is and has been Skefko, the English subsidiary of S.K.F., competes in the sale of anti-friction bearings with well established ball bearing manufacturers such as Hoffman and Ransome & Marles, and has been engaged at all times in pioneering the sale of the tapered roller bearings in the markets in which it has sold, because far more ball bearings than tapered roller bearings were used, the ball

bearing companies being very well known and the sale of tapered roller bearings having been developed largely by displacing ball bearings (Requested Findings Nos. 15; 21).

141. The District Court erred in failing to find as a fact that French Timken, while it manufactures and has manufactured approximately 80 per cent of the tapered roller bearings produced in France, competes in the manufacture and sale thereof with Rossi, C.A.M., the French subsidiary of S.K.F., and Renault, companies which also manufacture ball bearings and other types of anti-friction bearings, as well as manufacturers of other types of bearings, and has been engaged at all times in pioneering the sale of tapered roller bearings in the markets which it sells, because far more ball bearings than tapered roller bearings have been used in the French market, the ball bearing manufacturers being very well known and the sale of tapered roller bearings having been developed largely by displacing ball bearings (Requested Findings Nos. 15; 22).

142. The District Court erred in failing to find as a fact that S.K.F.'s pre-World War II production of anti-friction bearings was one-third of the world's supply; that, as of 1945, S.K.F.'s subsidiaries in France and Germany were the largest producers of anti-friction bearings in those countries; and that, as of 1945 of twenty to thirty manufacturers of anti-friction bearings in the United States, the largest was a subsidiary of an automobile manufacturer (Requested Finding No. 24).

[fol. 3769] 143. The District Court erred in failing to find as a fact that the combined volumes of sales of the defendant, British Timken and French Timken constitute approximately 23.22 per cent of those of the combined anti-friction bearing industries of the United States, the United Kingdom and France (Requested Finding No. 23).

144. The method of marketing bearings. The District Court erred in failing to find as a fact that sales of bearings for original installation constitute 95 per cent of the output of bearings, and provide the basis for (because they are most likely to lead to), replacement sales, constituting the balance of 5 per cent; that sale of bearings for original installation involves contact with the customer by the defendant's sales engineers in competition with sales engineers of other manufacturers of all types of anti-friction bearings; and that, while competition between the different

types of anti-friction bearings for original installation ends at the adoption of a design of a specific type of bearing because, once that particular type of bearing is incorporated, other types can not be substituted for replacement, nevertheless, tapered roller bearings manufactured by competitors of the defendant are interchangeable with its bearings, since almost all tapered roller bearing manufacturers copy the defendant's bearings dimensions and as a convenience to customers use the same system of parts numbers on their bearings as that used by the defendant (Requested Findings Nos. 25-29, inclusive).

145. The District Court erred in failing to find as a fact that the defendant, British Timken and French Timken conduct their replacement business through authorized distributors and stocking jobbers, who purchase and stock various sizes of bearings and parts for the purpose of serving customers, pursuant to a system of discounts from list price which are changed from time to time in order to meet competition, and that, in addition to that which comes to dealers or jobbers, replacement business consists of unsolicited inquiries to the defendant which orginate with [fol. 3770] persons who had had no previous contact with its sales organization, ordinarily amounting to $15,000 to $20,000 in value per year (Requested Finding No. 30).

146. Foreign commerce in anti-friction bearings. The District Court erred in failing to find as a fact that machinery, aside from that built in the United States, during the period involved herein, 1928 to date, has been manufactured chiefly in the countries of western Europe; that bearings are invariably components of such machinery; that the demand for anti-friction bearings outside the machinery producing countries consists of replacement business; that replacement bearing business generally has a natural tendency to follow original installation business and to go to the manufacturers located in those countries in which bearings to be replaced were originally manufactured and installed; and that, outside of the United States, anti-friction bearings have been manufactured principally in Sweden, Germany, Italy, United Kingdom, France and Switzerland (Requested Findings Nos. 31, 32 and 56).

147. The District Court erred in failing to find as a fact that from 1928 to date exports of anti-friction bearings by United States anti-friction bearing manufacturers have

been made principally to Canada for use in the manufacture of automobiles in Canada in plants affiliated with American automobile producers, lesser amounts going to European, Latin American countries, Japan, Australia, the Philippine Islands, and occasionally large shipments to Soviet Russia, and that the total exports from the United States for the alternate years from 1925 to 1939 averaged only 2.3 per cent of the total United States production thereof in those years (Requested Finding No. 33).

148. The District Court erred in failing to find as a fact that imports into the United States from Europe (where the other principal producers of anti-friction bearings are located) are principally from the S.K.F. plants and from Hoffman of England to American affiliates of those companies, largely in sizes and types which they do not [fol. 3771] produce advantageously in the United States, and that imports of anti-friction bearings into the United States averaged less than one per cent of the total United States production thereof for the alternate years 1925 through 1939 (Requested Finding, No. 34).

149. The District Court erred in failing to find as a fact that from the commencement in 1914 of World War I to date there has evolved a complete change in foreign trade from free competition on the basis of price, regulated only by tariff restrictions, to a trade administered and controlled by governments under rigid licensing systems in which price competition has no place, because these systems are administered according to the political and economical authorities of the particular countries which impose them, with the result that there is no substantial free competition on the basis of price in foreign trade today, and there is no likelihood of a return thereto in the future (Requested Findings, Nos. 35-52, inclusive).

150. The District Court erred in failing to find as a fact that at the present time many foreign countries, including the United Kingdom, France, Sweden, and Switzerland, impose substantial tariffs upon imports of anti-friction bearings, including those manufactured by the defendant (Requested Finding No. 53).

151. The District Court erred in failing to find as a fact that, as a result of the various restrictions imposed by foreign countries from the period since the commencement of World War I in 1914, consisting of the nationalistic

policies of the various nations to enforce local purchase of domestic goods, tariff regulations, formation by the United Kingdom of the sterling bloc, fluctuation of currency values, and government regulation and licensing of exports, imports and foreign exchange, American manufacturers of anti-friction bearings, including the defendant, from 1927 to date, could not have exported bearings manufactured in the United States to the United Kingdom, France, Germany or the other European machinery manufacturing [fol. 3772] countries in successful price competition with anti-friction bearings manufactured in those countries (Requested Finding No. 54).

152. The District Court erred in failing to find as a fact that at all times from 1927 to date, it has been necessary for an American manufacturer of anti-friction bearings, including the defendant, in order to do a successful foreign business therein, to establish plants to produce bearings in the foreign countries in which original installation sales are to be made; that since practically all of the manufacturing of machinery outside of the United States has taken place in the western European nations from 1927 to date, it has been necessary to establish plants in those countries to obtain original installation bearing business therein; and that the only foreign countries in which it was profitable to establish such plants were the United Kingdom, France, Germany and possibly Italy (Requested Finding, No. 55).

153. The District Court erred in failing to find as a fact that in order to obtain original installation bearing business in the United Kingdom, France and Germany it has been advisable from 1927 to date, not only to operate plants in those countries, but also to operate them under local management and with local personnel, accompanied by investment of local capital, because (1) the method of selling bearings for original installation requires the services of engineers who are familiar with local engineering practices and with the temperament of the customers of that nationality; (2) machinery manufacturers requiring speedy technical advice and service are reluctant to purchase bearings from manufacturers thereof who are not located nearby; (3) there is a strong national interest in each country in having an economy which is as nearly integrated as possible and is not dependent upon an outside source of supply of anti-friction bearings; (4) there is a national hostility to-

ward the product of foreigners in those countries and a pronounced national interest in supporting the product of local [fol. 3773] manufacturers which has been of especial importance to the defendant because its tapered roller bearing is essentially an American product competing largely with the ball bearing, essentially a European product developed locally in England, France, Germany and Sweden; (5) bearings in European countries are manufactured largely to metric rather than to inch measurements, which makes it much more practical to have plants in those countries if sales are to be made there; (6) high tariffs in the United Kingdom, France and Germany have made it advisable to have plants therein to avoid the tariff; and (7) the various restrictions on imports, exports and foreign exchange have made it necessary to manufacture bearings in the countries in which they are to be sold for original installation (Requested Findings Nos. 55 to 57, inclusive).

154. *Results of restrictions on United States import trade in anti-friction bearings.* The District Court erred in failing to find as a fact that neither British Timken nor French Timken could have sold anti-friction bearings on a competitive price basis for original installation or replacement in the United States because of the United States tariff and because of their higher costs of production (Requested Findings Nos. 58 to 60, inclusive).

155. *Relations between the defendant, subsidiaries of Vickers, Ltd., and La Societe Mechanique de Genvilliers generally and as to the trademark "Timken" 1909-1927.* The District Court erred in failing to find as a fact that the agreement of June 16, 1909, between the defendant and Electric & Ordnance Accessories Company, Ltd. (hereinafter called E. & O. A.), covering the United Kingdom and the Isle of Man, provided for a royalty of 15 per cent of the net invoice price of all sales to be paid by E. & O. A. to the defendant (Requested Finding No. 61).

156. The District Court erred in failing to find as a fact that the second agreement between the defendant and E. & O. A., covering licensing by the defendant of certain patents to be obtained in European countries, undertook to license [fol. 3774] manufacture and sale of tapered bearings in countries in which such patents had not then been obtained only "so far as the licensor lawfully can do so in the absence of such patents or grants" (Requested Finding No. 62).

157. The District Court erred in failing to find as a fact that neither at the time the 1909 contracts between the defendant and E. & O. A. were made, nor at any other time, was E. & O. A. an actual or potential competitor of the defendant in the manufacture and sale of anti-friction bearings (Requested Finding No. 63).

158. The District Court erred in failing to find as a fact that Societe de Mechanique de Genvilliers (hereinafter called S.M.G.) was not at any time an actual or potential competitor of defendant in the manufacture and sale of anti-friction bearings (Requested Finding No. 64).

159. The District Court erred in failing to find as a fact that in 1920, when Vickers, Ltd. sought to assign the rights of its wholly-owned subsidiary, E. & O. A., to Wolseley Motors, Ltd., another wholly-owned Vickers subsidiary, the defendant objected to the assignment on the ground that it did not feel that the sale of tapered roller bearings would be prosecuted by the new business organization, a motor car manufacturer, any better than it had been in the past, even though the directors of Wolseley Motors had decided that bearings manufactured under the 1909 license agreements should be made under an entirely separate organization, to trade under an entirely different name; that the agreements of June 16, 1909, between the defendant and E. & O. A., were modified on April 6, 1920 by two separate written agreements between the defendant and Wolseley Motors only after a satisfactory agreement had been reached between the defendant and Wolseley Motors on March 29, 1920, and that Wolseley Motors, after succeeding E. & O. A. as a party to the contracts with the defendant, was not and never was thereafter a potential competitor of the defendant in the manufacture and sale of anti-friction bearings (Requested Findings Nos. 65, 66).

[fol. 3775] 160. The District Court erred in failing to find as a fact that shortly after the amendment of the 1909 license agreements in May, 1920, the defendant was advised by its American trademark counsel, regarding the use of the name "Timken" as stamped on bearings by British Timken and S.M.G., that it was possible for British Timken to acquire ownership of the trademark "Timken" in that licensee's territory unless the matter were taken care of by a contract providing for licensing of the trademark to the British licensee and reversion thereof to the de-

fendant at the termination of the license, that the supplemental agreement of 1920 with Wolseley Motors should be revised to accomplish that purpose, and that the registration of the surname of "Timken" as a trademark could now be obtained in the United States under the Trademark Act of March 19, 1920, and in England under a new trademark act of December 23, 1919; that the defendant registered the trademark "Timken", which it had been using since 1912 in the United States, in 1920, and sought to obtain registration thereof in England and all civilized countries, but was advised by trademark counsel in 1921 that registration could be obtained only by British Timken, which had been organized as a wholly-owned subsidiary of Vickers, Ltd. and had taken over the rights of Wolseley Motors under the 1909 license agreements in 1920; was surprised to learn in December, 1921, that S.M.G. had already registered the trademark "Timken" in France and had become thereby under French law the owner thereof; and that the defendant also found that Prausnitzer, sales agent in Germany for E. & O. A., at the time, had registered the trademark "Timken" in Germany in 1916, that he successfully resisted the defendant's application for registration in Germany, and that under German law from 1918 to 1939 the first registrant of the trademark acquired incontestable title thereto regardless of the use thereof (Requested Findings Nos. 68 to 73, inclusive).

161. The District Court erred in failing to find as a fact that prior to 1927 the defendant procured registration of [fol. 3776] the trademark "Timken" in Belgium, Italy, The Netherlands and Norway in 1923, in Finland, Luxembourg, Rumania, Sweden, Switzerland, Turkey, Austria, Bulgaria, Czecho-slovakia, Denmark, Spain, Australia, Hungary and India in 1923, in Portugal, Yugo-slavia in 1923, and in Greece and Poland in 1926, and that at all times involved in this cause registrations of trademarks in certain of such countries either (a) could not be set aside by evidence of prior use by a contestant, or could be set aside by such evidence either (b) at any time, or (c) during a limited period after registration (except that a registration obtained with knowledge of the prior user's better right could be set aside at any time) but that the right to set aside registrations in each of these countries could be waived by contract (Requested Finding No. 74).

162. The District Court erred in failing to find that, after the organization of British Timken in 1920, the defendant's officials concluded that it was not progressing in a satisfactory manner; that, although the royalty under the two patent license agreements of 1909 had been cut from 15 to 10 per cent, nevertheless, British Timken, commencing in 1923, asked for a further reduction to not more than 2½ per cent, in order to meet competition, but did not take advantage of defendant's offers for assistance by instructing British Timken observers in the defendant's improved methods of production processes for the purpose of cutting costs; that in 1924 an official of defendant, who was sent to British Timken to advise it on cutting costs, was told by British Timken that it did not think that the defendant had any right to the trademark and trade name "Timken" in the United Kingdom; that the defendant in 1924 authorized its British solicitor to negotiate with British Timken an adjustment of the royalty and advised him that it must have entire control of the Timken name, and would adjust the royalty in order to obtain such control; that it is possible under English law to have a situation in which the legal ownership of unregistered trademarks belongs to one party and equitable ownership to another; [fol. 3777] and that on June 19, 1924, the defendant having been advised by its American patent and trademark counsel that although the basic patents upon which the 1909 patent license agreements were based had expired, nevertheless, the license agreements would be prolonged to the expiration of other British patents subsequently acquired by defendant, and that the license to British Timken to use the trademark and name "Timken" was of great value to British Timken, the defendant and British Timken reached an agreement by which royalties payable by British Timken were reduced to 5 per cent on ordinary business and 2½ per cent on Ford business, royalties payable by S.M.G. were reduced to 5 per cent commencing January 1, 1925, the defendant's exclusive ownership of the trademark was recognized and British Timken agreed that it should "be deemed to be using the said name as part of the subject matter of the license", and the 1909 license agreements were continued in existence to January 1, 1929 (Requested Findings Nos. 75 to 81, inclusive).

163. The District Court erred in failing to find as a fact

that, after the amendment of the 1909 agreements in 1924, the defendant and British Timken sought to obtain joint registration of the trademark in England, but that such joint registration was never obtained; that the joint registration for the British trade name "Timken" was abandoned in 1926 upon advice from British trademark counsel that it would be denied and that, either a new agreement should be drawn as a basis for obtaining registrations for concurrent user by defendant and British Timken, or the defendant and British Timken should be combined by one's absorbing the other; and that on January 12, 1927 defendant's American trademark counsel advised it that the difficulties with respect to the trademark in England, New Zealand, France and Germany could be surmounted if it were to take over the business of British Timken, because such action would merge the somewhat conflicting titles of defendant and British Timken, and, from a legal view-[fol. 3778] point, was by far the best way of handling the situation (Requested Findings Nos. 82 to 84, inclusive).

164. The District Court erred in failing to find as a fact that after the reduction in royalty in 1924 British Timken continued to ask for further reductions on large orders other than those from Ford, was just getting under way in the highly important industrial bearing field in 1924, and admitted that it was very disappointed with the business done by S.M.G. in France; that Wolseley Motors, the parent of British Timken, fell into considerable financial difficulties in 1925 or 1926, which resulted in its reorganization; and that in 1926 the defendant was advised that British Timken was using antiquated equipment because the management was opposed to obtaining any new equipment on account of lack of funds, and that the average price of its bearings was 10 per cent higher than that of ball bearings which were favored by British engineers and universally used, so that the price handicap was very serious (Requested Findings Nos. 85 to 87, inclusive.)

165. Joint acquisition of British Timken by the defendant and Dewar in 1927. The District Court erred in failing to find as a fact that on March 30, 1927, Dewar advised defendant that he was prepared to put up approximately half of the purchase price of British Timken, and that it was "essential that the company have British control of ordinary capital"; that he was of this opinion because

British Timken would then be a British controlled company so far as British companies and the British Government were concerned, and that this was important because foreign controlled companies always meet with greater sales resistance in England than do British companies; that on March 31, 1927, the defendant cabled Dewar that it was willing to become interested in British Timken to the extent of one-half or more of the amount necessary to acquire and reorganize it; and that, when on April 1, 1927, Dewar acceded to the defendant's suggestion that it send a repre- [fol. 3779] sentative, the defendant advised its American trademark counsel that it was negotiating the purchase of a controlling interest in British Timken and desired suggestions as to what should be done regarding the name registration, and instructed its representative that the registration of the name "Timken" in the United Kingdom, France and Germany must be definitely cleared up (Requested Findings Nos. 92 to 95, inclusive).

166. The District Court erred in failing to find as a fact that in negotiations between defendant's representative and Dewar, the former insisted that the name "Timken" should be kept the property of the defendant in so far as possible; that Dewar insisted upon British control of the operations because a product made by foreigners, although produced in England, was unpopular, and under foreign control his investment and business would be in jeopardy; that the defendant's representative agreed to British control of operations provided the defendant would be protected by reversion of control if the profits of British Timken should fall below a certain figure; that control should go to the defendant if Dewar should become incapacitated or die, and that the parties should have options on each other's shares in British Timken in event of sale; that it was agreed that a company owned and operated by defendant and Dewar should be organized to manufacture tapered roller bearings in France because S.M.G. was operating in an unsatisfactory manner, because of the French tariff, because of French hostility to foreign products, and because the largest automobile manufacturer in France had decided to use tapered roller bearings; and that a German company owned and operated by the defendant and Dewar should be inaugurated to manufacture tapered roller bearings in Germany, Prausnitzer to be in-

cluded in the German business if necessary for the purpose of obtaining release of the trademark "Timken" in Germany which had been registered as his personal property (Requested Finding No. 96).

167. The District Court erred in failing to find as a fact [fol. 3780] that the defendant's representative in such negotiations with Dewar advised it, during the negotiations, that three plans with respect to British Timken should be given consideration; namely (1) complete control thereof by the defendant, which he would recommend if the defendant had a person in its organization capable of reorganizing British Timken, and organizing a small company in France due to the unsatisfactory nature of the existing arrangements in France; (2) control by the defendant with a "working minority of British interest", which would be the best plan if Dewar, or a man of his type, were available, but that Dewar had refused to consider such a proposition; and (3) British control only so long as British control operated British Timken with satisfactory profit and dividends, a plan, the success of which would depend wholly upon the "the ability of the British control", and which he recommended, because Dewar was willing to accept it and was a business man of exceptional ability and with exceptional business contacts; that Dewar expected to cut British Timken costs 20 to 25 per cent with defendant's assistance, and wanted the defendant "very much as partners on account" of the defendant's interest in the profitable operation of British Timken if it were a partner; and that he had agreed with Dewar to negotiate jointly with Vickers, Ltd., for its British Timken shares, and upon their purchase to make certain arrangements to provide for control of British Timken as between defendant and Dewar (Requested Finding No. 97).

168. The District Court erred in failing to find as a fact that the "Heads of Agreement" dated May 16, 1927, signed by defendant and Dewar, which resulted from the foregoing negotiations (summarized in the Court's Memorandum, Pars. 41-43, inclusive), provided that upon Dewar's death or incapacity for six months, the defendant should have a right to purchase his shares; that shareholders desiring to sell British Timken stock must first offer the stock [fol. 3781] to the other shareholders; and that arrangements should be made for the formation of continental

companies for the manufacture and/or sale of bearings subject to a royalty to be divided between the defendant and British Timken (Requested Finding No. 98).

169. The District Court erred in failing to find as a fact that the basic purpose of the defendant and Dewar in entering into the "Heads of Agreement" dated May 16, 1927, was that the defendant, British Timken, and the companies to be acquired or organized by them in Germany and France, were to manufacture tapered roller bearings according to methods developed by the defendant and to sell them under the name "Timken" in the separate territories allocated to the companies, and to assist each other to sell such bearings everywhere in preference to bearings manufactured by other competing companies, such as S.K.F. and its subsidiaries; that if one Timken company could not sell such bearings advantageously in its own territory another was to make the sale; and that the provisions in the existing agreements between the defendant and British Timken which limited each its own territory were to be continued principally because Dewar did not wish to invest his money in the joint acquisition of British Timken with the defendant and in the companies to be jointly acquired and organized by them in Germany and France without assurance that the defendant would not compete with those companies (Requested Finding No. 99).

170. The District Court erred in failing to find as a fact that at the date of the acquisition, by the defendant and Dewar, of British Timken on May 16, 1927, British Timken was not, and the defendant did not consider it to be, an actual or potential competitor of the defendant; that at that time British Timken owned virtually no manufacturing equipment, and that which it owned was obsolete; that it leased its plant and machine tools; that it had practically no assets other than a certain amount of goodwill; that its [fol. 3782] largest net sales in its history were approximately $1,000,000 in 1926, as compared with defendant's $24,362,805; that British Timken's costs of manufacture of three of the four sizes of bearings which it manufactured in the largest quantities was approximately 200% of that of the defendant on two sizes and 135% on the third; and that the then existing agreement between the defendant and British Timken had only about a year and a half to run and British Timken could not have continued to manufacture

and sell anti-friction bearings in the absence of the relation it had with the defendant (Requested Finding No. 101).

171. The District Court erred in failing to find as a fact that the defendant acquired British Timken jointly with Dewar because it desired to insure its control of the name and trademark "Timken" in England, France, Germany and elsewhere and had been advised by its American and British trademark counsel that acquisition of British Timken was the best means of so doing; because it was dissatisfied with the manner in which business in Timken roller bearings had been conducted under license by the subsidiaries of Vickers, Ltd. and their sublicensee, S.M.G.; and because, based upon the recommendation of its representative, it determined that the arrangement outlined in the "Heads of Agreement" of May 16, 1927, with Dewar, who had expressed a desire to have the defendant as a partner and who was apparently and exceptionally well qualified to undertake the business, constituted the best method for the defendant to develop the manufacture and sale for original installation of tapered roller bearings in the United Kingdom, France and Germany, the principal manufacturing foreign countries in which original installation bearing business could be obtained, and the sale thereof for replacement purposes in the territories in which machinery produced in those countries was most likely to be sold; and that the defendant and Dewar did not purchase British Timken for the purpose or with the intention of preventing competition between the defendant and British Timken as an actual or potential competitor of the defendant (Requested Finding No. 102). [fol. 3783] 172. The District Court erred in failing to find as a fact that, pursuant to a more formal agreement made on March 15, 1928, between the defendant, British Timken and Dewar (in accordance with the provision of the Heads of Agreement of May 16, 1927, that the agreements therein should be embodied in a more formal document) the defendant and Dewar jointly (1) caused new articles of association and by-laws of British Timken to be adopted which carried out their agreement as to voting control thereof, and for first refusal to each of the shareholders in the event of sale of stock by the other; (2) caused an agreement to be made between British Timken and Dewar which made him managing director thereof upon the terms pro-

vided; (3) acquired stock interests in German Timken, and caused changes to be made in its capitalization, articles of incorporation and by-laws which gave to British Timken control (through a special class of stock) of its management in ordinary matters, and to the defendant control in extraordinary matters, and to the other shareholders first refusal of Prausnitzer's stock in the event of his death, incapacity, insolvency or retirement; (4) caused French Timken to be organized on July 11, 1928, in such a way as to give to British Timken stock control (through a special class of stock) with respect to ordinary matters, but to the defendant stock control in extraordinary matters; (5) entered into an agreement dated April 20, 1928, which gave the defendant an option on Dewar's shares in British Timken and in any subsidiary companies, defined as "any Company controlled by" British Timken so far as regards ordinary business whether by reason of its holding a clear majority of all the issued shares of such Company or the shares carrying a voting control) and giving each party exercising its right to first refusal on shares of the other in British Timken, an option to purchase the shares of the offeror in every subsidiary company, and further agreed in a Supplemental Agreement of the same date that each [fol. 3784] must offer the other its or his stock in any subsidiary company before selling to anyone else; (6) caused the defendant and British Timken to enter into a new "Business Agreement" as of January 1, 1928; and (7) caused Business Agreements to be entered into between British Timken and French Timken on June 16, 1928, and between British Timken and German Timken in 1929, respectively, on the model of the one between the defendant and British Timken (Requested Findings Nos. 103-111, inclusive).

173. The District Court erred in failing to find as a fact that the provisions of the 1928 Business Agreement between the defendant and British Timken relating to the trademark "Timken" established equitable ownership thereof in the defendant under English law and amounted thereunder to a waiver by British Timken of any right it might have had to set aside, on the ground of prior user by British Timken, registration of the trademark "Timken" in any foreign country in which the defendant had registered the trademark (Requested Finding No. 109).

174. Maintenance of relations between the defendant and Dewar (1928 to date). The District Court erred in failing to find as a fact that at all times since the making of the Heads of Agreement of May 16, 1927, the defendant and Dewar have collaborated closely in the operation of British Timken and French Timken and have maintained substantially the same system for control thereof as between themselves and as to third persons as that which was inaugurated at the time when they jointly acquired British Timken and jointly organized French Timken; and that they have regarded each other as partners in the operation of British Timken and French Timken and German Timken at all times since the making of the Heads of Agreement between them on May 16, 1927 (Requested Findings Nos. 112, 113).

175. The District Court erred in failing to find as a fact that, when in 1929 the defendant and Dewar desired to increase the capitalization of French Timken in order to handle increasing business, Dewar was unwilling to invest more of his own funds in French Timken so that the de- [fol. 3785] fendant, which expressed a desire "to keep him an equal partner in growing business" arranged to advance the necessary funds to French Timken under an agreement, suggested by Dewar, that one-third of British Timken's profits after 1929 be devoted to repaying the advances (French Timken common stock to be issued in their place), and the 1928 ten year Business Agreement between the defendant and British Timken to be extended to fifteen years; and that this Agreement was carried out through the medium of an American holding company, International and Commercial Investments, Inc. (hereinafter called I.C.I.), organized to hold the French Timken stock of the defendant and Dewar, and through an escrow and other agreements as to I.C.I. stock, in such a way as to maintain the balance of control of French Timken as between them (Requested Findings Nos. 114, 115).

176. The District Court erred in failing to find as a fact that in 1934, when the value of British Timken stock had increased greatly and Dewar desired to realize part of his investment therein and to avoid the existing arrangement by which his half of one-third of the profits was used to purchase common stock of I.C.I., and when the defendant's investment in French Timken by way of stock and

loans amounted to $822,128.80 as against defendant's investment of $31,960, the defendant and Dewar, pursuant to Heads of Agreement executed on August 15, 1934, rearranged their joint enterprise to provide (1) for an increased number of shares of British Timken, all of one class, the defendant and Dewar each to sell one-half of their holdings thereof to the public at a specified price; (2) for transfer of the remaining 50% of shares of British Timken owned by Dewar and the defendant to a holding company organized in such a way as to maintain the same rights as to voting control between them as had been provided formerly by the articles of association and by-laws of British Timken and with the same options of the parties on each other's shares in the event of sale; (3) for adjustment by the defendant and Dewar (contingent upon consummation of the sale of British Timken stock to the public) of their [fol. 3786] interests in French Timken, German Timken and I.C.I., and its wholly-owned subsidiary, International Bearings Investments, Inc. (hereinafter called "I.B.I.") pursuant to which the defendant and Dewar would each own a one-half interest in each of these corporations, Dewar would pay the defendant $250,000 in cash out of the proceeds of the sale of his British Timken stock, Dewar would give the defendant a note without interest in the amount of $150,000, secured by pledge of his one-half interest in French Timken, German Timken, I.C.I. and I.B.I., and payable only from distributions with respect thereto in excess of $7500 per year, Dewar to have control of French Timken during his lifetime and active management thereof until it should fail to pay annually $24,000 in dividends or other distributions from accrued earnings and control to pass to the defendant in the event of Dewar's death, retirement, or in the event of French Timken's failure to make such payments; (4) for amendment of the 1928 Business Agreement between the defendant and British Timken in certain respects, and its continuance in effect for fifteen years after the sale of the British Timken stock to the public, and (5) for freeing of French Timken from any obligation to pay royalties or service fees to the defendant or British Timken (Requested Findings Nos. 116, 117).

177. The District Court erred in failing to find as a fact that, acting pursuant to the Heads of Agreement of August 15, 1934, the defendant and Dewar caused various agree-

ments and other documents to be executed for the purpose of carrying them out; caused the sale in June, 1935, of 50% of their stock in British Timken (the defendant purchasing 10,000 shares at the sale, because it determined that it should "maintain somewhat greater ownership" in British Timken than was reached by its joint holdings with Dewar); caused the organization of a holding company known as Timken Holdings, Ltd., which maintained voting control of British Timken as between the defendant and Dewar as specified in the Heads of Agreement of August 15, 1934; and caused the deposit in the Westminster Bank of London, England, in the joint names of three trustees, [fol. 3787] including the defendant, of all of the stock of, and 236 promissory notes issued by, French Timken pursuant to a trust agreement providing for the pledge of Dewar's interest in French Timken and German Timken to secure payment of his note to the defendant as specified in the Heads of Agreement of August 15, 1934, which trust agreement presently governs relations between the defendant and Dewar as to French Timken (Requested Findings Nos. 118, 119).

178. The District Court erred in failing to find as a fact that, acting pursuant to the Heads of Agreement dated August 15, 1934, the defendant and Dewar caused British Timken to enter into a new Business Agreement with the defendant, effective January 31, 1935, which originally was to be effective for 16 years, but subsequently was amended to extend for 30 years from January 1, 1935, at the insistence of English brokers with whom Dewar negotiated for the sale of stock of British Timken because they felt that the stock could not be sold to the public without a long term agreement with defendant "particularly for the use of the name", since the goodwill of British Timken "rested largely in the association with" the defendant; and caused the 1928 Business Agreement between French Timken and British Timken to be superseded by a new Business Agreement between them dated July 15, 1935, which incorporated the amendments agreed upon by the defendant and Dewar in the Heads of Agreement of August 15, 1934 (Requested Findings Nos. 120, 121).

179. The District Court erred in failing to find as a fact that in 1936 Dewar recommended action with respect to funds of French Timken which, he stated, was equivalent

to taking such funds away from its control, but "as far as our partnership is concerned" was for its ultimate benefit (Requested Finding No. 122).

180. The District Court erred in failing to find as a fact that in 1938 the defendant and Dewar caused the defendant, British Timken and French Timken to enter into a Business [fol. 3788] Agreement dated November 28, 1938, which embodied the allocations of territory and certain of the other conditions contained in the 1934 and 1935 Business Agreements between the defendant and British Timken and between British Timken and French Timken, respectively, and which provided that it should continue in effect for a period of twenty-seven years from January 31, 1938; that the defendant and Dewar in 1938 also caused the defendant, British Timken and Dewar to enter into a supplemental Business Agreement which also contained certain terms and conditions which had been embodied in the 1934 and 1935 Business Agreements and provided in substance that the defendant and Dewar would cause French Timken to carry out the terms and provisions of the 1938 Business Agreement between the defendant, British Timken and French Timken; and that taken together the provisions of these two Business Agreements in substance are identical with the combined provisions of the 1934 and 1935 Business Agreements between the defendant and British Timken and British Timken and French Timken, respectively, which they were executed to replace on the advice of French counsel, and the two 1938 Agreements govern the present relations between the defendant, French Timken and British Timken (Requested Finding No. 123).

181. The District Court erred in failing to find as a fact that in 1940 British Timken acquired a plant in England owned by the Fischer Company, from the English Custodian of Enemy Property and that Dewar in so doing consulted with, and obtained the consent of, the defendant (Requested Finding No. 124).

182. The District Court erred in failing to find as a fact that on March 22, 1948, the defendant and Dewar and Timken Holdings, Ltd. entered into an agreement which canceled existing agreements governing control of the ordinary shares of British Timken owned by the defendant and Dewar through Timken Holdings, Ltd., and that contemporaneously the defendant and Dewar entered into an

agreement which gives the defendant an option to purchase all the ordinary shares of British Timken stock now owned by Dewar (which constitute 25% of its voting stock) in the event of his death or is being incapacitated for six months to act as its director or in the event that he desires to sell the shares, and also gives the defendant the right to control the vote of a majority of those shares combined with speci- [fol. 3789] fied shares presently owned by it, if at any time the profits of British Timken available for dividends based upon an average of three consecutive years are reduced below £50,000 for one year; and that the latter agreement presently governs relations between the defendant and Dewar as to the control of British Timken (Requested Finding No. 125).

183. The basic plan of cooperation between the defendant British Timken and French Timken in the manufacture and sale of bearings (1927 to date). The District Court erred in failing to find as a fact that at all times since the joint acquisition by the defendant and Dewar of British Timken, and of German Timken, and their joint organization of French Timken, the defendant and Dewar caused those companies to cooperate to sell bearings under the trademark "Timken" all over the world in competition with bearings manufactured by other companies; that their policy has been that if one of the Timken companies cannot sell advantageously in a portion of its own territory, another of the three companies shall make the sale (Requested Finding No. 126).

184. The District Court erred in failing to find as a fact that tapered roller bearings manufactured by the defendant, British Timken and French Timken are in most instances identical and interchangeable; that the part numbers used by the three companies are assigned by the defendant; that blueprints covering the design of any bearings developed by the defendant are sent to British Timken as a routine matter; that, if British Timken develops a new part it assigns a new part number and advises the defendant, and that identical bearings manufactured by the defendant, British Timken and French Timken bear identical symbol numbers; that there has been a constant stream of information from the defendant to British Timken as to production methods, machines, products and other matters which has been communicated to French Timken and

that British Timken has departed from the suggestions of the defendant only after "an agreed decision as to what [fol. 3790] British Timken should do or should not do"; that when British Timken develops a need for a certain bearing the defendant works out the design of the bearing, tooling to be inserted in the machines which are to be used in manufacturing the particular bearing, and gauge to be used in each operation, and assigns the part number therefor; that the defendant sends British Timken copies of its weekly reports to heads of sales and engineering departments which show the type of work and bearing applications being done for customers and, if British Timken requests it, the same complete information which it would give to its own field men with respect to any particular bearing application; that as soon as the defendant and Dewar jointly acquired British Timken one of the defendant's executives was sent to British Timken in 1927 to help reorganize it to make tapered roller bearings as closely as possible according to the methods followed by the defendant, and that his recommendations were carried out; that thereafter in almost every year some employee of the defendant has gone to British Timken and French Timken to introduce the defendant's methods as nearly as possible in various departments of their plants for the purpose of cutting costs and enabling them to manufacture bearings more cheaply and of a better standard of quality; that employees of the defendant have been sent to British Timken, French Timken and German Timken to assist and instruct their engineers in designing new types of bearings; that employees of British Timken and French Timken have been trained and instructed in the defendant's plants at various times; that new methods, designs and bearings and materials, machine tools and tooling worked out in the defendant's Extensive Research Department are passed on to British Timken as a matter of routine; that the defendant has assisted British Timken and French Timken in the acquisition of new machine tools and equipment at no [fol. 3791] profit to itself; that the defendant, commencing in 1927, as a part of the program to reduce British Timken's costs by 25%, made a study and set up a system by which British Timken and French Timken furnished comprehensive cost data to the defendant and were given reports comparing their costs with those of the defendant,

which constituted the basis for the sending by the defendant of its employees to cut the costs of certain of the operations of British Timken and French Timken; and that the defendant has sent its employees to British Timken and French Timken to assist them in selling bearing applications, and has furnished them with copies of its engineering journals and periodic additions thereto, and with copies of its three mediums of advertising, as soon as prepared (Requested Findings Nos. 127-139, inclusive).

185. The District Court erred in failing to find as a fact that the defendant did not furnish know-how to British Timken or French Timken for the purpose, or with the intention, of restraining trade or preventing competition between British Timken and French Timken as actual or potential competitors of the defendant in the manufacture and sale of anti-friction bearings (Requested Finding No. 140).

[fol. 3792] 186. General cooperation between the Timken companies. The District Court erred in failing to find as a fact that, when the defendant instructed its employees in 1939 and 1940 that it had an understanding with British Timken that on all unsolicited inquiries for bearings going into each other's territory the defendant could quote a 50% discount from its list price on standard bearings and pay a 5% commission on the net sale thereof to British Timken, the defendant was referring to an arrangement which resulted from the defendant's demonstration to Dewar in 1927 that British Timken's discount on this business was not large enough to meet competition, which caused British Timken to adopt the defendant's discount at that time, 50% discount from market price (Requested Finding No. 146).

187. The District Court erred in failing to find as a fact that in 1940, when the provisions of the Business Agreements between the defendant and British Timken were relaxed for the period of the war emergency and the defendant was permitted to fill orders from British Timken's territory through British Timken's distributors, prices for such bearings were established by the sellers, namely British Timken's distributors, and the defendant paid British Timken the difference between the price at which the bearings were sold by its representatives and the amount at which a sale would have been made to British Timken by

the defendant, because British Timken had the expense of performing the sale and servicing with respect to such bearings and the defendant had no selling expense (Requested Finding No. 147).

188. The District Court erred in failing to find as a fact that, when in 1941 the defendant was asked by the British Purchasing Commission whether it would be interested in establishing a bearing plant in Australia, the defendant pointed out that Australia was controlled by British Timken and that it would not consider building a plant there, that in any event it would be almost impossible to obtain delivery of machine tools suitable for the manufacture of anti-friction bearings there, but that if Dewar were interested, the defendant would confer with him about the matter (Requested Finding No. 148).

[fol. 3793] 189. The District Court erred in failing to find as a fact that at the present time the defendant is operating under arrangements with British Timken and French Timken pursuant to which it proceeds to make bearing sales in their territories independently of them and at prices fixed by it "with American competition in mind" and not agreed to with them in any fashion (Requested Finding No. 149).

190. The District Court erred in failing to find as a fact that, although the defendant, British Timken and French Timken have cooperated to meet the competition of other manufacturers of tapered roller bearings and have thus considered S.K.F. and its subsidiaries as a common business enemy, have arranged that if customers of British Timken insist on buying defendant's bearings they would be permitted to do so, and vice versa, "in order to combat competition", and an executive of the defendant testified that it was willing to sell bearings at a loss, if necessary, to compete with S.K.F. in Australia and the East Indies during World War II because it considers S.K.F.'s competitors unethical (in that the defendant is of the opinion that S.K.F. sells at prices below its cost to "freeze out" competitors), and there are various statements in the correspondence between officials of the defendant in evidence as to "eradicating" or "combatting" competition, there is no evidence in the record that the defendant ever sold bearings at below cost

in competition with S.K.F. or other competitors (Requested Finding No. 153).

191. The District Court erred in failing to find as a fact that the defendant has sold special alloy steel tubing which it has developed to its competitors who manufacture ball bearings (Requested Finding No. 155).

192. Cooperation by British Timken and French Timken with other competitors. The District Court erred in failing to find as a fact that, when in 1932 French Timken entered into an agreement with S.K.F.'s subsidiary in France, C.A.M., which provided for division of all the French bearing business, as outlined in the Court's Memorandum (Pars. 113, 114), this agreement was entered into because Citroen, French Timken's largest customer fell into financial trouble and S.K.F. financed it on condition that it should buy its steel from Sweden and all of its bearings from S.K.F., with the result that French Timken was left with practically no orders at all, and Dewar decided that it was better "to have some arrangement with S.K.F. to [fol. 3794] keep the French Timken company alive rather than let it die, which it would have done without such an arrangement"; that the defendant was advised that French Timken consistently exceeded the quotas provided for in this agreement; and that any bearings imported into France by C.A.M. would have come from Sweden and not from the S.K.F. subsidiary in the United States (Requested Finding No. 158).

193. The District Court erred in failing to find as a fact that, while the defendant's officials were in consultation with the officers of British Timken and French Timken concerning the agreements between British Timken and S.K.F., and French Timken and S.K.F., and approved the agreement between French Timken and C.A.M., these arrangements did not relate to the United States and did not have the effect of restricting the export of tapered roller bearings from the United States or their import into the United States, and came to an end at the commencement of World War II in 1939 and have not been renewed (Requested Finding No. 159).

194. The District Court erred in failing to find as a fact that, aside from the agreements by British Timken and French Timken with S.K.F.'s subsidiaries, the defendant, British Timken and S.K.F. had discussions in

1932 concerning prices in Canada, England and France, but there is no evidence that these discussions led to any agreements other than those between British Timken and French Timken with S.K.F.'s subsidiaries referred to in the next preceding assignment of error. (Requested Finding No. 160).

195. The District Court erred in failing to find as a fact that the policy of the defendant is opposed to combination of competitors for the purpose of fixing prices, and that, although the defendant was subpoenaed in 1945 before the Grand Jury in the case entitled United States v. General Motors Corp. et al., No. 18,895 on the docket of the United States District Court for the Northern District of Ohio, Eastern Division, involving a combination to fix prices of anti-friction bearings in United States domestic commerce, and certain other corporations and individuals were indicted therein for violations of the Sherman Act, neither defendant nor any of its officers were indicted (Requested Findings Nos. 161, 162).

[fol. 3795] Requested Ultimate Findings of Fact and Requested Conclusions of Law.

196. The District Court erred in failing to find as facts and to state as its conclusions of law that the defendant did not combine with British Timken or French Timken to violate the Sherman Act, but instead, that any restraints on commerce resulting from the defendant's agreements, arrangements and actions with British Timken and French Timken were and are reasonably ancillary to the conduct of a joint venture, the transfer of know-how and the licensing of the trademark "Timken", and that, since there is now no appreciable import or export trade of the United States in anti-friction bearings, there does not exist that present illegality which is essential to equitable relief, all as more specifically set forth in foregoing Assignment of Errors Nos. 2 to 9, inclusive, which are adopted by reference.

197. The final judgment of the District Court and the portions thereof to which reference is made in Assignment of Errors Nos. 10 to 38, inclusive, are contrary to law, not sustained by the evidence and clearly erroneous.

198. The District Court's purported findings of fact, to which reference is made in Assignment of Errors Nos. 42 to 110, inclusive, are contrary to law, manifestly against

the weight of the evidence, not sustained by any evidence, and clearly erroneous.

199. The District Court's purported conclusions of law to which reference is made in Assignment of Errors Nos. 111 to 136, inclusive, are each and all contrary to law and not sustained by the evidence.

200. The District Court erred in admitting in evidence, over the objection of this defendant, each of the following plaintiff's exhibits, to wit: 21A, 21B, 49, 50, 51, 52, 53, 54, 55, 56, 57, 58, 59, 60, 61, 62, 173, 174, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190 and 191.

201. The District Court erred in admitting in evidence, [fol. 3796] over the objection of this defendant, and in part basing thereon certain of its findings of fact, testimony as to the participation of British Timken and French Timken in alleged agreements with subsidiaries of S.K.F. and others, as to quotas and prices for the sale of anti-friction bearings.

202. The District Court erred in excluding from evidence each of the following exhibits sought to be introduced by the defendant, to wit: 108 and 126.

203. The District Court erred in sustaining the objection of the plaintiff to evidence offered by the defendant to the effect that British Timken was advised by the British Government in 1948 that continued importations of tapered roller bearings into England could not be permitted, and that it would be necessary for British Timken to expand its facilities to take care of the demand in England, or the Government would try to find some other anti-friction bearing manufacturer who would undertake the necessary expansion program, and if no one else could be found to do so, the Government would undertake it itself.

204. The District Court erred in not granting defendant's motion at the conclusion of the plaintiff's evidence to dismiss this cause and enter judgment therein for the defendant upon the ground that upon the facts and the law plaintiff had shown no right to relief as against this defendant; and in not granting a similar motion at the conclusion of all of the evidence herein.

205. The District Court erred in failing to sustain the objections and exceptions of this defendant to the following findings of fact, if the numbered paragraphs, or any of them, set forth in the Court's memorandum of opinion

adopted by it as its findings of fact, are sufficient in form to constitute findings of fact, namely: 15; 19; 20—1st sentence; 22—2nd sentence; 23; 33; 34; 35—3rd sentence; 36—except 5th sentence; 45; 48—1st sentence; 53; 65; 67; 69; 70; 71—3rd sentence; 72; 78; 79; 88; 89; 92; 94; 95; [fols. 3797-3816] 96; 97; 98; 99—1st line (not entire testimony); 103—1st sentence; 104; 106; 107; 110; 112—1st two lines; 116; 117; 119; 120; 121; 122; 123; 124; 125; 126; 127; 129; 131; 132; 133; 134; 135; 136—2nd sentence; 137—2nd and 3rd sentences; 143; 144—except 1st sentence; 145—insofar as it suggests defendant made a *defense* on the basis of good intentions; 146; 147; 148; 149; 150; 151—3rd sentence; 152; 153; 154; 155; 156; 157; 158; 159; 160; 177—2nd sentence; 180; 182; 183; 185; 186; 187—4th sentence, including quotation; 188; 190; 202—last sentence; 204; 205; 206; 207; 208; 210—except last sentence; and to the following conclusions of law if the numbered paragraphs, or any of them set forth in the Court's memorandum of opinion, adopted by it as its conclusions of law, are determined to be sufficient in form to constitute conclusions of law, namely; 67—2nd sentence; 120; 126; 127; 128; 129; 130; 131; 132; 134; 135; 136—1st sentence; 143; 145—insofar as it suggests defendant made a *defense* on the basis of good intentions; 150; 153; 154; 161; 162; 172; 174; 175; 176; 177; 178; 180; 182; 183; 184; 190; 193; 194; 195; 196; 197; 198; 199; 200; 210—last sentence; 211—1st sentence; and in failing to adopt in lieu thereof the defendant's requested findings of fact Nos. 1 to 170, inclusive, and conclusions of law, Nos. 1 to 10, inclusive, submitted by the defendant.

206. The District Court erred in overruling the motion of this defendant after final judgment for a new trial and for judgment for this defendant.

Wherefore, the defendant, The Timken Roller Bearing Company, prays that the Final Judgment of the District Court as to it in this cause may be reversed and held for naught, and for such other relief as the Court may deem just and proper in the premises.

Luther Day, 1759 Union Commerce Building, Cleveland, Ohio; John G. Ketterer, First National Bank Building, Canton, Ohio, Counsel for Defendant—Appellant.

PRAECIPE FOR TRANSCRIPT OF RECORD—Filed August 3, 1950

To the Clerk of the above named Court:

You will please prepare a transcript of the record in the above entitled cause to be transmitted to the Clerk of the Supreme Court of the United States, and include in said transcript the following:

1. Complaint with Exhibits A and B thereto.
2. Plaintiff's Interrogatories Nos. 1, 2 and 8.
3. Amended complaint with Exhibits A and B thereto.
4. Answer of defendant to amended complaint.
5. Order releasing certain witnesses from oath of secrecy before Grand Jury.
6. Transcript of record of trial of case from March 22 to April 27, 1948, inclusive, consisting of pages 1 to 2894, inclusive, including plaintiff's Exhibits 1 to 28, inclusive, 34 to 49, inclusive, 51 to 86, inclusive, 95 to 150, inclusive, 151 A, 151 B, 153 to 169, inclusive, 173 to 176, inclusive, and 179 to 191, inclusive; and defendant's Exhibits 1 to 74, inclusive, and 76 to 251, inclusive.
7. Stipulation and order making document entitled "Current Export Bulletin 434" part of defendant's Exhibit No. 248.

[fol. 3818] 8. District Court's memorandum of opinion finding for the plaintiff.

9. Proposed journal entry adopting the District Court's memorandum of opinion as its Findings of Fact and Conclusions of Law, submitted by the plaintiff.

10. Defendant's motion for an order rejecting document lodged by plaintiff denominated "Findings of Fact and Conclusions of Law" and requiring plaintiff to submit a draft of the findings of fact and conclusions of law required by Rule 58(a).

11. District Court's order adopting its memorandum of opinion as its findings of fact and conclusions of law.

12. Order denying motion of defendant for order rejecting document lodged by plaintiff denominated findings of fact and conclusions of law.

13. Plaintiff's draft of proposed final judgment.

14. Defendant's objections to draft of judgment proposed by the plaintiff.

15. Transcript of record of hearing of objections to proposed decree from September 28, 1949 to October 3, 1949, inclusive, consisting of pages 1 to 440, inclusive, including plaintiff's Exhibits 1 to 6, inclusive, and defendant's Exhibits A to C, inclusive, introduced at such hearing of objections to the proposed decree.

16. Application of defendant for an order admitting in evidence an exhibit in connection with the hearing on the form of final judgment.

17. District Court's order granting application and admitting in evidence as defendant's Exhibit D (decree) the memorandum attached to the defendant's application for an order admitting in evidence an exhibit in connection with the hearing on the form of final judgment.

[fol. 3819] 18. Application of plaintiff for an order admitting in evidence the exhibits in connection with the hearing on the form of judgment.

19. District Court's order granting application admitting in evidence plaintiff's Exhibit 8 (decree).

20. District Court's Final Judgment.

21. Motion of defendant for a new trial, and objections and exceptions to, and motion to amend and to make new and additional, findings of fact and conclusions of law.

22. Motion of defendant for stay of execution pending disposition of defendant's motions addressed to the District Court's final judgment.

23. Stipulation and order granting without bond the defendant's motion for stay of execution pending disposition of the defendant's motion for a new trial, and objections and exceptions to, and motion to make new and additional, findings of fact and conclusions of law, and that plaintiff may have leave to file its memorandum on said motions on or before March 16, 1950.

24. Endorsed ruling overruling motion for a new trial, and objections and exceptions to, and motion to make new and additional, findings of fact and conclusions of law.

25. Order overruling motion of defendant for new trial, and objections and exceptions to, and motion to make new and additional, findings of fact and conclusions of law.

26. Stipulation and order as to corrections of transcript of proceedings.

27. Petition for appeal.
28. Order allowing appeal.
29. Citation on appeal and acknowledgments of service thereof.
30. Assignment of errors.
31. Statement of jurisdiction of the Supreme Court of the United States.
32. Statement of defendant-appellant directing plaintiff-appellee's attention to paragraph 3 of Rule 12 of Revised Rules of the Supreme Court of the United States.
[fols. 3820-3909] 33. Acknowledgments of service of copies of petition for appeal, order allowing appeal, assignment of errors, and of the statement directing attention to the provisions of Paragraph 3 of Rule 12 of the Supreme Court of the United States.
34. This praecipe.

Dated: August 1, 1950.

(S.) Luther Day, John G. Ketterer, Counsel for Defendant-Appellant.

Service of the foregoing praecipe, together with a copy thereof, is hereby acknowledged this 1st day of August, 1950.

(S.) Arnold Raum, Acting Solicitor General, Solicitor General of the United States. Counsel for Plaintiff-Appellee.

Service of the foregoing praecipe, together with a copy thereof, is hereby acknowledged this 3rd day of August, 1950.

(S.) Robert B. Hummel, Acting Chief, Great Lakes Office Antitrust Division, Department of Justice, Counsel for Plaintiff-Appellee.

MOTION TO HAVE ORIGINAL PAPERS IN THE DISTRICT COURT TRANSMITTED TO THE SUPREME COURT OF THE UNITED STATES, AS A PART OF THE RECORD UPON APPEAL—Filed August 25, 1950

Now comes The Timken Roller Bearing Company, defendant-appellant in the above entitled cause, and moves that the Court, pursuant to Rule 10, paragraph 4, and Rule 18 of the Rules of the Supreme Court of the United States, authorize and instruct the Clerk of the District Court of the Northern District of Ohio, Eastern Division, to transmit and certify separately as models and exhibits of material in this case and as a part of the record upon appeal from the Final Judgment of this Court in the above entitled cause, to be filed in the Supreme Court of the United States, the following original, physical exhibits received in evidence in this case; to wit, Plaintiff's Exhibits 1, 2, 3, 135, 136, 150, 161, 162, 163, 170, 171, 172, and 191, and Defendant's Exhibits 49, 50, 51, 52, 55, 56, 57, 58, 59, 157, 158, 159, 160, 161, 165, 166, and 170, on the ground that it is proper that such original exhibits should be inspected by the Supreme Court but that it is impossible to incorporate true copies of some of such exhibits, and extremely inconvenient to incorporate copies of others thereof, in the transcript of the Record to be prepared by the Clerk of this Court.

Defendant-appellant further moves that, pursuant to Rule 10, paragraph 4 of the Supreme Court of the United States, the Court authorize and instruct the Clerk of the District Court of the Northern District of Ohio, Eastern Division, to transmit and certify, as part of the Record upon appeal from the Final Judgment of this Court in the [fols. 3911-3914] above entitled case, to be filed in the Supreme Court of the United States, the original stenographic transcript of the Record of the trial of the case from March 22 to April 27, 1948, inclusive, consisting of pages 1 to 2894, inclusive, the original stenographic transcript of the Record of the hearing held June 20, 1949, on the defendant's motion for an order rejecting a document lodged by the plaintiff entitled "Findings of Fact and Conclusions of

Law", and requiring the plaintiff to submit a draft of Findings of Fact and Conclusions of Law required by Rule 5(a), consisting of pages 1 to 60, inclusive; and the original transcript of the Record of the hearing on objections to the proposed Final Judgment in this case from September 28, 1949, to October 3, 1949, consisting of pages 1 to 440, inclusive, corrected in accordance with the stipulation and order as to corrections in the transcript of proceedings filed in this case on June 21, 1950, on the ground that a great deal of work and expense would be required to prepare and compare with the original copy of the transcript the corrected portions thereof.

(S.) Luther Day, John G. Ketterer, Attorneys for Defendant-Appellant.

Waiver of Notice and Consent

Notice of the foregoing motion is hereby waived; receipt of a copy of the motion and supporting brief is acknowledged; and plaintiff-appellee consents to the granting of said motion.

Philip B. Perlman, Solicitor General of the United States, by (S.) Robert B. Hummel, Acting Chief, Great Lakes Office, Anti-Trust Division, United States Department of Justice, Attorneys for Defendant-Appellant.

Order on Motion to Have Original Papers in the District Court Transmitted to the Supreme Court of the United States as a Part of the Record Upon Appeal—Filed August 29, 1950

On motion of The Timken Roller Bearing Company, defendant-appellant in the above entitled cause, and it appearing to the Court that it is proper that the original papers in the above entitled cause specified in said motion be transmitted to the Supreme Court of the United States, pursuant to Rule 10, paragraph 4 thereof,

It is hereby ordered:

That the Clerk of this Court transmit and certify separately, as models and exhibits of material in this case, as a part of the record upon appeal from the Final Judgment of this Court, the following original exhibits constituting evidence therein, to-wit:

Plaintiff's Exhibits 1, 2, 3, 135, 136, 150, 161, 162, 163, 170, 171, 172, 191.

Defendant's Exhibits 49, 50, 51, 52, 55, 56, 57, 58, 59, 157, 158, 159, 160, 161, 165, 166 and 170, and that the Clerk of this Court include with, and as part of, the Transcript of material parts of the Record in this case to be certified and transmitted to the Clerk of the Supreme Court of the United States, pursuant to Rule 10, paragraph 2 thereof, the original stenographic transcript filed in this Court of the record of the trial of the above entitled cause from [fol. 3916] March 22 to April 27, 1948, inclusive, consisting of pages 1 to 2894, inclusive; the original stenographic transcript filed in this Court of the record of the hearing held June 20, 1949, on the defendant's motion for an order rejecting a document lodged by the plaintiff, entitled "Findings of Fact and Conclusions of Law" and requiring the plaintiff to submit a draft of Findings of Fact and Conclusions of Law required by Rule 5 (a), consisting of pages 1 to 60, inclusive; and the original stenographic transcript filed in this Court of the record of the hearing on objections to the proposed Final Judgment in this case from September 28, 1949 to October 3, 1949, consisting of pages 1 to 440, inclusive, all corrected in accordance with the Stipulation and Order as to corrections in the transcript of proceedings in this case filed in this Court on June 21, 1950.

Dated: August 29, 1950.

(S.) Freed, Judge of the District Court for the Northern District of Ohio, Eastern Division.

Notice by Clerk hereby waived.

[Title omitted]

MOTION TO ENLARGE TIME FOR DOCKETING CASE IN THE SUPREME COURT OF THE UNITED STATES—Filed August 23, 1950

Comes now the appellant in the above-entitled case and moves pursuant to Rule 11 Paragraph 1 of the Rules of the Supreme Court of the United States, that this Honorable Court extend and enlarge, until October 6, 1950, the time within which this case on appeal shall be docketed in the Supreme Court of the United States, and the time within which the record on appeal shall be filed in said court, on the grounds that, concurrently with the preparation of the case for docketing, in which counsel for the appellant desire to assist the Clerk of this Court, the appellant must prepare, and file with the Supreme Court not later than September 5, 1950, a brief in opposition to appellee's Motion to Dismiss the Appeal and to Affirm the Judgment in this case, and appellee's Statement Making Against the Jurisdiction of the Supreme Court in this case, copies of which motion and statement were handed to appellant's attorneys on July 16, 1950; that appellant is advised by the Clerk that, due to the large amount of work required in preparing exhibits for inclusion in the transcript of the record, copies of papers, and an index for the record, it will be difficult to complete preparation of the record for docketing the time required; and that for the above reasons it will be extremely difficult for appellant to complete the docketing of the case on the return day, September 6, 1950.

[fol. 3918] Wherefore, appellant requests that this Honorable Court grant the relief above requested, and such other and further relief as this Court may deem just and equitable.

Respectfully submitted, (S.) Luther Day, John G. Ketterer, George H. Rudolph, Counsel for Defendant-Appellant, The Timken Roller Bearing Company.

NOTICE OF MOTION

To Philip B. Perlman,
Solicitor General of the United States,
Washington, D. C., and

Robert B. Hummel,
Acting Chief, Great Lakes Division,
Anti-Trust Division,
Department of Justice of the United States,
905 Public Square Building,
Cleveland, Ohio.

Please take notice that the defendant-appellant, The Timken Roller Bearing Company, has filed the foregoing motion in the above entitled case for an order extending and enlarging the time within which to docket the appeal and file the record on appeal in the Supreme Court of the United States, and that the same will be on for hearing before the Honorable Emerich B. Freed, Judge of the District Court of the United States for the Northern District of Ohio, Eastern Division, Federal Building, Cleveland, Ohio, on ——, 1950, at — o'clock —.

(S.) Luther Day, John G. Ketterer, George H. Rudolph, Attorneys for Defendant-Appellant.

Copies of the foregoing motion, notice of motion and brief in support thereof were served upon counsel for the plaintiff-appellee by handing one copy to Robert B. Hum-[fol. 3919] mel, one of counsel for the plaintiff-appellee, this — day of August, 1950, and by depositing in the mail another copy addressed to Philip B. Perlman, Solicitor General of the United States, Washington, D. C., on this — day of August, 1950.

(S.) George H. Rudolph, Attorney for Defendant-Appellant.

SUPPLEMENTAL MOTION TO HAVE ORIGINAL PAPERS IN THE DISTRICT COURT TRANSMITTED TO THE SUPREME COURT OF THE UNITED STATES, AS A PART OF THE RECORD UPON APPEAL —Filed September 21, 1950

Now comes The Timken Roller Bearing Company, defendant-appellant in the above entitled cause, and moves that the Court, pursuant to Rule 10, paragraph 4, and Rule 18 of the Rules of the Supreme Court of the United States, authorize and instruct the Clerk of the District Court of the Northern District of Ohio, Eastern Division, to transmit and certify separately as models and exhibits of material in this case and as a part of the record upon appeal from the Final Judgment of this Court in the above entitled cause, to be filed in the Supreme Court of the United States (in addition to those exhibits as to which were the subject of

a similar motion filed on August 25, 1950) the following original, physical exhibits received in evidence in this case; to wit, Defendant's Exhibits 54, 241, A (decree) and B (decree), on the ground that it is proper that such original exhibits should be inspected by the Supreme Court but that it is impossible to encorporate true copies of Defendant's Exhibit 54, and extremely inconvenient to incorporate copies of Defendant's Exhibits 241, A (decree) and B (decree) in the transcript of the Record to be prepared by the Clerk of this Court.

[S:] Luther Day, John G. Ketterer, Attorneys for Defendant-Appellant.

[fol. 3922] Waiver of Notice and Consent

Notice of the foregoing motion is hereby waived; receipt of a copy of the motion and supporting brief is acknowledged; and plaintiff-appellee consents to the granting of said motion.

(S.) Philip B. Perlman, Solicitor General of the United States; Robert B. Hummel, Acting Chief Great Lakes Office, Anti-Trust Division, United States Department of Justice, Attorneys for Defendant-Appellant.

[fol. 3928b] SUPREME COURT OF THE UNITED STATES,
OCTOBER TERM, 1950

No. 352

ORDER NOTING PROBABLE JURISDICTION—November 6, 1950

The statement of jurisdiction in this case having been submitted and considered by the Court, probable jurisdiction is noted.

Mr. Justice Clark took no part in the consideration or decision of this question.

[fol. 3928c] IN THE SUPREME COURT OF THE UNITED STATES,
OCTOBER TERM, 1950

No. 352

APPELLANT'S STATEMENT OF POINTS ON WHICH IT INTENDS TO RELY AND ITS DESIGNATION OF THE PARTS OF THE RECORD WHICH IT THINKS NECESSARY FOR THE CONSIDERATION THEREOF—Filed October 23, 1950.

The appellant, The Timken Roller Bearing Company, pursuant to Rule 13, paragraph 9 of this Court, states the points on which it intends to rely on this appeal, and designates the portions of the record to be printed which it thinks necessary for the consideration thereof as follows:

STATEMENT OF POINTS TO BE RELIED UPON

Appellant intends to rely upon its assignment of errors herein and upon the following points based thereon:

1. The District Court erred in holding that the appellant has engaged in an unlawful combination and conspiracy in restraint of trade and commerce in anti-friction bearings between the United States and foreign nations, with British Timken, Ltd. (a British joint stock company hereinafter called "British Timken") and with Societe Anonyme Francaise Timken (a French corporation hereinafter called "French Timken"), and has entered into unlawful contracts, agreements and understandings with, and has planned and acted with, British Timken and French Timken to eliminate competition among themselves and with others [fols. 3928c-1-2] in the production, sale and distribution

of anti-friction bearings in all markets of the world, in violation of Sections 1 and 3 of the Act of Congress of July 2, 1890, 26 Stat. 209, 15 U.S.C. §§ 1 and 3, known as the Sherman Antitrust Act.

2. The District Court erred in failing to hold that the restraints of trade, if any, resulting from the business agreements, contracts and understandings between the appellant and British Timken and French Timken have been at all times, and are, reasonably and lawfully ancillary and necessary to the creation and maintenance of a lawful joint venture and enterprise by the appellant and one M. B. U. Dewar, a British businessman, through their joint acquisition and control of British Timken and German Timken (now defunct) and joint organization and control of French Timken, to develop foreign trade and good will of the appellant in anti-friction bearings under the trademark "Timken".

3. The District Court erred in failing to hold that the restraints of trade, if any, resulting from the business agreements, contracts and understandings between the appellant and British Timken and French Timken have been at all times and are reasonably and lawfully ancillary and necessary to the transfer by the appellant to British Timken and French Timken of know-how with respect to the manufacture of bearings, the quality of steel used in connection therewith, and the various manufacturing processes specified in such business agreements.

4. The District Court erred in failing to hold that the restraints of trade, if any, resulting from the business agreements, contracts and understandings between appellant and [fol. 3928c-3] British Timken and French Timken have been at all times and are reasonably and lawfully ancillary and necessary to the licensing of the trademark "Timken" by the appellant to British Timken and French Timken, including the supplying of exclusive information by the appellant to British Timken and French Timken as to the production of anti-friction bearings in connection with such trademark licenses, thus holding, in effect, that it was illegal for the appellant: (a) to grant a license for the use of its trademark "Timken" in a group of foreign countries rather than for a single country; (b) to grant an exclusive license for the use of its trademark "Timken" to British Timken and French Timken in specified foreign countries and in

connection therewith to agree not to use its mark in such countries; (c) to grant a license for the use of its trademark "Timken" by British Timken and French Timken in foreign countries without granting to British Timken and French Timken the right also to use such mark in the United States; (d) to license the use of its trademark "Timken" by British Timken and French Timken, respectively, in distinct groups of foreign countries, while withholding a license to them as to other countries; (e) to grant a license to British Timken and French Timken for the use of the trademark "Timken" in foreign countries, and to communicate to British Timken and French Timken technical advice, information and know-how, to the end that the standard and quality of the products of British Timken and French Timken under the trademark "Timken" might be equivalent to those of appellant, while withholding such technical information and know-how from third parties; and (f) to license the use of its trademark "Timken" to British Timken and French Timken in foreign countries in which it did not have [fol. 3928c-4] the mark registered, as a means of developing good will in the mark in those areas, and, having permitted British Timken and French Timken to register the mark "Timken" in their own names in Great Britain and France, respectively, to obtain an undertaking by them to assign back such registrations to appellant at the termination of the license, and to demand compliance by British Timken and French Timken with such undertakings and the reversion of the trademark "Timken" to itself.

5. The District Court erred in failing to hold that the restraints of trade, if any, resulting from the business agreements, contracts and understandings between the appellant, British Timken and French Timken, were not imposed for the purpose or with the intention, and did not have the legal effect, of prejudicing the public interest by unduly restricting competition or obstructing the course of trade in violation of the Sherman Antitrust Act, there being at all times during the existence of such agreements, contracts and understandings substantial and vigorous competition between the appellant, British Timken and French Timken, on the one hand, and other manufacturers of all types of bearings, on the other, in all markets of the world.

6. The District Court erred in failing to hold that, since

there is now no appreciable or substantial import or export trade of the United States in anti-friction bearings on a competitive price basis with the territories served by British Timken and French Timken under the business agreements, contracts and understandings between the parties, there does not exist that present illegality which is essential to equitable relief such as is prayed for by the appellee in this cause.

[fol. 3928c-5] 7. The final judgment of the District Court is erroneous, beyond its jurisdiction, exceeds the permissible limits of the discretion conferred upon it, and deprives the appellant of its property without just compensation and without due process of law, contrary to the Fifth Amendment of the Constitution of the United States, in the following respects:

(a) It enjoins the appellant in perpetuity from granting to or receiving from British Timken or French Timken exclusively "in such a way as to deny any third person access thereto" know-how, machinery, materials and patents, even though it was not alleged in the amended complaint that these constituted part of the means adopted by the appellant and its alleged co-conspirators to carry on the alleged conspiracy.

(b) It enjoins the appellant in perpetuity from granting to or receiving from British Timken and French Timken exclusive know-how, patent licenses, trademark licenses, machinery or material in the production of anti-friction bearings, in that such transfers are prohibited when made "in such a way as to deny any third person access" thereto, thus depriving appellant of its property without due process of law, contrary to the Fifth Amendment to the Constitution of the United States.

(c) It enjoins the appellant in perpetuity from entering into any agreement with British Timken or French Timken, or any subsidiary, successor, assign, sales agent, representative or distributor thereof, to fix resale prices of anti-
[fol. 3928c-6] friction bearings produced by the appellant, thus depriving it of its rights under the Miller-Tydings Act, 50 Stat. 693, 15 U. S. C. 1.

(d) It enjoins the appellant in perpetuity from refusing to sell anti-friction bearings to any person at prices and on terms corresponding with those regularly offered to purchasers of the same classification for resale into the appel-

lant's territory, and from failing to provide services or assistance relating to the disposition or use thereof comparable to that made available to distributors or users of bearings in the appellant's territory, where the reason for such refusal is that the bearings are for resale, or other distribution, in the territory of British Timken or French Timken, or in some country other than the appellant's territory, as defined in the Final Judgment, thus exceeding the Court's jurisdiction to prevent and restrain violations of the Sherman Act under Section 4 thereof, and depriving the appellant of its property without just compensation and without due process of law, contrary to the Fifth Amendment to the Constitution of the United States, by denying to the appellant the right to choose the parties with whom it will deal and compelling it to do business with persons other than those chosen by it.

(e) It enjoins the appellant from entering into any agreement with British Timken or French Timken for the transfer of any right or immunity under any trademark or name [fol. 3928c-7] relating to the production of anti-friction bearings upon the condition that either of these two companies shall allocate or divide territories for the production or sale of anti-friction bearings, exclude any producer or distributor from any market for anti-friction bearings, or receive, grant, or exchange know-how or materials or machinery used in the production of anti-friction bearings in such a way as to deny any third person access thereto, thus depriving the appellant of its lawful right to license the trademark "Timken", or any other trademark, in the various respects set forth in paragraph 4, subdivisions (a) through (f) hereof.

(f) The Final Judgment requires the appellant to divest itself of all of its stockholdings and financial interest, either direct or indirect, in British Timken and French Timken, when the uncontroverted evidence in the record discloses, and the District Court found, that such stockholdings and interest were not acquired in connection with the alleged conduct of the alleged conspiracy and that the stock had not been used to control British Timken and French Timken in the carrying out thereof, the only basis upon which the appellee urged such divestiture being that the ownership of such investments by the appellant would constitute an inducement and incentive not to compete with British Timken

and French Timken, and the uncontroverted evidence in the record disclosing that such divestiture would constitute [fol. 3928c-8] a hardship to and punishment of the appellant, thus exceeding the jurisdiction of the District Court under section 4 of the Sherman Act.

8. The District Court erred in not making, as requested by the appellant, proper findings of underlying subsidiary and ultimate facts on all issues in the case separately found, and conclusions of law separately stated, as required by Rule 52 of the Federal Rules of Civil Procedure (because the findings of fact and conclusions of law did not sufficiently appear in the memorandum filed by the Court); in adopting, upon the motion of the appellee, the Court's memorandum opinion as its findings of fact and conclusions of law, and in overruling the appellant's motion after judgment that the Court adopt, in lieu of such purported findings of fact and conclusions of law, the proposed findings of fact and conclusions of law submitted by the appellant with its motion.

9. The purported findings of fact upon which the District Court based its Final Judgment are manifestly against the weight of the evidence, not sustained by any evidence, and clearly erroneous.

The Timken Roller Bearing Company

Inter-Organization Correspondence

January 16, 1933

(Industrial Field Men)

Subject—Competition

None of us, and we here at the home office must be included, know very much about selling in a highly competitive market. We have had about 8 years, which is just about the length of time we took to develop our industrial department, selling our tapered roller bearings without any tapered roller bearing competition. Gilliam and Bock were out of the picture before we really got organized industrially, and we have had rather easy sledding from the tapered roller bearing standpoint. True we have had a very difficult task in selling our bearings over self aligning straight roller and ball bearings, and don't think for a minute we want to in the least discredit that wonderful job that was done. At the same time after that good selling

job was done and our bearings were installed as a part of their regular equipment we did not have to face that keen competitive situation of tapered roller bearings coming into the picture.

L. M. Klinedinst.

[fols. 3930-4006] PLAINTIFF'S EXHIBIT No. 5

Copy.

A. M. Donze Canton, 5-27-43.

Such a situation cannot happen this time. We shall have to fight our way out of it. Many of the customers listed on the attached sheet have used our company exclusively for many years. They have not known of two sources of supply. They did not know that Timken supplied 85% of the tapered roller bearings in the country. The reason for that was obvious; we were always able to take care of these people so that it was not necessary to go outside and ask for additional supplies of bearings.

L. M. Klinedinst.

[fol. 4007] PLAINTIFF'S EXHIBIT No. 13

Agreement

This Agreement, made this 31st day of December 1927, by and between The Timken Roller Bearing Company, a corporation of Ohio, located at Canton, Ohio, and International Harvester Company, a corporation of New Jersey, located at Chicago, Illinois, witnesseth:

Whereas, both parties hereto are engaged in the manufacture of taper roller bearings and it is desired to enter into an agreement between the parties to mutually license said parties under certain patents and with respect to certain bearings and machines made and used by the respective parties.

Now, Therefore, it is hereby agreed by the parties hereto as follows:

1. The Timken Roller Bearing Company hereby licenses and empowers said International Harvester Company to

make taper roller bearings and parts thereof under the Miller patent No. 1,892,019 dated September 27, 1921, for Taper Roller Bearings, now owned by The Timken Roller Bearing Company for use only in machines made and sold by the International Harvester Company and for sale as complete bearings only for replacement of bearings on machines sold by said International Harvester Company, it being understood and agreed that said International Harvester Company shall have no right to sell such bearings or parts thereof separately except for replacement of bearings in machines sold by it.

2. The Timken Roller Bearing Company hereby licenses and empowers the International Harvester Company to make, use and sell taper roller bearings of the type and construction now being made and sold by it and identified by the drawing attached hereto and marked "Exhibit A,", under any patent additional to said Miller patent, now owned or controlled by The Timken Roller Bearing Company, the license granted under this paragraph, however, being limited to the specific construction disclosed in said exhibit and not extending to any general license to make other constructions under said patent or patents owned or controlled by The Timken Roller Bearing Company. It is agreed, however, that said license granted in this [fol. 4008] paragraph shall not extend to any bearings or parts thereof made or sold by International Harvester Company other than those made by it for use on machines sold by it or sold for replacements of bearings made and sold with such machines by it.

Headers

3. It is hereby agreed that International Harvester Company has, and shall continue to have, the right to use the Marville Header now employed by it for heading rolls free from any claim of infringement under patents by The Timken Roller Bearing Company. It is also agreed that the International Harvester Company shall be, and is hereby given the right, authority and permission to purchase and to use Waterbury-Farrel header for the purpose of heading rolls so far as The Timken Roller Bearing Company has the right to grant such permission, authority and consent.

Grinding Body of Rolls

4. It is hereby agreed that International Harvester Company shall have the right to continue to use the centerless grinder now employed by it for grinding the body of the rolls and consisting of a machine with a hand feed with a reciprocating support for the roll, and the right to purchase and use centerless grinders having a hopper and a reciprocating support for the roll with either automatic or semi-automatic feed notwithstanding any agreement now existing between The Timken Roller Bearing Company and the Cincinnati Grinders, Inc., or other suppliers of said centerless granding machines, and notwithstanding any patent or patents which said The Timken Roller Bearing Company may have upon said centerless grinders of the type and having attachments herein described, providing it is understood that this paragraph shall not convey to International Harvester Company a license under any patents which The Timken Roller Bearing Company may have or acquire on the spiral feed for centerless grinders, nor authorize International Harvester Company to purchase such spiral feed constructions from any supplier with whom said The [fol. 4009] Timken Roller Bearing Company may have an exclusive purchasing agreement.

It is hereby agreed that International Harvester Company has the right to use and may continue to use and to purchase machines of the center grinding type now employed by it, any agreement made or which may be made between The Timken Roller Bearing Company and any suppliers of such machines to the contrary notwithstanding, or under any patent or patents owned by The Timken Roller Bearing Company.

End Face Grinding

5. It is hereby agreed that International Harvester Company shall have the right to continue to use and to purchase machines of the character and construction now employed by it for end face grinding, the present machines of International Harvester Company for this purpose being Brown and Sharp grinders.

Cage or Retainer

6. It is hereby agreed that International Harvester Company shall have the right to make, or cause to be made for

it, cages or retainers of the present form now used in its bearings, as shown in the exhibit "A" hereto attached, and shall have the right to use or cause to be used the machines and methods now employed by it or under its direction, which machines and methods are hereby specified to be as follows:

(a) Drawing a flat bank to cup form.

(b) Punching an index hole with keyway therein in base.

(c) Inserting cup in die and indexing for each aperture and rib and punching each aperture separately.

(d) Swedging the angular faces on the inner parts of the ribs to conform to rolls.

(e) Taking out bottom by turning on laths.

Such right and permission is recognized and authorized by The Timken Roller Bearing Company notwithstanding any agreement with any suppliers on any patent or patents now owned by The Timken Roller Bearing Company.

[fol. 4010] Assembling Rollers and Cages or Retainers

7. It is agreed that the method and machines now employed by International Harvester Company for assembling the rolls and the cages or retainers shall be recognized and authorized to be used by International Harvester Company, any patent or supplier's agreement of The Timken Roller Bearing Company to the contrary notwithstanding, which method and machines are specified as follows:

(a) Placing rollers in cage.

(b) Forcing caging by plunger into conical die provided with fixed rib contacting abutments which set or force inwardly the ribs against the rolls.

Cup or Ring

8. It is agreed that International Harvester Company has the right to use and may continue to use any supplier's agreement or patent of The Timken Roller Bearing Company to the contrary notwithstanding, the machines and methods now used by it for forming the cup or outer ring of the bearing which machines and methods are hereby specified as follows:

(a) Forming by automatic screw machines from tubing or forming by forging from bar stock.

(b) Carbonizing and heat treating.

(c) Blanchard machine grinding for width on one side.

(d) Heald Sisematic #72 or Bryant #6 machine grinding on interior.

(e) Brown and Sharp, Norton a centerless grinding on exterior.

Cone

9. It is agreed that the right of International Harvester Company to use and continue to use its present machines and methods for making the cone of its bearings is hereby recognized and authorized by The Timken Roller Bearing Company, any supplier's agreement or patent of the said The Timken Roller Bearing Company to the contrary notwithstanding, which methods and machines are hereby specified as follows:

[fol. 4011] (a) Gormed from tubing on automatic screw machines or forging from bar stock.

(b) Grinding by Blanchard machine on two faces.

(c) Grinding internally on Heald or Bryant machines.

(d) Grinding O. D. body on Brown and Sharp Universal machine.

(e) Flange grinding by Brown and Sharp Universal machines.

Quenching Machines

10. It is also agreed that International Harvester Company has the right to use and continue to use the quenching machine now employed by it, any supplier's agreement or patent now owned by The Timken Roller Bearing Company to the contrary notwithstanding.

11. It is also agreed that International Harvester Company has the right to use and to continue to use the gaging machines now employed by it.

It is hereby agreed that said International Harvester Company reserves to itself a non-exclusive right and license to make bearings of the type devised now made and sold by it as shown in exhibit "A" attached hereto, for use only in machines made and sold by International Harvester Company and made and sold for replacement of such bearings, and subject only to said reservation, said International Harvester Company hereby grants to said The Timken Roller Bearing Company the exclusive right and license to make, use and sell taper roller bearings of the

type devised by said International Harvester Company embodied in exhibit "A" under any patent or patents that may be obtained by said International Harvester Company on said bearing, and free and clear of any and all license fees, which license said International Harvester Company agrees to confirm by suitable written instrument after the issue of said patent or patents.

12. The International Harvester Company hereby grants The Timken Roller Bearing Company a non-exclusive license to make and use in its own shops any of the special machines devised by International and now used by it under any patent or patents that may be issued to International Harvester Company thereon, and including particularly the [fol. 4012] quenching machine devised by International Harvester Company and now used by it, and the special gages designed and now used by International Harvester Company.

13. The International Harvester Company agrees to apply at its own expense for patents in foreign countries for said bearing shown in exhibit "A", and does grant said The Timken Roller Bearing Company or a subsidiary or an associate company now or hereafter established by it, a license under any and all such foreign patents, free and clear of royalties or license fees.

Said International Harvester Company agrees to advise said The Timken Roller Bearing Company of the countries in which foreign applications are filed, and if additional foreign patents are desired by said The Timken Roller Bearing Company, said International Harvester Company promises to file same in such additional countries, at the expense of The Timken Roller Bearing Company, and to assign such patents to The Timken Roller Bearing Company.

14. The Timken Roller Bearing Company grants to foreign subsidiary and associate companies of the International Harvester Company a license, co-extensive with that herein granted by The Timken Roller Bearing Company to the International Harvester Company under any foreign patents which said The Timken Roller Bearing Company may own, and likewise authority to purchase machines and parts co-extensive with that herein given to the International Harvester Company.

15. Each of the United States licenses hereby granted shall be personal to the license and shall not be transferable

except with the entire business and good will of the respective parties hereto, and said licenses shall not include any right to grant sub-licenses. Each of said licenses shall be for the full life of the respective patents.

In Testimony Whereof, the parties hereto have set their hands and seals respectively on the dates below given.

[fol. 4015] Interpretative Memorandum of Understanding as to Agreement Dated the 31st day of December, 1927

This Memorandum of Agreemen' made this thirty-first day of December, 1927, by and between The Timken Roller Bearing Company, a corporation of Ohio, located at Canton, Ohio, and the International Harvester Company, a corporation of New Jersey, located at Chicago, Illinois, in interpretation of the understanding of the parties as to certain manufacturing details covered by the prior agreement entered into between the parties and dated the 31st day of December, 1927, Witnesseth:

It is hereby agreed for and in consideration of the premises and undertakings set forth in said prior agreement that in the manufacture of bearings under said prior agreement of the 31st day of December, 1927, International Harvester Company in complying with the provisions of paragraph 2 of said agreement shall conform in good faith and so far as possible in standard production to the exact angle between the cone rib and the bearing surface of the cone as shown in said Exhibit A attached to said agreement, namely, an angle of ninety degrees (90°), but that accidental variations in the construction of said bearings due to errors of manufacture which may produce an angle of less than ninety degrees (90°) shall not be considered as cause for the institution of infringement suits based upon any patents of The Timken Roller Bearing Company provided that the total number of bearings made and used by the International Harvester Company thus having an angle less than ninety degrees (90°) shall not exceed ten per cent (10%) of the output of bearings of any one size or part number, and provided further that in such number of bearings having an angle less than ninety degrees (90°), the tolerance of variance thus permitted shall not exceed one degree (1°) less than ninety degrees (90°).

It is further agreed that The Timken Roller Bearing Company shall have the right to such reasonable inspection in the plant or plants of the International Harvester Company of the bearings produced by said—

[fol. 4016] The Timken Roller Bearing Company, by M. T. Lothrop, V. P.

Attest: J. F. S. Strough, Secretary.

STATE OF OHIO,
County of Stark, ss:

Personally appeared before me, a Notary Public, this 17th day of January 1927, M. T. Lothrop, to me personally known and known to me to be the Vice Pres. of The Timken Roller Bearing Company, and acknowledged that he executed the foregoing agreement as his free act and deed for the purposes therein stated, and in his official capacity as ————of The Timken Roller Bearing Company, and that he was duly authorized thereunto by the Board of Directors of said Company.

M. Brooks, Notary Public, Stark Co., Ohio. My Commission expires August 16, 1929.

Approved: M. J. Graham.
International Harbester Co., by H. B. Utley.

Attest: William M. Gale, Secretary.

STATE OF ILLINOIS,
County of Cook, ss:

Personally appeared before me, a Notary Public, this 29th day of December, 1927, H. B. Utley, to me personally known and known to me to be the Vice President of the International Harvester Company, and ackowledged that he executed the foregoing agreement as his free act and deed for the purposes therein stated, and in his official capacity as Vice President of the International Harvester Company, and that he was duly authorized thereunto by the Board of Directors of said Company.

Fred W. Hoffmeister, Notary Public.

[fol. 4017] P-13A

International Harvester Company

Chicago, U. S. A.

May 14, 1936.

Mr. W. F. Umstattd, The Timken Roller Bearing Company, Canton, Ohio.

Dear Sir:

This will confirm agreement in meeting this morning, at which were present your Messrs. W. E. Umstattd and L. M. Klinedinst and our Messrs. John Morrow, Jr., W. B. Swift, R. M. McCulloch, E. P. Renstrom and R. A. Fischer, as follows:

We are to have free license to use the spiral feed method and apparatus for grinding tapered rollers under Smith Patent 1,970,777 owned by your company. You are to make one of these attachments for us at cost and at our expense and also if desired by us send one of your operators, at our expense, to our West Pullman Works for a week or ten days to instruct our people in the proper method of grinding rollers with said attachment.

In consideration of the foregoing, we are to buy from your company a proportion of our requirements of steel used in the production of our ball and taper roller bearings substantially equal to what we have been buying from you in the past and also all tapered roller bearings which we require in our production and which we do not produce ourselves. It is contemplated that your price will at all times be competitive with the general market and if not, we have your permission to procure our requirements elsewhere. Further, it is understood that our Wisconsin Steel Works are carrying on some development work on bearing steels and we reserve the right to use their product at any time.

The above agreement is subject to cancellation at the discretion of the International Harvester Company on sixty (60) days' notice in writing to the Timken Roller Bearing Company.

Sometime ago Mr. Graham also stated to you personally that he would like to use the method and apparatus which your company uses in connection with the grinding of the angles on the ends of the tapered rollers and we understand

that you have no objection to our use of this method and apparatus.

Since this agreement modifies the agreement dated December 31, 1927 between your company and our company restricting our use of the spiral feed, it is understood that paragraphs 4 and 5 of said agreement are superseded in all respects by the present understanding.

[fols. 4018-4035] This agreement is drawn in duplicate. Please sign and return one copy signifying your acceptance.

Yours very truly, International Harvester Company,
John Morrow, Vice President.

Accepted by: The Timken Roller Bearing Company by W. E. Umstattd, President. RAF/MEH.
Copy.

Dear Sirs:

We are in receipt of your letter of the 21st inst. enclosing copy of draft agreement between our two companies and advising us that the same has been approved by your Board for which we thank you.

In reply we confirm our letter of the 23rd of September in which we advised that the agreement is also approved by the Board of this Company and may be regarded as a completed bargain.

Yours faithfully, Deutsche Timken Gesellschaft. m. b. H., (Sgd.) W. R. B. A.

[fol. 4051] Plaintiff's Exhibit 20

This Agreement is made the twenty-ninth day of December, One thousand nine hundred and thirty four by and between The Timken Roller Bearing Company, a Corporation organized under the laws of the State of Ohio and having its principal office in the City of Canton, Ohio in the United States of America (hereinafter for convenience called "The American Company") and British Timken Limited a joint stock Company incorporated under the laws of the United Kingdom of Great Britain and Ireland

and having its registered office at Birmingham in the Kingdom of England (hereinafter for convenience called "The British Company")

Whereas:

(a) The American Company manufactures in the United States of America anti-friction tapered roller bearings and steel used in the manufacture of all kinds of anti-friction bearings and has a very special experience in such manufactures.

(b) The expression "bearings" for the purposes of this agreement means anti-friction bearings of all kinds.

(c) The American Company is or may be or become the owner of Patents in the United Kingdom of Great Britain and Northern Ireland and in various other parts of the world covering inventions relating to bearings and improvements therein:

Now the parties hereto agree as follows:

1. For the purposes of this agreement the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all Dominions Colonies or Dependencies of the said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deemed to be the territory of the American Company.

2. (a) Each of the parties hereto will as fully and freely as its patent and contractual rights and obligations permit and free of expense to the other party except as to out-of-[fol. 4052] pocket expenses inform the other party as to all inventions discoveries improvements and practices useful in connection with the manufacture of bearings whether patented or not

(b) The American Company will so far as its patent and contractual rights and obligations permit and free of expense to the British Company except as to out-of-pocket expenses license the British Company to operate manufacture and sell bearings in the territory of the British Company during the life of this agreement under any Letters Patent or other patent rights now or hereafter from time to time owned by the American Company and pertain-

ing to the manufacture or sale of bearings in the territory of the British Company

(c) The British Company will so far as its patent and contractual rights and obligations permit and free of expense to the American Company except as to out-of-pocket expenses assign absolutely and for all time to the American Company all Letters Patent or other patent rights now or hereafter from time to time owned by the British Company and pertaining to the manufacture or sale of bearings in the territory of the American Company

(d) Provided however that nothing in this Agreement contained shall obligate either party to acquire or enlarge its interest in any Letters Patent or other patent rights

3. (a) Each of the parties hereto will use its best endeavours to maintain the distinctive character of the trade mark "Timken" and refrain from any act calculated to prejdice the rights of the parties hereto in respect thereof as now existing

(b) The British Company if and when requested by the American Company will join with the American Company in an application for concurrent registration of the trade mark "Timken" in accordance with the rights aforesaid

(c) The British Company upon the termination of this Agreement if and so far as it may be requested in writing by the American Company will cause the name "Timken" to be eliminated from its corporate name and from the name of any person, firm or company controlled by it and will refrain and will cause any person, firm or company controlled by it to refrain from using the name "Timken" [fol. 4053] as part of or in connection with his, their or its name or as a trade mark or trade name or otherwise and from any act calculated to prevent or delay any concurrent right which the American Company may then possess in respect of the said name from becoming a sole and exclusive right and so far as practicable will assign or cause any person, firm or company controlled by it to assign to the American Company or as it may direct any trade mark or other rights in respect of the said name

4. (a) The American Company will from time to time advise and instruct the British Company in the manufacture of any kind of bearings which the American Company may be manufacturing and particularly in connection with the quality of the steel used and its composition and analysis

the method of case hardening the machinery and processes for grinding gauging sizing quenching die working forging up-setting forming sorting plating, and other operations and in connection with any special tools and machinery

(b) The British Company will carefully and faithfully follow such advice and instructions so far as the same shall be economically practicable under the circumstances of the business of the British Company

(c) The British Company's manufacturing operations shall at all reasonable times be open to inspection by the American Company or its representatives

5. (a) The British Company by itself or its sublicensees approved by the American Company will manufacture bearings in such quantities and in such States within the British Company's territory and will exercise all such rights in connection with the manufacture of bearings as shall be required to maintain all Letters Patent from time to time owned by the American Company in any State or States within the British Company's territory

(b) If the British Company desires to be relieved from the obligation contained in paragraph "a" of this clause with respect to any State it shall be entitled to give notice in writing to the American Company that it excludes such State from the British Company's territory and thereupon such State shall be withdrawn from the British Company's [fol. 4054] territory and shall be added to the American Company's territory

(c) For the purposes of this clause a State shall mean a territorial area in which there is a separate jurisdiction for patent purposes

6. Except with the consent of the American Company the British Company shall not manufacture sell or deal in bearings of any kind except under and in accordance with the terms and provisions of this Agreement and under the Trade Mark "Timken"

7. During the life of this agreement the American Company shall not directly or indirectly make or sell or license others to make or sell bearings in the British Company's territory or in the American Company's territory knowing them to be for shipment into the British Company's territory save and except as follows to wit:

(a) The American Company may make or sell or license others to make or sell in the territory bearings for delivery

or shipment into the British Company's territory as assembled component parts of completed articles of manufacture manufactured in the American Company's territory or as assembled component parts of completed units of manufacture manufactured in the American Company's territory for incorporation into such completed articles of manufacture

(b) The American Company in its territory may accept and execute orders for bearings for ultimate destination in the British Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the British Company's territory or sales at prices in conflict with the wishes of the British Company and the American Company from time to time will notify the British Company of the details of the sales authorised under this paragraph and will pay to the British Company an amount equal to five per cent (5%) of the net sale price thereof

(c) The American Company may authorise not more than four manufacturers or producers of vehicles in the United States of America to import into the British Com- [fol. 4055] pany's territory bearings manufactured by the said producers in the American Company's territory for incorporation in new products or for bearing replacement purposes for products previously manufactured or assembled by the said manufacturers or producers or their subsidiaries in the British Company's territory Provided that they are not stamped with or identified by the name Timken

(d) For the purposes of this clause a holding Company as for instance General Motors Corporation and its constituent and subsidiary Companies shall be deemed to be one manufacturer or producer

(e) The parties hereto recognize and approve the mutual licensing agreement entered into between the American Company and International Harvesters Company dated the Thirty first day of December One thousand nine hundred and twenty seven of which a copy has been supplied by the American Company to the British Company

8. During the life of this Agreement the British Company shall not directly or indirectly make or sell or license others to make or sell bearings in the American Company's territory or in the British Company's territory knowing them

to be for shipment into the American Company's territory save and except as follows to wit:

(a) The British Company may make or sell or license others to make or sell in the British Company's territory bearings for delivery or shipment into the American Company's territory as assembled component parts of completed articles of manufacture manufactured in the British Company's territory or as assembled component parts of completed units of manufacture manufactured in the British Company's territory for incorporation into such completed articles of manufacture

(b) The British Company in the British Company's territory may accept and execute orders for bearings for ultimate destination in the American Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the [fol. 4056] American Company's territory or sales at prices in conflict with the wishes of the American Company and the British Company will from time to time notify the American Company of the details of the sales authorised under this paragraph and will pay to the American Company an amount equal to five per cent (5%) of the net sale price thereof

9. Notwithstanding anything in this agreement the American Company shall be at liberty to grant Licences to manufacturers to make and sell in the territory of the British Company steel and/or tubes under Patents or according to methods and processes belonging to the American Company Provided always that the American Company will make arrangements so that any royalty or charge which may be payable by any such Licensee in respect of steel and/or tubes supplied to the British Company shall be credited to the British Company.

10. (a) The provisions of this clause shall take effect notwithstanding anything to the contrary contained in this agreement and the other provisions of this agreement shall be deemed to be modified accordingly

(b) During the life of this agreement and so long as the French Company named Societe Francaise Timken (hereinafter called "the French Company") or any other French Company formed to acquire and carry on the business now carried on by the French Company shall carry on the said business the French Company which from time to time is

carrying on the said business shall be at liberty in France and the Dominions Colonies and Dependencies of France to make and sell bearings in and for use in the French territories aforesaid under any French Patents from time to time belonging to the American Company or the British Company and to make use of the name Timken in connection with its business without payment of any royalty or other charge and the British Company subject to the approval of the American Company shall enter into any agreement or agreements with any French Company which may be necessary for this purpose

(c) During the life of this agreement each of them the American Company and the British Company shall be at liberty to sell bearings for delivery and use in Russia without reference to the other of them but they shall keep each other advised with full details of all enquiries negotiations [fol. 4057] and orders and generally consult with one another in regard to Russian business whether with the Government authorities in Moscow or with or through any of the Russian Agencies or Trading Companies and if either of the parties hereto shall secure any orders for or in connection with bearings for delivery and use in Russia a commission of two per cent upon the net monies received in respect of such orders shall be paid by the party executing the orders to the other party and all expenses incurred by either party in negotiating or securing orders for or in connection with bearings for delivery and use in Russia with the approval of the other party shall be borne and paid by the parties hereto in equal shares and no royalty or other charge under the other provisions of this agreement shall be payable in respect of bearings in respect of which the said commission of two per cent is payable. The details above mentioned shall include blue prints statistical reports and other data. The prices and terms at or upon which offers are made and orders are accepted shall so far as practicable be mutually agreed from time to time but nevertheless either of the parties hereto shall be at liberty to quote and accept orders at low prices and extended times for payment without the consent of the other party after having first submitted the prices and other terms to the other party for its consideration and remarks provided that any such quotation or acceptance shall not involve under cutting some quotation already made by the other party

11. (a) Subject to the approval in writing of the American Company as to both terms and personnel to be given at its absolute discretion but not otherwise the British Company may from time to time grant sub-licenses to others to make use and vend bearings in the British Company's territory and may communicate to such sub-licensees any information with respect to inventions discoveries improvements and practices whether patented or not received from the American Company

(b) Every such sub-license shall be deemed to be a license granted by the American Company and all royalties payable thereunder in respect of Tapered Roller Bearings shall belong to the American Company and shall be made payable direct to the American Company accordingly.

[fol. 4058] (c) All the terms and conditions establishing the business and other relations between the British Company and any sub-licensee within the British Company's territory shall be submitted to and approved in writing by the American Company before the same are agreed to by the British Company and no alteration shall be made therein without the like approval

(d) If the British Company shall acquire any stock shares securities or other interest in any Company or Association manufacturing or selling bearings in the British Company's territory the British Company shall not sell or dispose of such stocks shares securities or interest without the consent in writing of the American Company

12. (a) During the life of this Agreement the British Company shall pay to the American Company a royalty equal to one half of one per cent (½%) of the net invoice prices after deduction of all discounts of all Tapered Roller bearings manufactured or sold by the British Company less amounts equal to one half (½) of the royalties actually received directly by the American Company from sub-licensees pursuant to the last previous clause hereof

(b) Provided however that no royalties shall be paid hereunder by the British Company in respect of (1) completed Tapered Roller bearings purchased by the British Company from the American Company or (2) Tapered Roller bearings manufactured by the British Company and sold by it to sub-licensees appointed under the authority of the last previous clause hereof or (3) Tapered Roller bearings upon which royalties are paid directly to the American

Company by sub-licensees pursuant to the last previous clause hereof

(c) In the case of bad accounts written off by the British Company the American Company shall refund to the British Company royalties paid in respect to bearings giving rise to such accounts

13. The said royalties shall be paid on the First days of January April July and October of each year or within thirty days thereafter for the bearings sold during the quarter year prior to the said respective dates.

[fol. 4059] 14. (a) The remittance of the said royalties shall be accompanied by statements showing in detail:

(1) The number of bearings made during the preceding quarter year

(2) The number of bearings sold during the preceding quarter year

(b) The statements in respect thereto furnished during January of each year shall also be accompanied by a certified statement prepared by the Auditors of the British Company or its sub-licensees as the case may be based upon an actual examination of the books and records of the British Company or its sub-licensees giving the same data as above provided in respect of sales made during the year prior to the said month of January and the said January s atements if required by the American Company shall be further verified by Statutory Declaration of the Secretary for the time being of the British Company or its sub-licensees

(c) The American Company may once in each year at its own expense employ a Chartered Accountant who shall have the privilege of examining the books records and plant of the British Company and its sub-licensees with a view to determining how many Tapered Roller bearings the British Company and its sub-licensees shall have made and sold up to the time of such examination and to whom and when and for what prices

15. (a) The British Company shall pay all renewal fees required to maintain and keep on foot all Letters Patent with respect to bearings in the British Company's territory owned by the American Company of which particulars from time to time have been supplied to the British Company by the American Company

(b) Provided however that if the British Company shall desire to discontinue or refrain from maintaining any such Letters Patent it shall be at liberty to give not less than four (4) months' written notice to the American Company and upon the expiration of the said period of four months the Letters Patent to which such notice relates shall belong [fol. 4060] to and be at the disposal of the American Company free from any rights of the British Company under this agreement and the British Company shall be under no obligation to maintain and keep on foot such Letters Patent

(c) The British Company at its own cost will defend every action or proceeding instituted for the purpose of revoking any Letters Patent with respect to bearings in the British Company's Territory owned by the American Company so long as such Letters Patent is being maintained and kept on foot by the British Company under the provisions of this agreement

(d) If any of the said Letters Patent shall be revoked solely on some ground which would not have been available if the British Company had duly performed its obligations under this Agreement then and in any such case the American Company in addition to any other rights which it might have against the British Company shall be entitled to recover from the British Company all costs charges and expenses reasonably incurred by it in defending the action or proceeding in which such Letters Patent is revoked.

16. Upon the termination of this Agreement whether under any of the provisions hereof or otherwise howsoever the British Company for a period of six (6) months thereafter shall have the privilege of completing and selling its stock of bearings on hand at the date of such termination upon the terms which would have ruled if this Agreement had not been so terminated and subject to the payment of royalties as herein provided

17. (a) In the event of liquidation of the British Company or the appointment of a receiver of its undertaking (except for the purpose of capital reorganization) this Agreement shall immediately terminate and cease

(b) The rights and privileges of the British Company hereunder shall be assignable only with the consent in writing of the American Company

18. (a) This Agreement shall come into operation and effect as provided in an agreement dated the twenty-ninth

[fol. 4061] day of December One thousand nine hundred and thirty four and made between the American Company (1) the British Company (2) and Michael Bruce Urquhart Dewar (3) and unless otherwise terminated as herein provided shall continue in full force and effect for a period of sixteen years from the first day of January One thousand nine hundred and thirty five

(b) The agreement between the parties hereto executed as of the first day of January One thousand nine hundred and twenty eight is hereby cancelled as on the date of this agreement coming into operation and effect except as to any monies payable under that agreement in respect of the period down to that date but subject to the provisions of the agreement mentioned in paragraph (a) of this clause

In witness whereof the Timken Roller Bearing Company by the Authority of its Board of Directors has caused these presents to be executed in duplicate by its Secretary and its corporate seal to be hereto affixed and British Timken Limited under the authority of its Board of Directors has caused its Common Seal to be affixed hereto in duplicate as of the day and year first above written

The Timken Roller Bearing Company. By: W. E. Umstattd, President

Signed and Sealed by or on behalf of The Timken Roller Bearing Company in the presence of:

R. C. Brower, Secretary.

Sealed by or on behalf of British Timken Limited in the presence of:

W. B. U. Dewar, F. A. Pascue, Directors; R. O. Squire, Secretary.

[fols. 4062-4063] Dated December twenty-ninth 1934.

The Timken Roller Bearing Company and British Timken Limited,

Agreement as to Business.

[fol. 4064] PLAINTIFF'S EXHIBIT 21

January 8, 1935.

These memoranda read by Mr. Umstattd on 1/12/35.
DPH 1/15/35.

Note

Attached herewith are various memoranda covering briefly, salient features of our new agreements necessary between British Timken, French Timken and American Timken, growing out of the changeover of British Timken from a private company to a public company, and the placing of British Timken shares upon the market.

D. P. Hess.

[fol. 4065] Memorandum 1

Agreement #1

Title—Sale of Shares

This agreement between American Timken, British Timken and M. B. U. Dewar covers the varibus steps necessary to place British Timken shares upon the market.

In the recital part of this agreement is set forth the following points:

(1) The various Articles of Association and By-Laws under which the British Timken Company has been operating.

(2) Resolutions of the Directors pertaining to the employment of Mr. Dallow as manager and Mr. Pascoe as Financial Adviser of the British company.

(3) Agreement between the British Company and Mr. Dewar covering the latter's appointment as Managing Director.

(4) Agreement between the American Company and the British Company establishing business relations (hereinafter referred to as the Business Agreement), agreement between the British Company, French Timken Company and the American Timken Company establishing business relations.

(5) Resolution of the Directors of the British Company increasing the capitalization to £250,000.

(6) Statement in regard to the shareholders of British Timken offering for sale 125,000 shares of British Timken stock, being 50% of the total issued capital.

(7) Provision for reduced royalty payments to take effect in the year 1934 prior to the actual sale of shares to the public.

(8) Provision to restore royalty to 4% if actual sale of shares to the public has not been made.

There is also set forth under the distinct heading of agreement as separate from the heading of recitals, the following:

(1) Provision permitting the British Company, at any time before August 1, 1935, to cancel the existing Articles of Association or adopting new Articles of Association in accordance with the status of the British Company as a public company.

(2) Statement to the effect that the new business agreement will go into operation only if shares have been sold on the market.

[fol. 4066] (3) Clause to the effect that no claim will be made upon the French Company by either the British Company or the American Company for royalties up to the time the new French agreement goes into effect.

(4) Provisions for making new service agreements with Mr. Dewar, Mr. Dallow and Mr. Pascoe. (Details covered in separate agreements Nos. 3, 4a and 4b.

(5) Provisions for new business agreement between the British Company and the French Company to be effective upon completion of sale of shares to the public.

(6) Statement providing that if shares are not sold to the public prior to August 1, 1935, all deeds, agreements and instruments shall be restored to the original status of the British Company as a private company.

Memorandum II

Agreement #2

Title—Business Agreement

This new agreement supersedes the original business agreement dated January 1, 1928 and under which American Timken and British Timken have been operating up to the present time. It is proposed to date the new agreement as of December 31, 1934 so that the two companies will be operating under the new plan before sale of the shares has been made. It is proposed in this memorandum, for brevity sake, to only set forth the difference between the old and the new agreements, and also to mention the fact whether or not these various changes were covered generally in the Heads of Agreement, which were drawn during Mr. Dewar's and Mr. Pascoe's visit to this country last May, and which have been approved by both companies under date of September 24, 1934.

(A) Under paragraph 4 sub-division (a), it was provided that the American Company would instruct the British Company in the manufacture of bearings. This clause has been changed in the new agreement to read "that the American Company will from time advise and instruct the British Company in the manufacture *of any kind of bearings which the American Company may be manufacturing*". The italic part of the preceding sentence is new, and due to the fact that the American Company logically can only advise at the present time on tapered roller bearings rather than on the general classification of bearings, which would pertain to ball bearings, straight roller bearings, etc.

(B) Under paragraph 7 (b) and 8 (b) the old agreements call for the payment of a 10% commission by each company covering sales of bearings into the others territory, and no mention whatever was made as to the prices at which these sales took place. During the past seven years it has been found that with the reduced prices in effect in recent years the original commission was too high, and it has therefore been

reduced to 5% in the new agreements. (This was covered generally in the Heads of Agreement signed September 24, 1934). Certain difficulties were also encountered due to no fixed agreement between the respective companies as to prices at which these bearings could be sold, and therefore the new agreement provides that neither company is permitted to sell into the other's territory except at prices approved by the company into whose territory the bearings are sold.

(C) Paragraph 9 is an entirely new section added to this agreement and covers the fact that the American Company is at liberty to grant licenses covering the manufacture of its steel in the territory of the British Company. The American Company agrees, however, that any royalties payable under such a license will be credited to the British Company covering steels or tubes sold to the British Company by the licensee. This new clause was inserted to eliminate any possible misunderstanding that might arise through the developments abroad of some of our specialized steel products.

[fol. 4068] (D) Paragraph 10, Sub-section A and B are new and provide for the fact that the French Timken Company pays no royalty to either the British Company or the American Comapny.

(E) Paragraph 10 (c) is an entirely new paragraph covering the establishment of Russia as so-called free territory. Under the old agreement Russia was British Timken territory and the American company had no rights to sell bearings into it, except through the payment of a 10% commission to British Timken. Under the new arrangement Russia is considered the territory of both the American Company and the British Company, and the expenses of developing sales in this territory will be equally divided between the two companies. In addition a commission of 2% will be paid by the company receiving Russian orders to the other company, and it is provided that all data pertaining to the procurement of Russian business, such as quotations, drawings, etc., will be exchanged between the two companies. There is also a provision to the effect that prices will be mutually agreed upon but that either company is permitted to accept orders

at low prices and extended terms without the consent of the other party, after having first submitted the prices and terms to the other party. It is also agreed that neither party will underquote the prices of the other party, but at the present writing we are in communication with Mr. Dewar to clarify this phase of the Russian situation, particularly in view of the statement heretofore mentioned about either party being permitted to accept orders at low prices and long terms. (This subject was generally covered in Heads of Agreement dated September 24, 1934).

(F) Paragraph 12, sub-section (A) and (B) specifies the new royalty of ½ of 1% as compared with the 4% royalty in the old agreements. (This feature was covered in the Heads of Agreement).

Sub-section (B) covers detailed deductions of the British Company when making royalty payments, and in the past they were permitted to deduct from the total British sales the amount actually paid American Timken for rollers and cages purchased from us. Under the new agreement this deduction has been eliminated.

(G) Under paragraph 15 the old agreement provided that the American Company would pay all patent costs of every description pertaining to the filing of patent applications, working of patents, taxes on patents, litigation, etc. This is impossible under the reduced royalty in effect in the new agreements, and therefore provision has been made that all of these expenses will be paid by the British Company covering patents in their territories. It is also provided that the British Company is not permitted to drop the maintenance of any patent except by giving four months notice to the American Company.

(H) Under paragraph 18 is set forth the fact that the new business agreement runs for a period of 16 years from January 1, 1935 up to December 31, 1950. The old business agreement under the existing provisions would expire December 31, 1943. (This was covered under heads of agreement dated September 24, 1934).

D. P. Hess.

[fol. 4069] January 8, 1935.

Memorandum III

Agreement #3

Title: Agreement as to Managing Directorship

(A) Paragraph 4 of this agreement provides that Mr. Dewar is to be the Managing Director of the British Timken Company for a period of 5 years from December 31, 1934 and thereafter until his appointment is terminated on six months notice. Under the old arrangement it was provided that "Mr. Dewar shall hold office as Managing Director during his life or until he shall resign such office by not less than six months notice in writing to the Company."

(b) Under paragraph 6 Mr. Dewar's appointment as Managing Director shall cease and determine under the following conditions:

(1) If Mr. Dewar vacates office as a Director of the Company.

(2) If the Company in General Meeting by Ordinary resolution decides that Mr. Dewar's appointment as Managing Director shall cease and determine.

Mr. Dewar's salary remains the same as in the past several years.

D. P. Hess.

[fol. 4070] January 8, 1935.

Memorandum IV(a)

Agreement #4a

Title: Agreement as to General Manager

This is an entirely new agreement and covers the employment of Mr. Dallow as General Manager of the Company for a period of 5 years from December 31, 1934 at a salary of £1500 ($7500.00) per year plus a commission on the net profits of the company for each year, equal to 1% of such profits up to £50,000 ($250,000.00) and 1½% of such profits in excess of £50,000 ($250,000.00) before any deduction for income tax. Mr. Dallow has been the Manager at Birmingham since 1927 at a salary of £1,000 ($5,000.00) per year, with the same commission on profits as outlined above. This increase in salary is merited by his work and is not

excessive for similar positions as now existing in England. It was felt necessary by Mr. Duncan, our attorney, that the executives of the company should be under service agreements before the shares are offered to the public, and we have therefore approved this employment agreement, as well as one for Mr. Pascoe described in Agreement 4b.

We raised the question with Mr. Duncan as to the status of Mr. Dallow's and Mr. Pascoe's employment agreements should the British Company fail to earn the required amount (£15,000) for the Dewar group to retain control of British Timken Ltd. (thus placing American Timken in control), and we suggested that Mr. Dallow and Mr. Pascoe agree to write a letter of resignation should such a condition take place. Mr. Duncan advised us that such a procedure was not legal in England, but that both Mr. Dallow and Mr. Pascoe had agreed verbally with him to resign under the circumstances outlined above, and Mr. Dewar further agreed to the same thing. We have accepted this as satisfactory and are exchanging letters with Mr. Duncan to this effect. It should be understood that Mr. Duncan is American Timken's representative on the Board of British Timken Limited, as well as Timken Holdings Limited.

D. P. Hess.

[fol. 4071] January 8, 1935.

Memorandum IV(b)

Agreement #4b

Title: Agreement as to Financial Adviser

This covers the employment of Mr. Pascoe as Financial Adviser of the British Timken Company for a period of 5 years from December 31, 1934, at a salary of £800 ($4,000.00) per year plus a commission on the net profits of the Company for each year equal to 6/10ths of 1 percent of such profits up to £50,000 ($250,000.00) and 1½% of such profits in excess of £50,000 ($250,000.00) before any deduction for income tax. This is the same salary and commission that Mr. Pascoe has been receiving for the past several years, and the circumstances covering his service agreement are exactly the same as outlined previously with regard to Mr. Dallow's service agreement.

D. P. Hess.

[fol. 4072] January 8, 1935.

Memorandum V

Agreement #5

Title: Consent Agreement

This agreement merely covers the members of the Company consenting to the passing of resolutions cancelling the existing Articles of Association and By-Laws and the substituting of new Articles of Association.

D. P. Hess.

[fol. 4073] January 8, 1935.

Memorandum VI

Agreement #6

Title: Nomination in favor of M. B. U. Dewar or Nominees

This particular agreement covers the issuance of the new stock created by the increase in capitalization of both A and B shares to Mr. Dewar or his nominees, so that such stock is in his possession for sale to the public. It is further provided that this authority shall only continue in force until August 1, 1935. In discussing this matter with Mr. Higgins the latter stated that this is the British practice in handling such affairs.

D. P. Hess.

[fol. 4074] January 8, 1935.

Memorandum VII

Agreement #7

Title: Authority with respect to Sale of Shares

This is entirely a new agreement and gives authority to M. B. U. Dewar to sell 125,000 shares of British Timken Limited so that the net return received after deduction of all expenses shall not be less than £1.4.0. per share (approximately $750,000.). This agreement also provides for issuing the increased number of shares to Mr. Dewar and ourselves in exactly the same ratio as shares now held. (This was covered in the Heads of Agreement dated September 24, 1934). It also provides for changing the shares of British Timken Limited from A and B shares to one class of shares before the stock is put upon the market.

In this agreement the new Holding Company set-up is arranged and, briefly, is as follows: The new Holding Company shall be named Timken Holdings Limited, with Articles of Association and By-Laws substantially the same that exists with British Timken Limited *as a private company*. The share capital of the new Holding Company is to be £125 divided in 2500 shares composed of 1250 A shares and 1250 B shares, and in addition there are 2500 registered participating rights which are attached to the heretofore mentioned A and B shares and cannot be separated from these shares. These particular rights represent all of the new shares held by American Timken and the Dewar group in new British Timken Limited as a public company, the total of such shares being 125,000 and which shares are deposited with the Holding Company. This new Holding Company, briefly, will operate the same as British Timken Limited did as a private company, to the extent that the Dewar group will exercise control of the Holding Company (and in this way will exercise a 50% control of new British Timken Limited as a public company) on the basis that British Timken Ltd. earnings shall be not less than £15,000 per annum and dividends of not less than £12,500 per annum are paid.

Provision is made in the Holding Company setting forth the fact that should one of the parties wish to sell a part of his interest in new British Timken Limited, the shares involved by such sale must first be redeemed through the [fol. 4075] Holding Company and offered to the other party for purchase. It is also provided that if either party sells 5% or more of its shares in the Holding Company, which in turn, of course, means its interest in new British Timken Limited, then the provisions through which control of the Holding Company is exercised (and new British Timken Limited as a result) are changed from the present status. In other words, if the Dewar group wish to sell 5% or more of their stock and American Timken buy it, then the Dewar group no longer control British Timken, and on a similar basis if American Timken choose to sell 5% or more of its holdings in new British Timken Limited, then the operation whereby we obtain control if the earnings fall below £15,000, etc., is also at an end.

It is also provided in this agreement that the 125,000 shares are to be sold at one and the same price and at the

same time, and that the amount received is to be divided between American Timken and the Dewar group on the basis of the number of shares held by each group, and, furthermore, a time limit for completion of the sale of these shares is set as August 31, 1935.

Provision is also made that this particular authority covering the sale of shares must be signed by each and every shareholder of the present British Timken Company as a private company.

We have also added a provision whereby the holder of 800 participating rights in the Holding Company can nominate a director of British Timken Limited as a public company and that the Holding Company will vote its interest in British Timken Limited to effect the election of such nominee.

D. P. Hess.

[fol. 4076] January 8, 1935.

Memorandum VIII

Agreement #8

Title: Shares and Interests in Timken Holdings Limited

This is a new agreement and covers in considerable detail the following major points:

(1) The sale of all shares in the Holding Company to each other, and all necessary acts by either party in connection therewith.

(2) Provision upon the death of Mr. Dewar for the American Company to have an option for a period of six months upon his shares at their fair value, and in case of disagreement the question of price is to be arbitrated by two London Chartered Accountants and an umpire to be appointed by such arbitrators in accordance with the English Arbitration Act of 1899.

(This agreement is practically the same as the one now in force and dated April 20, 1928, covering the American Timken interest and the Dewar interests in British Timken Limited as a private company.)

D. P. Hess.

[fol. 4077] Jan. 9, 1935.

Memorandum IX

Agreement #9

Title: Agreement covering re-distribution of various interests in different companies

This is a new agreement through which the American Company and its various subsidiaries, such as ICI and IBI, and Mr. Dewar, through his Luxembourg Holding Company, agree on the new division and operation of the French Timken Company and the German Timken Company. Briefly, the following points are set forth:

(1) Upon completion of the sale of British Timken shares to the public, Mr. Dewar is to purchase from American Timken a one half interest in French Timken and German Timken, and the price for this purchase is to be $400,000, of which $250,000 is to be paid in cash and a promissory note for $150,000 without interest and secured by Mr. Dewar's share of the assets of French Timken and German Timken. The promissory note will be that of Mr. Dewar's Luxembourg Holding Company and payment of such note will be made as follows: All monies paid by the French Company in respect of Mr. Dewar's French assets, in excess of $7,500 per annum, will be applied as a payment on the heretofore mentioned note. It is also specified that in case of liquidation or sale of the French or German companies, Mr. Dewar's share of such liquidation or sale shall be applied to the payment of the said promissory note.

(2) Mr. Dewar will have control of the French Company as long as the latter company pays a dividend of $24,000 per year. In this latter respect it is provided that such payment shall be made from "undistributed profits", and this clause is interpreted to mean the surplus of profits over and above losses earned after December 31, 1933. Should he fail to pay such an amount covering the operations of any year starting January 1, 1936, such default will mean that he loses control of the French Company, and such control passes into the hands of American Timken. (This was covered in Heads of Agreement dated September 24, 1934).

[fol. 4078] (3) Provision is made so that each party must offer his shares for sale to the other party before presenting them for sale to outside interests, and prices for such shares are to be determined, should the various parties fail to agree, by an arbitration board in accordance with the English Arbitration Act of 1899.

(4) The various transactions necessary upon the books of the American Timken Company to effect this new arrangement of the American Timken Company's foreign interests are to be handled by Messrs. Weiss and Hall of Ernst & Ernst. The plan is to consolidate all of our present foreign holdings into one subsidiary company, and this new company is to be known as Continental Bearings Ltd.. In this way it will be possible to charge off the anticipated losses we will take on our investment in the French and German companies against the anticipated profit we will have through the sale of British Timken Limited shares to the public.

(5) Under this agreement as received, no provision has been made whereby Mr. Dewar agrees to get our consent on the salaries of French Timken directors, similar to the method in force in British Timken Limited as a private company. We have cabled him and Mr. Duncan to have such a clause inserted.

D. P. Hess.

[fol. 4079]

Jan. 9, 1935.

Memorandum X

Agreement #10

Title: Business Agreement between British Timken Limited and S. A. Francaise Timken

This is purely a revision of the old agreement dated June 16, 1928 and covers the actual operation of the French Company as a subsidiary of British Timken Limited. This agreement is very similar to the business agreement between American Timken and British Timken Limited. The following are some of the major features covered:

(1) The French Company maintains at its own expense all patents owned by either the British Company or the American Company in the French Company's territory; i.e., France and its colonies

(2) The French Company pays no royalty to either the British Company or the American Company (covered by Heads of Agreement dated September 24, 1934).

(3) The French Company is permitted to sell into the territory of both the British and American companies at prices satisfactory to the latter companies, but must pay the usual commission of 5%. This same condition holds good for sales by the American or British Companies into French territories.

(4) Provision is made to the effect that both the American Company and the British Company can appoint its own auditors to go over the books of the French Company, but at the expense of the American or British Companies.

(5) This new agreement is to continue in force for the same length of time as the agreement between the American Company and the British Company; i.e., until December 31, 1950.

D. P. Hess.

[fol. 4080] PLAINTIFF'S EXHIBIT 22

Memorandum

Collateral with an Agreement dated Twenty ninth December, One thousand nine hundred and thirty four and made between The Timken Roller Bearing Company of Canton, Ohio, U.S.A. (1) and British Timken Limited of Birmingham, England (2) as to business between the said American Company and the said British Company.

To The Timken Roller Bearing Company, Canton Ohio, U.S.A.

It is hereby agreed that if and so long as the royalty of one half of One per cent (½%) payable under Clause 12 (a) of the above Agreement in respect of tapered roller bearings manufactured or sold by us shall not be payable by us to you in respect of tapered roller bearings manufactured by us and sold by us to Societe Anonyme Francaise Timken or Deutsche Timken Gesellschaft mit beschrankter Haftung we in quoting or selling tapered roller bearings manufactured by us to the said French Company or the said

German Company will give to the purchasing Company the benefit of the royalty which is not payable in respect of the bearings sold by way of an equivalent discount or other allowance from the price to be paid for such bearings.

Dated this Twenty ninth day of December, One thousand nine hundred and thirty four.

For British Timken Limited, M. B. U. Dewar, Managing Director, British Timken Limited, Birmingham, England.

[fol. 4081] PLAINTIFF'S EXHIBIT 23

Agreement

Dated Twenty Eighth May, One thousand nine hundred and thirty five.

Parties

1. The Timken Roller Bearing Company, Canton, Ohio, United States of America (the American Company).

2. British Timken Limited, Cheston Road, Birmingham, England (the British Company).

Supplemental to an Agreement contained in an Agreement and a Supplemental Memorandum both made between the parties to this Agreement and dated the Twenty ninth December, One thousand nine hundred and thirty four, constituting a Business Agreement between the American Company and the British Company.

Whereas

(a) It is provided in the said Business Agreement that it will become unconditional and come into full operation and effect as provided in another Agreement dated the Twenty ninth December, One thousand nine hundred and thirty four and made between the American Company (1) the British Company (2) and Michael Bruce Urquhart Dewar (3).

(b) The said other Agreement has been modified by an Agreement bearing even date herewith and made between the same parties as were parties to the said other Agreement (inter alia) so as to provide that the said Business Agreement shall be modified so as to come into full operation and effect forthwith.

Agreement

The said Agreement and Supplemental Memorandum constituting the said Business Agreement between the par-
[fol. 4082] ties hereto shall come into full operation and effect forthwith.

In witness whereof these presents have been executed by or on behalf of the parties hereto.

Signed sealed and delivered by Andrew Jameson Matthews Duncan as Attorney for and on behalf of the above named Timken Roller Bearing Company in the presence of: R. O. Squire, 65 Cheston Road, Aston, Birmingham.

A. J. M. Duncan, Attorney for or on behalf of The Timken Roller Bearing Company.

The Common Seal of British Timken Limited was hereunto affixed in the presence of: M. B. U. Dewar, F. A. Pascoe, Directors; R. O. Squire, Secretary.

[fol. 4083] PLAINTIFF'S EXHIBIT No. 24

Agreement

Dated Sixth day of June, One thousand nine hundred and thirty five.

Parties

(1) The Timken Roller Bearing Company, Canton Ohio, United States of America (the American Company).

(2) British Timken Limited, Cheston Road, Aston Birmingham, England (the British Company).

Supplemental to an Agreement dated the Twenty ninth day of December, One thousand nine hundred and thirty four, between the American Company and the British Company a Supplemental Memorandum of the same date and addressed by the British Company to the American Company and a Supplemental Agreement made between the British Company and the American Company dated the Twenty eighth day of May, One thousand nine hundred and thirty five the said Agreements and Memorandum consti-

tuting a Business Agreement between the American Company and the British Company.

Whereas:

A. By Clause 18 of the said Agreement dated the Twenty ninth day of December, One thousand nine hundred and thirty four, it was provided that the said agreement should come into operation and effect as therein mentioned and unless otherwise terminated as therein provided should continue in full force and effect for a period of Sixteen years from the First day of January, One thousand nine hundred and thirty five.

B. It has been agreed between the American Company and the British Company that the said period of Sixteen years from the First day of January, One thousand nine hundred and thirty five shall be extended to a period of [fol. 4084] Thirty years from the same date.

Agreement

1. The period of Sixteen years from the First day of January, One thousand nine hundred and thirty five mentioned in Clause 18 of the said Agreement dated the Twenty ninth day of December, One thousand nine hundred and thirty four shall be extended to a period of Thirty years from the First day of January, One thousand nine hundred and thirty five and as from the date of these presents the said Agreement shall be deemed to be altered accordingly.

2. The said Business Agreement constituted by the said Agreements dated the Twenty ninth day of December, One thousand nine hundred and thirty four and the Twenty eighth day of May, One thousand nine hundred and thirty five and the said Memorandum dated the Twenty ninth day of December, One thousand nine hundred and thirty four shall be read and take effect as if the period of Sixteen years from the First day of January, One thousand nine hundred and thirty five mentioned in the said Agreement dated the Twenty ninth day of December, One thousand nine hundred and thirty four had been a period of Thirty years from the First day of January, One thousand nine hundred and thirty five.

In witness whereof these presents have been executed by or on behalf of the parties hereto.

Signed, Sealed and Delivered by Andrew Jameson Matthews Duncan, as Attorney for and on behalf of the Timken Roller Bearing Company above named in the presence of: ——— ———, 10 Mayfair Place, W1, Private Secretary.

For and on behalf of The Timken Roller Bearing Company, A. J. M. Duncan, Attorney.

[fol. 4085] The Common Seal of British Timken Limited was hereunto affixed in the presence of: M. B. U. Dewar, Director; F. A. Pascoe, Director. Pvt. Secretary, — ———.

[fol. 4086] PLAINTIFF'S EXHIBIT No. 25

Agreement made the Fifteenth day of July, One thousand nine hundred and thirty five between British Timken Limited a Joint Stock Company incorporated under the Laws of the United Kingdom of Great Britain and Ireland and having its principal office in the City of Birmingham England (hereinafter for convenience called "the British Company") and Societe Francaise Timken a Societe Anonyme incorporated under the Laws of France and having its principal office in the Town of Asnieres in the Department of Seine France (hereinafter for convenience called "the French Company").

Whereas:

(a) The British Company manufactures anti-friction bearings (hereinafter called "bearings") in England and has great experience in the manufacture of bearings

(b) The French Company is the registered owner of the trade mark "Timken" in France

(c) The British Company or the French Company is or may be or become the owner of patents or patent rights in various parts of the world covering inventions relating to bearings and improvements therein

(d) The Timken Roller Bearing Company of Canton Ohio United States of America is hereinafter for convenience called "the American Company".

Now the parties hereto agree as follows:

1. For the purposes of this Agreement:

(a) The territory of the French Company shall mean the territories of the Republic of France on the Continent of

Europe and her Dominions colonies dependencies and mandatory territories in any part of the world except in or [fol. 4087] adjacent to North or South America

(b) The territory of the British Company shall mean the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all Dominions colonies dependencies and mandatory territories of the United Kingdom and other European countries except in or adjacent to North or South America but shall not include the territory of the French Company

(c) The territory of the American Company shall mean the rest of the world outside the territories of the French Company and the British Company

(d) The British-American territory shall mean the territories of the British Company and the American Company in combination; and

(e) These territories and the corresponding meanings shall be subject to alteration from time to time by agreement between the parties hereto by letter or other writing.

2. (a) Each of the parties hereto as fully and freely as its patent and contractual rights and obligations permit and free of expense to the other party except as to out of pocket expenses will inform the other party as to all inventions discoveries improvements and practices useful in connection with the manufacture of bearings whether patented or not.

(b) The British Company so far as its patent and contractual rights and obligations permit and free of expense to the French Company except as to out of pocket expenses will license the French Company to operate manufacture and sell bearings in the territory of the French Company during the life of this Agreement under any Letters Patent or other patent rights now or hereafter from time to time owned by the British Company and pertaining to the manufacture or sale of bearings in the territory of the French Company.

[fol. 4088] (c) The French Company so far as its patent and contractual rights and obligations permit and free of expense to the British Company except as to out of pocket expenses will assign absolutely and for all time to the British Company or its nominees all Letters Patent or other patent rights now or hereafter from time to time owned by the French Company and pertaining to the manufacture or sale of bearings in the British American territory.

(d) The French Company if and when requested by and at the expense of the British Company will execute and do or cause to be executed and done all deeds acts and things which the British Company may consider necessary or desirable in order that any inventions discoveries improvements or practices useful in connection with the manufacture of bearings which may come to the knowledge of the French Company and which the French Company shall be entitled to communicate to the British Company for this purpose may be protected by Letters Patent or other patent rights in such parts of the British American territory and in such names as the British Company shall specify with a view to such patent rights being assigned to or otherwise vested in the British Company or its nominees in accordance with the provisions hereinbefore contained.

(e) The French Company hereby irrevocably appoints the British Company with power of substitution to be its Attorney for and in its name and on its behalf but at the expense of the British Company to execute and do all deeds acts and things which the British Company or its substitutes from time to time may consider necessary or desirable for the purpose of giving effect to the agreements on the part of the French Company contained in this clause.

(f) Provided however that nothing in this Agreement contained shall obligate either party to acquire or enlarge [fol. 4089] its interest in any Letters Patent or other patent rights.

3. (a) Each of the parties hereto will use its best endeavours to maintain the distinctive character of the trade mark "Timken" and refrain from any act calculated to prejudice the rights of the parties hereto or the American Company in respect thereof as now existing.

(b) The French Company if and when requested by the British Company will join with the British Company or the American Company in an application for concurrent registration of the trade mark "Timken" if and so far as such registration is possible in the territory of the French Company.

(c) The French Company upon the termination of this Agreement if and so far as it may be requested in writing by the British Company or the American Company will cause the name "Timken" to be eliminated from its corporate name and from the name of any person firm or com-

pany controlled by it and will refrain and will cause any person firm or company controlled by it to refrain from using the name "Timken" as part of or in connection with his their or its name or as a trade mark or trade name or otherwise and from any act calculated to obstruct or delay the British Company or the American Company in any steps which it may take with a view to establishing the exclusive right of the British Company or the American Company to the said name in the territory of the French Company and so far as practicable the French Company will assign or cause any person firm or company controlled by it to assign to the British Company or as it may direct any trade mark or other rights in respect of the said name in its ownership or control.

4. (a) So long as the French Company shall be actually engaged in the manufacture of bearings the British Company will from time to time give advice to the French Company with respect to the manufacture of bearings and particularly in connection with the quality of the steel used [fol. 4090] and its composition and analysis the method of case hardening the machinery and processes for grinding gauging sizing quenching die working forging upsetting forming sorting plating and other operations and in connection with any special tools and machinery and the French Company will follow such advice so far as the same shall be economically practicable under the circumstances of the business of the French Company.

(b) The French Company's manufacturing operations shall at all reasonable times be open to inspection by the British Company and the American Company or their representatives.

5. (a) The French Company by itself or its sub-licensees approved by the British Company if and when required by the British Company or the American Company will manufacture bearings in such quantities and in such States within the territory of the French Company and will exercise all such rights in connection with the manufacture of bearings as shall be required to maintain all Letters Patent from time to time owned by the British Company or the American Company in any State or States within the territory of the French Company.

(b) If the French Company desires to be relieved of the obligation contained in paragraph (a) of this clause

with respect to any State it shall be entitled to give notice in writing to the British Company that it excludes such State from the territory of the French Company and thereupon such State shall be withdrawn from the territory of the French Company and shall be added to the British American territory.

(c) For the purposes of this clause a State shall mean a territorial area in which there is separate jurisdiction for patent purposes.

6. Except with the consent in writing of the British Company and the American Company the French Company [fol. 4091] shall not manufacture sell or deal in any bearings except under and in accordance with the terms and provisions of this Agreement and under the trade mark "Timken" and except with the consent in writing of the British Company and the American Company the French Company will not commence to manufacture sell or deal in any other products.

7. The British Company undertakes that during the life of this Agreement the American Company and the British Company shall not directly or indirectly make or sell or license others to make or sell bearings in the territory of the French Company or in the British American Territory knowing them to be for shipment into the territory of the French Company save and except as follows to wit:

(a) The British Company and the American Company may make or sell or license others to make or sell in the British American territory bearings for delivery or shipment into the territory of the French Company as assembled component parts of completed articles of manufacture manufactured in the British American territory or assembled component parts of completed units of manufacture manufactured in the British American territory for incorporation into such completed articles of manufacture

(b) The British Company and the American Company in the British American territory may accept and execute orders for bearings for ultimate destination in the territory of the French Company for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the territory of the French Company or sales at prices in conflct with the wishes of the

[fol. 4092] French Company and the British Company from time to time will notify the French Company of the details of the sales authorized under this paragraph and will pay to the French Company an amount equal to five per centum (5%) of the net sale price received under any sales so authorized not being sales made through or at the request of the French Company

(c) The American Company may authorize not more than four manufacturers or producers of vehicles in the United States of America to import into the territory of the French Company bearings manufactured by the said producers in the American Company's territory for incorporation in new products or for bearing replacement purposes for products previously manufactured or assembled by the said manufacturers or producers or their subsidiaries in the territory of the French Company Provided that they are not stamped with or identified by the name Timken

(d) For the purposes of this clause a holding Company as for instance General Motors Corporation and its constituent and subsidiary Companies shall be deemed to be one manufacturer or producer

(e) The parties hereto recognize and approve the mutual licensing Agreement entered into between the American Company and International Harvesters Company dated the Thirty first day of December One thousand nine hundred and twenty seven and the British Company when requested by the French Company will supply to the French Company a copy of the said Agreement.

8. During the life of this Agreement the French Company shall not directly or indirectly make or sell or license others to make or sell bearings in the British American territory or [fol. 4093] in the territory of the French Company knowing them to be for shipment into the British American territory save and except as follows to wit:

(a) The French Company may make or sell or license others to make or sell in the territory of the French Company bearings for delivery or shipment into the British American territory as assembled component parts of completed articles of manufacture manufactured in the territory of the French Company or as assembled component parts of completed units of manufacture manufactured in the territory of the French Company for incorporation into such completed articles of manufacture

(b) The French Company in the French Company's territory may accept and execute orders for bearings for ultimate destination in the British American territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the British American territory or sales at prices in conflict with the wishes of the British Company and the French Company shall from time to time notify the British Company of the details of the sales authorized under this paragraph and shall pay to the British Company an amount equal to Five per centum (5%) of the net sale price received upon any sales so authorized not being sales made through or at the request of the British Company.

9. Notwithstanding anything in this agreement the American Company shall be at liberty to grant licenses to manufacturers to make and sell in the territory of the French [fol. 4094] Company Steel and/or tubes under Patents or according to methods and processes belonging to the American Company provided always that the American Company will make arrangements so that any royalty or charge which may be payable by any such licensee in respect of steel and/or tubes supplied to the French Company shall be credited to the French Company

10. (a) Subject to the approval in writi g of the British Company as to both terms and person-el to be exercised at its absolute discretion but not otherwise the French Company may from time to time grant sub-licenses to others to make use and vend bearings in the territory of the French Company and may communicate to such sub-licensees any information with respect to inventions, discoveries, improvements and practices whether patented or not received from the British Company

(b) Every such sub-license shall be deemed to be a license granted by the American Company and shall contain a provision to that effect similar to the provision in that behalf contained in this Agreement

(c) All the terms and conditions establishing the business and other relations between the French Company and any sub-licensee within the territory of the French Company shall be submitted to and approved in writing by the British Company before the same are agreed to by the French Company and no alteration shall be made therein without the like approval

(d) If the French Company shall acquire any stocks, shares, securities or other interest in any company or association manufacturing or selling bearings in the territory of the French Company the French Company shall not sell or dispose of such stocks, shares, securities or interest without the consent in writing of the British Company

11. Each of them the British and the American Company [fol. 4095] shall be entitled once in each year at its own expense to employ a Chartered Accountant who shall have the privilege of examining the books of account and records of the French Company and any sub-licensees of the French Company and taking notes or extracts therefrom.

12. (a) The French Company shall pay all renewal fees required to maintain and keep on foot all Letters Patent in respect to bearings in the territory of the French Company owned by the British Company or the American Company of which particulars from time to time have been supplied to the French Company by the British Company

(b) Provided however that if the French Company shall desire to discontinue or refrain from maintaining any such Letters Patent the French Company shall be at liberty to give not less than three (3) months written notice to the British Company and upon the expiration of the said period of three months the Letters Patent to which such notice relates shall belong to and be at the disposal of the British Company free from any rights of the French Company under this agreement and the French Company shall be under no obligation to maintain and keep on foot such Letters Patent

(c) The French Company at its own cost will defend every action or proceeding instituted for the purpose of revoking any Letters Patent with respect to bearings in the territory of the French Company owned by the British Company or the American Company so long as such Letters Patent is being maintained and kept on foot by the French Company under the provisions of this agreement.

(d) If any of the said Letters Patent shall be revoked solely on some ground which would not have been available if the French Company had duly performed its obligations [fol. 4096] under this Agreement then and in any such case the British Company in addition to any other rights which it might have against the French Company shall be entitled to recover from the French Company all costs,

charges and expenses reasonably incurred by it in defending the action or proceeding in which such Letters Patent is revoked.

13. Upon the termination of this Agreement whether under any of the provisions hereof or otherwise howsoever the French Company for a period of six (6) months thereafter shall have the privilege of completing and selling its stock of bearings on hand at the date of the said termination upon the terms which would have ruled if this Agreement had not been so terminated.

14. (a) In the event of liquidation of the French Company (except for the purpose of capital reorganization) or the appointment of a receiver of its undertaking this Agreement shall immediately terminate and cease

(b) The rights and privileges of the French Company hereunder shall be assignable only with the consent in writing of the British Company.

15. This Agreement unless otherwise terminated as herein provided shall continue in full force and effect for a period of thirty (30) years from the First day of January One thousand nine hundred and thirty five.

16. This Agreement is and shall be deemed to be entered into by the British Company on its own account and also for and on behalf of the American Company as a separate party so far as regards any rights benefits or obligations expressly granted, reserved or undertaken by or to the American Company and so far as regards such rights, benefits and obligations the American Company shall be entitled to claim the benefit and be subject to the burden of this [fol. 4097] Agreement accordingly.

17. The agreement between the parties hereto made as at the Sixteenth day of June One thousand nine hundred and twenty eight is hereby cancelled and the British Company for itself and the American Company hereby releases and discharges the French Company from all liability to pay for royalties which are now payable under that agreement by the French Company to the British Company or the American Company but this release shall not extend to any monies due on loan account or current account or otherwise than in respect of such royalties.

18. This Agreement is entered into in England and shall be construed and take effect according to English law.

In Witness whereof British Timken Limited has caused its Common Seal to be affixed and these presents in duplicate and Societe Francaise Timken under the authority of its Board of Directors has caused these presents to be signed by the Managing Director of the French Company in duplicate the day and year first above written.

The Common Seal of British Timken Limited was hereunto affixed in the presence of:

—. Dallow, A. J. M. Duncan, Directors; R. O. Squire, Secretary.

M. B. U. Dewar, Administrateur Delegué, S. A. Francaise Timken.

[fol. 4118] Plaintiff's Exhibit 34

British Timken & Fischer Plants as Described by Dewar

1. Main Birmingham plant and main office. This is the original plant expanded since the war by purchase of property across the street. Present employment is about 2,000 people. This plant they hope to dispose of after the war if they can buy the Northampton plant. The latter while 20% smaller is better laid out and should have the same capacity as the Birmingham plant.

2. Northampton Plant. This is what is called an "assisted plant" in that building and equipment were erected by the government and tooling was provided by British Timken. They believe they will be able to buy it at a fair price after the war, at the same time selling the Birmingham plant, and concentrate tapered bearing manufacture at Northampton Plant which is located at Duston, a small village near Northampton and about 50 miles southeast of Birmingham. About 850 are now employed.

3. Fischer Plant. This is located at Wolverhampton about 30 miles northwest of Birmingham. About 1,500 employees at present time. It is planned that this plant will make all the straight roller and ball bearings in the post-war period.

4. Other small plants now operated but in which British Timken has no financial interest and no idea of running in peace-time are:

1. East Works at Coalville near Leicester about 30 miles east of Birmingham. This is an old freight car plant employing 800. British Timken furnished tooling.

2. Heat-treating plant about halfway between Birmingham and Wolverhampton employing 40 people and operated as a safety measure.

3. Headnessford Plant operated by Fischer about 15 miles from Birmingham and employing about 350.

At present Dewar estimates British Timken and Fischer combined produce about 90% of British tapered roller bearings and about 10% of straight roller and ball bearings. S.K.F. produced balance of tapered roller bearings [fols. 4119-4137] and shares balance of straight roller and ball bearings with Ransome and Marles and Norma-Hoffman. He estimates all four companies as about equal and employing 6,000 each. British Timken growth has been much greater than that of the other bearing companies arousing some jealousy. Of British anti-friction bearing production he estimates 25% tapered and 75% straight roller and ball.

Latest sales estimates for British Timken and Fischer are 2,000,000 £ for the former with 120,000 £ profit before tax and 700,000 £ for the latter with 40,000 £ profit before tax.

Plants are now generally operating 53 hour shifts of 5½ days on a two shift basis. Take home pay has practically doubled with men now averaging 250 £ per year and girls 150 £.

Bearing prices are all over the map as a result of wage changes and of successive use of Swedish, American and British tubing at .06, .12 and .25 cents per pound respectively.

W. Robert Timken.

October 13, 1927

MR. LOTHROP:

Following is a brief outline of the items discussed with Mr. Dewar on his recent *vitis*:

General

Question of royalty was settled on a 4 percent basis, except in cases where British Timken sell to either of our contemplated continental subsidiaries. In these cases we shall receive 2 percent and British Timken shall receive 2 percent from these subsidiaries. The general details of the new contract between ourselves and British Timken are practically the same as the present contract, except that we are given the right on service bearings to fill orders received in New York or other shipping points for bearings going into British Timken territory. We shall continue in such cases to remit to British Timken 10 percent of the net selling price. This agreement is made reciprocal in the sense that British Timken can execute orders received in their territory for service bearings on a similar basis.

British Timken take upon themselves the necessity of registering the name "TIMKEN" in all of their territory I impressed Mr. Dewar with the fact that this should be done at once.

Yours very truly, —— ——.

DPH-HGW

[fol. 4139] PLAINTIFF'S EXHIBIT 39

13th January, 1928.

D. P. Hess, Esq., Messrs The Timken Roller Bearing Co., Canton, Ohio, U.S.A.

DEAR MR. HESS:

As we are actively servicing Timken bearings throughout the whole of Europe, we naturally come up against difficulties from time to time, but a somewhat serious one has just come to our notice which we want to put before you.

In Budapest, Hungary, Timken bearings are serviced by

Mr. Michael Pal, and he has been doing remarkably good business for us during the last year. In the same city there is a house called Messrs Denes & Friedmann, who are the representatives of the Timken-Detroit Axle Company through their British connection. As you know, we have established service prices for bearings identical with your own and operate with the same discounts, but we are much alarmed to find that Messrs Denes & Friedmann can sell Timken Axle sizes considerably cheaper than our own distributor. You can imagine that our own representative to whom we have granted the distributorship of Hungary is naturally upset and feels that the Timken organization as a whole are not doing the right thing.

It seems to us that the Timken-Detroit Axle Co. are taking advantage of their position inasmuch that they buy from you at low prices and ship them over to our territory [fol. 4140] on a small margin of profit, and this does interfere with our service prices. We realise that it is a very difficult problem, but if an opportunity presents itself for mentioning it to your friends in Detroit perhaps you will do so.

Yours faithfully, For British Timken Limited, W. E. Hobley, Sales Manager.

[fol. 4141] PLAINTIFF'S EXHIBIT 40

February 17, 1928

Mr. W. E. Hobley, Sales Manager, British Timken Limited, Birmingham, England

DEAR MR. HOBLEY:

We have finally concluded arrangements with Timken Detroit Axle Company with reference to the sale of our bearings through their distributors in Europe, and particularly in Budapest, Hungary.

Mr. Emmett, of the Automotive Products Company, London, is in touch with this situation, and I believe it would be wise for you to call upon him. He will receive instructions from Timken Detroit to the effect that he should not undersell us or you on service bearings. After you have

seen Mr. Emmett, I would be delighted to hear from you in this regard.

Yours very truly, The Timken Roller Bearing Company, —— ——, Assistant to the President.

6th March, 1928.

Mr. D. P. Hess, Messrs The Timken Roller Bearing Co., Canton, Ohio, U.S.A.

DEAR MR. HESS:

I am very much obliged to you for yours of the 17th February saying that arrangements have been finally completed with the Timken Detroit Axle Co., whereby they shall not in future undercut our various distributors who are situated throughout Europe.

The writer knows Mr. Emmott very well and will take an early opportunity of seeing him and collaborating with him in the sale of service bearings, as presumably they will still be interested in those sizes which are used in the various Detroit Axle models.

Your letter arrived just at the time when we had a visit from Mr. Michael Pal of Budapest, and there is no doubt that the situation which has arisen there is very embarrassing to him. He has made a great deal of propaganda in the country of Hungary, which has resulted in him enjoying quite a good turnover, and it is very disconcerting that the Timken Detroit Axle Co.'s representative is able to offer bearings for replacement at ridiculously low prices.

Yours faithfully, For British Timken Limited, W. E. Hobley.

[fol. 4143] PLAINTIFF'S EXHIBIT 42

Birmingham, 22nd March, 1928.

D. P. Hess Esq., Messrs The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

DEAR MR. HESS:

In your letter of the 17th February you mentioned that arrangements had been concluded with the Timken-Detroit Axle Co. apropos the sale of their service bearings throughout Europe. We have not had an opportunity up till now of seeing the Automotive Products Co. in London, who are the British representatives for the T.D.A. Co., but hope to do so very shortly.

Our reason for writing now is to ask if this arrangement which you have made with Detroit will embrace Australia also. Col. Murray White, who is touring Australia and investigating our distributing arrangements very closely, reports that the firm of Messrs Motor Traders are the agents for the T.D.A. Co. in Australia, but whether their agreement is with the T.D.A. Co. direct or through their London house, we cannot say. The fact is, that they are importing bearings from Detroit and distributing them throughout the trade at lower prices than our own authorized distributors can. As you know, we have established list prices identical with your own, and it is unfair for the Timken-Detroit Axle Co. to service their bearings throughout our territory at lower prices just because they are in a position to do so.

We should like you to take this matter up with them as soon as ever you can make it convenient.

Yours faithfully, For British Timken Limited, W. E. Hobley.

[fol. 4144] PLAINTIFF'S EXHIBIT 43

April 18, 1928.

Mr. W. E. Hobley, Sales Manager, British Timken Limited, Birmingham, England.

DEAR MR. HOBLEY:

Relative to our discussion with Timken Detroit Axle as to the resale of Timken Bearings in Europe, we cannot at

this time give you any information whatever on Australia. I believe frankly, that nothing further can be done until you have a talk with Mr. Emmott, of the Automotive Products Company, on his return to London. We have ascertained from Timken Detroit Axle Company that they have been giving Mr. Emmott a discount of 50 and 10 off list, and possibly a 5 percent discount for cash. It naturally follows that on such a basis various representatives in Europe cannot, as we see it, undersell your representatives except in some minor instances. However, you must bear in mind that while we have certain influence with the Timken Detroit Axle Company, we do not at the moment know of any pressure we could bring to bear on other axle companies who may be doing identically the same thing through European representatives that the Automotive Products Company have undertaken. Naturally, once the trademark of Timken is registered in England, this situation can be entirely cleared up, and Mr. Strough advises me that Mr. Duncan is to bring this subject to Timken Detroit Axle Company's legal representative in your country for attention. Our own suggestion would be that you keep us informed of what troubles you encounter in this regard, partly after you have seen Mr. Emmott, and we shall continue to do everything we can to assist you in this matter.

Yours very truly, The Timken Roller Bearing Company. —— ——, Assistant to the President.

PLAINTIFF'S EXHIBIT 44

July 13, 1929.

British Timken Limited, Birmingham, England.

GENTLEMEN:

Confirming our various cablegrams to you, we are making the following shipments of tractor bearings during July:

500 sets	78216-78551	
500 "	69354-69630	July 17th
500 "	484-474-A	
Same		July 24th
1,000 sets	78216-78551	
1,000 "	69354-69630	July 31st
1,000 "	484-474-A	

In accordance with your latest cablegram we are planning to ship you the following bearings during August:

1,000 sets	78216-78551	
1,000 "	69354-69630	Aug. 7th
1,000 "	484-474-A	
Same		Aug. 14th
Same		Aug. 21st

This is causing us, frankly, a great deal of changing in our plan of operations, as it meant putting all of this type of machinery to making these large bearings, on double shift and operating them seven days per week; but we feel that you need this help very badly at the present [fols. 4147-4148] time, and our joint efforts must be made to keep competition out of this Ford situation.

You may be interested to know that the Ford Motor Company, Detroit, upon receiving advices that your deliveries were not satisfactory, from their English and Cork representatives, immediately placed an order with us for approximately 5,000 sets of bearings, and of course they would have to pay our prices for them. We felt this would be a very serious handicap to your future sales, as they would constantly hold up the fact to you and possibly to us, that you could not handle their production after we

had used our efforts, as you know, successfully, to have them turn over this entire production to you.

We discussed it among ourselves here, and decided the best thing to do would be to make up as many bearings as you needed, and guarantee Ford Motor, Detroit, that you would meet whatever deliveries they required, and we in turn would back you up a full 100 percent. This seemed to satisfy Ford Motor, Detroit, and we are leaving it entirely in your hands as to keeping both the Cork and Manchester authorities thoroughly sold on Timken Bearings from all standpoints, and especially that right now, of delivery.

We are shipping these bearings to Ford, Cork, Ireland, freight prepaid, and are going to bill you your selling prices to Ford. In other words, the following prices:

78216-78551—$5.89
69354-69630— 2.38
484-474-A— 1.51

As you understand, these prices for the differential bearings in particular, are very materially below the prices that we sell Ford, and these quotations to you must be held in strictest confidence, as we certainly would be asked to explain the difference in prices we bill to Ford and the prices to you; and our explanation of this would be that we are billing you such prices on account of the close relationship between the two corporations, and that the British Timken [fols. 4149-4150] Company is standing whatever losses may be incurred.

We are very much interested in knowing your definite plans as to handling future Ford production requirements, and if you are likely to need any additional help from us please write us in detail along this line, so that we can make whatever arrangements are necessary here, to provide ourselves with material, tools, etc. in sufficent time to take care of your requirements.

Yours very truly, The Timken Roller Bearing Company. —— ——, Assistant to the President.

DPH-HGW

P.S.—Have decided to make up an additional 1,000 sets of bearings over and above your orders, while our machinery is set up and in operation. D.P.H.

MY DEAR DON:

. . . . . .

3: PRICE ARRANGEMENT WITHIN THE COUNTRY: In this direction, you will be interested to hear that largely at the instigation of the R.I.V. Company, we have attended meetings of all the manufacturers in France with a view to finding means not only to prevent further price cutting, but to raise our prices.

The fact that all the companies operating in France are very anxious to prevent the continued competition and consequent falling in prices, is an interesting commentary on the present position.

As I have indicated above, it has been most unfortunate that the commencement of operations with French Timken coincided with the severe fall in prices throughout the world and a consequent shrinkage in trade. I think we should endeavour to regard French Timken as an entity on its own and that its finance should be so arranged that it will have an opportunity of establishing itself on a firm basis.

Further, it would appear more economical to make these cuts in interest particularly, rather than to pay the interest out having it subjected to tax and having French Timken in a position where it needs assistance as to Loans.

Yours very sincerely, s/ M.B.U. Dewar

P.S. I am returning to Paris next week when I hope that we may be able to conclude a price agreement between all the companies operating in France.

[fol. 4156] PLAINTIFF'S EXHIBIT 51

22nd June, 1932.

D. P. Hess Esq., Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

After a lot of discussion the French manufacturers, SKF, RIV, SRO, M. & B. and Timken, have decided to try an arrangement which may prevent the senseless price cutting which is going on to-day.

The basis of this arrangement, which has been provisionally concluded to start as from the 1st July and to continue for eighteen months, is that each company should have a percentage of the total of the anti-friction bearing business in France, and that they shall not exceed this quota.

At present, we have not decided on the firm of Accountants who shall be appointed to examine figures to see whether the percentages are being kept, nor have we been able to arrive as yet at any penalties for firms which exceed their quota; but still, a beginning has been made.

As our position in France is that we only manufacture Tapered Roller Bearings, we have been accorded special treatment as we cannot take any part of our quota in Ball Bearings. As it has been difficult to arrive at a total figure for the French market without careful independent investigations, all the percentages have been calculated on the average SKF plus RIV turnover for the years 1929, 1930 and 1931.

I am informed by SKF privately that they have concluded in France and in most parts of the world, a 20 years' agreement with RIV. In France, the average total SKF-RIV turnover for three years was given us as 136 mi" on francs; ($5,400,000.00) of this figure we understand RIV is 15%.

[fol. 4157] Our average turnover, worked out on the same basis, came to 6.75% of SKF plus RIV. We claimed that our business was a steadily increasing one at the expense of Ball Bearings and our quota was increased to 7%.

The SRO figure is 17½%; the M. & B. figure I do not know but it is somewhere between 5% and 8%.

These percentages have all been arrived at by independent negotiations between SKF and the firm concerned.

As mentioned above, we are compelled, as we do not make Ball Bearings, to take the whole of our quota in Tapered Roller Bearings, and so far we have had a continually expanding market. For this reason, I objected very strongly to our quota being 7%. The result has been that we came to an agreement for our turnover for this current year to be 10 million francs, ($400,000.00) which will allow us 5 million francs ($200,000.00) for the second half year. In order to arrive at our next year's figures, it was agreed that we should take our turnover this year extended at the list prices of the Bearings.

For example, supposing we sell 10 million francs, $400,000.00) this year, the list prices of Bearings being 70 million francs, then SKF have undertaken that our turnover next year at list prices shall not be less than 56 million francs, i.e. 80% of this year.

This figure, you will understand, is a minimum guarantee, our maximum being the 7% of whatever the SKF-RIV turnover may be next year.

It is hoped that the trade may be able to increase their prices by at least 20%. This price increase, even with a restricted turnover combined with the proposed cuts in our Overheads, about which I have already written to you, should put us on as favourable a position as the other French manufacturers who are more firmly established but who, nevertheless, have been living on their reserves.

[fol. 4158] It will interest you also to know that during these negotiations, SKF showed to us their agreement with Citroen by which Citroen is compelled legally to place all his orders with them for all Tapered Roller Bearings. On the other hand, Citroen is now negotiating with us and I think we shall ultimately arrive at an understanding with SKF that we shall be entitled to have a proportion of the Citroen business at reasonable prices.

Altogether, I am reasonably satisfied with these negotiations and I feel sure that they will be beneficial to our interests in France.

It is possible that as a result of these negotiations, further talks will take place in England with a view to SKF and ourselves coming to some understanding, but I do not think anything in this direction will be done before the middle of July.

Yours very sincerely, Michael B. U. Dewar

[fol. 4159] PLAINTIFF'S EXHIBIT 52

22nd June, 1932.

D. P. Hess Esq., Messrs. Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

Many thanks for your letter of the 10th June.

With regard to the SKF standards, we have, of course, a separate standard in England; and France, too, have a different standard. The SKF standard has been adopted for the other countries.

I saw de Benedetti in France last week, but apart from their general suggestion that we should join forces with them in France, they have not got any nearer making a direct proposal. As, however, our new arrangement in France will entail all the firms working more closely together, it is quite possible a proposal will come from them in the near future. As regards Russia, I have asked Mr. Pascoe to write to you in full on this matter.

Yours very sincerely, M. B. U. Dewar.

[fol. 4160] PLAINTIFF'S EXHIBIT 53

July 7, 1932.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. 1., England.

DEAR MICHAEL:

Just received your very interesting letter with reference to the French arrangement covering bearing production for the next 18 months. Naturally, we were somewhat disappointed at the small percentage we were able to get, and I am wondering just how this will affect us in the phase of our development program of replacing ball bearings in motor truck design. I judge from your letter that our turn over is to be held to 10 million Francs, and that the replacement of ball bearings by tapered bearings has no effect on increasing this amount.

I am just a little bit puzzled as to the reason for using list prices in computing our turn over for next year. Am I correct in assuming that this is to be the standard

method of arriving at the quota for the various bearing manufacturers or was this a special concession in our favor along the line of making sure that our turn over for next year would not decline more than 20%? Personally, I am not very optimistic as to the possibility of increasing prices 20%. You understand, of course, that my reasoning is largely based on a similar condition in this country and I fully appreciate that particularly on the Continent things are done considerably different than here.

Your statement with regard to Citroen is exceedingly interesting, and at your convenience will you advise us on what basis Citroen is legally compelled to place his orders with S.K.F. Pending your further advice, I am assuming that this was part of the deal for his financing but on the other hand it was our impression that the financing was done by Swedish bankers rather than by S.K.F. directly.

With kindest personal regards, I am

Very truly yours. Assistant to the President.

DPH:MC

[fol. 4161] PLAINTIFF'S EXHIBIT 54

19th July, 1932.

D. P. Hess, Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

MY DEAR DON:

Many thanks for your letter of the 7th instant. I am sorry that you feel disappointed at the smallness of the percentage allotted to S.A.F.T. I enclose you a copy of my letter to the Chairman of the French SKF Company which sets out my views clearly. As a matter of practical politics I do not think that the percentage will affect us next year. It certainly will not affect us this year.

I am sorry that I did not make it clear in my letter as to why list prices were taken in arriving at the turnover to be guaranteed us next year. In the minds of SKF and RIV is fixed the idea that all turnovers in anti-friction bearings will probably decrease 20%. Supposing that prices remain next year on the same basis that they have been for

the first six months of this year, SKF are not prepared to guarantee us for next year more than 80% of our turnover for this year. As however they are hoping to bring about a considerable rise in selling prices, the only way of giving effect to such an idea was to take the list prices of our sales for this year and next year in order to arrive at 80% of the 1932 turnover to be guaranteed us for 1933. Personally I think we have got an exceptionally favoured position in obtaining this guarantee if you consider the big percentage which Renault and Citroen are and have been of our total turnover. If we were to lose them both our [fol. 4162] turnover would be very considerably reduced, and certainly a very long way below 80% of our current year's turnover. In this regard SKF and RIV and everyone with whom I have spoken, including our own staff, are unanimous in their opinion that Renault will make more of their own bearings, particularly if we endeavour to increase the selling prices. SKF told us that Renault had informed them that by the middle of next year they expected to be manufacturing all their own tapered roller bearings with the exception of four symbols. We do not think ourselves that Renault will get quite as far as this.

SKF showed us also their agreement with Citroen, of which I will tell you more later. This agreement, if SKF cared to enforce it in law, compels Citroen to place all orders for tapered roller bearings with SKF.

I think after considering these two points regarding Renault and Citroen you will agree that 80% guarantee for next year is considerably in our favour.

I note you are doubtful about the possibility of raising prices 20%. I am too, but the French prices have been so long uneconomical that I do not think there is likely to be quite the objection that there would be in some other countries. It has already been agreed to advance our service prices 10%. We cannot go further then this as Fischer could then import bearings from Germany.

I do not think that our new agreement is likely to affect the replacement of ball bearings by tapered roller bearings. Also we are in a position to give reasonable delivery of the larger size tapered roller bearings, and I have definite understanding with Mr. Bratt of SKF that we shall be at liberty to supply bearings beyond our quota in instances where anyone else is unable to supply. Certainly in the event of Renault making more of their own bearings we

shall have plenty of room within our quota to supply truck bearings, which business, by the way, is getting on really quite well.

The SKF-Citroen agreement is a signed and sealed legal document in which Citroen undertake to place all orders for tapered roller bearings required by them with SKF at [fol. 4163] cost price plus 10%. There is a formula included for arriving at the cost price and the figures are subject to audit. Although this is an entirely independant agreement between Citroen and SKF on paper, it undoubtedly formed part of a series of agreements—(1) for finance, (2) for instructing Citroen in ball bearing manufacture, and (3) for supplying special steel to Citroen.

Yours very sincerely, M. B. U. Dewar.

Enclosure.

[fol. 4164] 23rd June, 1932.

M. Bratt, Compagnie d'Applications Mecanique, 15, Avenue de la Grande Armee, Paris.

Dear Mr. Bratt:

I have to thank you for your courtesy and patience in the discussions which have proceeded between your Company and S. A. Francaise Timken in Paris recently.

I am glad that a temporary agreement has been reached. Like you, I hope that during the continuance of this temporary arrangement a basis may be found for some more permanent and lasting agreement.

As I advised you verbally at the end of our meetings in Paris, we, of S. A. Francaise Timken, have accepted the present agreement, particularly that part of it embodying the percentage of the CAM-RIV turnover of 7%, because we feel sacrifices must be made all round to come to an agreement.

When the discussions, which must take place in the near future for a more permanent arrangement, are being held, we are anxious that you will not reproach us if we endeavour to arrive for the future at a higher percentage than that at present allotted to us.

Our main reason will be the continued expansion of the Tapered Roller Bearing business which has occurred and

is bound to continue at the expense of the Ball and parallel roller business.

With kindest regards,

Believe me, Yours very sincerely, —— ——.

[fols. 4165-4166] PLAINTIFF'S EXHIBIT 55

July 29, 1932.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. I., England.

DEAR MICHAEL:

Your letter of June 22nd regarding the French anti-friction bearing agreement has been given considerable thought by us, and while we feel that a limitation on volume in France during depression times will have its advantages, there are still a few points that are not entirely clear to us.

Your letter of July 19th, just received, clarifies the situation to some extent, but we are wondering how we can expand our French turnover to such an extent that it will be profitable as our past records indicate, that even with the economics you are putting into effect, we cannot break even with sales less than $400,000.00 ton $450,000.00 annually. Furthermore, as we understand it, our percentage is based on the combined SKF-RIV volume, and as we replace ball bearings with taper bearings, are we not automatically reducing our volume by cutting SKF-RIV sales due to the fact that they furnish the greater part of anti-friction bearing requirements in France.

Of course, the fact that we are permitted to supply over our quota where no one else is in a position to supply, may help temporarily, but if French SKF follow England SKF, they will certainly put themselves into a competitive position with us on taper bearings for commercial vehicle use.

Are we correct in assuming that the combined turnover figures given in your letter of June 22nd as 136,000,000 francs represent SKF and RIV sales of all kinds of anti-friction bearings, and no SKF steel is included?

With kindest regards, Very truly yours, The Timken Roller Bearing Co., —— ——, Assistant to the President.

DPH:MC.

[fol. 4167] PLAINTIFF'S EXHIBIT 56

Aug. 4, 1932.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. I, England.

DEAR MICHAEL:

As instructed by our Board of Directors, I wrote you recently with reference to the French Timken situation. Judd Spray was advised by Bill Batt of SKF that he had received information from Sweden to the effect that RIV and SKF had made an agreement whereby SKF would handle the sale of RIV bearings all over the world with the exception of Italy. This ties in somewhat with your statement about these two companies making a 20 year agreement, but I cannot conceive just why any such sales agreement covering distribution would be made when both companies make the same line of product. If you get an opportunity will you try and check this statement or give us any other information you can along this line.

We are trying very hard to obtain the Ford Canadian business for you, and it now looks like we are going to be successful. SKF is quoting against us but we have a very good idea of what their prices are and are arranging our quotations accordingly. Unfortunately, Ford at the present time is having considerable trouble with his eight cylinder car and is planning on changing the axle design, which, of course, will affect our bearings, and the Canadian plant has held up all purchases for the time being. We will keep you posted in this matter.

With kindest regards, I am Very truly yours, The Timken Roller Bearing Co., —— ——, Assistant to the President.

DPH:MC.

[fol. 4168] PLAINTIFF'S EXHIBIT 57

23rd August, 1932.

D. P. Hess, Esq., Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

I have to acknowledge receipt of your letter of August 4th.

I find it exceedingly difficult to reply to your letter of the 29th July on the subject of our agreement with SKF-RIV in France. There appears to be such a different view put in your letter from what I know your view would be if you were here that it is difficult to put all the points in a letter. I am, however, drafting a reply which I hope will convey to your Board the position.

The information that Spray has received from Batt is quite correct. I have recently had the pleasure of meeting the Chairman of the R. I. V. at their French factory at Chambery which, by the way, is a wonderful factory, although at least twice as large as anything they require. He told me that they have made an agreement with SKF to the effect that SKF will handle all the sales of RIV Bearings all over the world with the exception of Italy and Russia; in Italy 85% of the Bearings used will be RIV and 15% SKF. Russia is free territory and the subject of no agreement as yet.

The SKF-RIV agreement is, as you say, for 20 years.

The reason I think the agreement has come about is as follows:

The RIV plant in Italy is now probably as big as the SKF plant in Gothenburg. Roughly 80% of the capacity of [fol. 4169] the RIV plant is being sold to Russia. How long this will go on it will be difficult to say, but there is no doubt that supposing the Russian market were to dry up, RIV would be forced to find markets for this enormous output which would certainly have the effect of cutting price levels all over the world.

I am informed on very good authority that of the present SKF output in Gothenburg, 60% at least is now for Russia.

The SKF-RIV agreement makes the Timken situation

outside the United States really worse than it was before, as RIV have a very large production of inch size Bearings, in fact almost as complete a range as our own, and I have no doubt we shall soon begin to feel cuts in Service prices, and I expect that you will also in the territories outside the United States.

The RIV factory in France is brand new and of 15,000 square metres floor space on one level, with north light roof. They have tied themselves up now to SKF to a turnover of not more than 20 million france per annum for this factory, and they have made the suggestion to us that instead of our moving into a new factory, we should share their factory at Chambery with them.

You will probably have noticed that Prytz has just been made Chairman of the International Re-organisation Committee of the Swedish Match Company, so that it is possible somebody else may take control of the policy of SKF. It they do, I think it quite possible that negotiations may be set on foot again to try to find some arrangement between us.

With kindest regards, Yours very sincerely, M. B. U. Dewar.

[fol. 4170] PLAINTIFF'S EXHIBIT 58

30th August 1932.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio.

MY DEAR DON:

I have to acknowledge receipt of your letter of 29th July on the subject of the French anti-friction bearing agreement. The points raised in your letter as as follows:

1. A limitation of production in France during times of depression will be advantageous.
2. We are prevented from expanding our turnover.
3. If we cannot expand our turnover how is it going to be possible to make a profit?
4. Owing to our percentage being based on S.K.F. sales if we reduce S.K.F. sales we automatically reduce our percentage.

The whole basis of an agreement with S.K.F.-R.I.V. is to make it possible to increase prices. Since the formation of S.A.F.T. we have been forcing our way into the French market by replacing ball bearings with taper bearings. S.K.F. have replied to this by manufacturing taper bearings here and selling them at prices which as you know have become unprofitable. Any increase in prices will help our position and if no increase in price is effected then the agreement will undoubtedly lapse. Your letter seems to me to overlook the fact that the agreement must have a beneficial effect on us this year and does not extend beyond the end of 1933.

Referring to the points raised in your letter of 29th July, as I have outlined them above, with regard to (1), I [fol. 4171] do not understand why there is to be a limitation of production. The proposal is to keep the relative output as existing between the different manufacturers on the same basis as it is to-day for eighteen months and to avoid unnecessary price cutting. If the total volume of business decreases then output will decrease. If the total volume of business increases then output will increase.

With regard to (2), we have to some extent tied our hands for a very short time, but against this we have received for next year a guarantee of anyhow 80% of the business we have obtained this year. If S.K.F.'s contention that business will fall off next year to the extent of 20% is realised then we are put into a good position by such a guarantee.

If we assume that our turnover during the current year is Frs. 10,000,000 ($400,000.00), 4.3 millions ($172,000.00), will probably be for Renault and 1 million ($40,000.00) for Citroen. S.K.F. have only to enforce their written agreements with Citroen to take this million from us. If, as S.K.F. contend, Renault will in the coming year make a bigger proportion of his taper bearings then our output will automatically be reduced by a reduction in our Renault turnover.

From this you will realise that the expansion of our business, if Renault make all their bearings themselves and S.K.F. make all the Citroen bearings, must come from heavy vehicle sources which will certainly take us over 18 months to exploit and in any event there is nothing to prevent us taking commercial vehicle bearings as part a-

our quota at fair prices and letting the Renault business be done by Renault himself at his own loss.

With regard to (3), in spite of making all possible economies that we can here in every way, we are more likely to achieve our desire to make a profit by an increase of anti-[fol. 4172] friction bearing prices rather than by reducing prices to a still lower level than they had reached six months ago.

With regard to (4), as the agreement is only to the end of 1933 this point does not seem to be of any great importance. Further our calculations go to show that the S.K.F.-R.I.V. turnover for 1930 was in the region of Frs. 170,000,000 ($6,800,000.00), and for 1929 even higher. This has been confirmed by their Managing Director.

With regard to the third paragraph of your letter about French S.K.F. following England S.K.F., I regret that I cannot understand the meaning of the paragraph.

With regard to the last paragraph, you are correct in assuming that Frs. 136,000,000 ($5,440,000.00), represents the S.K.F.-R.I.V. sales of anti-friction bearings excluding railway bearings and excluding steel.

In 1931 it is estimated that the production of taper roller bearings was approximately as follows:

Timken	12.5	million francs	$500,000.00
S.K.F.	4.0	" "	$160,000.00
R.I.V.	1.0	" "	$40,000.00
			$700,000.00

For 1932 the same figures will be approximately:

Timken	10.0	million francs	$400,000.00
S.K.F. & R.I.V.	3.5	" "	$140,000.00
			$540,000.00

Of this total of 13.5 million francs ($540,000.00), the Citroen and Renault orders to us will be in the region of 5.5 millions, ($220,000.00), this leaves a balanee of all taper roller bearing orders of Citroen and the other manufacturers o 8 millions ($320,000.00), so that under our agreement we have received a guarantee from S.K.F. of all the taper roller [fol. 4173] bearing orders placed this year with the exception of Renault and 1 million of the Citroen business.

I trust that this letter will make it a little more clear to you that we regard this deal as entirely satisfactory and likely to lead to a very much better state of affairs.

Yours sincerely, Michael Dewar.

I wish you were here. 5 minutes would suffice to enable you to appreciate that which takes weeks by letter.

Just off to Brittany for 10 days holiday.

Dewar.

[fol. 4175] PLAINTIFF'S EXHIBIT 60

4th November, 1932.

Mr. H. H. Timken, Timken Roller Bearing Company, Canton, Ohio.

DEAR MR. TIMKEN:

Just returned from Paris and a further study of the French situation.

As you recall, I wired you we were exceeding our so-called quota, sales being (of all Anti-Friction Bearings) 11% instead of 7% and September figures now show our

business represents 13%. This, of course, indicates just one thing, and that is the growing popularity of our product, and this is bound to be a source of further discussion as to our quota. We also find that the whole operation of the so-called cartel, like all other such plans, is giving its originator and operator SKF considerable trouble.

As you know, SRO (a Swiss Ball Bearing maker with a French plant) were allotted 17%, but they are now up to 20% and SKF can't get their customers to accept RIV Ball Bearings in place of SKF—the customers ordering SRO instead—so this makes matters still more involved. On top of our 13%, we just received two-thirds of the Citroen commercial vehicle requirements to June of next year. This should be about $20,000.00 or about one-third of all the Citroen business we have done so far in 1932, and Bratt, head of French S.K.F., said he would try to arrange during 1932 to give us one third of the total Citroen business.

One thing is very encouraging about the operation of the cartel. Between SKF and ourselves we have raised [fol. 4176] prices about 5% and come to a definite agreement as to service prices in France.

Incidentally, we were told definitely by SKF that they had loaned Citroen personally considerable money and he was tied up to use SKF Bearings and steel. You know we thought he might have received this money from the Swedish bankers, possibly Kreuger & Toll, but we now know just where he got it, and we were further told that the Citroen notes, coming due this year, would be renewed.

The Michelin Tyre people also helped Citroen at the same time.

Dewar and I have been discussing what to do in case they try to reduce our volume to the quota figure and after considering various plans, we have come to the conclusion to try and hold our present volume (about $400,000.00 sales annually) and in exchange for this higher quota, offer SKF one half of our steel tonnage in France. This seems like a good move and will possibly be quite acceptable to SKF as their steel production in Sweden must be very low at this time.

Dewar and Bratt, head of SKF in France, are very friendly. Prytz is coming to England in December as head of a Swedish trade delegation, and we have lined up a

tentative programme to discuss with him regarding England.

I wired Bill to send four chucking machines to France. Our truck business in the larger sizes is growing very fast and we are working two shifts trying to fill the orders, and even then can't quite meet deliveries.

We have definitely decided to renew our present lease for another year, and feel certain we can get a reduced rental.

I told you in my wire we had worked out economies so that with even a reduced sales volume of $320,000.00 annually (our guaranteed minimum) we could very nearly break even. Will describe this in detail on my return, but have told the French-Timken operating staff that is a definite programme, as we cannot continue taking any [fol. 4177] further losses.

Dewar is keenly alive to the entire situation and is spending at least half his time in France.

Higgins is here and it looks like we finally have the financial structure definitely set up in simple form, unless we again run afoul of these rotten French taxes and laws. The experts in Paris are now on it and we should have their decision next week.

With best regards to you all, Sincerely yours, Don P. Hess.

[fol. 4178] PLAINTIFF'S EXHIBIT 61

5th December, 1932.

J. D. Spray, Esq., Timken Roller Bearing Co., Canton, Ohio.

MY DEAR JUDD:

This letter is just to confirm the cables which have passed between us, which are as follows:

Your cable 1.12.32:

"Trying to Improve Conditions in Canadian Market Stop Do You Approve Comparing Your Quotations Which We Have Here with Blare for Canada and Dagenham."

My cable 1.12.32.

"L.70 Yours not Understood Our Prices for Ford Canada Are Slightly Higher Than Ford Dagenham Stop We Are

at Present Negotiating with Blare England Regarding Dagenham Stop We Understand that Blare Parent Factory Supplies Canada Stop Understand that Blares Chairman in London Shortly".

Your cable 2.12.32.

"L70 Pending Your Meeting with Blare Chairman Will Discuss Canadian Prices Only with Blare New York".

I do hope you are writing as even after your last cable I am still rather in the dark.

I take it that you are trying to improve the price level in the Canadian market. Is it your suggestion that you and ourselves should try to arrive at a general arrangement with SKF regarding quotations to Ford in Canada and at [fol. 4179] Dagenham, or for other manufacturers in Canada as well as Ford? As I believe you are aware, we have not as yet had to reduce our f. o r. prices for Canada as low as we have had our prices driven down for Ford Dagenham.

During Mr. Hess's visit, he told us of certain events on your side of the water. The result of this information has been that we are engaged at present in negotiating an arrangement with SKF to cover orders placed by Ford Dagenham. As the SKF position is at present, their English Company is only interested in Dagenham. Their Swedish Company is interested in the Canadian market and in all other places where they assemble cars.

As you probably know, we have at present practically the whole of the Ford European business with the exception of a percentage in England and with the exception entirely of their German orders. Our proposed agreement for Dagenhan will be on the basis of us having 70% and SKF having 30% of the work.

I would add, in addition, that we hope to come to an arrangement on Service work for all Bearings in England as part of the same arrangement.

I shall naturally be most interested to hear how your negotiations regarding Canada go. If, as seems extremely probable, sterling depreciates in terms of gold still more than it has done, we should still be in a position to compete with SKF in Canada provided we have the benefit of your selling organisation to help us.*

With kindest regards, Yours very sincerely, Michael B. U. Dewar.

* & of course if you will write!!

[fol. 4180] PLAINTIFF'S EXHIBIT 62

13th December, 1932.

Mr. D. P. Hess, The Timken Roller Bearing Company, Canton, Ohio. U. S. A.

MY DEAR DON:

On Friday, the 9th December, a meeting, which we had expected for some considerable time, actually took place. The meeting was more or less at the request of Mr. Agnelli, who, as you know, is very anxious to join up with us in France so that our plant could be transferred to his half-empty factory at Chambery. His argument is that the combined outputs of RIV and Timken in one factory would have the effect of cheapening production.

The Meeting consisted of the following:

Mgr. Director	Agnelli	R. I. V.
Sales Mgr.	de Benedetti	
	Forsberg	SKF Gothenburg
	Batt	SKF New York
Mgr. Director	Bratt	SKF France
	M. B. U. Dewar	British Timken, England.
	F. J. Pascoe	

Prytz was unable to be present, but Forsberg took his place.

[fol. 4181] Agnelli opened the discussion by asking what could be done about the French situation. We replied that before any such thing as joint manufacturing between Timken and RIV (who are so closely associated with SKF) could take place, it would be essential to have the very closest co-operation and probably even manufacturing agreements between SKF Gothenburg and the Timken Roller Bearing Co. at Canton. We pointed out that if they wanted such a close association it would be essential for them (SKF) to take the matter up with T.R.B. as it would be impossible for Timken and RIV to manufacture side by side in one factory in France without all the technical information, both regarding processes of manufacture and applications, being common knowledge.

Agnelli suggested that SKF would probably be willing to waive their right of entrance into the French RIV fac-

tory so that no-one other than RIV would know of our methods of manufacture, application, and so on.

Forsberg then stated that SKF could not possibly agree to this as it was entirely one-sided, RIV having access to the whole of the SKF knowledge regarding Ball Bearings, which would consequently come to Timken, and SKF being barred from any knowledge which they might acquire from the RIV association with Timken.

After Forsberg's remarks I said that even if SKF had no access to the RIV factory in France, RIV themselves were very serious competitors in Tapered Roller Bearings manufactured in Turin. After that I re-iterated that in my opinion—and it was an opinion only as I had no right in any sense whatever to speak for the T.R.B., Canton, and I had no knowledge of what was in their thoughts—I felt that the key to such very close co-operation, as joint manufacturing, lay between SKF, Gothenburg, and the T.R.B. in Canton.

Mr. Batt then informed us that he had had some discussion of an informal nature with T.R.B. regarding the possibility of stabilising prices in the Canadian market. This brought from Mr. Fosberg a statement to the effect that SKF, Gothenburg, had asked SRO in Switzerland, to ap- [fol. 4182] proach Fischer in Germany with a view to a possible price arrangement of a world-wide nature between SKF, Fischer and SRO.

Mr. Forsberg pointed out that as long as Fischer was outside it was extremely difficult to make any price arrangements even in Tapered Roller Bearings alone in countries which had low tariffs. He informed us that he was advised that Fischer was now making a range of Tapered Roller Bearings up to really large sizes.

My feelings, as a result of all this discussion, are that everybody is anxious to come to some arrangement to prevent the increase in capacity for the production of Anti-Friction Bearings and also to prevent further price cutting. As you are aware, there is at present an arrangement over Anti-Friction Bearings in France between all the manufacturers who count. In England, Timken have just concluded an arrangement with SKF on prices to be quoted to Ford, Dagenham, and on Service Bearings in England.

RIV have concluded a twenty years' agreement with SKF

over all the world except Russia. The next step is, undoubtedly, for SKF to try and bring Fischer into line. When they have done that, I think there will be every prospect of arriving at a price agreement on Tapered Roller Bearings on the Continent and in all countries where such action is legal.

You will notice in the above discussions that England was not considered at all from the general Anti-Friction bearing point of view. I am, however, able to tell you that SKF, England, have invited us to discuss with them some arrangement on Ball Bearing prices for Industrial purposes.

As you are aware, their Industrial business in England is the business from which they obtain most of the profit for their English Company.

I am glad to be able to tell you this, as we have long felt [fols. 4183-4184] here that the threat of attacking the SKF industrial business in England and in other lucrative markets would cause SKF to seek to protect themselves by mutual agreements on Anti-Friction Bearing business.

Yours very sincerely, (signed) Michael Dewar.

* I have received another letter stating our German manager Wrba had been approached by SKF relative to agree on Rolling Mill prices in Germany—Duncan is writing me in detail on this last move—

Don H

European Trip

D. P. Hess

August & September 1933

[fol. 4186] September 28, 1933.

BRITISH TIMKEN LIMITED

British Timken sales so far this year are $1,000,000.00, being 25% above last year's sales, and profits, before taxes, are approximately $48,000.00 for the first seven months as compared to $36,500.00 for the same period last year. The increase in sales volume is largely in the automotive division but where prices are very low. In fact, automotive sales are double last year's sales, and a good portion of this can be traced to Ford's success with his 8 HP car—the competitor of Morris' and Austin's small popular priced models. We have had 90% of the Ford business and as he had reached a volume of 200 cars daily on his 8 HP, one can easily realize the result on our sales volume. However, all British automotive production is up approximately 20% over last year and we have shared in this business. Commercial vehicle sales are up about 8% and service sales about 15%. Russian business has amounted to 12% of our total sales volume. (The entire Russian subject will be discussed later in this report).

During the current year, real progress has been made in cooperation with SKF to not only stabilize sales prices but to raise them generally, and contracts for the last half, do in many cases, call for a 5% increase in prices. The need for this is vital when we consider the fact that automotive and commercial vehicle sales prices have declined about 30% since 1929. This is due almost entirely to SKF competition but our present relations with them in England are quite cordial and we feel that for the next year we face no further price cuts. This relationship with SKF started with our offering to split the Ford business on a 70-30 basis during my visit last fall, but it is interesting to know that we continue to receive 90% of Ford business, due in all probability to the fact that we are considered 100% British, and of even more importance, we give Ford

excellent service and have assigned one man to spend practically all of his time at Dagenham. Another point of interest in our Dagenham Ford relations is that Ford refuses to follow the same practice as Detroit in fitting pinion bearings, insisting, in cooperation with British Timken engineers, that Detroit is fitting entirely too tight and that at Dagenham they have much better results with a "looser" fit. In other words, the pinion gear turns freely and not like the tight method used at Detroit. I explained the entire Ford Detroit situation to our Mr. Hill of British Timken, so that he would be prepared for any complaints, but he assured me that Dagenham is entirely satisfied with present results and refuses to follow Detroit unless they get into trouble. Incidentally, the success of the Ford 8 HP model has greatly stirred British automotive circles and there is a definite trend to bring new models out more in conformance with American design, and we feel that this will cause both Morris and Austin to redesign their axles and possibly give us an opportunity to replace the present ball bearings, at least in the front wheels.

The British Bock Company of Glasgow has finally decided to liquidate and the entire stock of bearings on hand has been taken over by us and SKF and divided equally. In the contract which is in the name of British Timken, it is specified that all tools and gauges and special machinery is to be destroyed, and the writer agreed to cancel our present license to British Bock and transfer it to British Timken. No further manufacture of Bock bearings is contemplated so the license is merely to protect the name of Bock. The plan was to divide the present Bock customers between SKF and ourselves, but at the time of my visit this was not working out very well as most of Bock customers were demanding Timken bearings, but we are [fol. 4187] giving SKF a copy of every inquiry so that they can quote on the business. We decided this was the fair and wisest thing to do, and if they cannot get the business, it is entirely their own fault.

Industrial sales continue to grow and indastry generally in England is on the upgrade. I was told that the steel business is better than any time since 1929 and in the Sheffield district every open hearth furnace is in operation. We are getting a goood many inquiries for bearings in this industry. The new tariff is helping the manufacture of machine tools and this in turn will help us.

No new agreement between England and Russia has been reached, and while negotiations are still in progress no one knows what will happen. There is no question, however, but that the present time is very serious for Russia. It is no longer a secret that they have asked and received extensions from Germany on this Year's payments of bills, and possibly from Italy. They are placing very little business anywhere and then only on very long terms with no down payment. Recently an order was placed in Germany for a large tonnage of steel bars and rails at 48 months terms. I questioned the truth of this but our Dr. Wrba told me he knew one of the Germans making the deal. He further told me that 30-36 months was not out of the ordinary. Later in London, I ascertained that the new Russian-Italian agreement just signed called for terms ranging from 28 to 44 months with a government guarantee of 70%. It is getting increasingly difficult to get anything like accurate information as to conditions in Russia, but there is a very definite food shortage in many districts and the so-called 5 year plan of food production is a flat failure. We are further told both in Germany and England that industrial production is falling far behind due to the ruination of machinery by unskilled Russian labor. Just before I left France, I learned that there is a real possibility that the Soviet regime will try to make some settlement of the old Czarist Russian debts, hoping in this way to get some kind of long term credit. This is most likely if they fail to get U. S. A. recognition in the very near future, as the Soviet has exhausted all the old blandishments of placing big orders with European nations. It is, however, considered a typically Russian trick and no one takes it seriously. Just how much the present Hitler regime in Germany will effect Russian trade relations is, of course, not known, but the feeling in Germany is very definitely pro-Hitler, which must mean anti-Russian with its communistic trait. This, of course, would force Russia to go elsewhere for machinery, etc., and most naturally to England or the U. S. A. It is very doubtful, however, if England will give long terms and if we in the U. S. A. do likewise, the Russians are very much "up against it". Most Englishmen feel that we Americans will fall for the Russians and their promises, particularly if our government guarantees a part of the invoice value, but at the same time

they admit they themselves would like the business but on British terms.

There is no real sales improvement so far in our railroad business at British Timken, but several encouraging developments have taken place. The largest railroad in England, London, Midland & Scottish, has definitely undertaken modernizing their equipment and also buying new equipment. They are greatly pleased with the performance of our bearings and tell us we shall get more orders eventually. Our record on the Metropolitan Railway has attracted nation wide attention and we are getting good publicity from it. All the underground lines, bus systems and trolley cars in the London metropolitan district have been merged into one big corporation and two of the five men in responsible positions are very good friends of ours. Mr. Halley, formerly Traffic Manager at Metropolitan, is now Chief [fol. 4188] Operating Manager in charge of all traffic for the new combine, and Mr. Groffbaker, a personal friend of our Mr. Pascoe, is Assistant Chief Mechanical Engineer and is slated to be Chief Mechanical Engineer very shortly. With these two men favorable to us, we should get a large volume of this kind of business in the coming years. During my visit, we decided to have Mr. Spear, who handles British Timken railroad sales, come at once to America and he will spend some time with us. Attached to this report is a record of British Timken railroad sales to date, as well as present inquiries.

Manufacturing

British Timken has made real progress in improving their manufacturing practice during the past year. The weakest point has always been in the Screw Machine Department, but from July of 1932 to the present time, they have increased the output of this department from 50 to 70% and improved the quality in a like manner. They give most of the credit for this to the two linemen we sent them some time ago, and the writer is satisfied that they have overcome this serious obstacle. In fact, practically all the machines are timed exactly like Canton's, and while they do not equal our production, they do very well considering the small quantities they have to make. The entire cup and cone grinding department, except OD cup grinders, is operated by female labor and all machines operate on Canton units.

The new ball bearings are starting to come through and they expect to be producing 16,000 per month by the end of September. As far as I could tell, they are producing an excellent job and tests they showed me indicated performance was better than their competition. Two of the largest manufacturers, Leland and Standard, have told Mr. Dewar we can have half of their ball bearing business whenever we are ready to produce. I urged them to go very slow in this development and found Mr. Dewar entirely in accord. They are selling straight roller bearings in the industrial field, mostly for electric motors, but here again, we are following the policy of "making haste slowly".

Several changes are being made in the British Timken executive staff which will be described verbally by the writer.

Financial

British Timken's position continues to be very sound as is evidenced by their balance sheet, and it is a question in the writer's mind if they are not entirely too conservative from the standpoint of possible mergers alone. This point I discussed very carefully with Mr. Pascoe and will go into all details with Mr. Ernst and Mr. Brower. To emphasize this point I asked Mr. Pascoe to prepare a statement showing the true values at the present time, of our investment in British Timken, and this is attached to this report and marked Exhibit "C". Personally, I would like to see us put British Timken stock in the open market, when the right time comes, as I feel we should be in a position to take something back out of this company. I discussed this subject with Mr. Dewar and Mr. Pascoe and they will give it some thought and discuss it with us on their visit to America next Spring.

No further discussion with Ransome & Marles regarding a merger has taken place. Both Mr. Dewar and Mr. Pascoe feel that such a combination is almost impossible as long as Col. Higgs dominates Ransome. We rather feel that our improved relations with SKF will evidently bring on discussions among all antifriction bearing manufacturers and thus possibly pave a way for future mergers. SFK are greatly disturbed about our entry into the ball bearing [fol. 4189] field and have already asked us to agree on industrial prices. Mr. Dewar stated we would discuss this

after we got under way to some extent and also after we see how we can work together on taper prices.

Both Mr. Dewar and Mrs. Pascoe are watching the R.I.V. (Italian) situation very carefully and Mr. Dewar is keeping in constant friendly contact with Angellis, head of R.I.V. Our latest information is that the R.I.V. plant is very slack due to the letdown in Russian orders, and our British associates feel that they will use every means to sell this output at low prices, all over the world. This, of course, might affect us materially in South America and Canada where we have maintained good service prices, but it is the writer's opinion we shall have no great difficulty in the U.S.A. as long as the present tariff is maintained and with the depreciated dollar.

General

Business conditions in England are improving almost daily and I have never seen so much optimism expressed by all Englishmen with whom I came in contact. As heretofore mentioned, both the steel industry and automotive industry are improving materially and all railroad lines report increased traffic and earnings. Consumer buying is given as being 50% above the past three years average, and several of the writer's friends in England selling direct to the ultimate consumer say they are having difficulty supplying the trade. I spent a few hours discussing present conditions with a certain Mr. Glenday attached to the British Federated Industries Board (similar to our U. S. Chamber of Commerce). He is reputed to be one of the best British economists and he feels Britain is headed for several years of real prosperity but as he remarked "no boom times like you have in the U. S. A.". His remarks on our present activities in America were very interesting and I will report them verbally. Another Englishman whom I found exceptionally well posted was Mr. Wallace, head of the Chase Bank. He was more conservative than Mr. Glenday regarding British affairs but definitely stated that going "off gold" was Britain's salvation and that in his opinion England was finished forever as a "free trade country". With only one exception, I found that British industrialists and bankers feel certain we will have inflation in the U. S. A. and possibly of a drastic character. Their observations of our labor situation is quite interest-

ing but too lengthy for this report and I will give it verbally to anyone interested.

Mr. Dewar and Mr. Pascoe plan to come to America next Spring as soon as Mr. Timken has returned.

D. P, Hess.

DPH:MC.

[fol. 4190]

EXHIBIT "C"

British Timken Limited

To December 31, 1932

British Timken was purchased in September 1926, the first Accounts under the new conditions being made up to 31st December, 1927. The statement below shows the profit of each year and the amounts paid in dividends; the amounts carried to Reserve Funds, all figures being after deduction of Income Tax.

Period to 31st December				
Year 1927	Profit	$331,149	To Reserve	$243,343
Year 1928	Profit	297,697	To Reserve	170,340
			To Special Reserve	73,003
Year 1929	Profit	293,316	To Reserve	170,340
			To Special Reserve	24,334
			To Dividend net	77,870
Year 1930	Profit	205,808	To Reserve	146,006
			To Dividend	47,145
Year 1931	Profit	275,881	To Reserve	146,006
			To Dividend	73,003
Year 1932	Profit	75,228	To Reserve	97,337
			To Dividend	45,626
In Six Years—Total Profit		$1,479,043	Total to Reserve	$973,375
			Total Special Reserve	$97,337
			Total Paid in Dividends	$243,647
Balance carried forward to 1933				$164,721
In Six Years Net Assets of British Timken have increased by				$973,375
Plus				$164,721
				$1,138,096

The above is calculated after depreciation has been written off all Plant at the normal rate of 7½% and after setting aside a Special Reserve for obsolescence of $97,337.

To arrive at real increase of Net Assets allowance should be made for hidden reserves created in the amounts at which Tools and Gauges stand in Balance Sheet and the bidden reserve in the Stock figure.

[fol. 4191]

Tools and Gauges. In June 1931 a valuation was made by Heatley, Kirk & Price which showed a valuation for Tools of $196,972 against a Balance Sheet figures of $22,699, giving as Hidden Reserve $174,273—and as Tools in September 1926 were worth approximately $43,801 (valuation not Balance Sheet figure).

	$174,273
	$ 43,801
	$130,472

Stock

October 1926. Wages in Stock and W.I.P.	$42,964
Charges 165%. Charges on Wages in Stock 56%. Hidden Reserve 109% of $42,964	$46,833
December 31, 1932. Wages in Stock and W.I.P.	$73,669
Charges 416%. Charges on Wages in Stock 56%. Hidden Reserve 360% of $73,669	$625,210
Increase in Hidden Reserve in Stock from 1926 to 1932	$625,210
Less	$46,833
	$218,377

It follows that true increase in Net Assets of British Timken is:

$1,138,094	—Reserve and carry forward
$ 130,472	—Hidden Reserve in Tools
$ 218,377	—Hidden Reserve in Stock
$1,486,943	

Net Assets of British Timken are worth—$1,973,631.

Further, our present Lend Buildings bought for $97,337 were valued in 1931 by W. K. P. at $355,281; giving a further Hidden Reserve of $257,944.

So Net Assets of British Timken may now be shown as	$1,973,631
Plus	$ 257,944
	$2,231,575.

[fol. 4192]

The Timken Roller Bearing Company originally invested $255,510 in British Timken. On this investment we have received in dividends $127,914.

We have also received in royalties, since the above investment was made $260,194.

In the same period we have received orders for materials and equipment, amounting to $524,342.

Our true present investment in British Timken based on December 31, 1932 figures is $1,171,573.

being 52½% of the amount shown heretofore as $2,231,575.

Note: All figures given based on par exchange $4.86—1£. Present exchange rate is $4.78—1£.

French Timken

[fol. 4199] French Timken at the present time is having its best year and figures now available for the first six months show a profit for the first half of $30,000.00 as compared with a loss for the same period last year amounting to $48,000.00. It should be realized, however, that this year's operations are relieved from the payment of interest on indebtedness and royalty, but even so, the results are decidedly better than in the past five years. Assuming the same royalty and interest conditions as were in effect last year, then this half year's profit would be reduced to $13,000.00.

The improvements in the current year's operations are due mainly to two important factors, namely, better diversification of sales and improved manufacturing methods. It will be recalled that prior to this year a large part of our sales, in fact 59%, was concentrated on two major customers, Citroen and Renault, and prices received from these customers were very low. As a result of this situation, during the past two years, French Timken has been concentrating on the other major sales lines, such as commercial vehicles, industrial bearings and service, and thus our sales this year to Renault and Citroen only represent 31% of our total sales.

Our success in the French commercial vehicle field has been very marked and at present Timken bearings are used in some positions on practically all such vehicles built in France. This is indicated in comparing sales for the past two years, as follows:

1932 sales for commercial vehicles	$6,400.00
1933 sales for commercial vehicles	$25,000.00 (based on first six months)

Percentage of increase 305%.

We are, of course, continuing vigorous sales efforts to place our bearings in still wider use in this branch of the automotive industry.

One of the basic reasons in selling Citroen and Renault in the automotive field has been the hope of increasing our service business. While both of these companies manufacture their own bearings, we have, nevertheless, been in-

strumental in their use of taper bearings instead of ball bearings, and are beginning to share the service business with them. This is largely the reason that current service sales compare with 1932 sales as follows:

1932 Service sales $24,000.00
1933 Service sales $35,000.00 (based on first 6 months)
Percentage of increase 40%

We feel that this business will continue to grow because we shall soon feel the effect of our sales in the commercial vehicle field, and furthermore the development of bus transportation with its replacement business, is progressing at a rapid rate all over France but particularly in the South. Added to these facts we have the continued domination of the French automotive market by Citroen and Renault, with the resulting wider use of taper bearings.
[fol. 4200] In the industrial field our growth has also been very encouraging, as evidenced by the following figures:

1932 Industrial sales $9,100.00
1933 Industrial sales 18,400.00 (based on first 6 months)
Percentage of increase 102%

As is generally known, France is not primarily an industrial country like Germany and England, so this branch of our business will never reach a large growth. However, there is a definite development in the steel industry both in erecting new plants and modernizing old ones, and we are watching this development very closely. In addition, the purchase of American made machine tools has been stimulated with the decline of the dollar in its relation to the franc, and this should enhance our industrial sales eventually.

The development of Timken Bearings in railroad use has been slow. We have had a trial installation on three cars of the Est Railway for the past 18 months and these bearings have been entirely successful. Largely as a result of our performance in this test we have just received an order from the Est Railway covering 240 bearings and boxes. This is our first real railroad order in France and we feel it shows a definite recognition of our product in this particular field, and by one of the largest companies as well.

We are making considerable headway in the so-called Diesel railcar field in France. This branch of the railroad industry is bound to have real growth particular in Northern France, where so many summer resorts and channel ports are located. We have had our bearings on a Bugatti railcar running from Paris to Deauville for the past six months. This is a distance of about 120 miles, which is made in two hours. Just within the past few days Bugatti has received an order for ten more such cars on which our bearings will be mounted. In addition Renault has also obtained an order for 20 cars and we in turn have received the bearing order.

As is generally known, we are members of the French antifriction bearing cartel. This cartel was started in July 1932 and expires at the end of this year. Under its provisions, our share of the French anti-friction bearing business was set at 7% of the combined business of SKF and RIV, with a guaranteed minimum of $320,000.00 yearly. However, as closely as can be ascertained, we are operating at about 10% instead of 7%, and discussions are now in progress regarding a new arrangement to start in 1934. Our programme, tentatively settled during the writer's visit, is to insist on abandoning the idea of us having a percentage of the anti-friction bearing business, as obviously not being ball bearing manufacturers, we cannot compete in this field. We shall try to obtain an agreement that we should have 75% of the taper bearing business, but exclude both Citroen and Renault from the calculations as no one can know how many of their own bearings they will manufacture themselves. At present we estimate our share of the taper business, excluding Renault and Citroen, at about 65%. SKF object strenuously to the minimum guarantee we now have, and we have decided if we can reach an agreement satisfactory to us on other points, that we will waive this guaranty as we are confident our present position in France is well established and can be maintained.

One of the greatest difficulties in the cartel arrangement has been the allotment of ball bearing business to the Italian concern, R.I.V. During the past year a large part of the French industry has refused to use these bearings as no advantage in prices was obtainable (which, of course, was [fol. 4201] impossible under the cartel agreement). As a

result SKF, managing the cartel, has told us the ball bearing situation was almost intolerable. S.R.O. (Swiss manufacturer with a French plant) was getting more than their share from disgruntled R.I.V. customers. During my stay in Paris, we were informed unofficially, but very reliably, that SKF had taken over the R.I.V. factory and sales at Chambery, France, and from now on R.I.V. activities in France were at an end. This should be quite beneficial to a new arrangement, as it only leaves three major manufacturers in France, namely, SKF, making all kinds of bearings, S.R.O., making largely ball and a few straight roller bearings, and Timken, making only taper bearings. Another point which is coming up for discussion is SKF's insistance that they market their so-called "standard" taper bearing. It will be recalled at the international anti-friction and standards meeting held in Milan, Italy, two years ago, our Mr. Wooler, representing the U.S.A. and its taper bearing standard (100% Timken), was unsuccessful in persuading the meeting to accept our standard with the result that all of the countries represented (England was not represented officially) except France and the U. S. A. accepted an SKF standard for taper bearings (largely interchangeable with ball bearings). It was only through our Mr. de Beauvivier's position in the French anti-friction bearing industry that we held France in line so that even now French opinion seems subject to strong pressure from SKF. As a result of this condition, SKF in France are pressing the sale of their standard taper product at discounts of about 10% under the present Timken type bearing prices, uring the user to change over to their type, thus making the mountings interchangeable with ball bearings. We shall, of course, fight this strenuously but our position is none too strong, regardless of the excellent performance of our product, as SKF is dominant in France, and the average French automotive builder will do anything to get a 10% reduction in prices, particularly when SKF guarantee performance.

The financial situation is distinctly better at French Timken from the standpoint that all current expenses are being met and we have cash on hand. There are no further plant expenditures to be made of any sizable nature, so that if sales can be maintained at current levels,

we should continue present profitable operations. Even a small decline in sales will not affect us greatly as we have not yet felt the full effect of manufacturing economies originated last fall and early this year. Several changes in the set up of our French balance sheet are to be made but the writer will discuss this in detail with Mr. Brower and Mr. Ernst.

General

Business conditions in France are better than a year ago, with unemployment down to about 200,000 persons, and the general industrial production figure being 108 as against 96 for the same period in 1932. The steel industry for June and July was 25% higher in output than for the same months last year.

The automotive industry is reported about 15% ahead of last year with Renault making considerable headway due largely to Citroen's strike during April and May. The latter is also handicapped due to the production of a bad model two years ago, and in turn Renault has brought his recent models very much "up to date". The French market is still very favorable to the four cylinder type and I am told that Renault's 4-cylinder model is much superior to Citroen's, who put his faith into a six cylinder a few years ago and who has gone back to large scale production of a four cylinder type.

[fol. 4202] Everyone in France is much disturbed about conditions in the U. S. A., and I found an almost universal feeling that the world is leagued against France. While it should be realized this condition is almost hereditary, I never met it so strongly as during this visit. The French politicians are using it constantly, citing our leaving the gold standard, our tariff walls, etc., as all aimed at France. Apparently this same line of reasoning is predominent in the fact that all published figures show that France's budget deficit is about 6,000,000,000 francs, whereas I was told by one of our American bankers in France that the actual figure was three times that amount but the French people cannot be told, as even now they are refusing to buy French government bonds. In addition French exports are constantly falling and the tourist trade this summer in France is almost negligible due largely to the high cost of living in a country still on the gold basis, and

the resentment on the part of Americans due to the French failure to pay their war debts even in a small degree.

D. P. Hess.

[fol. 4203] September 27, 1933.

GERMAN TIMKEN

While sales for German Timken for this current year are more than double last year, being $31,000.00 as compared with $13,000.00, for the first six months, conditions in Germany are such that during my visit we seriously considered shutting down tight at our Berlin plant. At the time of my arrival in Germany, government restrictions were such that no money in excess of $50.00 could be taken from Germany and when it is realized Deutimken depends on either British Timken or French Timken for bearings, we can easily see that it would mean putting more and more money in the form of goods into Germany and hoping to get paid for it at some time. These restrictions had been in force for about four months and during this time we had sold rolling mill bearings, made in England, to several German firms. We had been allowed to use from 8 to 12% of the invoice value for the purchase of British pounds, and both Mr. Dewar and Mr. Pascoe had decided to use some of the "blocked" marks in the purchase of German securities. I investigated this procedure quite thoroughly and agree with it, as should Germany go off the gold standard with the resulting depreciation of the Reichmark it would make the possibility of German Timken ultimately paying British Timken almost out of the question.

However, during the first week in September, the German government relaxed its currency restrictions and as a result it appears British Timken can get a large part of its funds transferred. The situation, however, is one of a day to day nature as these restrictions are put on without notice. At our meeting in London, however, we definitely decided to continue on with German Timken for at least six months and review the situation at that time.

Business generally in Germany is about the same as last year except that new orders from Russia are very small. The whole country is greatly upset by political turmoil and

this is having its effect on business. It is rather interesting to know that the textile business, however, is enjoying almost boom times due to the demand for brown shirts and swastika flags. There is no question however but that the Hitler movement is gaining a strong foothold in Germany. Of course, this is probably due in some measure to the rigid dictator type of administration now in force which seems to suit the large percentage of German people but at the same time the Hitler idea of so-called world domination by Germanic ideas is rapidly building up antagonism all over Europe and in England. It must be remembered that that German people have had this doctrine preached to them since Bismarck's time and that the sad lessons of the war are t ng forgotten by Hitler's Nazi followers, the large majority of whom are under 30 years of age, with little, if any, war experience. This group, unable to make a livelihood by the usual methods due to the large unemployment in Germany, naturally have plenty of time and desire to listen to almost any kind of teaching or propaganda with the result that any idea capable of stirring up either national idealism or hatred is reasonably sure of success. What the outcome will be no one seems to know, but the writer received many statements outside of Germany which I will report verbally.

D. P. Hess.

[fol. 4204] PLAINTIFF'S EXHIBIT 64

December 2, 1933.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W.1, England.

DEAR MICHAEL:

Delighted to receive your letter of the 10th ult. outlining the situation with regard to SKF standard bearings in France, and we are glad to know that SKF seem to be pushing the use of tapered roller bearings.

We are anxiously awaiting the results of your conference with Mr. Bratt and Mr. Gorsberg and hope that you will

be successful in coming to an arrangement for the French market.

Very truly yours, The Timken Roller Bearing Co.,
Assistant to the President.

DPH:MC.

[fol. 4205] PLAINTIFF'S EXHIBIT 65

22nd December, 1933.

Mr. D. P. Hess, Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

I enclose herewith draft of the proposed agreement between Francaise Timken and CAM.

As you know, we have been working on this for some months. The idea of this arrangement is to divide the Tapered Roller Bearing market between ourselves and CAM in a manner which is not constant but which depends on the total anti-friction bearing turnover of CAM. As CAM produce approximately 80% of the Ball Bearings produced in France, any great increase in the use of Tapered Roller Bearings must come from CAM's Ball Bearing sales unless the total anti-friction bearing sales increase.

Taking the agreement clause by clause, I should like to make the following comments:

Introduction: "CAM" will cover "SKF" and all its associated companies wherever situated.

Article 2: Prohibits during the term of the agreement Timken making in France or importing Ball Bearings.

Article 3: You will notice that Axle Boxes and Rolling Mill Bearings are excluded from the arrangement. Several examples of the Timken quota are given under varying conditions. After a good deal of thought, we have come to the conclusion that the conditions most likely to be obtained during the next two years will lie between a total anti-friction bearing sale by CAM and Timken of from 110 to [fol. 4206] 130 million francs per annum and a total sale of Tapered Roller Bearings from 19 to perhaps 30 millions per annum, although in view of the continual decrease in the production of motor cars in France, I regard this figure as rather optimistic.

In the division of the market between ourselves and CAM, the following figures, which I believed Mr. de Beauvivier gave you, are of interest:

(Figures in Millions of frances)

Taper Roller Bearing Sales

	1929	1930	1931	1932	1933
Timken Sales:	5.36	7.9	12.6	10.1	10.2
CAM Sales	1	2	3.5	5.4	8.5
	6.36	9.9	16.1	15.6	18.7

During this period we have lost sales due to the Citroen financial agreement with SKF of 5.0 millions per annum which CAM have gained, and Renault have increased their own manufacture of Taper Bearings from one million per annum to six million per annum.

Article 4: Agrees to a fine of 25% if either side exceeds their quota. The method of paying and agreeing these fines month by month is the suggestion of CAM.

Article 7: As I have informed you before, we have already been forced into the position of manufacturing SKF sizes of Tapered Roller Bearings and we are beginning to supply these to Berliet during next month. As the SKF standards are now the accepted standards for all millimetre manufacturing countries, with the exception of France, it is only a question of time before they become standard in France also.

[fol. 4207] It appears obviously to be in both our interests to manufacture one series of Bearings rather than to manufacture two. In other words, if we standardise on the SKF series, we may have to manufacture 80 sizes of bearings whereas if we manufacture both Timken and SKF, we shall have to manufacture probably 180 sizes of Bearings for several years to come.

Article 8: It is proposed that the agreement should be for a minimum period of two years.

We have been able to obtain from SKF some details regarding the dimensions of their Bearings which will be of assistance in enabling us to manufacture Bearings identical to theirs. They have asked us in return to let

them have details of the dimensions of those bearings which we have manufactured. I have taken this out of the agreement as I do not know what feeling you have on the matter. As SKF and RIV are already manufacturing Bearings which are to all intents and purposes interchangeable to ours, I see no objection to letting them have the information for those sizes of Bearings which they and we are already manufacturing in France; particularly as it will be a considerable saving of trouble to us to have the complete details of their Bearings in return.

I am very anxious to get this agreement settled during the first fortnight in January. I propose to go over to Paris on the 8th and should like to have your agreement by then.

In view of the great strength of SKF on the Continent and our weakness, I feel very satisfied with the proposed arrangement.

With best wishes for Xmas and the New Year,

Yours very sincerely,

Michael B. U. Dewar.

[fol. 4208] PLAINTIFF'S EXHIBIT 65A

Between,

The Societe Anonyme FRANCAISE TIMKEN with a capital of 10,000,000.—hereafter described as "TIMKEN" having its registered office at Asnieres (Seine) 5 Quai Aulagnier, being the only organisation for the sale of Timken bearings in France, French Colonies and Protectorates, on the one part,

and:

The Compagnie d' Applications Mecaniques, with a capital of Frs. 27,000,000.—hereafter described as "CAM" having its registered office at Paris, 15 Avenue de la Grande Armee, being the only organisation for the sale of S.K.F. Bearings in France, French Colonies and Protectorates, on the other part,

the following has been agreed:

ARTICLE I

The agreement concluded between TIMKEN and CAM on the 17th June 1932 and which expires on the 31st December

1933 will be replaced as and from the 1st January 1934 by the present contract which will have the same object as the aforementioned, namely the consolidation of the market and the development of the sale of tapered roller bearings.

ARTICLE II

TIMKEN agrees not to manufacture or sell, either directly or indirectly, in France, or in the French Colonies [fol. 4209] or Protectorates, bearings or thrust washers other than tapered roller bearings and tapered roller thrust washers and their components.

ARTICLE III

The market in tapered roller bearings controlled by TIMKEN and CAM in France and in the French Colonies and Protectorates will be divided between the two Firms in taking into account, firstly the "total" and secondly the "special" markets of the two Firms. The "Total" market will be composed of the total annual sales of TIMKEN and of any organisation controlled by the latter, of tapered roller bearings and tapered roller thrust washers, and their components, with the exceptions specified hereunder, and the total annual sales of CAM and of any organisation controlled by the latter, of bearings and thrust washers of all types and their components, with the exceptions specified hereunder.

The "Special" market will be composed of the total annual sales of TIMKEN as enumerated above and of the total annual sales of CAM of tapered roller bearings and tapered roller thrust washers, and their components, with the exceptions specified hereunder.

In calculating the "total" and the "special" markets, the following will be excluded:

a) The sales of the two contracting parties consisting of:

1. Bearings destined for use with axle boxes or wheels of Railways or Tramways;
[fol. 4210] 2. Castings for Plumber Blocks, etc.
3. Tapered rollers sold alone.
4. Bearings employed on Rolling Mills.

b) 1. Sales made between the two contracting firms, as well as those between organisations of which they have control.

2. Sales made outside France, French Colonies and Protectorates.

3. Sales of Timken and S.K.F. bearings made abroad and imported in France, either in the form of parts comprised in machines or cars, or in the form of purchases made by Competitors of stocks taken over from Firms in liquidation or Bankruptcy.

In calculating the "total" market, exception will be made in addition, of balls and cylindrical rolls sold alone, as well as any other article which is not a true bearing, or thrust washer, or component of a bearing or thrust washer.

In calculating the "special" market, exception will in addition be made of any article which is not a true tapered roller bearing or tapered roller thrust washer or a component of a tapered roller bearing or tapered roller thrust washer.

To determine the percentage reserved for Timken, the part of the annual "special" market above Frs. 10,000,000.—will be divided into several sections and Timken will be entitled to a percentage on the amount of each section, according to the following table:

[fol. 4211]

Sections	Percentage reserved for Timken on the amount of each section
Above Frs. 10,000,000- and up to and including 20,000,000.-	53% (fifty three)
Above Frs. 20,000,000.-and up to and including 30,000,000.-	38% (thirty eight)
Above Frs. 30,000,000.-and up to and including 40,000,000.-	28% (twenty eight)
Above Frs. 40,000,000.-	20% (twenty)

To the Timken qutoa thus determined, must be added for the "special" market above Frs. 10,000,000.—a sum representing 5% of the "total" market.

In the improbable case of the "special" market being less than Frs. 10,000,000.—it is understood that the parties should agree to fix other percentages.

Example	(1)	(2)	(3)	(4)
Total Market	110,000,000	123,000,000	132,000,000	138,000,000
Special Market	19,000,000	28,000,000	35,000,000	42,000,000
Timken percentage for each section:				
Above Frs. 10,000,000 and up to and including 20,000,000	53%	53%	53%	53%
Above Frs. 20,000,000 and up to and including Frs. 30,000,000		38%	38%	38%
Above Frs. 30,000,000 and up to and including Frs. 40,000,000			28%	28%
Above Frs. 40,000				20%

[fol. 4212]

	(1)	(2)	(3)	(4)
Timken Percentage on Total Market	5%	5%	5%	5%
Corresponding Timken quota for each section.				
Above Frs. 10,000,000 and up to and including Frs. 20,000,000.	4,770,000	5,300,000	5,300,000	5,300,000
Above Frs. 20,000,000 and up to and including Frs. 30,000,000.		3,040,000	3,800,000	3,800,000
Above Frs. 30,000,000 and up to and including Frs. 40,000,000			1,400,000	2,800,000
Above Frs. 40,000,000				400,000
Corresponding Timken quota on Special Market	5,500,000	6,150,000	6,600,000	6,900,000
	10,270,000	14,490,000	17,100,000	19,200,000

Article IV

If Timken does not attain the quota CAM agrees to pay to Timken a sum amounting to 25% of the deficiency, and if Timken exceeds the quota, the latter agrees to pay to CAM 25% of the excess.

1. Timken quota ..... 11,000,000 Frs.
   Total Timken sales ..... 10,600,000 Frs.
   CAM will pay Timken 25% ..... (11,000,000–10,600,000)=100,000 Frs.
2. Timken quota ..... 12,000,000 Frs.
   Total Timken sales ..... 12,700,000 Frs.
   Timken will pay CAM 25% ..... (12,700,000–12,000,000)=175,000 Frs.

[fol. 4213] ARTICLE V

A payment will be made as soon as possible, and any case not later than sixty days after the end of every month for the part of the year already expired, according to the following examples:

Figures at 31st January:	Total market 1/1- to 31/1	Frs. 10.000.000
	Special market 1/1- to 31/1	Frs. 1.900.000
	Total Timken sales	Frs. 950.000

The total market corresponds to a total market for one year of:

$\frac{12}{1} \times 10.000.000$ ..... Frs. 120.000.000

The Special market corresponds to a total market for one year of:

$\frac{12}{1} \times 1.900.000$ ..... Frs. 22.800.000

	Timken quota for one year	Frs. 12.364.000
	Timken quota for one month	Frs. 1.030.333
CAM will pay Timken 25% (1.030.333,33-950.000)-		Frs. 20.083.333
Figures at 28th February:	Total market 1/1 to 28/2	Frs. 19.000.000
	Special market 1/1 to 28/2	Frs. 3.900.000
	Total Timken sales	Frs. 2.000.000

The Total market corresponds to a total market for one year of:

$\frac{12}{2} \times 19.000.000$ ..... Frs. 114.000.000

The special market corresponds to a total market for one year of:

$\frac{12}{2} \times 3.900.000$ ..... Frs. 23.400.000

	Timken quota for one year	Frs. 12.292.000
	Timken quota for two months	Frs. 2.048.666.67
CAM owes Timken 25% (2.048.666,67-2.000.000)		Frs. 12.166.67
	Amount already paid	Frs. 20.083.33
Timken will pay back to CAM		Frs. 7.916.66

etc., so that the account between the two Firms for each year will be entirely liquidated fater the December pay-
[fol. 4214] ment.

ARTICLE VI

The two contracting parties are in agreement to delegate to a well known Firm of Chartered Accountants the task of calculating the quota and to determine the sum to be paid at the end of each month.

ARTICLE VII

In order to arrive at the allocation of the market as provided in as precise a manner as possible, an intimate commercial collaboration will be established between the two

contracting parties, which will have to determine by agreement the tariff prices and discounts for the retail market, the prices and delivery dates quoted for all large orders, or for important customers. Timken and CAM will reciprocally communicate at least every month, and the examination of the approximate amount of orders received or other useful figures will indicate by comparison which of the two Firms must in collaboration with the other endeavour to take a larger share of the orders.

The two contracting parties engage to favour the standardisation of tapered roller bearings to the dimensions and with the bore tolerances mentioned in appendices 4 and 6 of the report of the Milan 1932 Ball and Roller Bearing Meeting (I S A IV) and with the outside diameter tolerances fixed for ball and roller bearings by the meeting at Paris in 1929.

[fol. 4215] As far as their means of manufacture will permit Timken and CAM will recommend the bearings conforming to the above to their Customers in preference to tapered roller bearings with dimensions and tolerances other than those specified every time that the opportunity presents itself and the standard bearings will be favoured as much as possible in the price policy of the two contracting firms.

ARTICLE VII

The present agreement is made for a period of —— and will subsequently be automatically renewed annually unless three months advice of withdrawal is given by one Party to the other and at the same time to the Firm of Chartered Accountants designated (by registered letter).

ARTICLE IX

It is agreed that all the articles of this contract can be modified at any time by common consent of the two parties.

ARTICLE X

If one of the contracting parties amalgamates or concludes any new agreement with any other firm concerning the division between them of the sales of bearings in France, this present agreement will be altered so that the interests of neither of the two parties will be prejudiced.

ARTICLE XI

The parties expressly agree that all differences concerning the interpretation of the application or the execution of the present agreement will be submitted before one or more arbitrators appointed by the President of the Inter-
[fol. 4216] national Chamber of Commerce or any other similar institution and whose decision will be binding for the two parties.

The parties agree in consequence not to have recourse to a Court of Law.

[fol. 4218] PLAINTIFF'S EXHIBIT 67

4th March 1935.

Mr. D. P. Hess,
Timken Roller Bearing Co.,
Canton, Ohio.

My dear Don:

I have to thank you for your letter of the 21st ultimo regarding the Citroen situation and our arrangement with SKF and France.

It will probably interest you to know that we have come to a temporary agreement with SKF which will limit any payments from S.A.F.T. to SKF to a maximum of Frcs.

20,000 a month for the first three months of this year. These three months I feel, are the critical period as Citroen is improving in production and there is also a certainty now that Peugeot are going to adopt Taper Bearings for at least one of their models.

I will write you further on this matter when I am in Paris which will probably be next week.

Yours sincerely, M. B. U. Dewar.

[fol. 4219] PLAINTIFF'S EXHIBIT 68

January 18, 1934.

Mr. A. C. Ernst,
Ernst & Ernst,
Union Trust Bldg.,
Cleveland, Ohio.

Dear Mr. Ernst:

I have just been called to New York where I have to be present at a meeting tomorrow morning, which eliminates my proposed visit with you to discuss the French SKF agreement. I am, however, enclosing a copy of this agreement and in view of the fact that Mr. Dewar would like to have an answer by January 23rd, I am sending it with John Sander so that it will get into your hands tomorrow (Friday) morning. If necessary, I could, of course, come up and discuss it with you Saturday or Sunday.

This agreement is largely the outgrowth of a discussion which Mr. Dewar and I had during the past summer regarding our French arrangement. As you know, we had been operating at a loss in France up to this year, when we expect to make about $30,000.00 and it is vitally necessary to our operations in French that prices be maintained at the present level. This latter feature is absolutely in the hands of SKF due to their dominating position in France, so that almost any agreement we would enter into would have to be such that a very friendly attitude between the two companies regarding prices would become a large part of it. The other important factor we discussed was the possibility that SKF might attempt to kill the taper roller bearing business in France by marking taper prices down

so low that it would be impossible for us to compete. You will probably recall that this was their attitude in England and was one of the reasons that we decided to go into the ball bearing business, and incidentally, in England since we have gone into the ball bearing business we have reached an arrangement with SKF to gradually increase the prices of taper bearings.

The agreement as proposed is disappointing to me from the standpoint that as the sales of roller bearings increase, our percentage of these sales decrease. Naturally, I would like to have seen us continue to have 53% of the business regardless of whether the so-called special market was 19,000,000 francs per year or 42,000,000 francs per year, and I am sure that Mr. Dewar tried to get such an arrangement because it is one of the points that we discussed during my visit. However, on the other hand, I think the idea of Timken having 5% of the total anti-friction business is a splendid move and goes a long way toward keeping SKF from [fol. 4220] killing the sales of taper bearings. Then, again, the idea of having a penalty for exceeding the quota is reasonably satisfactory from our standpoint, as it is the first time in the history of European transactions that I know of where SKF was willing to pay, in any kind of money, for a violation of a contract on their part.

You will note that this agreement obliges us to go along with SKF in their standardization of taper bearing sizes in France, whereas our attitude here in the U. S. A. has been very much against this standardization. However, I know that SKF can put across their scheme in France if they wish, and all that we can do is to complain and be forced to make the bearings that our customers desire, regardless of whether they are the SKF standards or the so-called Timken type of taper bearing. In other words, we are not strong enough in France to tell any of our customers that we refuse to make the SKF standard bearing, and have no recourse except of loss of that particular sale or the possibility of materially lowering our prices to quote below the prices set up for the SKF standard. Frankly, it is not a comfortable position to be in, but I am in accord with Mr. Dewar in the thought that it is probably the only thing that we can do in France.

I think it would be wise to sign this agreement for two years only, and expect to advise Mr. Dewar to this effect.

I am attaching a memorandum of my own showing the total sales of Timken and SKF under the proposed agreement and covering the various amounts set up in the agreement. You will note from this memoranda that on the assumption that total antifriction bearing sales increase from 110,000,000 to 138,000,000 francs, our increase in sales volume would be approximately 87% whereas SKF would increase approximately 19%.

With kindest regards, Very truly yours, DPH, Assistant to the President.

DPH:MC

[fol. 4221] PLAINTIFF'S EXHIBIT 69

THE TIMKEN ROLLER BEARING COMPANY

Canton, Ohio February 12, 1934.

Mr. H. H. Timken, 708 Electric Bldg., San Diego, Cal.

DEAR MR. TIMKEN:

Thank you kindly for your wire to Senator Johnson which helped me considerably during my visit in Washington 10 days ago. I had a very satisfactory discussion with Senator Johnson, who in turn had discussed my trip with our Russian Ambassador Bullitt who was then in Washington, and at the latter's request it was decided that immediately upon my arrival in Moscow I get in touch with him and he personally will sponsor me during my visit in Russia.. I also spent quite a little time with Harry Payer, who, as you probably recall, is the Cleveland attorney who is acting as Assistant Secretary of State, representing the RFC in the Russian financial transactions. Mr. Payer told me that in his opinion the financial arrangements for handling Russian business would be settled very quickly and that the Russians had definitely stated they would place orders for one hundred million dollars worth of U.S.A. goods upon the completion of such arrangements. Frankly, this sounds a little too ambitious to me, but Mr. Payer seemed to think that it was an accomplished fact. I am simply giving this to you for what it is worth.

I also saw Mr. George N. Peek at the request of Col.

Cooper of New York. Mr. Peek has a commission reporting directly to President Roosevelt in the study of our Foreign Trade Development, and I spent over an hour with him discussing the general European situation, and particularly my Russian trip. He is very much interested in it and has requested that upon my return I call upon him in Washington and give him the reaction that we got not only in Russia but also in Europe. Incidentally, he says he used to know you quite well, and a letter from you thanking him for his attention to me would, I believe, be quite beneficial. Mr. Peek impressed me very much as having his feet thoroughly on the ground and I have been informed in several places in Washington that he is one of the strongest men in the present administration. His address is: George N. Peek, 211 Administration Bldg., Department of Agriculture, Washington, D. C.

Prior to my visit in Washington I took Charlie Balough with me to see Col. H. L. Cooper, whom I have known for several years, and who has been very successful in his transactions with U.S.S.R. He spent quite a little time with Charlie and me advising us various ways of procedure [fol. 4222] when in Moscow, and, needless to say, they were very helpful. He is giving me a letter to a certain Mr. Rosenglotz, who is Commissar of Foreign Trade for the U.S.S.R. and I was told by Mr. Cooper that he is one of the most powerful men in Russia today. Incidentally this is the only letter of introduction Mr. Cooper has ever given to this man, and he explained it by saying that he felt sure the Timken Company relations would be very honorable with the Russians and that he wanted to help me personally all he could.

Charlie and I also saw Mr. Bogdanov, who is giving us usual introductory letters to his associates in Moscow, and I asked him particularly for a letter of introduction to some one in Moscow who is familiar with the plans for railroad development. I am having considerable trouble getting my passport visa for Russia, even in view of the fact that I had a letter from Mr. Bogdanov to the Russian Consul now stationed in Washington. It seems that regardless of such a letter they have to go to Moscow for final approval but up to this time I have not yet received it and it may be that I will have to sail without it. In such an instance I will have to get it either in London or Berlin,

but apparently the routine for handling such affairs is not yet working satisfactorily in Washington.

Foreign Developments

I have just been advised by Mr. Dewar that we recently had the largest payroll in our history at British Timken and he is encouraged by the prospects for the immediate future. Our ball bearing business is starting to move along in pretty fair style and there is no question but that during the last half of this year this should be a factor in our British sales. According to preliminary figures we will earn about the same as last year, i.e., $80,000 or $90,000 net, and with the SKF-British Timken arrangement on prices holding good for the current year, we should be in an even better position than in the early part of last year.

Incidentally, last week I was at Ford Motor Co., Detroit, and met Mr. Pat Hennesy, Director of Purchases for Ford Motor Co. Ltd., Dagenham, England. We spent about an hour together and developed a nice contact which will be invaluable to Mr. Dewar in England. I also met, while at Ford, Mr. Mueller, who, I understand, is the manager of the Swedish plant. I was told by Mr. Loughran, the Ford Motor man who handles all their foreign affairs, that they are looking forward, particularly in England, to a very good year, and that their small 8 HP car was going across very nicely all over Europe. I was also informed by this gentleman that the manufacturing arrangements in France were going to be changed and that the Ford Co. was going to build their own axles and transmissions in France rather than importing them from either England or America, and that we should be ready at our French plant to supply them with their bearing requirements.

I am enclosing copy of our new SKF-French Timken agreement together with a letter I wrote Mr. Ernst at the time I forwarded it to him for his comments. I might say, incidentally, that later in discussing it with Mr. Ernst he was of the opinion that we should do nothing on it other than postpone signing it for six months or longer. I ex- [fol. 4223] plained to him that this, in my opinion, was not possible as it had been under negotiation for quite some little time, but that if he felt definitely on it I would discuss the matter with Mr. Dewar. This I did, and both Mr. Dewar and Mr. Pascoe stated that in their opinion it would be a

serious blunder not to sign this agreement, as SKF at Gottenborg were very much opposed to it on the ground that the French SKF manager had given us entirely too much and there was no reason in the world why SKF was obliged to guarantee us such a high percentage as 5% of their sales. Personally, I agree with Gottenborg, and feel that this percentage is a very strong point in this agreement. All of us here discussed the matter quite in detail and felt that we should follow Mr. Dewar's judgment, and Mr. Ernst also stated that if Mr. Dewar did not feel we should postpone signing, he would withdraw his objections.

French Timken has just received an order for supplying the bearings for the four-high mill being built by Renault in Paris. These bearings will be manufactured in England and shipped through French Timken to Renault. This mill, you will remember, is the one I told you about as being designed by United Engineering & Foundry Co. and it has been hanging fire for about six months. We were up against competition from Bantam in the U.S.A., but French Timken and Mr. Dewar had prevailed upon SKF to withdraw from quoting on this particular mill, so that it was either a question of Renault making the bearings themselves or buying them here in America from Bantam or from French Timken. Frankly, I was more or less concerned that they would try and make them themselves, but apparently they gave up this idea.

The German situation is about the same as when you left, and I have just been advised through Hercules that the Bosch interests at Stuttgart, with the permission of the German government, will allow the use of blocked marks to the extent of 25% of the purchase price of an article. However, this is tied up with a good many restrictions and I have decided that the only thing for me to do is to try and solve the situation together with Charlie Balough while in Germany.

Pumps

I am enclosing copy of memorandum written after my last visit to International Harvester, and also with regard to my conversation with Mr. Woodworth, President of Ex-Cell-O Aircraft & Tool Corporation, while in Cleveland last week. I think both of these are self explanatory, and you have already heard from Charlie Balough that the

Ex-Cell-O pump is working out quite nicely. I just talked to Mr. Treiber on the telephone and he tells me that at high speeds (above 1200 RPM) it is his opinion that the Ex-Cell-O pump is superior to anything he has tried, but at lower speeds it does not function as well as Bosch. I have studied the design of this pump quite considerably, and while it should be somewhat cheaper to manufacture than either the Bosch or Deckel type, it has in my mind, one fundamental feature of design that may be either a detriment or a decided advantage. It is as follows: The so-called magazine of this pump, which is circular and about [fol. 4224] 4" in diameter, is made of one piece and this one piece housing or magazine, contains all six plungers operating in the cylinders themselves, which are bored in this housing. In other words, the slightest wear on one of these six cylinders may spoil the entire housing and it has to go back to the factory, and according to the Ex-Cell-O plan, it will then be repaired and new plungers fit into it and returned to the field. Now this may be a good thing, but almost everywhere I have gone in this country I found this is the major complaint against Bosch, i.e., that no field adjustment can be made and that if anything happens to the pump it must be sent back to the factory. This so-called factory service is exactly the principle on which Ex-Cell-O are working, and Mr. Alden, their engineer, tells me that they are satisfied that for the next several years this is by far the best way to handle fuel injection problems on Diesels, as there are no mechanics skilled enough in the art to make the necessary adjustments in the field. He further tells me that these pumps are all tested and the adjustments made at the factory so that when mounted on a motor or serviced in the field the few connections to be made are extremely simple and practical. I agree with him in this latter fact, but whether it is desirable to have a unit on which practically no adjustments can be made in service is, in my opinion, the real question to decide.

Incidentally, this man Alden of Ex-Cell-O, has impressed Balough and me very much with his knowledge of pumps, and I have just completed arra...gements with Mr. Woodworth, President of Ex-Cell-O, to "borrow" Mr. Alden's services for six weeks, and as a result he will be attached to the staff of the Timken Roller Bearing Co. as a

pump engineer for the above mentioned period. I have agreed to pay his expenses to Europe and return but Ex-Cell-O will pay his salary. Bill Umstattd and I discussed this phase from every angle, and we feel the opportunity of getting the temporary services of a man who has spent 5 years on fuel injection problems as relating to Diesel engines is certainly worth the expenses of his trip to Europe. Incidentally, he seems to be a very well grounded engineer, and I understand for 3 years he was the Dean of Engineering at Ohio Northern University and was also the head of the Engineering School at the Detroit Technical Institute. I trust this meets with your approval.

Summarizing the whole pump situation, we are now prepared to meet various pump people, like Deckel, etc., with Alden's very definite knowledge of fuel injection systems, as well as Charlie Balough's knowledge of Diesel motor design proper. As you know, we all feel that if we go into this pump game we are going to have a very heavy expenditure, and I personally want to be absolutely sure that we are starting on the right grounds, if we start at all, and that we should take advantage of every possible source of knowledge that we can get.

Sorry to have written you such a long letter, but for the next 8 weeks you will have to put up with my own handwriting and rather short notes from Europe. In the meantime, if you wish to write me please send all mail to London at the address noted below, from where it will be reforwarded to me wherever I am located.

With best regards,

Very truly yours, D. P. Hess.

DPH:MC.

[fol. 4225] P.S. I am also enclosing an article read before the Institution of Locomotive Engineers in England last Fall by Mr. P. A. Hyde. This is the only copy I have and I would appreciate your returning it to Canton when you are finished. The notations therein in pencil are those of Mr. Sanders.

London address: Mr. D. P. Hess, % British Timken Limited, 10 Mayfair Place, London, W.I., England.

Also enclosing some data on French vs. N. Y. & London food prices; also article by Keignes (London Times) on the New Deal.

[fol. 4226] PLAINTIFF'S EXHIBIT 70

WESTERN UNION

January 22, 1934.

Dewar-L -fin-Piccy-London

Upon further consideration we feel it advisable you postpone your trip until later preferably summer stop. Timken now in California and am told his trip Florida in March uncertain and we feel it absolutely necessary he take part our discussions stop We consider both world and domestic monetary and business situation still very uncertain and we feel dollar must be stabilized next six months after which we can make definite arrangements with you regarding our mutual world affairs stop In meantime I am authorized discuss all details with you regarding your views and ours revising present agreements on my coming trip stop As result will move up my sailing date from middle March to middle February Stop Regarding Blare French Agreement if you can maintain status quo with Blare for another six months pending more definite settlement world affairs we consider advisable but if you feel this impossible we go along with you in your judgment but suggest two year agreement stop Writing

Hess.

[fol. 4227] PLAINTIFF'S EXHIBIT 71

London, England,
February 16, 1932.

RUSSIAN SITUATION

As cabled, the RIV have quoted 85% off list and given two years time payments to the Russians. The entire amount of the invoices was guaranteed by the Italian Government. During 1931 they received approximately $500,000.00 of tapered bearing business in addition to their ballbearing and straight roller bearing business which amounted to $200,000.00. I questioned these figures, but Pascoe spent three weeks in Russia and they were verified by Beneditti, Managing Director of RIV to Dewar. Beneditti

also stated the last order they received was in October for 50,000 cones and cups 78216/78551. No orders have been placed since that time and he and Dewar have agreement on bottom prices at 85 with interchange of information on quotations, etc.

Pascoe through political alliance, is putting pressure to bear on the local Russian agency to divide this business. They agree and so has Moscow if British Timken will guarantee prices based on sterling at about its present value ($3.50). This is obviously impossible but negotiations are continuing.

Pascoe feels the Russians have a fair chance of meeting 1932 payments provided no countries definitely shut out Russian exports. We just received news in London that they defaulted on some German payments, but current opinion is that this is a smart move to take advantage of the stringent German financial situation, as the Government would have to make good 70% of the default which they cannot now do. Russia has offered full payment if Germany will accept Russian products such as oil, timber, manganese, etc., in lieu of reisch-marks.

Incidentally, they fasten an extra set of front wheel bearings to every tractor shipped. Tractor production, verified by Pascoe, is as follows:

Leningrad	100 Fordsons daily
Stalingrad	100 Harvesters daily
Kharhov	30 Harvesters daily.

A bearing plant is being built to handle 70,000 daily (under 8″), will employ 16,000 men working two seven hour shifts, will use bars and forging machines. Technical data and layout is being made by RIV.

D. P. Hess.

[fol. 4228] PLAINTIFF'S EXHIBIT 72

Sept. 3rd, 1929.

MY DEAR DON:

Dallow has sent me on your letter of Aug. 20th and his reply to see before it leaves.

I don't think that there is anything to add at the moment. I am quite satisfied in most things and our costs of production are still coming down and will continue to do so as our grinding improves which is being shown in all our later figures now.

Our figures will bring home to you the reason for my pressing you on the question of heading rolls and so on, as Bock and SKF are continually forcing our prices down.

We have made a temporary arrangement with the former which will prevent them cutting prices to our best customers.

I am hoping to see Sloane again soon to help us further in our work.

Kindest regards,

Yours ——.

[fol. 4229] PLAINTIFF'S EXHIBIT 73

10th November, 1930.

D. P. Hess, Esq., The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

MY DEAR DON:

Many thanks for your letter of the 30th October. I am glad that Shuler has got back and hope that he was satisfied with his visit.

With regard to Fegan, I am afraid Shuler is entirely wrong. I delayed Fegan's coming because his Wife had to have an operation for Appendicitis. Where he got the other idea from I do not know. Incidentally, I am afraid Fegan is no use whatever on organization, but he has got a "mechanical" brain and I should very much like him to get right down to your Shop practice which is really where we have to learn.

I am sorry that Wooler has found fault with our Engineering Journal, and I hope that he is writing to Wood about it. I will certainly send you our proofs in future, but I was under the impression that our Engineering Journal was practically the same as yours with a few of the expressions altered so as to make them more understandable by the average English Engineer. With regard to the article in "The Automobile Engineer" entitled "Double Purpose Bearings" it even made me smile.

Things are keeping much about the same here and we are still running a little overtime, but I do not see very much chance of things picking up now until the New Year. I think it is almost certain that we shall have a General Election here, either in January or February, and that the result will be an Emergency Tariff. What the effect of a Tariff is going to be ultimately on England it is very difficult to say, but at the beginning anyhow it will certainly provide a stimulus to an improvement in trade which is at present lacking.

[fol. 4230] I do hope that you will be able to come to a decision soon regarding S.K.F. I am on the verge of a real row with them in this Country. I agreed that pending all these discussions—which have now been going on for a year—we would let them have Motor Cycle Bearings to make provided they would not interfere with our large Bearing business. They have, however, recently concluded an arrangement with Dennis to supply them with Ball Bearings at a very cut price and certain sizes of Taper Bearings at slightly below our figures. They have further offered Dennis a rebate of 10% provided their total business for the Year on all Bearings exceeds £10,000. Unfortunately I did not find this out until Prytz had left the Country but I have written the Commercial Manager at Luton a pretty stiff letter on the subject and sent a copy to Prytz. I have no intention whatever of letting them get in to our business under the pretext of a friendly arrangement. I shall consequently be very glad when you have decided whether we are going to do a deal or not.

Prytz has sent me a copy of the letter that he addressed to you on the 8th instant, which I suppose you will receive by the same mail as you receive this. It bears out entirely the cable that I sent to Grover Higgins. In this connection, would you let me know whether you would prefer me to

cable to Grover Higgins or to you, or to anyone else in regard to these negotiations. I have cabled to Grover Higgins recently as not very long ago Fred Strough took me severely to task for mentioning S.K.F in an open cable addressed to Canton, so I thought I had better be on the safe side.

I am going over to Paris in about a fortnight's time and I will see Fegan then and make arrangements for him to come as soon as his Wife is fit to travel.

With kindest regards,

Yours ever, Michael B. U. Dewar.

[fol. 4231] PLAINTIFF'S EXHIBIT 74

24th November, 1930.

D. P. Hess, Esq., Timken Roller Bearing Co., Canton, Ohio.

My dear DON:

Many thanks for your cable. As I told you in my cable, SKF here, in spite of the arrangement I had with their late Managing Director, began to cut definitely into our business by promising rebates and other forms of price cuttings. I immediately reduced our prices to well below theirs and told them I would have nothing more to do with them. I was rather afraid that a real row might result, but I am glad to say it has not, and it has brought them to heel. They have now undertaken definitely to cover us in future on all Commercial Vehicle work pending the completion of the negotiations in America.

I think you are wise to take the step of putting in hand those two small machines, as in the event of a deal with SKF you will get your money back for them, and in the event of not having a deal, we shall certainly be able to get the Ford orders and a good many others which, at the present moment, Wrba cannot make at a reasonable price owing to the cost of his Race and Rib grinding, as he has only very old and very slow machines to do it with.

I am going to Paris on Saturday or Sunday, and will write you again when I have been there.

Yours very sincerely, Michael Dewar.

[fol. 4232] PLAINTIFF'S EXHIBIT No. 75

December 27, 1929.

Mr. M. B. U. Dewar, c/o British Timken Limited.

Dear MICHAEL:

Our industrial business in Canada is increasing quite perceptibly, and there is no question in our minds but that Canada in General has rather bright prospects in the use of anti-friction bearings. Our problem here is that we are up against approximately a 30% tariff and the situation is further complicated by the fact that we have agreed with the Canadian Government that our subsidiary company in Canada will purchase bearings from us at only one price, namely, our No. 18 price.

With this situation confronting us we are going to be bothered by rather serious competition from S K F, and the thought has occurred to us that it may be possible for you to supply bearings for our industrial requirements in Canada. According to our records there is a 15% duty on English products as compared with our 30% and, if you can sell bearings at low enough base prices, there is no question but that we can hold—or I should rather say get—a big bulk of this industrial bearing business in Canada.

With this in mind I am enclosing a list of bearings that are very likely to be used in this industrial development and we would like to know the best pric British Timken can quote on them. We are showing in this list of bearings our present selling price as well as our No. 18 price which is the selling price to our subsidiary Canadian company. Incidentally, these bearings will be used in fair quantities and I am advised they are usually ordered on the basis of approximately 500 pieces quarterly of each size.

Will you kindly give this matter your consideration and advise us at your convenience.

Very truly yours, The Timken Roller Bearing Company, —— ——, Assistant to the President.

8th January 1930.

D. P. Hess, Esq., Timken Roller Bearing Co., Canton, Ohio.

My dear DON:

Many thanks for your letter of the 27th December regarding industrial business in Canada.

We will, of course, do anything we can to help you, and we are going into this matter. I will write you again when I am at the works on Monday. I have had so much to do here that I have not been over to Paris yet, but I have now definitely decided to go over on the 20th January.

I should love to help you compete with S.K.F. in Canada. I heard quite casually the other day from a representative

of the American motor industry, (who was in London and whom I met but whose firm I do not know) that for their assembly factory in Canada they have placed an order with S.K.F. for bearings which will be manufactured in Luton, as they were able to buy these *taper roller* bearings made by S.K.F. Luton more cheaply in Canada than they can buy yours.

I am sorry I have no more detail. Perhaps you can make an enquiry and find out if that is correct. If so, and we can help you in this matter again, please command us. I do want to take every possible step we can to keep S.K.F. out of the taper roller bearing business anywhere.

Yours very sincerely, M. B. U. Dewar.

[fol. 4237] PLAINTIFF'S EXHIBIT 77

December 16, 1932.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. 1., England.

DEAR MICHAEL:

Now that I have been home about a week and as the temperature this morning was 40° F. below zero, I think I should write and tell you a few of the conditions that I find existing here, etc.

My crossing on the "Paris" was simply delightful to the extent that we had perfect weather all the way across. The service on the ship as well as the food was marvelous but at the same time in my humble opinion the "Paris" itself is a long ways from the "Acquitania's" class, and I certainly would hate to be riding on it on any kind of a rough or choppy sea. Incidentally, when it comes to docking a boat the French are almost impossible and I now understand why they like to go to Plymouth so that they have to use tenders. It took almost two hours to dock in New York with absolutely no fog or any more difficulties than you would normally expect in such an operation.

I have gone over the entire situation in Europe with Mr. Timken several times, as well as all the members of our staff with the exception of Mr. Ernst, and I am convinced that everything is entirely satisfactory to all of us. I ex-

plained in detail, and particularly to Mr. Timken, the French situation, and I think he now understands what you were up against last July in making the SKF agreement. He, of course, feels, as you know I do, that we should try to get a more favorable deal and I have explained to him that you are working on this phase of the situation at the present time but no definite action will be taken until the end of the first quarter of 1933, if then.

Your move in France eliminating Mr. Seward has also met with approval, as you know we Americans are quite impatient with statistics, etc., which are constantly unreliable. We have not as yet definitely set on sending a man over as Charlie Brower claims he is so short handed that it will seriously cripple him to send one of his best men, and I am of course insisting that the best is none too good, so we are going to discuss this matter in detail with Mr. Ernst in the next week or 10 days.

[fol. 4238] Conditions here are materially better than when I left, due primarily to Chrysler bringing out new models and their apparently good reception in the trade. We are now working 20 days per month 7 hours per day and employing 1100 men, and at this writing it looks like January will be about 15 percent better than the past two months. We are, or course, still operating at a loss and this is far from pleasing to some of us as you can realize. Our steel business is almost flat, and while we have done some good missionary work in this regard it still remains an event of the future as to how it will turn out in actual dollars and cents.

I cabled you recently about the Canadian situation and have just had a chance to review your last letter to Judd. Briefly, the situation is as follows:

SKF using bearings shipped from Sweden have underquoted us in Canada to quite a marked degree and have obtained quite a good bit of the Ford Canadian business as well as some of the other automotive manufacturers. Judd and I have been discussing it and he left for Detroit early this week convinced, as I am, that the only way to handle the situation is with British made product, which we intend to do. I, therefore, cabled for the maximum discount you could allow from your No. 317 list and I have just received an answer that this will be 87½ percent. I think this will be quite satisfactory, other than we will probably put it into easily calculated figures like 88, and

possibly have you make your bills direct to our Canadian company but ship the product to Ford, Chrysler, or whomever we designate. This will give us an opportunity to add on something for selling expenses which we will, of course, have in Canada. However, this latter feature I will discuss with Judd and write you further at a later date. In any regards, it will be up to British Timken to probably supply the entire Canadian market, both automotive and industrial, as we do not intend to let SKF have this business under any consideration.

I have been having considerable discussion with Steve Moreland since my return, and am sorry to advise you that I am pretty well disgusted with him. I explained very carefully to him that you could no longer pay a salary of $300.00 per month in American dollars and that you proposed to pay half in dollars and half in pounds. After about an hour's argument he flatly refused to accept such a proposition, although his present salary in America is $250.00 per month, as I insisted that he take all salary reductions that have gone into effect since he left. His major complaint seems to be that he cannot get living conditions comparable or any where near comparable with what he has been having in America along the line that he cannot get a house with heating conditions which will make Mrs. Moreland and the children comfortable. He tells me that he had to pay 7 pounds a week for the house he lived in and it was very unsatisfactory from this standpoint. This seems to be his major complaint as he likes the work and with minor exceptions likes his associates in England very much. I [fol. 4239] have told him that this is entirely a matter for your decision and that I personally would not approve his continued payment in American dollars exclusively unless you felt that this was the thing to do.

In the meantime, Michael, I expect to see next week in Pittsburgh a man I described to you, Fred Waldorf,—and while he is not as good as Steve Moreland, he is an excellent steel mill equipment engineer who I feel sure will be capable of teaching your staff all the details of this job. He speaks German but does not speak Russian. It might be well for you upon receipt of this letter to advise me your wishes as to our sending a man over, because if we rehire Waldorf I will have to bring him here to Canton for 30 days time in order to get him up to-date. On the other hand I believe Moreland will be very willing to come back if Dallow could

find him a house with central heating, as I feel if he had this problem settled he would be more than willing to accept different remuneration than $300.00 per month in dollars (or money as someone once said).

I certainly did enjoy Asquith's account of the World War, etc., and my only problem is to keep from loaning these books to my friends, as they are without doubt the best works along this line I have ever seen. Incidentally, I have promised to loan them to H.H.T.

Hope by this time our good friend Tabby is in good health again and that his cocktail parties do not ruin him.

With kindest regards to you and all of your associates, I am

Very truly yours, ——— ———,

DPH:MC.

[fol. 4240] PLAINTIFF'S EXHIBIT 78

Mr. D. P. Hess, Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

Thank you so much for your letter of the 16th December. I have just written to Mr. Timken in reply to his letter of the same date.

I was terribly sorry to hear that there is an epidemic of influenza in Ohio and that the schools have been shut. I don't know how true it is, but it was given as a piece of news on the radio a few nights ago.

With regard to your talks with Mr. Timken and Mr. Ernst, I am glad they appreciate the agreement which I made with SKF last July. I now have no doubt that we shall not be able to keep to the agreement and I have arranged a meeting with Mr. Bratt in Paris to discuss some further arrangements with him. There is no doubt we must have more liberty of action.

With regard to your sending over somebody to instal a Standard Costs System, I have engaged a Mr. Hamilton, who has been in the offices of Mr. Mearns—of Whinney Smith Whinney & Co. He is twenty-seven years of age and has been very highly recommended indeed to us by Mr. Mearns. In fact we found great difficulty in persuading Mr. Mearns to let him go.

He is going to work at British Timken on our Standard

Costs System for five or six weeks, and then I propose to send him to Paris.

I am very glad you feel conditions are improving, and [fol. 4241] I hope that the demand for cars will really increase, as surely a large proportion now of the cars in use must need replacement.

I have just written you another letter in connection with the competition with SKF Gothenburg. I merely would add here that we will, of course, do everything in our power to enable Timken to hold the Canadian market.

With regard to Moreland, I shall be glad to see him, and perhaps we may be able to come to an agreement with him.

The general prospects in this country seem to be brighter at the moment; but nevertheless, there is a long way to go before we shall see any real improvement.

It will interest you to know that I am now absolutely certain that the Ring Rolling Machine will be entirely satisfactory, anyhow for Cups. We shall have our big furnace for it finished this week; but the result of making some rings on our Forging Machine for one of the 400 series Cups and then rolling them has shown us that we can, without a doubt, do what we anticipated we could. We can keep the eccentricity within four thousandths of an inch and do with one small operation of chamfering only, before carburising.

With regard to Ellis's half cold and half hot method of making smaller Cups, we shall have this under way also during this week and I will send you full particulars of it as soon as we are satisfied with it.

At the moment, all I can say is that it looks very promising.

With regard to Ball Bearings, we are really beginning to make some headway now. We have been relying, possibly too much, on making outer races on the Ring Rolling Machine, and we now know what we can do in that regard [fol. 4242] which will make it possible to get ahead more rapidly.

With kindest regards,

Yours very sincerely, Michael Dewar.

[fol. 4243] PLAINTIFF'S EXHIBIT 79.

December 14, 1932.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W.1., England.

DEAR MICHAEL:

Upon my return to this famous country I find a cable from Birmingham with reference to a statement made by Ford Dagenham that we have granted Ford America a license to manufacture Timken bearings according to our patents, and it puzzled me just a little bit because this is the situation I described to you when I explained that we had dropped the Bower suit and had given Ford such a license as they describe. We, however, explained to them that we could give them no such license for England or any European plant as British Timken was our exclusive licensee and that anything in this regard which they desired would have to be discussed with you.

I think I have explained to you verbally our position with Ford and, of course, your action in England is entirely in your own hands. For your further information, we are mailing a copy of this Ford agreement and trust you will retain it in London as we do not care to have it generally known.

Very truly yours, The Timken Roller Bearing Co.,
———, Assistant to the President.

DPH:MC

[fol. 4244] PLAINTIFF'S EXHIBIT 80

29th December, 1932.

Mr. D. P. Hess, Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

Many thanks for your letter of the 14th December regarding your arrangement with Ford.

The Co-Ordination Department of the Ford Company in London had apparently been advised by Detroit of your arrangement and wished to obtain the same concession

from us. There is no doubt at all that Ford have decided here, as a policy, to have two sources of supply and they have certainly favoured SKF in the last month or two in placing orders. However, our arrangement with SKF will prevent this going too far.

We have had to give way to Ford as naturally it seems impossible for Timken in one country to treat Ford differently from Timken in another country.

I am very glad to hear you have shipped the three Acmes for Birmingham, and I shall be most interested to have them to see what it is in the re-building which makes them so much stronger than the ordinary Acmes. As I told you, your Acme expert told us that we could never possibly get anything like the production you get from our Acmes,—however much we spent on repairs—without rebuilding them.

I shall be in Paris again the week after next, and shall look forward to your letter regarding the modifications to the Aube Electric Furnace.

With kindest regards, Yours very sincerely, Michael Dewar.

Ford Motor Company, 3674 Schaefer Road, Dearborn, Mich.

Attention Mr. C. F. Unruh, Purchasing Department

GENTLEMEN:

This replies to your letter dated January 26th, addressed to Mr. J. W. Spray, regarding letter sent to you dated September 19, 1932, addressed to your Company, attention Mr. D. J. Jend, as follows:

Canton, Ohio, August 31, 1932.

Date changed to September 19, 1932.

The Ford Motor Company, Dearborn, Mich.

Attention: Mr. D. J. Jend

GENTLEMEN:

In connection with our patent license agreement dated August 31, 1932, herewith attached, we want it understood that we do not have the right to grant licenses to the Ford Motor Company, Ltd., of England, as we have previously granted exclusive license to the British-Timken Ltd. under any British patents which we own or control.

Very truly yours, The Timken Roller Bearing Company. (Signed) J. W. Spray, Vice President.

Since the date of the license agreement was changed from August 31, 1932, to September 19, 1932, our letter quoted above should be changed so as to show the date of the license agreement correctly, as follows:

"In connection with our patent license agreement dated September 19, 1932, herewith attached, we want it understood that we do not have the right to grant licenses to the Ford Motor Company, Ltd., of England, as we have previously granted exclusive license to the

British-Timken Ltd. under any British patents which we own or control."

Unfortunately Mr. Spray is in the Cleveland Clinic Hospital, undergoing an operation; hence, my writing this letter, rather than defer a reply which would carry Mr. Spray's signature.

Very truly yours, The Timken Roller Bearing Company. (Signed) R. C. Brower, Secretary & Treasurer.

GENTLEMEN:

In consideration of the placing with us of your purchase order No. H-5094, dated Sept. 19th, 1932, for 87,500 Bearing Cones and Cups, we hereby grant to the Ford Motor Company, a Delaware corporation, of Dearborn, Mich., the Ford Motor Company of Canada, Ltd., the Ford Motor Company, Ltd., England, and their subsidiaries and associated companies, a permanent, irrevocable and non-exclusive license both in the United States and in such foreign countries as we have such patents, to manufacture, have manufactured, use and sell bearings including those known as tapered roller bearings under any and all patents and

patent applications or inventions owned or controlled by us or under which we may have the right to grant licenses during the time in which we furnish you with bearings.

This license shall also extend to include any bearings which you may have previously manufactured, had manufactured, used or sold.

This license shall likewise extend to equipment and apparatus for the manufacture of bearings of this type, and to methods and processes of making same.

This license shall extend only to bearings for use in or in connection with products manufactured or sold by the licensees hereinabove named, and to equipment, apparatus, methods and processes for use in the manufacture of bearings to be sold for such use.

By placing the above purchase order, or by accepting this license, it is understood that the Ford Motor Company of Dearborn, Michigan, the Ford Motor Company of Canada, Ltd., the Ford Motor Company, Ltd., England, [fol. 4250] and their subsidiaries and associated companies neither expressly nor impliedly admit the validity or infringement of any patents under which they are herein licensed, nor do they bind themselves to purchase any definite or specified number of Bearing cones and/or Cups except as set forth in purchase order No. H-5094.

The licensor represents it has good title to the following patents and the lawful right to grant this license on same:

Neal Patent No. 1258634 dated March 5, 1918.
Miller Patent No. 1392019 dated September 27, 1921.

26th January 1934.
Recd. 2-5-34.

Mr. D. P. Hess, The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

DEAR MR. HESS:

Mr. Walsh has favoured us with another Order, No. 21542, for 1500 Bearings No. 09074/09194 which are to be shipped to your Toronto office, and I am a little worried about the price of this particular bearing. As you know we have sold this to you in the past at list price, which 10/- this being subject to a discount of 87½%, giving a net figure of 1/3d. We are not making the bearing at anything li[ke] this figure to-day, and I am wondering if you cannot pay a little more for this having regard to the fact that your Toronto people can land this into Canada with a much lower duty charge than if the bearing is sent over from Canton. To cover our costs we should ask list price less 82½%, or what you would call a 17½ List.

I am sure you do not want to see us shoulder a loss on a job like this, and I would appreciate your meeting us.

I am also much obliged to you for Order No. 21543 covering a supply of Timken Straight Roller Bearings. Dis-

counts so far have not been mentioned for this type of bearing, although Mr. Dewar has referred to 80% in the case of ball bearings. What I propose to do at the moment on this initial order is to invoice at list prices less 75%, so that Mr. Partridge can get an idea as to what his landed costs will be and the competition that he has to meet.

Yours faithfully, For British Timken Limited, W. E. Hobley (signed).

Mr. D. P. Hess, The Timken Roller Bearing Co., Canton.

DEAR MR. HESS:

A letter just reaches us from Mr. Webster of the Service & Sales Division dated 13th instant, in which he asks us to send over to Toronto 30 A. C. No. LY. 70 and 20 Cups No. LY.62A. The order is being put on the books and despatch will be made fairly promptly, but I must remind you that with the rising cost of raw material it is impossible for us to bill these to you at list prices less 87½% discount, which was arranged some years ago. The best we can do on a bearing of this type is 80%, so that the invoice will read:

A. C. No. LY.70	List Price £2.10.0.
Cup No. LY.62A	List Price £1.10.0.
	Less 80%

As these bearings are for replacement in British made commercial trucks, I am sure your Toronto office will be able to land them and well them profitably.

Yours faithfully, For British Timken Limited, W. E. Hobley, Sales Department.

11th September, 1934.

My dear Don:

I have your letter of the 15th August with regard to the sale of 570 tons of Ball Bearing Tubing to Moscow.

The question of your selling steel to Russia was never mentioned to me either during your visit to England or during our visit to Canton. The only question of the sale of steel that was discussed was the question of selling your steel in England or making an arrangement for some firm in England or elsewhere to make your special steels.

The position is one of considerable difficulty because I do not feel inclined to agree to give you carte blanche to sell tubing in our territory; it might conceivably react to our disadvantage if your tubing were sold to our competitors.

Yours sincerely, M. B. U. Dewar.

Mr. D. P. Hess, Timken Roller Bearing Company, Canton, Ohio.

Dear Michael:

Regarding your letter of the 11th as to our selling tubing to Russia, please understand that under no circumstances would we sell our tubing to any one in the world who might as a result harm British Timken, French Timken or American Timken. We have not yet reached this necessity in merchandising our Steel and Tube product.

Very truly yours, The Timken Roller Bearing Co.,
—— ——, Assistant to the President.

The Timken Roller Bearing Company

Inter-Organization Correspondence

Date May 23, 1938.

Attention of: Mr. W. E. Umstattd—Canton
Subject: Ford Motor Company

Following my conversation with you on the Stey'r German plant situation, I interviewed Mr. Wibel and Mr. Loughran at Ford and this is merely a confirmation of that visit.

Mr. Wibel accepted without question the explanation that British Timken under the present political situation in Europe would not be permitted to aid a German Plant as had been suggested. He evidently by thinking out loud satisfied himself that this was very logical and he also accepted without any need for substantiation your statement of last week that our interests in British Timken and our contract with them prevented our doing anything.

Since our visit of last week I personally was concerned over the possibility of Bower doing something and I was anxious at this interview to find out if anything had been done by them. Before seeing Mr. Wibel, in a conversation with Mr. Loughran I mentioned that Bower had made a deal with Hoffman in England which petered out because the Hoffman Plant selected for tapered roller bearings had been commandeered by the government as a "Shadow" Plant.

When our interview was practically over I asked Mr. Wibel if there was something he could suggest we do and then I proposed that we might supply him with a flow or work sheet from the raw material used through to the finished product showing machines, production, et cetera, and I suggested that we use a wheel bearing. I think we possibly better supply this information on B-1216 & B-1217. However, if you want to use some other part number we are not committed on this particular bearing.

I feel that as the situation stands today that Bower will not be asked to supply anything because Mr. Wibel instructed Mr. Loughran to get information on a straight roller bearing from Green Island, their own plant, and on a ball bearing from the Hoover Company, and his words

were, "When you get this altogether and the information from Timken we will send it over there and tell them that is all we can do."

Mr. Loughran says there are 900 of the "Shadow" plants in England.

Gentlemen:

Your Reference: WEH/LC

This will acknowledge your letter of March 15 to L. M. Klinedinst regarding SKF prices into Canada. We do not understand where you got your figure of 27½% duty applying on SKF bearings entering Canada from Sweden. The duty is 17½% and applies only on Industrial and Service bearings, Automotive bearings being admitted duty free.

We are conversant with your relations with SKF in England and understand how you are able to stabilize prices there. It is indeed unfortunate that this does not apply to the world generally.

Very truly yours, The Timken Roller Bearing Co.

W. Robert Timken
REF:BAS

[fol. 4261] PLAINTIFFS EXHIBIT 99

August 25, 1939.

Mr. M. B. U. Dewar, British Timken Limited, 10, Mayfair Place, London, W. 1, England.

Dear Mr. DEWAR:

We are having our troubles with the SKF Company not only in this country but in Canada as well and in many foreign countries such as Japan, South America, and else-

where due to their making price reductions very far below those that we have ever extended to anyone in their respective field.

We had a situation in Canada where the SKF Company is bringing in their tapered roller bearings and selling them for new installations, not only industrial but automotive as well. They have cut the price from 10% to 12% at Ford and General Motors in Canada and also at McKinnon Industries, an axle manufacturer, but they have not yet been able to secure any of the International Harvester or the Chrysler business. We feel with this tremendous price handicap they may do this.

However, the thought that we have in mind is that we should make a study of the Canadian situation with the thought in mind that perhaps some arrangement might be set up whereby we could be appointed exclusive Canadian distributors for British Timken handling tapered rollers, balls, and straight rollers, not only for service requirements but for new installations as well in all of the various industries. There would be some advantages in this and perhaps many disadvantages. We can see, however, that industrial and service bearings shipped by SKF from Sweden into Canada take a duty of 17½% while they are free from England. This would give us that advantage.

While this arrangement might not be feasible it is certainly worth while thinking about, and it appears to me a good club to put over the SKF Company's head. Maybe you have some thoughts on it and we would be glad to have your reaction.

[fol. 4262] We presume that under circumstances such as these you would sell The Timken Roller Bearing Company, Limited, of Canada, at your lowest prices on the various types of bearings, and you might give us these prices so that we could set up some figures to determine whether or not it would be possible to compete with SKF in Canada on such a basis.

Very truly yours, —— ——, Vice President.

Mr. L. Klinedinst, Timken Roller Bearing Company, Canton, Ohio.

Dear Mr. KLINEDINST:

Many thanks for your letter of the 25th August, regarding the trouble you are having with SKF in Canada.

We will give this matter our most careful consideration, but at the present time it is rather unlikely that we shall be able to help you very much. If, however, we can help you by persuading SKF not to fight you, that would appear to be the best way.

Please note that we have shut our London office, as all our work will, for the duration be with Government Departments, and these will not be located in London. Consequently, Mr. Pascoe and I expect to transfer ourselves to our head office in Birmingham.

Yours sincerely, Michael Dewar.

[fol. 4264] PLAINTIFF'S EXHIBIT 101

September 27, 1939.

Mr. M. B. U. Dewar, British Timken Limited, Cheston Road, Aston, Birmingham, 7, England.

Dear MICHAEL:

In discussing among ourselves the present confusion about trade with England and France occasioned by the war, a number of points have arisen which we would like to clear up if possible. We realize, of course, that there has been a good deal of uncertainty due to upset conditions.

I will list these questions in order that we may discuss them more clearly.

1. What is the preser atus of shipments of bearings and steel to British and r ench Timken? Our understanding is that British and French import licenses must be obtained in each case before an order is shipped. However, we have had several cables requesting immediate shipment

although as far as we knew no specific licenses had been obtained. It is possible that we may have difficulty in arranging shipping space unless we know definitely that a license is in your hands. I would suggest, therefore, that on future orders you indicate that you have secured an import license in each case.

2. What methods of payment do you propose to set up? It is our impression that in order to conserve foreign exchange the British and French governments require that sufficient dollars be earmarked to cover each order. It is quite probable that the United States will make similar conditions in the new Neutrality Bill which is now under consideration. We should, therefore, establish a definite method of payments as soon as possible. The matter of accounts receivable already on the books must also receive consideration.

3. Your inquiry on machinery raises the problem of payments for purchases if made. It is possible that some of the machinery firms would prefer to have us assume responsibility for these purchases and bill you direct. I can see no objection provided adequate foreign exchange is made available. What is your thought on this? In this connection we would prefer that you take title to any machines purchased before they left the country.

[fol. 4265] 4. Methods of shipment—as you no doubt are aware all freight charges must be prepaid before shipments will be accepted. I assume the simplest method would be for us to prepay these charges and add them to the invoice. The question of lines to be used also must be settled. Rates and insurance on neutral lines are lower than on British or French lines. In addition no definite sailing dates are published for the latter with the result that postponements may entail storage charges at New York. However, "cash and carry" provisions of the new Neutrality Bill may make use of American ships impossible.

5. There is the possibility that you will wish us to supply bearings to territories of British and French Timken which you cannot serve if your plants are working at capacity on orders for domestic use.

6. Can anything be done by us to salvage our Reichsmark account in Germany? Or has the entire amount been seized by the German Government?

7. What is the present status of the Westminster account?

8. Can you give us any idea of the type of orders for steel and bearings which we may expect to receive from British and French Timken? This is especially important in the case of steel as our mill is operating at capacity.

9. What are the British and French regulations as regards blueprints and advertising matter which we may wish to send you?

10. We are, of course, particularly interested in the question of your present orders with us, expecting that some of them may be cancelled under the new conditions. We are very cramped for storage space and would appreciate knowing as soon as possible what disposition should be made of them.

11. We understand some friction has arisen between Russian and British firms which had been bidding on Russian orders. Can you give us any information on this subject?

12. We are also interested in hearing what, if anything, has happened to the trademark proceedings.

Before closing I would like to assure you that we have no intention of increasing prices either to you or to our domestic customers unless we are absolutely forced to by general wage increases or abnormal rises in raw material costs.

From the above you will see we have made no attempt to analyze these problems nor have we offered any suggested solutions. Some of them may be answered in a few days by the legislation of our own Government. However, we have merely listed the questions that are in our minds today and would appreciate your writing us in as much detail as possible giving us your thoughts on each one.

Sincerely yours, W. Robert Timken.

WRT:BAS

[fol. 4266] PLAINTIFF'S EXHIBIT 102

British Timken Limited

MBUD/KP, 26th October, 1939.

Mr. W. Robert Timken, The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

MY DEAR ROBERT:

I am sorry that I have not replied to your letter of September 27th but the various Government regulations were in such a fluid state that it was extremely difficult for us to give clear replies. Even now, some of the regulations have been altered within the last twenty-four hours.

Referring to your questions by number, the following is our latest information:

1. Import Licences are required for any bearings for vehicles that run on roads. This, at the moment, apparently includes tanks. No Import Licence is necessary for bearings required for industrial machinery. As regards steel, no Import License is necessary. For machine tools, up till almost the moment of writing Import Licences were not required, but the regulations have been amended within the last twenty-four hours requiring such Licenses and we are taking steps to obtain them for all machines on order.

Whether we have to get an Import Licence or not, when we order from you, we can, even under present circumstances, and always do, buy forward the dollars required for payment, but when the question of payment arises we have to get special permission to use those dollars for the purposes for which they were bought. We do not anticipate any difficulty in obtaining permission to use any dollars we have bought. When we order anything from you in future you may take it that where we have cabled you asking for shipment, we either have the Import Licence or no [fol. 4267] Import License is required. In future we will always tell you either by cable, if the material is ordered by cable, or by letter, if ordered by that means, whether or not an Import Licence is necessary and, if necessary, that we have it or are obtaining it.

2. Methods of payment are referred to above in that we have stated that we always buy the dollars forward immediately we place an order with you, so you may take it

that we always have the dollars as soon as you have the order. Payment can be made by bank transfer, cable or letter, just as you prefer. As regards accounts receivable already on your books, here again we have in our possession dollars to cover every order open with you, and as payment becomes due, so we apply for permission to use the dollars. For instance, we paid you on the 9th and 11th October $1002 for your May account.

3. We would prefer you to assume responsibility for purchases of machinery and bill us direct as it facilitates our application for dollars here when we only have to quote the name of one firm. As mentioned above, adequate foreign exchange will always be available and we do not foresee any difficulty in obtaining permission to use the foreign exchange. We quite agree to take title to any purchases before they leave America, and we shall carry out insurance, marine and war, ourselves, as indeed we do now through our Insurance Broker by means of an open cover. Again, if we take delivery at your factory, this again is what in fact we do in many cases, we wish you to pay freight charges, debit us both rail and boat to England, insurance being dealt with as above.

4. Methods of shipment. All freight charges now having to be prepaid, you should pay them and add them to the invoices. So far as we can see, in future we should prefer shipments to be made on British boats.

5. As regards the supply of bearings from British and French Timken to overseas customers, we anticipate that we should be able to serve all our territories, except enemy ones, as great efforts are being made by the British Government for all export trade to be maintained. Should, however, we find it impossible, we shall send you a cabled or mailed request to supply any territories where our delivery is endangered, in which case payment arrangements will be made between you and the customers in the territories concerned. We shall tell you the prices and ask you to credit us with the difference between your normal price to us and the prices we ask you to invoice to customers.

[fol. 4268] 6. With regard to the Reichmark Account in Germany, the Auditors, Price Waterhouse & Co., have closed their office; Miss Doering is presumably still there.

7. With regard to the Westminster Account, it is quite clear that this is not in the hands of any British subject and

therefore is not subject to our control requirements that the dollars should be sold to the British Government.

8. You have received steel orders from British Timken and bearing orders. We will endeavour to give you as long a notice as possible as to our requirements, but at present it is impossible to say more than we have said by sending you orders.

9. As regards blue prints and advertising matter, we cannot export without permission, neither can we import without permission, but we have applied for a general permit.

10. Present orders. We shall not ask you to cancel any orders except possibly those for bearings for passenger car replacements, which are very small indeed. We are at present attempting to obtain permission to import those already ordered from you for such replacements.

11. We know of no friction between British firms and Russia.

12. Regarding trade mark proceedings, the matter is proceeding slowly and at the moment is waiting for certain declarations which we have to submit to the authorities from certain of our customers in this country and other organisations who are interested in the field covered by our products.

In the event of modifications to the above, we will immediately inform you.

With regard to French Government requirements, you may take it that in general these are the same as in the case of the British Government. However, the position in France is rather more fluid and I am afraid at the moment that on many points it is difficult to write precisely. When in Paris last week we prepared a letter to send to you but we are holding it up for a day or two in order that we may refer to some of the points you raise in more detail than we can at this moment.

Travelling over to France is not a pleasant occupation in these days, taking as it did about seventeen hours each [fol. 4269] way. The boats are small but fast and compelled to zigzag and the passengers are forced by the authorities to wear life belts during the crossing.

For your amusement, I enclose you two photographs of Mr. Pascoe and myself in our office in Birmingham. I only hope that when the United States comes within easy bomb-

ing range of Europe, which I suppose will occur within the next ten years, you will have more comfortable things to wear.

Yours sincerely, Michael Dewar.

[fol. 4270] PLAINTIFF'S EXHIBIT 103

British Timken Limited

MBUD/KP, 14th November, 1939.

Mr. W. Robert Timken, The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

MY DEAR ROBERT:

Further to my letter of the 26th October, which is in reply to yours of September 27th, in a matter of various points arising under War conditions which you wish to have made as clear as possible, the regulations regarding France I told you then were much the same as in the case of the British Government, but I think that, in order that there might be no confusion, I had better reply to your letter again from the point of view of Francaise Timken:

1. Import Licences are required for obtaining delivery of all imports, including bearings, steel and machine tools. When we send you an order, we at the same time make an application for an Import Licence, and, up to the present, these have always been granted. We understand that in the case of a Licence being refused, we should be advised within a week of our application, so that if our order had been sent to you by ordinary mail, we should have sufficient time to notify you of a cancellation by cable. In the case of orders given by cable, you may take it that we have previously obtained an Import Licence or have ascertained that this will be granted.

2. Methods of Payment. In France, all purchases and sales of foreign exchange are controlled by the "Office des Changes". Generally speaking, foreign exchange can only be obtained for the following purposes:

[fol. 4271] (a) Payment of debts incurred prior to the 9th September last.

(b) For travelling expenses.

(c) Payment for goods for which an Import Licence has been obtained.

When we obtain an Import Licence, we receive at the same time authority to purchase the necessary foreign exchange from the Office des Changes. The formalities take a certain time, but we expect that you will receive payment approximately two weeks after we have received delivery of the goods. This method will mean that we shall be making payment to you on receipt of each invoice, although later we may be able to group several invoices and make one payment in respect of these.

As regards Accounts Receivable already on your books, we obtain the necessary foreign exchange from the Office des Changes as and when payment is due on production of your invoices.

In this way we have already remitted to you the sums due on the 20th September and 20th October for our May and June accounts. These and future payments will be sent to you by the National City Bank, Paris, or by the Westminster Bank, Paris, by mail transfer as heretofore. At present it is impossible to make forward contracts in foreign exchange, but in view of the system enumerated above and the fact that we hold approximately $40,000, this should be ample cover to meet any possible exchange losses.

3. We would prefer you to assume responsibility for the purchases of machinery and bill to us direct.

The details given above (Paragraph 2) on the question of foreign exchange apply equally to payments for machinery.

We quite agree to take title for any purchases before they leave America and we shall carry out insurance, "marine and war", ourselves through the "Ministry of Merchant Marine". We wish you to pay all freight charges.

4. Methods of shipment. All freight charges now having to be prepaid, you should pay them and add them to the invoices. Unless you hear to the contrary, we should prefer shipments to be made on French boats or, failing this, British boats.

[fol. 4272] 5. As regards the supply of bearings to our overseas customers, we anticipate that we shall be able to serve all our territories except enemy ones as the French

Government are, like the British Government, alive to the necessity of maintaining exports. Should, however, we find it impossible, we shall send you a cabled or mailed request to supply any territories where our delivery is endangered, in which case payment arrangements will be made between you and the customers in the territories concerned. We shall tell you the prices and ask you to credit us with the difference between your normal price to us and the prices we ask you to invoice to customers. We have applied for permits to export but we have not received many as the system is not yet working smoothly in France, but we anticipate that it will be very shortly.

6. .....

7. .....

8. You have received steel and bearing orders from Francaise Timken. We will endeavour to give you as long notice as possible as to our requirements but at present it is impossible to give you any information other than that already in your possession.

9. Up to the present time we have received both blue prints and advertising matter from you without difficulty. Of course, as you are aware, there is a censorship.

10. Present orders. We have already written to you and cabled you instructions regarding this matter and as you will have noticed, we have only cancelled certain small orders for service bearings.

11. .....

12. .....

I have now, I think, answered all the points you raise in your letter. Should any modifications be made, as doubtless they will, I will of course inform you as soon as I possibly can.

Yours sincerely, (Signed) Michael Dewar.

[fol. 4273] PLAINTIFF'S EXHIBIT 104

British Timken Limited

JES/LC 23rd October, 1939.

Mr. W. Robert Timken,
The Timken Roller Bearing Co.,
Canton, Ohio, U. S. A.

Dear Sir,

Percy Grant & Co. Ltd., Buenos Aires.

We now have pleasure in sending you herewith a draft memorandum of the Agreement which we propose should be concluded between Messrs. Percy Grant & Co. Ltd. and ourselves to cover our railway distributorship in the Argentine and Uruguay.

You will notice that the Agreement is made out as between British Timken Limited and Percy Grant & Co. Ltd., without joining in yourselves as a party to the Agreement. Our lawyers point out that neither we nor Percy Grant & Co. Ltd. is entitled to enter into the Agreement without the consent of yourselves. It is suggested that to cover this point a letter of consent should be sent by you to both Percy Grant & Co. Ltd. and ourselves, and that Percy Grant & Co. Ltd. and we should acknowledge the letter and undertake not to make any alteration in the Agreement without your consent. The 2 forms of letter proposed for this purpose are enclosed, and it is considered by our lawyers that this method of binding up the matter will prove simpler to operate and more satisfactory than any joint Agreement.

We trust that you will approve generally of both the proposed Agreement and the form of consent, and we shall be glad to hear from you in this connection at an early date as we are anxious to conclude this Agreement.

Yours faithfully, For British Timken Limited, J. —.
——, Sales Manager, Engineering Division.

[fol. 4274] PLAINTIFF'S EXHIBIT 105

The Timken Roller Bearing Company
Canton, Ohio

December 28, 1939.

British Timken Limited
Cheston Road, Aston
Birmingham 7, England.

Gentlemen:

Your Reference: JES/LC

We have gone over the draft of a proposed Agreement between yourselves and Messrs. Percy Grant & Company inclosed in your letter of October 23, 1939. While we were in substantial agreement with the terms included, our Counsel felt that some changes were advisable from our viewpoint. I have underlined in red these changes on an extra copy and would appreciate your comment on them. If, however, they are acceptable to both parties as I think, please arrange to have them signed by the two parties to the Agreement.

The only major change is the one which provided that we sign our consent to the Agreement at the foot thereof rather than by means of the three letters of acceptance which you inclosed. We and our Counsel felt that this method was much clearer and yet met the point raised by your Counsel of not including ourselves as party to the Agreement.

Further, in relating this Agreement to the Business Agreement of November 29, 1938, we believe that we should reach a clear understanding as to the types of sales which may be made and the commissions payable.

Naturally, in the case of sales made by you to railroad equipment builders in your territory, no commission would be payable under #6 P. (A) of the Business Agreement.

However, sales made into Argentina or Uruguay for use for bearing replacement purposes would fall under #6 P. (B) of the Business Agreement. These would, therefore, have to be made at prices agreeable to ourselves and would carry the 5% commission.

[fol. 4275] We would, further, not expect you to make sales to Argentina or Uruguay to manufacturers as per #6 P. B of the Business Agreement.

If these three paragraphs are in accord with your understanding, please so state in your reply to this letter and the matter will then be clearly understood by us both.

Sincerely yours, W. Robert Timken.

[fol. 4276] PLAINTIFF'S EXHIBIT 106

Memorandum of Agreement by and between British Timken Limited and Percy Grant & Company Limited

This agreement is made as on the first day of September One Thousand Nine Hundred and Thirty-nine by and between British Timken Limited, a joint stock company incorporated in England and having its Registered Office in the City of Birmingham England of the one part and Percy Grant & Company Limited, of Edificio Britanico Reconquista 314, in the City of Buenos Aires Argentina a joint Stock Company incorporated in —— of the other part.

Whereas

(a) The following words and expressions have the following meanings in this Agreement where the context admits.

"The Company" means British Timken Limited.

"The Canton Company" means The Timken Roller Bearing Company of Canton, Ohio, United States of America.

"The Representative" means Percy Grant and Company Limited.

"Argentina" and "Uruguay" mean respectively the territories of the Argentine Republic and the Republic of Uruguay.

"Railway Rolling Stock" means and includes Locomotives, Coaches, trucks, and other rolling stock in use on Railway Lines and does not include such vehicles or any other machinery plant or stock not in use on Railway Lines.

"Railway Bearings" means and includes anti-friction bearings, axle boxes and housings and parts thereof for use in Railway Rolling Stock.

"The Company's products" means products manufactured or supplied by the Company.

"The Canton Company's products" means products manufactured or supplied by the Canton Company.

"The Representative's territory" means Argentina and Uruguay.

"The Company's Territory" means the United Kingdom of Great Britain and Northern Ireland Eire and all Coun- [fol. 4277] tries other than France on the Continent of Europe and all Dominions Colonies Dependencies and Mandatory Territories of the United Kingdom aforesaid and other European Countries except France in any part of the World except in or adjacent to North or South America.

"Railway customers" means and includes the Proprietors of the Steam and Electric Railways in the Representative's Territory and builders of Railway Rolling Stock for use on Railways in the Representative's Territory, who are resident or carry on business in the Company's territory or the Representative's Territory.

(b) The Canton Company and The Company are associated Companies and work in close association in all matters connected with the manufacture of anti-friction bearings and each of them makes use of the name "Timken" as its trade mark, The Company doing so under contract with The Canton Company.

(c) The Canton Company has entered into an Agreement with the Representative dated the first day of March One Thousand nine hundred and Thirty-nine with a view to promoting the sale of Railway bearings being the Canton Company's products to the proprietors of Railways in the representative's territory either direct or through builders of Railway Rolling Stock in the Canton Company's territory or the Representative's territory.

(d) It is probable that some of these Railway proprietors may wish to make their purchases of Railway Bearings in the Company's territory in which the Company has the exclusive selling rights under the trade mark "Timken."

Now it is hereby declared and agreed by and between the parties hereto

1. Territory, Products, Uses.

(a) The Company hereby grants to the Representative, subject to the terms and conditions hereinafter stipulated, the exclusive right in the Representative's territory to can-

vass and invite offers and enquiries from Railway customers in that Territory for Railway Bearings being the [fol. 4278] Company's products which are intended to be purchased in the Company's Territory by the Railway customers for use in Railway Rolling Stock in the Representative's Territory.

(b) The Representative's rights under this Agreement are limited as to territory products customers and uses as above specified, and the products to which these rights apply will be the Company's products.

(c) The Company's products to which this Agreement applies shall be of the Company's standard design, material and workmanship.

(d) In particular the Representative's rights under this Agreement do not include the right to sell bearings, axle boxes or housings or parts thereof (whether for original installation or for replacement) for automotive or industrial application or for use otherwise than in Railway Rolling Stock on Railway lines, notwithstanding that such products may be ordered or used by railway customers.

2. Enquiries. The Company will refer to the Representative all enquiries for the Company's products received from Railway customers in the Representative's Territory except where conditions appear to the Company to indicate the advisability of quoting direct to such customers and the Company reserves the right to handle and sell direct to Railway customers on orders received direct by the Company, paying to the Representative a commission as hereinafter provided.

3. Selling Prices and Terms.

(a) In view of the nature of the business every transaction under this Agreement shall be subject to special quotation by the Company as to prices and all other terms and conditions, and the Company's products sold under this Agreement will be sold by the Company to Railway customers in the Company's Territory or as may be agreed upon in each case, subject to all limitations of this Agreement.

(b) No order received by the Representative or received by the Company from Railway customers in the Representative's Territory or in the Company's territory, shall be binding on the Company unless and until it is accepted in writing by the Company in Birmingham.

[fol. 4279] (c) All selling prices of the Company's products quoted to the Representative or to Railway customers shall be as detailed in the Company's written quotations and all such prices and all invoices shall be payable in Sterling to the Company in Birmingham unless otherwise agreed by the Company in writing.

4. Commissions.

(a) The Company will pay to the Representative a commission of ten per cent (10%) on the value of the Company's products shipped into the Representative's Territory upon orders received by the Company from Railway customers in the Company's territory, provided that prior to the Company's quotation to a customer resulting in an order it was known to the Company that the products were intended for shipment into the Representative's Territory.

(b) When the Representative succeeds in having the Company's products specified for new equipment which is to be purchased and constructed in the Company's Territory and shipped into the Representative's Territory the Representative will notify the Company in order that a commission for the Representative may be included in any quotation which the Company may submit in connection with such equipment.

(c) All commissions shall be reckoned upon the net invoice price or value of the Company's products unpacked ex Works, Birmingham regardless of the basis of delivery on which the quotation is made and the order is accepted.

(d) In order successfully to meet price competition in special cases, the Representative may agree to its commission being reduced to less than 10%, but such a reduction shall only be made by the Company after the Representative's Agreement thereto has been received in writing or by cable.

(e) All commissions payable by the Company shall be paid by draft or cheque in Sterling drawn on the Company's Bank Account in England and mailed to the Representative by the Company or will be credited to his account in any Bank in England designated by the Representative.

[fol. 4280] (f) Commissions under this Agreement shall be payable to the Representative only after full payment for the products upon which the Commission is payable has been received by the Company and no commission shall

be paid on sales for which the Company is unable to collect payment in full.

(g) All Commissions payable under this Agreement will be paid on the 20th day of the month following the month in which the Company receives full payment for the Company's products in respect of which the commission is payable or so soon thereafter as practicable.

5. Price Changes. Prices may be changed by the Company from time to time by giving to the Representative notice either in writing or by cablegram but no increase in price shall be effective with respect to orders being negotiated by the Representative on quotations issued by the Company prior to the time when it shall have received notice of such increase in price, provided that such orders are received by the Company within 45 days after mailing to the Representative notice of such increase, or within 25 days after the Company has cabled such notice to the Representative.

6. Diligence, Competition.

(a) The Representative during the term of this Agreement will exert its best efforts diligently to promote the use of Railway bearings for new or existing Railway Rolling Stock within the Representative's Territory which the Railway customers wish to purchase in the Company's territory.

(b) The Representative during the term of this Agreement will not sell or be interested in sales of nor solicit orders in the Representative territory directly or indirectly for any products that compete with the Company's products or the Canton Company's products.

(c) This Agreement and said agreement of the first of March 1939 shall be in force and effect concurrently subject to the termination provisions of this Agreement hereinafter provided in paragraphs 20, 21 and 22.

7. Communications.

(a) The Representative will conduct all business dealings [fol. 4281] and correspondence with the Company at its office in Birmingham England.

(b) The Company will pay 50% of the cable charges incurred by the Representative in connection with the work involved in carrying out the terms of this Agreement.

(c) The Representative's invoices for such cable charges shall be fully detailed as to the way the charges have been incurred, and shall be submitted to the Company every three months.

8. Access. The Representative will give to the Company or its agents at all reasonable times access to all information relating to the Company's products in the Representative's territory.

9. Shipments.

(a) Time specified for shipment by the Company shall be computed from receipt by the Company in Birmingham of the definitive order with complete specifications mutually approved.

(b) In the event of Acts of God, prevention by domestic or foreign law, fires, strikes, lockouts, or other differences with Workmen, accidents, shortage of transport facilities, delay of carriers, riots, acts of Civil or Military authorities, non-delivery of parts or materials by the Company's suppliers, or any other unavoidable causes or contingencies beyond the control of the Company affecting manufacture delivery or shipment then the delivery and shipment may be delayed by the Company without the Company being held responsible by the Representative or any customer therefor.

10. Penalty Clauses. The Representative shall not negotiate any order which involves a delivery penalty clause, unless the Company expressly consents thereto in writing.

11. Adjustments. All adjustments of claims for defective material and workmanship in the Company products shall be made by the Representative in accordance with the Company's instructions.

12. Representative's Authority.

(a) The Representative is in no way the legal representative or agent of the Company, and its authority as Representative is limited as expressly stated in this Agreement, and the Representative has no right or authority to assume or create any obligations of any kind, expressed or [fol. 4282] implied, on behalf of the Company or to bind it in any manner, whatsoever.

(b) The Representative shall not make any use of the name Timken or any variation thereof in connection with

its firm name, style, or title during the term of this Agreement, or at any subsequent time without the express written consent and authority of both the Company and the Canton Company.

(c) Without restricting the foregoing general provisions the Representative is specifically prohibited from using "Timken" in its corporate name without the express written authority of both the Company and the Canton Company.

13. Fees and Taxes. If the conduct of business by the Representative under this Agreement should subject the Company to the payment of any license, registration or other fee or tax of any nature under the laws of Argentina or Uruguay, then the Representative at its expense shall pay the same, and in any event the Representative shall indemnify and save harmless the Company from any license, registration or other fee or tax of any nature under Argentine or Uruguay laws which might be assessed or attempted to be assessed upon the Company or deducted from any money which the Company is entitled to receive under this Agreement, or any transaction effected thereunder.

14. Designs and Drawings.

(a) The Representative will secure and submit full engineering information concerning proposed Railway applications for approval by the Company.

(b) The Company will make application drawings and designs and will furnish blue prints and Van Dyke prints to the Railway customers in the Representative's territory or in the Company's territory at the request of the Representative.

(c) The Company reserves the right to make only general drawings except in the case of an actual order, in which case the Company will make complete detailed application drawings and data as to methods of application and furnish them to the Representative or to prospective Railway customers but the said drawings, etc. shall remain the exclusive and confidential property of the Company.

[fol. 4283] 15. *Inspection and Service.* The Representative at its expense will at all times render reasonable service to Railway customers and operators of the Company's products in the Representative's Territory with a

view to ensuring that the Company products are applied and maintained under proper operating conditions.

16. *Advertising.* The Company will furnish to the Representative free of charge, catalogues and pamphlets describing the Company's products in such quantities as the Company may deem necessary to assist the Representative in the development of the business and such catalogues and pamphlets will be posted to the Representative or in accordance with its instructions in small quantities as ordinary printed matter.

17. *Samples.* Samples and models may be supplied free of charge by the Company at its option and shall remain the property of the Company.

18. *Laws Governing Agreement.* This Agreement shall be interpreted and construed according to the laws of England.

19. *Illegal Provisions.* If any provision of this Agreement conflicts with any law or regulation in the Representative's Territory then such provision shall be considered as omitted from this Agreement and in such case the Company shall have the right to substitute a valid provision as nearly as practicable, equivalent thereto.

20. *Continuance of Agreement.* This Agreement shall remain in force until the first day of March 1942 and thereafter shall continue from year to year provided however that this Agreement may be terminated by either party on the first day of March 1942 or on the first day of any month thereafter by six months' prior notice in writing to the other party; provided further that this Agreement may be terminated by the Canton Company on the first day of March 1942 or on the first day of any month thereafter by six months' prior request in writing by the Canton Company to the Company and to the Representative; provided always that this Agreement shall be automatically terminated in the event of the termination of the Agreement made the first day of March 1939 between the Canton Company and the Representative.

[fol. 4284] 21. *Termination for Cause.* If the Representative fails to pay any moneys to the Company when the same become due and payable or fails to perform any of the conditions or provisions of this Agreement on its part to be performed, then the Company shall have the right to terminate this Agreement immediately by notice in writing addressed to the Representative at its last known address.

22. (a) This Agreement shall not be assignable or transferable directly or indirectly by the Representative or by operation of law and if the Representative becomes insolvent, if a petition in bankruptcy is filed by or against the Representative, if the Representative makes a composition with or assignment for the benefit of its creditors, if a receiver, liquidator or trustee is appointed for the Representative, if the Representative goes into liquidation or dissolution or attempts directly or indirectly to assign the benefit of this Agreement, then this Agreement shall terminate forthwith.

(b) The Representative will immediately notify the Company of any change in the legal constitution or control of the Representative.

(c) In the event of the termination of this Agreement the appointment by the Company of another Representative (which appointment shall require the consent in writing of the Canton Company) such new appointment shall be without prejudice to any claim the Company may have against the Representative and the Company will execute all unfilled orders accepted prior to termination.

23. *Entire Agreement, Modification.*

(a) This Agreement constitutes the sole and only Agreement existing between the parties hereto.

(b) All other agreements contracts and undertakings between the parties hereto are hereby terminated and no subsequent agreement or alteration of this Agreement by and between the parties hereto shall be valid or of any force or effect unless such agreement or alteration is made in writing and duly signed by or on behalf of both parties and made a part of this Agreement in express terms and unless such subsequent agreement or alteration also shall [fol. 4285] receive the written consent and approval of the Canton Company.

(c) Notwithstanding the fact that another Agreement may exist between the Representative and the Canton Company relating to the Representative Territory the parties to this Agreement shall have no liability to each other except as defined in this Agreement.

In Witness Whereof this Agreement has been signed on behalf of the parties hereto.

Whereas as recited in preamble (c) of the foregoing Agreement dated as of the first of September 1939 The Timken Roller Bearing Company entered into an Agreement with Percy Grant and Company Ltd. dated the first of March 1939 and British Timken Ltd. is also familiar with the terms of said agreement; Now Therefore pursuant to the provisions of paragraph 6 of said agreement of the first of March 1939 The Timken Roller Bearing Company does hereby consent that British Timken Ltd. and Percy Grant and Company Ltd. may enter in to and operate under the foregoing agreement dated as of the first of September 1939 subject to its terms and conditions provided however that by signing this consent The Timken Roller Bearing Company does not become a party to the foregoing Agreement and does not otherwise relinquish or waive any of its rights in said Agreement of the first of March 1939 or in any existing agreements between The Timken Roller Bearing Company and British Timken Ltd.

The Timken Roller Bearing Company. By ——— ———, President. Attest ——— ———, Secretary.

Signed and sealed by or on behalf of The Timken Roller Bearing Company December —, 1939, in the presence of ——— ———.

Our Arrangements With British Timken Limited, Birmingham, England

Since the turmoil in Europe certain situations are arising that make it necessary for each and every one of our key

men to thoroughly understand the setup between British Timken Limited, Birmingham, England, and The Timken Roller Bearing Company, Canton, Ohio.

Their territory consists of the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all Dominions, Colonies, Protectorates, and Dependencies of the United Kingdom and the European countries with the exception of those in or adjacent to North and South America which puts Canada in the American territory.

The contract provides that we shall not ship or knowingly permit our customers to ship bearings into their territory for use in the manufacture of any equipment whatsoever. Where customers wish us to make shipments into their territory for manufacturing purposes, we are to advise them of our arrangement with British Timken Limited and you are to immediately advise us of such conversations, negotiations, etc., so that we can in turn contact the British Timken Company.

Undoubtedly many of our manufacturing customers buy bearings from us for service purposes and occasionally for manufacturing purposes and in turn re-ship them into British Timken's territory. That, of course, we have no knowledge of and we cannot stop.

There is a provision in the contract which permits us to execute orders whose ultimate destination is in British Timken's territory for service purposes only to be used in equipment originally built in this country and equipped with Timken bearings, but there is considerable detailed work connected with this, and, therefore, such shipments must be made by us here in Canton or authorized by us to be shipped through one of our branches.

[fol. 4287] There are a number of American manufacturers using Timken bearings who operate plants in British Timken's territory. Some of these plants have used both SKF tapered roller bearings and Timken bearings. Inasmuch as it is becoming more and more difficult to secure anti-friction bearings from the Swedish companies, these American manufacturers who own these foreign plants will probably call on us to make deliveries of bearings from here. Please note that such deliveries are in direct violation of the British Timken contract, and where such requests are made refer them to us as we may want to effect some arrangement with British Timke. to fill such require-

ments rather than have the American company buy one of the competing makes of tapered roller bearings and have them shipped into British Timken's territory. In such an event, both companies would lose.

L. M. Klinedinst.

[fol. 4288] PLAINTIFF'S EXHIBIT 108

Canton, 12-6-39.

J. R. Comber
W. B. Moore
W. H. Richardson
W. C. Sanders

It is quite evident from past practice in handling export orders that there are some of our men not fully familiar with our contractual arrangements with British Timken regarding territories and the shipment of bearings into each other's sales territory.

So that our men may be fully familiar, we are quoting below from our business agreement with British Timken. The following paragraph covers British Timken's territory as well as our own.

"For the purposes of this agreement the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all Dominions, Colonies, or Dependencies of the said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deemed to be the territory of the American Company."

The following paragraphs cover the shipment of our bearings into their territory, and we are not quoting the paragraphs covering British Timken's shipping bearings into our territory inasmuch as they are identical:

"During the life of this agreement the American Company shall not directly or indirectly make or sell or license others to make or sell bearings in the British Company's territory or in the American Company's territory knowing

them to be for shipment into the British Company's territory save and except as follows to wit:

(A) The American Company may make or sell or license others to make or sell in the territory bearings for delivery or shipment into the British Company's territory as assembled component parts of completed articles of manufacture manufactured in the American Company's territory or as assembled component parts of completed units of manufacture manufactured in the American Company's territory for incorporation into such completed articles of manufacture.

(B) The American Company in its territory may accept and execute orders for bearings for ultimate destination in the British Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the British Company's territory or sales at prices in conflict with the wishes of the British Company and the American Company from time to time will notify the British Company of the details of the sales authorized under this paragraph and will pay to the British Company an amount equal to five per cent (5%) of the net sale price thereof".

It is our interpretation of these arrangements that we are not permitted to sell or ship bearings into or known to be destined to British Timken's territory without paying them a 5% commission, and even under such circumstances our prices must be acceptable to them. We have a mutual understanding with British Timken that on unsolicited inquiries for bearings going into each other's territory that [fol. 4289] we are at liberty at all times to quote prices representing a 50% discount from American list on standard bearings and pay a 5% commission on the net sale thereof. We insist that all of our men respect our agreement with British Timken and on any unusual cases to consult the Home Office for further instructions.

[fol. 4290] PLAINTIFF'S EXHIBIT 109

The Timken Roller Bearing Company

Inter-organization Correspondence

Attention of: W. Robert Timken.
Subject: Mr. L. M. Klinedinst's General Letter No. 11-13 of 12-6-39. (F-3).

From 24-4 Canton.
Date 1-29-40.

In view of the confused conditions of international trade and the increased demands of the British and French governments for bearings for war purposes, it is probable that we will receive more and larger inquiries for bearings destined for the territories of our British and French associates. We have also had reports that companies using SKF bearings are having difficulties in getting deliveries, and this, too, may be a factor in our receiving inquiries for delivery in the territories of our associates.

Our agreement provides that we are not to sell bearings into Europe or possessions of European countries, excluding Russia and North and South America, except for service, and in the case of service, only under certain price conditions. Our agreement does *not* permit us to sell original equipment bearings directly or to domestic manufacturers knowing them to be destined for shipment into British or French Timken territories. However, this does not include bearings assembled into completed articles of manufacture or component parts of completed articles of manufacture subsequently shipped into their territory.

When inquiries are made for bearings which may be shipped into our associates' territories, please report the matter immediately to Canton giving full information as to number, size, quantity, specification, and the exact use of the bearings. In addition, you should use your best efforts to persuade the customer that our British and French associates are both able and eager to supply their foreign requirements and that they manufacture a product comparable in every way to our own.

When emergency shipment of small orders is demanded, we have the permission of our associates to fill such orders. We do not, however, wish to take advantage of this permis-

sion except where it is unavoidable. These cases must be taken up with Canton as outlined above for it is necessary that complete information be given to the associate involved. Should the Canton office see fit to fill any such orders that does not mean we will continue to accept them, and the customer should be urged to place all future orders with British or French Timken as the case may be.

W. R. Timken.

[fol. 4291] PLAINTIFF'S EXHIBIT 10

20th September, 1940.

R. E. Forsythe, Esq., The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

DEAR BOB:

Further to my letter dated 27th August, I have to advise you that Mr. W. R. Dickenson has joined the Royal Australian Air Force, and is, therefore, cancelling his trip. His place will be taken by Mr. J. A. Harrison of Bearing Service Co. of Aust. Pty. Ltd., who you will find a very nice chap. He will be travelling on the s. s. "Monterey" which is due in Los Angeles on Monday October 7th, and if you could arrange for someone from your Los Angeles office to meet him, it would be very much appreciated, especially as he has not visited America before. According to his proposed itinerary he will arrive in Canton by train early on Friday morning, the 11th October, and will leave on Saturday 12th October for New York. He also proposes to call at Canton again on his way back to Australia.

I fully expect that Mr. Harrison will take up very strongly with you, the service which his Company is getting from British Timken, Ltd., and in my opinion, there is no doubt that there is very good cause for complaint. That the war has increased their worries and troubles is undoubted, but at the same time, their handling of matters, especially the changeover of bearings from Birmingham to Canton, has been badly bungled as far as we can see. It seems impossible to rely on Birmingham to efficiently handle orders and of course, neither I nor our Distributors are officially

allowed to correspond with you direct. Mr. Harrison will, I expect, give you details of lots of other matters which have been held up unduly, but I pointed out to him that possibly you may not be able to help him much, as this territory is controlled by British Timken, Ltd.

Mr. Harrison will also mention to you the possibility of the British Purchasing Commission buying bearings direct in America. In this case, the Bearing Service Co. of Aust. Pty. Ltd., would, of course, like to have some cover, although not a large one. This also brings up the question of how [fol. 4292] British Timken Ltd., would get on in these circumstances, but no doubt you will make suitable arrangements if the situation arises.

The main object of Mr. Harrison's visit to America is in connection with obtaining adequate supplies of bearings other than tapered roller bearings. As you know, the Bearing Service Co. of Aust. Pty. Ltd., is a very solid supporter of Timken, but at the same time, of course, it is essential that they have a complete range of bearings to offer. In this connection, any help and advice that you can give Mr. Harrison with regard to other bearing Companies, would be appreciated; he has my fullest confidence, and you can rest assured that Timken interests will be carefully guarded.

I am expecting Cyril Fall, one of our Service Engineers to join me here within the next few weeks. He will be permanently resident in Australia, and of course will operate under Stuart, should the latter decide to rejoin the Company after the war. Stuart is still extremely busy, and unfortunately he is stationed so far away from me that I do not expect to see him for some time.

A few days ago, the Bearing Service Co. of Aust. Pty. Ltd., received a cabled request from you for a Letter of Credit for $50,000 so presumably you have started to make some heavy shipments to us out here. I am still very much handicapped by lack of information, but am hoping to get some of this from you at any time now.

I recently had a tentative enquiry for a Timken lubricant testing machine, and would be grateful if you would let me know the approximate cost ex. Canton without motor, but otherwise complete.

As you probably know, Buck Spear is now General Manager of Fischer Bearings Co. Ltd., and I had a long

letter from him recently. We seem to be much more fortunate with supplies from them as from Birmingham. Do you think there is any possibility of supplies of American Timken bearings being curtailed to Australia, owing to expanded war effort in the United States? To guard against this, it is highly probable that a security stock will be ordered from you by our Distributors under Commonwealth regulation. I have not heard any more lately of the possibility of General Motors manufacturing out here, about which I have already written to you.

I am afraid that recently I have been asking you for a lot of information, and I sincerely hope that this is not a trouble. On the other hand, you will appreciate the rather absurd position existing at the present moment, inasmuch [fol. 4293] that we are getting practically all our supplies from you, and yet it is almost impossible to get any information from Birmingham. Why not take over Australia and New Zealand for the duration of the war? I hope that you have been asked by Birmingham to quote for the complete equipment of 20 alternatively 35 locomotives and tenders for the New Zealand Railways. This is a case where the customer is extremely anxious to place the order with us, but for some extraordinary reason, we do not seem to be able to produce a price.

With kindest regards, and once again apologising for any trouble that I may be putting you to,

Yours sincerely, Colin S. Gibson.

P. S. Could you please arrange to have me put on your mailing list again for pulls of advertisements, also for lists of new production accounts, provided my name does not appear on the top.

[fol. 4294] PLAINTIFF'S EXHIBIT No. 111

Bearing Service
Melbourne, Australia

Twenty three, Ten, Forty.

Mr. R. Forsythe, The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

Dear Mr. FORSYTHE:

Colin Gibson assures me that I need not wait for any introduction before commencing to write to you.

Our cable to Mr. Harrison may have been a little difficult for you to understand but we are engaged at the moment in replying to a cable from Mr. Pascoe and we are very concerned to make sure that Mr. Harrison does not ask you specially to request that our orders go direct to Canton and then for us, in our enclosed letter, to ask Timken to do the opposite. In other words, we do not want you to think for one moment that we would ever let you down in the slightest particular.

Your cabled objection to Birmingham together with our letter, we hope will bring some result.

It is, of course, much better for us if we can send our orders direct to Canton but we feel that there is no chance of obtaining this officially and if we can obtain permission to send all enquiries, etc., freely to you, we will also provide you with a copy of all orders, which amounts to much the same thing.

Colin is afraid that they will reply stating that England will supply more in the future and that we will be worse off than ever.

Owing to the delay in getting orders across to you, Sydney are in a very sad state for many stock sizes and Weber has already booked indent orders for Mr. Pratt, but now that you have the matter in hand, it should not be long before they are O.K. again.

We are very concerned about the 2% discount, not so much for the money involved, although that amounts to something, but it seems like the 'last straw' coming on top of the business outlined in our enclosed copy letter.

[fol. 4295] We have cabled Birmingham to-day asking them to arrange for you to allow the cash discount.

I am asking Mr. Harrison to try and meet Mr. Dewar and casually give him a copy as per our enclosure stating to him that he might wish to make some enquiries while he is in America.

If you think this is unwise, would you tell Mr. Harrison the best course to proceed.

With kind regards,

Yours faithfully, Bearing Service Co. of Aust. Pty. Ltd., R. R. Thomas, Deputy Chairman of Directors.

[fol. 4296] PLAITIFF'S EXHIBIT No. 111A

Bearing Service

Twenty-three, Ten, Forty.

Letter No. B-163

C. S. Gibson, Esq., % Messrs. Tozer, Kemsley & Millbourne (Aust.) Ltd., 109 Russell Street, Melbourne, C. 1.

Dear SIR:

We have your favour of the 21st inst. together, at our request, of a copy of a cable reading:

> "Canton report confusion caused by receiving requests for deliveries and prices direct from Australia presumably Bearing Service Company Stop This is directly opposite to our instructions Stop How does it occur? Stop Please take immediate steps to rectify" (Sgd.) Pascoe

We believe that Mr. Pascoe is very properly concerned that the 'confusion' may be detrimental to the goodwill of Timken in this country and, therefore, we are led to assume that Mr. Pascoe is unaware of the following facts which we would like you to bring under his notice.

(a) That the Timken tapered stock sizes received by us from both Birmingham and Canton during the last six months have been insufficient for us to meet the normal demands of our customers.

(b) That the information and replies to our queries received from Birmingham have not been sufficiently prompt

or informative to enable us to prevent the very considerable damage that has now been done to the good name of Timken in this country.

(c) That competitive factory representatives have become aware of the exasperated state of mind of many hitherto satisfied Timken users and have already booked orders for tapered roller bearings. Pratt has already booked indent orders and we have been informed that Bower bearings are on the way to Australia.

[fol. 4297] Only for the vital confusion that exists in the tapered roller bearing field here, as a result of the foregoing, we consider that we could have prevented both of these rivals from becoming seriously interested in this market.

We are confident that had we received the active cooperation of British Timken, Ltd. that these unfortunate setbacks to Timken prestige in this country would not have occurred.

Under date of 21/9/1939 over the signature of the writer, we forwarded for the consideration of British Timken Ltd. a considered method of organizing to meet this anticipated emergency and we submit that subsequent events have proved that, had this organization been arranged in advance as suggested by us, the whole of this setback would have been avoided.

Further, an unusual opportunity was offered to Timken in this country when the supply of Swedish ball bearings was abruptly cut off at a time that Canton was not in full production.

Not only was that opportunity missed but after more than twelve months of war, after large quantities of ball bearings have become available in this country, we still await our first considerable shipment from Canton and we still, in some unfortunate cases convert Timken users back to ball bearings.

The distribution of ball and roller bearings in this country is coming more and more under the control of the Ministry of Munitions and if Timken is to obtain its fair share of the large orders required in the national war effort, we must obtain and hold the confidence of responsible officials.

Time is the essence of the contract in the local war effort and we are expected to have information at our fingertips to give instant reply to the Defence officials about delivery

dates and prices or they are dissatisfied and look for prompt service elsewhere.

A reply to our overseas cable is expected within two or three days and this service we are usually able to give from any factory except British Timken Ltd.

As yet British Timken have not forwarded us a Timken American price-list and we are working for the present from one that we received from America over two years ago.

The number of cables that we requested you to send to have a discount schedule established may be discovered by [fol. 4298] an examination of the cable files of British Timken, but we still await information in regard to prices of American bearings marked with an asterisk in the Timken Roller Bearing Company Price-list.

Should Mr. Pascoe care to examine the cable files of British Timken Ltd., he will find ample evidence of the impossibility of us giving prompt service to the Defence authorities.

Numbers of cables will be seen that have taken between fourteen days and a month to receive any reply and, in some cases, no reply was received at all so far as we are aware.

At this time of writing we have before us several instances of potential orders lost to us because the Defence authorities were dissatisfied with our available information in regard to Timken tapered roller bearings.

We do not propose in this communication to recapitulate in detail the evidence which is already available in the files of British Timken Ltd. suffice it to say that at last we decided that this impossible state of affairs could not be permitted to continue and we cabled British Timken as follows:

June 1940.

"If possible ship all outstanding orders dated March and earlier except balance . . . ex Canton owing to stock shortage ship . . . ."

We have reason to believe that in consequence we will receive shortly a large shipment of bearings from Canton and when it arrives we shall be in a position to advise our customers what bearings are included.

In some urgent cases we have been reminded by the Ministry of Munitions that we were retarding the Defence program by not supplying information promptly and we were asked whether we were prepared to do something about it

or whether they would communicate direct with the British Purchasing Commission.

In such cases we incurred the extra cost of cabling Canton and we were able thereby to assist to preserve the goodwill of Timken to some degree.

In our opening remarks we stated that we believed Mr. Pascoe to be properly concerned about the effect on the Timken goodwill and we, therefore, asked you to forward Mr. Pascoe a copy of this letter so he may be informed that in our considered opinion — goodwill of Timken bearings in Australia can be maintained only by establishing [fol. 4299] real co-operation between British Timken and ourselves in solving the present problem.

We give our unqualified assurance that we have no thought except to give prompt service and information and we have no doubt that Mr. Pascoe will readily agree that Timken goodwill has not been adequately protected in this country since the outbreak of war for reasons that could have been avoided.

With all respect, we request Mr. Pascoe to accept this following recommendation which we make in the light of many years experience of this market.

(a) That all our orders be forwarded to British Timken Ltd.

(b) That in all other matters connected with shipments of goods, we be encouraged to communicate freely with Canton, at the same time sending a copy to Birmingham.

Your recent advices to us indicate that production in England is overtaking the tremendous demands that have been made on the Birmingham factory since the outbreak of war.

We wish you to advise your Principals that we protest most emphatically against the retransfer of orders to England again before some enquiry is made into the effect this action will have upon the Australian market and until we have assurance that our recent experience will not be repeated.

Yours faithfully, Bearing Service Co. of Aust. Pty. Ltd., R. R. Thomas, Deputy Chairman of Directors.

L. M. Klinedinst

Sales Into British Timken's Territory

Canton
12-3-40

In September of 1939 British Timken approached us regarding our shipping direct for them bearings to their overseas markets. They advised us that they would give us their orders for these bearings but that we must ship and invoice their customers from whom we would receive payment. This was due to the fact that they could not secure currency permit to pay for material which they did not receive. It had not been our practice in the past when we shipped bearings for British Timken directly to their export customers to give them a discount from our standard established prices such as we gave them when the bearings went to Birmingham, but they asked that we now do so due to prevailing circumstances. In other words, when we made shipments to their customers direct, they would advise us the prices at which the material should be charged and then we were to credit British Timken's account with the difference between the amount received from the customer and the price we would ordinarily have charged British Timken had the bearings gone to Birmingham.

We agreed to do the above on a temporary basis, reserving the right to rescind the price concession at our discretion, and in this connection British Timken was to guarantee the credit of their agents so long as we followed their instructions regarding terms of shipment.

Since the time that hostilities broke out in earnest in Europe we have continuously received inquiries emanating from British Timken's sales territory requesting catalogs and prices on our bearings. In many cases we were advised that they had formerly been supplied their Timken bearings from Birmingham, but they now desired to establish an American source of supply in case they could no longer secure bearings from England, and in some cases these inquiries came from British Timken distributors and French Timken agents. We have either referred the inquiries to Birmingham, or if it were a specific inquiry covering a definite lot of bearings we quoted our protective discount of

50% off American list. We have received definite orders from their sales territories which upon being referred to British Timken were turned down at their instructions.

As you are aware, Mr. Harrison of The Bearing Service Company of Australia, Melbourne office, who is their Liason Officer, is now in the United States and spent several days at Canton. Mr. Harrison stated he was making this trip in order to contact American suppliers of other bearing manufacturers whom they represent and to see if we were doing all possible to expedite the shipment of bearings which they had placed with British Timken and had been transferred to us. Incidentally, British Timken in approximately August of this year transferred to us a large quantity of orders for miscellaneous quantities and sizes of bearings to be shipped to Australia. We were informed by Mr. Hobley that they would like us to handle the requirements of bearings for Australia and South Africa on such sizes that we manufacture. Judging from Bearing Service order numbers shown on British Timken's orders they were quite old when we received them, and they covered over 100 different sizes and the quantities ranged from two pieces [fol. 4301] of a size to two thousand pieces. Mr. Harrison told us that they were quite alarmed concerning their supply of bearings especially in view of the fact that they had the defense contract for the Australian Government and asked that we push these orders all possible which we have been attempting to do. Naturally, under our present operating conditions here, these orders are more difficult to get through than regular orders due to the wide variety of sizes. There is also the fact to consider that there is only one sailing a month of passenger boats out of San Francisco to Australia, and it can be appreciated that it takes quite sometime after orders are placed from Australia, until they go to Birmingham, are sent here, and then arrive back in Australia.

At about the time of Mr. Harrison's visit here we started receiving from the British Purchasing Commission in New York, the Australian Division, inquiries concerning the delivery of certain items which Bearing Service Company had on order for the Australian Defense Board. In practically every case we could not identify the orders due to differences in quantity or for the fact that we had no order at all for such a part number, and we have been unable at any

time to give them an intelligent reply to an inquiry concerning delivery. I would like to point out a case where Mr. Harrison asked me if we had an order for certain sizes of bearings which I told him we did not have, but told him I had just received a call from Mr. P. J. Winspur of the British Purchasing Commission stating that such an order had been placed by Bearing Service Company and requesting us to advise delivery. It so happens that the particular order in question, #71525, was received from British Timken November 30 although this order was dated by them October 12. According to Mr. Harrison, this order had been placed by Bearing Service Company early in October and was urgently required for defense purposes.

Mr. Winspur [of the British Purchasing Commission] advised me more or less confidentially that he had learned that all orders from Bearing Service Company in Australia had to be placed through Birmingham due to contractual relations and stated that he felt it would be necessary for the Australian Government to probably take over these orders and place them through the British Purchasing Commission. In discussing this with Mr. Harrison a few days before he left Canton, he asked if we would cover them in the amount of 5% on such sales inasmuch as they had the defense contract, but we made him absolutely no promises of any kind.

It became necessary when we received such large quantities of orders for Australia to have Letters of Credit established, and Mr. Harrison when he was here requested a 2% cash discount which, he stated, was the customary discount received by them. However, upon referring the matter to British Timken, we were told they were not entitled to any such discount. Naturally, according to Mr. Harrison, who had given us a long story on the troubles they were having with British Timken, the matter of refusing the cash discount and the trouble they were having with delivery only [fol. 4302] served to increase their dislike of the method employed by British Timken in handling their requirements.

We have picked up from several sources in the United States the story that The Bower Roller Bearing Company is making every effort to take advantage of present conditions in order to establish themselves in world markets, and such conditions as described above only serve to give them

an entree into these fields. We have also heard that SKF is buying Bower bearings and are either re-packaging them or having their name stamped on the bearings and selling them to their regular customers in export markets. Naturally, we feel that present conditions do not add to the prestige of the Timken name and also that Bower who is a dangerous competitor is now being given an opportunity to secure a foothold from which it may be very hard to dislodge them after the war is over.

We feel that the name Timken could better be protected as well as giving Timken customers the service to which they are entitled if British Timken would establish prices for us in their territory and allow their customers, agents, or distributors, to place orders direct with us with a covering copy to Birmingham. This matter was covered by cable to Birmingham, and we were absolutely turned down flat, and various letters on the matter have gone unanswered. We do not feel that British Timken would necessarily lose control of their export markets, but rather are of the opinion that we would serve a definite purpose at the present time in holding this market for them until such time as they are able to handle the market themselves.

R. E. Forsythe.

REF:BAS.

[fol. 4303] PLAINTIFF'S EXHIBIT No. 113

December 4, 1940.

Mr. M. B. U. Dewar
Carlton Hotel
Washington, D. C.

DEAR MR. DEWAR:

We were advised by the British Purchasing Commission that they will very likely take over all of the purchases of anti-friction bearings for Australia. This will present a problem, the solving of which we must ask your help.

Undoubtedly as these inquiries come to the British Purchasing Commission they will ask all tapered roller bearing manufacturers in this country to quote prices, and following the same assumption further, they will give the business to the lowest bidder. That is one phase of it. On the other hand, should your Australian distributors specify on their

orders that they must definitely be supplied Timken bearings, then, we presume, they would come to only Timken for quotations, or would they take it upon themselves to buy from the cheapest source?

Regardless of how this works out, we have the problem of what prices to quote and how to distinguish between bearings that are to be used essentially for service and those to be used in production. There is another angle that may enter into this—the Purchasing Commission may go, for instance, to the General Motors Export Corporation for prices on bearings for General Motors equipment and, naturally, there should be uniformity in prices. Surely we feel it is necessary to have two distinct prices if this is possible—one covering bearings for service and the other for production.

We have in mind a number of American manufacturers who have assembly plants in Australia, and if the British Purchasing Commission takes over that phase of the business those bearing purchases would come through them rather than through the International Harvester Company, or General Motors, or whoever may have plants in Australia.

[fol. 4304] We have in mind a situation that developed several months ago. When we quoted the British Purchasing Commission on a large quantity of bearings at the established government buying agency price—#30—our competitor, The Bower Roller Bearing Company, quoted on this same inquiry at about a #17 price and The Bower Company got the business.

We do not want to see The Bower Company or any other American manufacturer of tapered roller bearings find a foothold in Australia or in any other territories covered by you, but we feel this will happen on a straight competitive bidding proposition because it is not possible to definitely control the price at which other tapered roller bearing people will sell their products for foreign consumption.

The simplest way out of this, as we see it, is for British Timken to instruct all of their foreign service connections to very definitely and positively specify Timken tapered roller bearings. That will give the British Purchasing Commission no leeway. If that can be done, the problem is virtually solved.

In case it works out this way, what prices should we quote the Purchasing Commission on bearings:

A. for production purposes where known, and
B. strictly for service purposes?

We feel, Mr. Dewar, that the awkward situation now presenting itself might have been avoided had British Timken permitted us to handle their outside orders direct.

Mr. Harrison of The Bearing Service Company of Melbourne spent quite some time with us recently and was very bitter in his criticism of our deliveries. We found in many cases we had never received an order from British Timken for the sizes so badly needed.

The policy followed by your Australian people was to send the order to British Timken, they would fill such parts of it as they could, and the balance of it was transferred to us. That meant a very great delay and that was why we suggested sometime ago that you have such parts ordered and shipped direct from Canton.

We are primarily interested, of course, in keeping Timken bearings to the front during this trying period and the further desire to help you in every way possible since we know how difficult it is to eradicate a competitor in foreign fields after he once gets a start.

I think this is a matter that you and I should discuss sometime in the very near future, and I would like to know what the chances are of seeing you for an hour or two at an early date.

Very truly yours, —— ——, Vice President.

R. E. Forsythe Esq., Timken Roller Bearing Co., Canton, Ohio, U. S. A.

Dear Bob:

On the 11th December, the following cablegram was received by Bearing Service Co. of Aust. Pty. Ltd. Melbourne from Mr. Harrison. This was sent from Los Angles on the 10th December:

> "Canton Advise Dewar Agreed ~~Yesterday~~ Their Handling Australia Direct He Cabled Pascoe This Effect Now Awaiting Confirmation Birmingham"

As you can imagine this is some of the best news I have had in years. So far I have not received any advice from Birmingham about it. I feel that Birmingham will do their best to avoid this arrangement, although if Mr. Dewar has agreed to it, half the battle is won. I can think of quite a number of reasons as to why Mr. Dewar would agree, and no doubt I will hear this story from you in due course.

Birmingham still appears to be in a hopelessly chaotic

state on the sales and ordering sides, despite a cable from Mr. Pascoe giving me his personal assurance that no further delays would take place from that end. The latest example is regarding an order for a few precision #3 bearings, ordered by Bearing Service Co. Sydney in March this year. The order was accepted by Birmingham who cabled that delivery would be made in 14 weeks. Some days ago, I cabled for delivery information and the reply received is that they are unable to supply, obtain cancellation. It is difficult to understand this reply, and why this order has not been sent on to you. As you can imagine our Distributors in Sydney are most annoyed about it, and Mr. Hodgkinson informed me that he would cable you direct asking you to fulfil the order, despite the instructions he has received from Birmingham that no cables must be sent to Canton. Every day and all day, I am receiving requests from Distributors and customers for information which I am unable to give; Birmingham never tell me very much and generally, the position is just as chaotic as [fol. 4307] ever. It seems incredible to me that Birmingham cannot hand this territory over to you to handle direct, otherwise they are in great danger of losing our goodwill out here. In the hope that this will happen, I give hereunder, some notes about the handling of the territory which may be useful:

Ford Motor Co. of Aust. Pty. Ltd. Geelong. For some years we have been obtaining the bulk of the tapered roller bearing business from the Ford Motor Co. Geelong, which of course, is mainly required for replacement purposes. These requirements have been very heavy recently, owing to spares being required for army vehicles. The procedure is that the Ford Motor Co. send their orders in to me personally, and I send these on to Birmingham after checking.

I do not know if you will be taking over this part of the business, and am of the opinion that it is quite possible that Birmingham will want to retain it. Should you be taking it over, it will of course, be necessary for you to compete with prices ex Ford factories in Canada, and you will know what the position is with them. You may prefer to retain the business in this way, but as you can imagine, I am naturally anxious to have it direct.

You will, no doubt, have a copy of Birmingham's Ford Export pricelist No. 376. Our discount off this list to the

Ford Motor Co. Geelong selling direct is 75% plus 10% for all tapered roller bearings. Under present circumstances, the approximate landing charges for British bearings including Exchange, Freight, Insurance, Duty (nil), Primage (5%) etc., is 42½%. The approximate landed charges from America amount to 65% which includes 15% duty and 10% primage, together of course with exchange. This should enable you to determine the present day landed costs and the prices which you would have to quote to be competitive.

Relative Cost of Landing Bearings Into Australia. Bearings of British origin come into Australia duty free, but there is a primage of 5%. Bearings from America are subject to 15% duty and 10% primage. In addition to duty and primage, landing charges include Exchange, Insurance, Freight, Wharfage, Dues etc.,

A good rough estimate of Australian landed cost is to take the nett dollar price and call a Cent a Penny. For example, if a bearing ex Canton is sold at $1.20 nett, the approximate landed cost in Australia is 120 Pence of 10/-d. Australian Currency.

Protection of Distributors. Although British Timken have always reserved the right to sell direct to any customer, it can be taken as a general rule that this has not been done except in a few isolated cases. In such cases, the price charged is very high and the total amount of business executed in this manner is not worth mentioning. The only customer in Australia to whom we sell direct is Ford Motor Co. Geelong, and in this case, a commission of 2½% is paid to the Bearing Service Co.

[fol. 4308] The scheme of fully protecting our Distributors is, I believe, a very wise one, as they can depend on our whole-hearted backing and co-operation. Other bearing Companies such as Hoffman Mfg. Co. England in many cases, sell direct to customers in Australia with the result that they do not receive the same co-operation from Australian Distributors as we do.

If an enquiry is received in Birmingham which they know is for this territory, usually an endeavour is made to have the bearings purchased through our local distributors. If this is not possible, the price charged is such that our distributors could supply the same customer and make a reasonable profit.

Competition. Our main competition in the past has been from the S.K.F. Ball Bearing Co. which is strongly established out here. It has offices in Melbourne, Sydney, Brisbane, also in Wellington, New Zealand and Auckland, New Zealand. They have always adopted the policy of carrying large stocks of tapered roller bearings, and we have been at a considerable disadvantage owing to this. S.K.F. carry these stocks on consignment, whereas our distributors, of course, always pay cash for bearings. This has meant that the local stock of bearings has been limited by the financial capacity of our distributors. I have on a number of occasions, strongly recommended to Birmingham that we keep a consignment stock in Australia, but this has been turned down. I fully appreciate that a consignment stock is not an ideal arrangement, but if it is the means of obtaining substantial business, I think it is worth while.

Despite the above, we have consistently obtained the majority of the tapered roller bearing business offering, and of course, the total business has been increased owing to efforts made in the Industrial field. Since 1934 when I came out, our tapered roller bearing business has increased more than 4 times. S.K.F. competition is a very real and serious problem because as you know, S.K.F. is a very efficient and live organization. S.K.F. were on this market many years before us, and have established a very firm footing which has taken a lot of hard work to move. Now, however, Timken is an acceptable bearing to all industry out here; it is well-known and is becoming much more widely used.

We can now expect a certain amount of competition from American tapered roller bearing Manufacturers such as Bower, Bantam, and Pratt. Bower and Pratt have obtained a few orders for this territory, but so far their activities have been very limited. Provided that we can obtain adequate stocks out here, I feel that there is very little to fear from other American Factories. I understand from one of Mr. Harrison's letters, that S.K.F. are obtaining tapered roller bearings from America from Bower and having these stamped S.K.F. If this is true, it will mean much more serious competition, and if there is anything that you can do to stop this, which of course, I doubt, it would help considerably.

At the present time, there is an excellent opportunity for getting tapered roller bearings more firmly established

in this market. Unfortunately, this opportunity has been [fol. 4309] to a certain extent, lost owing to the fact that stocks are not available. This has been due to Birmingham's inability to supply, coupled with their apparent apathy in placing orders with you.

Prices: As you know, the following schedule of prices is now in force in connection with No. 100 list—

Industrial bearings	discount 80%
Automotive bearings	discount 65%
Ford bearings	discount 60%

The 2% discount for cash has not been allowed, but this may be rectified should you completely control this market.

With regard to prices from Birmingham for this market, I am giving hereunder, a general summary of the position. I presume that you have a copy of Birmingham's Export list No. 356 complete with Supplement No. 1 and if by any chance you could possibly find your way around this list, the following discounts apply:

Table I.

Replacement	1" sizes	discount 50% plus 10%
	mm sizes	discount 75% plus 10%
Industrial	1" sizes	discount 70% plus 10%
	mm sizes	discount 75% plus 10%

Tables III and XVIII.

Replacement and Industrial	discount 75% plus 10%

Tables IV and VI.

Replacement Only	discount 50% plus 10%

Tables V, VII and VIII.

Replacement	discount 50% plus 10%
Industrial	discount 70% plus 10%

Table XIX.

Replacement and Industrial	discount 60% plus 10%

Conveyor Bearing. A special discount of 77½% plus 10% is applicable to conveyor bearings irrespective of quantity.

A number of other special long discounts are also applicable in special cases. These cases mainly apply to large

buyers or where competition is severe. With regard to prices, I am allowed to use my own judgment and can on the spot, give special discounts up to 80% off list where I think it is necessary.
[fol. 4310] As you can imagine it is advisable for me to have as much price information as possible. This avoids the cost and time taken to cable you for special prices, and I would suggest that you let me have your opinion about it. Prices are particularly needed for the following, which of course, will be in addition to your 100 list, a copy of which I do not possess as yet:

Prices for Precision bearings.
Special prices which you may be prepared to give for conveyor bearings.
Prices for large bearings where available, which are not shown in the 100 list.
Price for the Timken Lubricant Testing machine.

Technical Data. Should you be taking over this territory entirely, it will of course, be quite in order for you to send to me all technical data available. If such is the case, would you please have me put on your mailing list for such information, and also on your mailing list for general sales information.

Distributors: I have already sent you a list of Distributors, but in case this has become mislaid, I attach hereto a further list.

By far the most important of our Distributors in this territory are Bearing Service Co. Melbourne and Bearing Service Co. Sydney. In addition to their large Automotive turnover, the main industrial business in Australia is concentrated in Melbourne and Sydney.

The Bearing Service Group consists of Bearing Service Co. Melbourne, Bearing Service Co. Sydney and Duncan & Co. Ltd. Adelaide. These three Companies are financially and commercially connected, but of course, should be treated as separate organizations when being dealt with by you. The Bearing Service Co. Brisbane is entirely separate from this Group, although it is closely associated with them. In New Zealand, our main Distributor is Jas. J. Niven & Co. Ltd. who are our sole Industrial agents for that territory. As you know, Sparks Pittock is with Jas. J. Niven & Co. Ltd.

Range of Sizes. As you know Birmingham make a range of sizes of tapered roller bearings including the I.S.A. series, the LY. series and other specials which are not manufactured in America. It will be necessary for us to continue to order such sizes from Birmingham where they are required.

Thrust Bearings. I am somewhat confused as to the complete range of thrust bearings manufactured by you, and will be grateful if you would let me have details. As far as I know, your complete range is not included in any publication of yours which I have.

Plummer Blocks. If possible, would you please arrange to send me an export pricelist, together with discounts, for transmission equipment either from Dodge or Medart or both. As an alternative to this, it may be preferable for [fol. 4311] our Distributors to have housings, tapered sleeves, lock nuts etc., manufactured locally, and for this I require prices of double cone tapered bearings.

Shims, Lock Nuts etc. Will you please let me have prices for shims, lock nuts, washers, nuts, cotter pins etc.,

Rubber Mounting: Would you please advise me of your experience with mounting Timken bearings in rubber. Any general information on this subject would be appreciated.

The stock position out here is worse than ever, and we are anxiously waiting to receive substantial shipments from you. Many customers are held up, and unless a good quantity of bearings arrives within the next few weeks, we will be in a serious mess. From the information received from both Birmingham and Mr. Harrison it would appear that there should be heavy shipments on the water.

Just recently some shipments arrived for Brisbane and Sydney on the Kanangoora", but unfortunately no shipping papers were available to clear them. I have already written to you asking if it would be possible for you to send papers by air mail.

This letter should arrive in Canton just about Christmas time, so please accept my very best wishes. Perhaps after all you may decide to have a trip down here one of these days.

With very kind regards, and hoping that you will take over this market.

Yours sincerely, (S.) Colin S. Gibson.

31st December 1940.

R. E. Forsythe Esq., Messrs. Timken Roller Bearing Company, Canton, Ohio, U. S. A.

DEAR BOB:

You will have received my cablegram re the one which I had from Mr. Pascoe; I could not quite understand why he wanted me to acknowledge his cable to Canton but no doubt he had his reasons for it. As you can imagine, everyone out here including the Ministry of Munitions is delighted as we feel that we can now get some service and reasonable deliveries.

Jack Harrison is arriving in Melbourne by plane this afternoon and I will be going down to see him and will get some firsthand news of you. I am hoping to have letters from you soon, particularly as I do not know what has been behind the whole move, nor do I know exactly how I am to operate in future. In any case I would appreciate your arranging to have sent to me copies of all correspondence which you have with this territory so that I will be completely familar with what is happening. There are very many questions which will arise but at the moment I do not think it is worthwhile taking them up with you until I get some more definite instructions from Birmingham. I

sincerely hope that you are to take over this territory entirely.

I will be officially confirming my cablegram to Canton shortly but am just getting this short note away by today's Clipper Mail to tell you how very pleased I am with the new arrangement and I sincerely trust that you are also.

With very kindest regards, Yours sincerely, Colin S. Gibson.

[fol. 4316] P. S. Private: For many years in Australia and New Zealand B. T. Ltd. has employed the services of Kemsley & Co. to act as sort of factory representatives. For the past seven years—to my knowledge—they have been completely useless. In fact they do literally nothing for us except provide me with office space plus the part time services of an inferior junior typiste,—raking off in return a large commission. This has amounted to over £2000 sterling per annum in the last year or so.

In 1936 I put in a report to my Directors strongly recommending that we do without the services of Kemsley & Co., as we could run our own office out here very easily and on much less than their annual commission. This would have made for more efficiency and given the Company more prestige. Mainly owing to the efforts of Kemsley's London Directors, who apparently made a good job of entertaining our Directors, the whole thing was scotched, and so the disgraceful state of affairs continues.

Kemsleys have an office in New York called The Fenchurch Export Corporation, and it is more than likely that this company will approach you with a view to furthering their own interests.

The main business of Kemsleys is to ship on behalf of customers for which they obtain a 2½% buying commission. They are in no way qualified to handle Timken products, and how long they will get away with their present racket I just don't know.

[fol. 4317] PLAINTIFF'S EXHIBIT 118

CC M. B. U. Dewar, L. M. Klinedinst, F. J. Pascoe, H. H. Timken, Jr., W. Robert Timken.

Mr. Gutteridge, an engineer who has been sent to this country by the Australian Government to negotiate for the establishment of manufacturing plants in Australia, visited us at 3 P. M. with Mr. Chamberlain who is at present Technical Engineer with the British Minister of Munitions in Washington. Mr. Chamberlain's Australian connection was as an engineer with the Australian Ball Bearing Company. He explained that the name of his company is a misnomer insomuch as they are a general engineering firm which grew out of a company established 20-odd years ago to regrind and repair ball bearings for the Australian trade.

Gutteridge and Chamberlain called on us to see if we would be interested in establishing a bearing plant in Australia to manufacture all types of anti-friction bearings. They said that the anti-friction bearing business in Australia has amounted to about $1,000,000 per year for the past several years, but within the past twelve months this figure has increased approximately 100%. Mr. Gutteridge said that the Australian Government was insisting that a plant be built in Australia and that adequate tariff protection would be given to such an industry.

I explained to Gutteridge and Chamberlain that Australia was controlled by British Timken and that under no circumstances would we consider building a plant in Australia. I pointed out to them that it would be almost impossible to get delivery on any machine tools suitable for the manufacture of anti-friction bearings and that no bearing manufacturer in this country had excess machinery which could be shipped to Australia. Mr. Gutteridge wanted to know if we would be interested in establishing a plant in Australia if he could secure priorities for the necessary equipment. I told him that I did not think he could secure such priorities, but if he did we would not be interested as I had previously pointed out that British Timken controlled the sale of Timken bearings in Australia.

Mr. Chamberlain seemed to grasp the situation much more readily than Gutteridge. He explained that he was in this country to work with Michael Dewar on tanks and was trying to adapt the American and British tank designs to con-

form with machinery in existence in Australia. I told the gentlemen that it might be wise for them to get in touch with Mr. Dewar about this matter, and that if after they had talked with him it seemed desirable Bob Timken and I will come to Washington to see Dewar. Both of the gentlemen said that Australia is in dire straits because they cannot secure bearings from SKF and British Timken and that there is such a multitude of sizes in general use in Australia that it is extremely difficult to keep their equipment running.

26th February, 1941.

Mr. W. E. Umstattd, President, The Timken Roller Bearing Company, Canton, Ohio.

DEAR SIR:

At the present time, as you are probably aware, the Australian Government is having considerable difficulty in securing the necessary supplies of ball and roller bearings sufficient to meet their requirements for munition production, and rather than improving it would appear as though this situation will become aggressively more serious. Whilst it is realized that from an economic standpoint of view the time may not yet be opportune for the consideration of local manufacture of ball bearings in Australia, at the same time from a national emergency point of view this is a matter which really does require very careful consideration.

It is my understanding that Messrs. Chamberlain and Gutheridge, who at the present time are over here investigating matters on behalf of the Commonwealth Government, have had a general discussion with you regarding this question, and I am writing this letter to you to find out whether, in the event that some satisfactory arrangement could be arrived at, your Company would be interested in local manufacture in Australia and what your policy might be in regard to same.

Believe me, Yours very truly, (Signed) F. B. Clapp.

[fol. 4319] PLAINTIFF'S EXHIBIT 120

Mr. F. B. Clapp
British Purchasing Commission
Australian Division
15 Broad Street, New York City

Dear Mr. Clapp,

Your letter of February 26th has been received.

When Messrs. Chamberlain and Gutheridge visited us about ten days ago we told them that under no circumstances would The Timken Roller Bearing Company establish a plant for the manufacture of bearings in Australia. We have a contract with British Timken Limited which precludes our establishment of a manufacturing plant in Australia. Such a plant would have to be built by British Timken Limited.

Sincerely yours, — — —, President.

Birmingham, 7, England

Gentlemen:

Confirming our cable of today with regard to the supply conditions in the East Indies, etc., we urge that you consider some arrangement that would permit us to handle direct orders received from these regions. It seems very likely that unless some method similar to that established for Australia is agreed upon, the trade position of Timken will be endangered and additional competition brought into the picture. We have written you several letters in the past few months but no decision has been forthcoming.

We realize, of course, that the situation is not entirely in your control but feel that the export push must be relaxed in order to avoid crippling lack of supplies. Indications that Skefco will get the propeller bearing application which you developed because of your lack of sufficient plant capacity strengthens the case for concentrating on English needs and allowing us to protect your position in the export trade during the present emergency. We will keep Michael informed on this and hope that we can persuade both of you to our point of view.

As regards the Auto Olimo order, we are going to fill this one since it had already been accepted and will make the usual arrangement for payment to you but will await your decision before accepting any others.

Very truly yours, The Timken Roller Bearing Co.,
—— ——, Assistant to the President

Washington, D. C.

Dear Michael:

I am attaching a copy of a letter just addressed to Mr. Pascoe again dealing with the subject of service requirements. We doubt if Mr. Pascoe thoroughly understands this whole picture.

It took many years, as you will recall, to get foreign dealers of American made cars to buy their service bearing requirements through British Timken. The habit has been formed, and up until recently the American car manufacturers supplied very few bearings to the foreign agencies for service. They depended upon British Timken to do that. Conditions, however, have changed very materially since the war and even already many of the car builders in this country are asking us to pack bearings and ship them into your territory for service replacements claiming that they are unable to get the service their users have a right to expect. We have in several cases been forced to do this by the car builders, but in every instance we have first consulted the Birmingham office. However, to do that in each individual case requires a lot of time, cabling, telephoning, etc., and it seems to us that your Birmingham office should lay down a straight out-and-out policy that would permit us to handle all of these inquiries and orders for the duration of the war at a price that will get the business for you and at the same time make a nice profit for the British Timken Company which in round numbers is approximately 20%.

We wonder if you could point out to Mr. Pascoe the urgency of this matter.

Very truly yours, L. M. Klinedinst.

LMK:BAS

[fol. 4323] PLAINTIFF'S EXHIBIT 124

February 24, 1941

Mr. F. J. Pascoe
British Timken Limited
Cheston Road, Aston
Birmingham, 7, England

Dear Mr. Pascoe:

Our cable A-626, February 20, 1941,
Your reply this morning reading as follows:
"Please quote protective discount and refer
Spence to Guest Keen Williams Calcutta"

We fear that you do not quite sense the situation existing in foreign territories today.

Obviously, we are not the only tapered roller bearing manufacturer in the United States who receives similar requests for quotations. The Bower Company now makes all the sizes used currently in passenger cars, farm machinery, and practically all of the sizes used in trucks and industrial equipment. The Hoover Company manufactures practically all of the passenger car sizes. The Tyson Company does not manufacture the smaller passenger car sizes but they do make practically all of the larger truck sizes, 3" and above. The Bantam Company manufactures many of the larger truck sizes. Then there are several smaller companies such as Pratt, Orange, etc., who manufacture bearings only for the service but have quite a comprehensive list of sizes.

A quotation of 50% off, known as the protective discount, will not get this business. There is, however, sort of a general understanding among the manufacturers here that 70% off is the general service export discount. When these inquiries come through if any one of the above companies should quote 70% off as against our 50%, the business will go to those companies and neither one of us will know anything about it and we both lose.

[fol. 4324] Then another thing can happen. Suppose we quote the 50% discount and we hear no more of it. The other fellows quote 70%; they get the business and also the inquiries for future requirements, and we will have no knowledge of it and neither will you. This would enable any one of these competitors to build up unknown to you or

us a nice volume of foreign business which they are very anxious to do not only because there is a much better profit in it than if they sold the same bearings for production purposes in this country but, more important, it gets them established in foreign fields.

We do not want these things to happen because after the war it is going to be extremely difficult to get them out even though you should decide then to quote competitive prices. They will know about these competitive bearings and will at least place part of their business elsewhere.

Please don't misunderstand us; this is very difficult business for us to handle. The volume is not very large and shipping and packing, etc., is rather complicated compared to our regular flow of domestic business. Our only point in urging you to change your policy in this respect is to hold the business for you when the war is over.

There is another angle to this and a very important one. Most of the bearings that are being ordered by these various agencies throughout the world are for use in American-made vehicles, and should it come to the point where the users and dealers of these vehicles cannot secure their bearings through the customary channels they will change their policy and buy them through the motor car builder. If that should happen and should it become standard practice, you would find yourself in the position at the end of the war with little or no replacement business on American built cars.

Now won't you please analyze this matter again from this point of view, and if you agree that you want us to protect this business for you during the period of the war, cable us.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice President.

The Timken Roller Bearing Company,
Canton,
Ohio,
U.S.A.

DEAR SIRS:

We have your letter of the 18th February confirming your cable regarding the Far Eastern situation.

We have considered this matter and confirm having cabled you as follows:

> B187 A621 Have no objection to your accepting direct orders our territory provided our agents are adequately covered stop Please also do your utmost to cover us stop In all cases therefore please consult our agents before quoting and endeavour to mak quotation through agents stop We are advising all agents except Australia regarding this arrangement and are mailing you copy advice and list of agents

This, we believe, is self-explanatory.

We would add, however, that as our agents have been chosen for their knowledge of the markets, we consider that their services should be used in maintaining them at the highest possible level. If third parties take advantage of the war situation by endeavouring to deal direct with you, nothing but harm can result, but if you are able to deal through our agents in those cases where we cannot give good delivery, nothing but good can come of it.

Attached is a copy of a letter which we have sent to our overseas agents in the territories involved. A list of those [fol. 4326] territories is also given.

We realise that in certain cases you might find yourselves up against severe competition but we must rely upon cooperation with our agents to overcome this, and if it is found that very low prices are necessary, which we sincerely hope they are not, then the amount by which you

are able to cover us in respect of this direct business must be decided at the time.

We trust that this makes our position quite clear.

Yours faithfully, F. I. Pascoe, Director, British Timken Limited.

[fol. 4327] 14th March, 1941.

Copy of Letter to British Timken Overseas Distributors whose names appear on the attached list.

Dear Sirs:

It has come to our notice that certain firms in some of our overseas distributors' territories are approaching our associates in America direct for supplies of tapered roller bearings. We regard this as a serious endeavour on their part to nudermine the market which you have worked so hard to build up.

We have therefore arranged with our associates in America that, should they receive any enquiries direct from your territory, they will immediately advise you by cable in order to get your agreement to the prices which they will quote, or, alternatively, and preferably, they will make an offer to yourselves which you in turn can pass to the enquirer.

This is a temporary wartime measure which we are taking in order to protect your and our interests.

Yours faithfully, For British Timken Limited, — —, Sales Manager, Engineering Division.

Mr. F. J. Pascoe, Cheston Road, Aston, Birmingham 7, England

DEAR MR. PASCOE:

Thank you for your letter of March 14, your reference FJP/KP/U41, regarding our selling bearings into your territory. We believe that this will go a long way towards clearing up the difficulties we have been having but feel that if you had gone a little further it would have materially benefitted all concerned.

In this respect we want to call your attention to an inquiry which we just received from Auto Hall-Saigon, French Indo-China who wished to be quoted on approximately $1348 worth of bearings based on our 100 list. We referred to your list of distributors and found that undoubtedly French Indo-China would come under the Straits Settlements and that you are represented there by three distributors, namely: Muller & Phipps (Malaya) Ltd., Malayan Motors Ltd., and United Engineers Ltd. We did not know which of the three to approach, nor did we have any idea as to what prices should be quoted which would not jeopardize your position in that market. However, we did know that it was necessary for us to quote 70% off our 100 list in order to meet our domestic competition. We therefore disregarded all of your distributors and cabled this company direct; a quotation based on a number 30 price or 70% off our list. In order to have handled this in the fashion you suggested, it would have been necessary for us to know the prices at which you had been selling in this market, the territorial jurisdiction of your distributors, if any; or, if it were open territory, which of the distributors we should approach and whether or not we should immediately have quoted them our best price of 70% off or some higher price.

[fols. 4332-4333] Would it not be possible for you to give us the necessary information as regards your distributors and their territories, and then allow us to contact them immediately and give them a copy of our Engineering Journal showing the sizes which we manufacture, and also a copy

of our 100 price list with the information that we will allow them a 70% discount? Then when further inquiries are received from these markets, we can immediately refer the matter to your distributor and they will be in a position to quote them on such sizes as we manufacture with a minimum of time and cable expense.

To believe the foregoing is a cleancut method of handling this matter and would help to preclude the possibility of other distributors effecting contractual relations with our competition with resultant hardships on your distributors and yourself.

May we have your comments.

Very truly yours, The Timken Roller Bearing Co.,
C. Robert Timken, Ass't. to the President.

WH

[fol. 4334] PLAINTIFF'S EXHIBIT 127

6th May, 1941.

Mr. W. Robert Timken, The Timken Roller Bearing Company, Canton, Ohio, U. S. A.

DEAR MR. TIMKEN:

We have yours of the 15th April replying to our letter U 41.

We note what you say. At the same time, we feel that in order to protect our markets it is essential to have all tapered roller bearing business in each of the territories involved going through our agent. If third parties know that they can approach yourselves or us direct and by so doing, imagine that they can get better service, the whole organisation of our distributors may be upset. As you know, all our distributors have been carefully selected by personal visits to the territories by members of our staff, and we feel that the correct way of dealing with the matter, is to make it known in each territory that our distributors there are automatically distributors for yourselves inasmuch as we are so closely associated.

Now that you have so kindly relieved us of a great deal of our obligations in respect of Australia, we are well able to take care of the export business to other territories but at the same time, we shall not hesitate to make use of your

greater capacity, should we feel that there is a danger of tapered roller bearing business being placed with competitors due to our inability to offer delivery in a reasonable time.

[fol. 4335] We suggest therefore, that our way of dealing with the matter, namely to refer each enquiry back to our distributors, be given a trial for a further period.

I am sorry that with the list of distributors that we gave you, we did not make it quite clear what class of business each dealt with. An amended list is attached hereto giving this information. This unfortunately, would not have assisted you in the matter of Auto Hall-Saigon, as of course, this territory came under the jurisdiction of Francaise Timken and we have not yet appointed a new distributor.

Yours faithfully, F. J. Pascoe, Director, British Timken Limited.

Mr. W. G. Turner—San Francisco

Sales to British Timken Controlled Territory

With reference to our recent exchange of correspondence concerning disposition of several orders placed with us directly by "Etablisseme[illegible]ts Bainier d'Indo-Chine", the latest being Yale Hills' le[illegible] to you of April 28th, we are now in receipt of a commu[illegible]tion from British Timken granting us permission to deal directly with accounts located in their territory provided we do so with the consent of their agency connections in each country.

To familiarize you with all of the details leading up to this final reaction from British Timken we attach copy of our complete correspondence file beginning with W. Robert Timken's letter to British Timken of February 18th and ending with their Mr. Pascoe's letter of May 6th. We are not in entire accord with their proposed method of disposing of these unsolicited inquiries and firm orders emanating from accounts located in markets coming under their jurisdiction. However, we must necessarily be guided by their judgment and decision in the matter and we, therefore, ask that you be guided by the following procedure in the future in disposing of all such unsolicited inquiries and firm orders which you receive from accounts located in British Timken territory:

Do not extend any discounts greater than 50% without specific authorization from Canton regardless of the fact that you have previously been authorized to extend our extreme export discounts in some few instances. All such previous authorizations to extend discounts greater than 50% are hereby withdrawn.

Referring to Canton before quoting only those inquiries and orders involving substantial quantities to which, in your opinion, consideration of a discount greater than 50% should be given. Miscellaneous small orders and inquiries may be predisposed of immediately by extending 50% discount.

Upon receiving these inquiries and orders here at Canton, we will make direct acknowledgment to the customer explaining our position and promptly communicate with British Timken's agents as requested by Mr. Pascoe. From time to time, however, our management may deem it advisable or necessary to extend discounts greater than 50% without first approaching either British Timken or their agents.

Robert P. Kelly.

vd., enc.

[fol. 4339] PLAINTIFF'S EXHIBIT 129

Commission Contract with British Timken Ltd.

Under a business agreement between The Timken Roller Bearing Co. of Canton, Ohio and British Timken Ltd. of Birmingham, England, sales territories have been assigned to both companies with exclusive control vested in the company handling a given territory.

There is a provision in this contract that provides for a payment of a 5% commission on sales into each other's territories on service bearings but only then when the prices charged were agreeable to the controlling company. In order to eliminate needless cabling or delays occassioned by correspondence, we have the past agreed upon a price to be charged on unsolicited orders we receive. We then pay a 5% commission on this amount. The foregoing is intended only to cover service business and there is no provision made to handle original equipment business. There is no provision in the contract to cover such business except that full control is vested in the company handling a given territory, and we never had a general agreement with British Timken to cover such circumstances prior to the present war. We did have instances on special jobs when we worked out a special agreement with them to handle a certain order paying them an agreed amount, but as stated before we had no general agreement in effect.

When England entered the war British Timken was confronted with two conditions which made it impossible to handle their export sales as in the past. These were:

1. Their entire production was required in England and they also had to limit their range of production.

2. Financial regulations by their government precluded their past practice of buying bearings from us and having them shipped direct to their export customers, they paying us direct and collecting from their customers.

British Timken therefore started placing orders with us for direct shipment to their customers with the request that we bill and collect from the customer at a given price and then credit their account with the difference between the charged price and the price we would normally charge British Timken for the parts involved. It should be understood, of course, that we granted British Timken special low prices inasmuch as they had all selling, engineering and service expense to bear. In order to calculate the amounts payable to British Timken, we found it would be necessary to calculate or extend each invoice on two different price bases. This was considered too laborious and involved. Therefore, we offered in settlement for 1940 to pay them a flat percentage representing, as close as we could determine, the difference between the two prices. Although we would not possibly have had to pay the amount we paid, being around 22+%, we felt that since British [fol. 4340] Timken had the expense of sales and service representatives in these markets and no source of revenue we should not attempt to take advantage of the situation. In fact British Timken lost money by such an arrangement when you consider they lost their ordinary manufacturing profit.

In 1941 we cut the percentage from 22+% to an even 20% as we encountered considerably more difficulty in handling these orders. We made no agreement prior to the end of the year as to the exact percentage we intended to pay inasmuch as we wished to hold this open until we saw how conditions developed during the year.

We should make special reference to one order handled for British Timken during 1941. This was an order placed by Richard Thomas Co. of Ebbw Vale, England, with British Timken for $329,560.00 worth of mill bearings. Our standard price to British Timken, or, in this case, to any manufacturer in this country, was $284,191.00. We, therefore, agreed to credit British Timken with the difference

of $45,369.00 less f.a.s. New York charges of $1,951.98, inasmuch as we billed and collected direct from Richard Thomas.

R. E. Forsythe.

[fol. 4341] PLAINTIFF'S EXHIBIT 130

GENERAL DISCUSSION WITH DEWAR

February 23, 1944.

A discussion was held between Messrs. Dewar, Umstattd, Henry Timken, and Robert Timken relative to postwar problems.

* * * * * * *

The other point which bothered Dewar was England's need, pressed by governmental circles, of increased exports after the war. He felt British Timken might be hurt by British feeling that they would not be permitted to export to Argentina, Brazil, and other countries which were building up big sterling balances. He felt this might prejudice government circles into supporting Norma-Hoffman and Ransome & Marles as wholly British owned firms in the export of tapered bearings. British S.K.F. does no export business as this is handled from Sweden. He would like to consider some joint selling programs throughout the world whereby each company would supply the bearings it could make most cheaply. Umstattd pointed out the difficulties of finding someone without prejudice toward either British or American Timken to administer such a program. Considerable discussion around this point resulted in no concrete plan but raised a number of points which needed consideration. All were agreed that the general aim was to take aggressive advantage of the strengthening of the Timken trade position throughout the world resulting from the war. It was realized that this might result in serious price cutting as a combative measure but both parties were agreed that this could be met without fear. Both parties are to study the problems with the idea of evolving the best possible program toward carrying out [fol. 4342] this purpose.

We informed Dewar that present feeling in America

against international cartels was growing as a natural extension of prohibition of such stultifying arrangements in the domestic economy. This feeling was shared by Timken Roller Bearing management who felt that it might become advisable to suspend the business agreements with British Timken although it was felt that primary importance should be given to aggressive competition on a world wide scale.

We discussed briefly Duncan's position as American representative on the British Timken board of directors and the probability that his age (74) would make it necessary before long to find a successor. Dewar agreed although he felt Duncan was still an able and respected member of the board.

(S.) W. Robert Timken.

[fol. 4343] PLAINTIFF'S EXHIBIT 131

Canton, June 10, 1944

Mr. R. A. Baal—New York
Muller & Phipps (Asia) Ltd.

Joe Cornell handed me your letter of June 2 which resulted in my discussing this with Mr. Klinedinst. I think before we definitely commit ourselves to quoting 70% on general sizes and 60% on Ford on the orders to which you refer, we better find out just exactly what is involved—bearing sizes, quantities, etc. Perhaps you could tell us a little bit more about Cymot, Ltd., for it is well that we are given what information is available on any of these companies that we give consideration to quoting our export prices in British Timken markets.

You brought up an age-old subject, namely, the policy that we should employ in quoting on inquiries emanating from British Timken territory. I pointed out to Mr. Klinedinst the weakness in our pricing policy in the British Timken market, emphasizing the fact that buyers for the B-T market are becoming familiar with the fact that we are protecting British Timken and by so doing, do not have a price that is anywhere near competitive to Bower. As a result, it now develops that we don't even get inquiries for a lot of requirements. They are automatically referred to our competitors. Naturally it cannot be expected that

Bower will establish an export policy comparable to ours in territories that we cover and another pricing policy to be in line with us in British Timken territories.

Mr. Klinedinst has agreed to write British Timken with a definite recommendation that for the duration of the war we be allowed to quote our export prices in all markets which will include, of course, British Timken. He wants me to write him a letter that will be sufficiently informative and in detail to cover this competitive situation, pointing out the reasons for our recommendation, and he will enclose a copy of it with his letter.

I think it would be better, Bob, if you would write me this story so that I can turn it over to Mr. Klinedinst verbatim or submit it to him over my signature as you are a little bit more familiar with the details than I am. In this letter emphasize particularly Bower and their export policy. I believe that Ahlberg has appointed somebody in New York as their official export agent to cover the world. In this letter you should be definite as to the discounts we recommend employing in our quotations.

If you will get this for me quickly, we will get a dispatch off to British Timken.

Referring now to Muller and Phipps, and the Cymot, Limited, if you will give me the information on this, we will make a decision here in Canton and probably won't wait for British Timken's answer in this case.

E. H. Austin.

Subject: Muller & Phipps (Asia) Ltd.

This answers your letter of June 10th, which after its receipt I had some further conversation with Ed Broderick of Muller & Phipps concerning the orders which they are

holding for Cymot Ltd., and the requirement which they have at the present time is as follows:

60 #799076
37 #28156
60 #15118
2 #2581
2 #2729
8 #3120
12 #799056
10 #2523
3 #3120
24 #799085

Frankly, the above order isn't much to talk about, but according to Ed Broderick, in reviewing the files of the Ira H. Snyder Co. over a few years, they have purchased a considerable amount of tapered bearings from Bower, and also the records show that substantial purchases were made from Hoover when they were in a position to furnish tapered roller bearings.

In respect to Cymot Ltd., I had occasion to question a number of prominent export people, including Ed Caswell of Thompson Products, who Cymot represents in the Union of South Africa, and Ed tells me they are the largest independent automotive wholesaler in South Africa. Harry Herts has visited South Africa a number of times and has called on Cymot, substantiated this opinion, and further believes that in certain parts of South Africa they are distributors for British Timken Ltd. I of course have no way of verifying this.

In regard to the broader aspect of this problem, the analysis outlined by you are entirely correct, because I can well recall long before the war, that Dodge & Seymour Ltd. have approached me on many occasions, having substantial orders for British Timken markets such as India, Ceylon, Burma, Dutch East Indies, Federated Malay States, etc., and I know for an absolute certainty that in many cases this business went to Hoover and Bower, and on some occasions the gypsies such as New York Bearing Co., L. C. Smith and Leterstone. Previous to the war we made certain variations in our British Timken policy, and I believe with the concent of British Timken, the outstanding exception being General Motors Overseas Operations, who we

placed on an equal footing throughout the world. We also made an exception to those American controlled metal and mining companies who had properties in our territory where they enjoyed our extreme export prices, and also properties in British Timken territory.

In respect to Bower competition through Ahlberg, it is very true that they employ the same price policy of 70% on general sizes and 60% on Ford sizes in all world markets. I understand that Bower's export business is under the [fol. 4345] personal control of Fred Burkholder out at Chicago, and I have been informed that they do not have any New York export representative, but rather operate their own export department. In their export advertising they are making quite a bid for distributors and sales representatives, but if they were the least bit aggressive, they certainly could do a job in such markets where they only have to contend with British Timken competition, and of course protective price policy from the States precludes our being in the picture at all.

I for one would believe it good judgment on our part to be in a position to quote competitive discounts from the States in line with Bower's policy, and I certainly believe that now is the time that some very definite thought should be given to that subject, particularly when Bower are in a position to offer a complete hearing service, which is quite an item when considering shipping costs.

As emphasized above, I am not particularly recommending that we go out and solicit business in the British Timken territory, but do know for a fact that a good many of the export houses who have requirements for tapered roller bearings, do not approach us because of the present price barrier; and to repeat, I would recommend that we set our present price policy for Latin-America to all world markets in cases where business is offered to us.

R. A. Baal.

Mr. M. B. U. Dewar
British Timken Limited
Cheston Road, Aston
Birmingham 7, England

Dear Michael:

I am inclosing copy of a report from our Service-Sales Division Manager, Mr. E. H. Austin, covering certain British Timken export markets which in some cases have been coming to us during the war period, and you will note that previous to the war in markets such as this there was a protective discount of 50% quoted as against our general discount in other markets of 70%. This has no reference to bearings that are purchased through Lend-Lease. In that case, of course, there is an entirely different policy, but there are still many of the other markets where they come to us direct and we would like to get your thoughts on how we might handle such inquiries.

After writing this letter I received another communication from Mr. Austin, a copy of which you will also find attached.

Very truly yours, —— ——, Vice President.

The Timken Roller Bearing Company

Inter-organization Correspondence

Attention of: Mr. L. M. Klinedinst.
Subject: Price Competition—British Timken Export Markets

From Canton.
Date July 6, 1944.

A short while ago Muller and Phipps, New York City, who represent us in a number of far eastern markets, took over the firm of Ira Snyder, an old export company located in New York City. It comes to light that there were a num-

ber of orders on their books involving the purchase of Bower bearings for the account of Cymot, Ltd., who, according to our records, are one of the largest independent automotive wholesalers in South Africa and handle many nationally known, American parts lines. Investigation discloses that we did not receive an inquiry from Ira H. Snyder Company to quote on these requirements for the reason that it had been previously established by them that our prices would not be competitive with such concerns as Bower Roller Bearing Company, Tyson Bearing Company, and the Hoover Steel Ball Company, all located here in the States.

It is a part of our knowledge that, for the reason just stated above, other important American exporters buying for the accounts of some of the large automotive wholesalers in British Timken markets are referring their requirements to competition, more especially the Bower Roller Bearing Company. I have in mind such concerns as Dodge and Seymour, Ltd., with whom we are very well acquainted, who have claimed many times that they could give us considerable business in British Timken markets if our prices were competitive.

You will recall that a number of years ago through arrangements with our British associates, it was decided that on unsolicited business from export houses in this country and destination British Timken markets, we would quote a protective discount of 50% from the American service list. In our markets our distributor discount on General Line bearings is 70% and on the Ford 799000 series, 60%. The Bower Company, through Ahlberg who represent them in all foreign markets, has established a resale schedule comparable to our own. It is natural, however, that they do not differentiate between their quotations in markets that we serve and those served by British Timken.

It is quite obvious that in the future this is going to present a more serious competitive situation than it has in the past and it would be my recommendation that this matter be brought to the attention of our British associates with the view of establishing a more workable pricing arrangement.

I feel that we should recognize the fact there are many important automotive wholesalers in British Timken mar-

kets who handle, pretty generally, American automotive parts lines and their natural inclination is to place their requirements through buying houses located in the States. And if we do not do something competitively to protect this business for ourselves as well as British Timken, it is going to be wide open for competition.

The above recommendations are not in any way intended to convey that we will be inclined to solicit this type of business involving British Timken territory, but we do know for a fact that a good many of the export houses who have requirements for tapered roller bearings, do not approach us because of the present price barrier. And I repeat I would recommend that we consider extending our present price policy for Latin America to all world markets in cases where business is offered to us.

E. H. Austin.

vd

[fol. 4348] Date July 7, 1944.

This will supplement my letter to you of July 6 having to do with resale prices on service requirements in British Timken territory.

Our New York office has just received an inquiry from the export house of John Dunn, Son & Company, 21 West Street, New York City, involving approximately 350 bearings for miscellaneous tractor and farm implement applications. This involves an order from one of their accounts in East London, South Africa.

Our normal procedure would be to quote 50% from the U. S. service list. We are quite positive that this quotation will force this business to competition who, as indicated in our previous letter, will employ their regular export discount regardless of the fact that this material is for a market which we classify as British Timken.

E. H. Austin.

[fol. 4349] PLAINTIFF'S EXHIBIT 134

65 Cheston Road,
Birmingham, 7.
30th November, 1943.

MY DEAR LOUIS:

The last time that I was at Canton before I came back to England, you talked to me for a short while on the problem of post war markets. The South American markets were mentioned, and you suggested that financial considerations might make it necessary for us to export to some of the South American markets from England, as most of the countries had very large sterling balances, but were short of dollars. I made one suggestion in this connection: that we might have joint Timken selling offices in that territory, so that the maximum of Timken products should be sold there, whether they came from England or from the U. S.

Since I have been home, I have given a great deal of thought to the post war position and I feel, myself, that we should endeavor to come to some arrangement which would enable both of us to sell, perhaps more freely than in the past, in each other's markets. The mainspring for this suggestion is, of course, political. I had the pleasure of discussions and breakfast with Eric Johnston, President of the U. S. Chamber of Commerce when he was in London, and I have naturally read the American papers, which have been fairly outspoken regarding agreements between American and European firms. It would appear, therefore, that some such new arrangement between us might also be helpful to you in dealing with your post war situation.

As far as we, in England, are concerned, we are being driven into much closer association with the bearing firms here than we were before the war; the war has shown how dependent on imports into England from Scandinavia one of the British bearing firms was. This revelation has weakened the status of that company very much here, as they appear to have imported some 85% of their prewar turnover in taper bearings, and about 50% of their turnover in other types. They are trying to weaken our growing strength by saying that we are in the same position vis-avis the U. S. A.

If we are to play our part in the discussions which are beginning—and which may conceivably lead to negotiations

on a Governmental level between Great Britain, the United States and Sweden, I should like to feel that we are in a position to say that we are not being prevented by you from exporting to any markets by reason of a trade agreement between us.

Briefly, I think that greater freedom of action will be beneficial to both of us in the period of world reconstruction and, as soon as I can, I will come over to discuss the general position with you.

If you can, through some semi diplomatic channel, let me know that you agree to such an idea in principle, it will enable us to take a stronger line regarding, what must always be the mainstay to both our firms, namely: tapered roller bearings both vis-a-vis our competitors and the British Government.

With very best wishes to you for Christmas and the New Year from us all,

Yours ever, (Signed) Michael Dewar.

[fol. 4350] PLAINTIFF'S EXHIBIT NO. 137

Complete United Production of Ball and Roller Bearings and Steel Balls.

Reported to the AEBMA by members of the Association, from January 1941 through July 1945.

No reports received prior to January 1941 or after July 1945, when reporting was discontinued.

The annexed summary prepared January 17, 1946.

British Timken Limited, Cheston Road, Aston, Birmingham, England.

GENTLEMEN:

We are quoting verbatim our Mr. Baal's memo of August 1 regarding Rudolph Morgerger, Kralja Petra 11.6., Novisad, Yogoslavia. This is sent for your information and following if you care to do so.

"Mr. Morberger called this morning with the express purpose of arranging for the purchase of Timken Bearings for shipment to Yougoslavia. He knew of British Timken Limited, but he claims in buying through their local distributors he was of the opinion that even though he had to buy at a higher price from the United States, that the bearing cost would be lower through the elimination of the British Timken Distributor. The writer completely outlined our relations with British Timken Ltd., which he appreciated, and we made the promise that we would make his interest known to British Timken.

"He was formerly a distributor for the German made Fischer bearing, but he lost this due to what he terms politics. He represents the English ball bearing manufacturer, R. & M."

Very truly yours, The Timken Roller Bearing Co.
——— ———, Assistant to the President.

W. Robert Timken

GENTLEMEN:

Parres Hermanos
Postal Box No. 141
Mellilla, Morocco

Attached hereto is copy of their letter dated August 26 together with a copy of our translation. We would appreciate your handling.

It may be inopportune at this time to mention future business conditions, but it is possible that you may wish to have us take care of certain markets for you during this period of emergency, and we wish to assure you that we shall be very glad indeed to give you every cooperation possible.

Very truly yours, The Timken Roller Bearing Co.
——, Assistant to the President.

Inter-Organization Correspondence

New York, 9-15-39.

Subject: Parres Hermanos, Postal Box No. 141, Mellilla, Morocco.

We are attaching original and translations of a letter received from the subject company which you will observe involves British Timken territory. As time goes on we no doubt will receive many inquiries from territory under British Timken control but we presume that it is much

too soon to consider any emergency policy in respect to neutral countries that were formerly supplied by British Timken Ltd.

In the meantime, we are following out the established routine and forwarding this original inquiry to you.

R. A. Baal.

Timken Roller Bearing Service & Sales Co.,
16 West 60th Street,
New York, N. Y.

MY DEAR SIRS:

We are writing to ask you to send us your latest catalogs indicating at the same time price and maximum discounts because we are interested in the importation of your products.

For your information, we wish to advise that our Government demands pro-for a invoices with prices of origin to grant importation license and in order to save time, we suggest that together with your information you will send us some sets of blank invoices so that we can prepare the pro-form invoices here in accordance with the monthly amount of exchange that we can obtain and with our requirements.

Awaiting to hear from you, we remain,

Yours very truly, ——

[fol. 4380] PLAINTIFF'S EXHIBIT No. 141

September 20, 1945.

British Timken Limited, Cheston Road, Aston, Birmingham 7, England.

Attention: Mr. J. E. Spear.

GENTLEMEN:

This is in reference to your letter of August 31, which relates to inquiries for tapered roller bearings from Liverpool export houses to Brazil.

We prefer all of the business for this country be handled by our Brazilian subsidiary. As you perhaps know, we trained several engineers at our plants here before sending them to Brazil. We are adverse to brokerage or export houses becoming involved in the sale of our product, particularly when so much pioneering and engineering work is to be done. It is our ambition to develop Latin American markets the same as we did in the United States—have all new applications, for example, to be submitted to our company for approval.

If this Liverpool exporting house cares to give us the name of the firm who is interested in purchasing such bearings, we will immediately cable our South American Company to contact the firm or firms involved.

Very truly yours, The Timken Roller Bearing Company. General Manager, Foreign Division.

H. C. Sauer: rp

JES/JD

31st August, 1945.

The Timken Roller Bearing Company, Canton 6, Ohio, U. S. A.

DEAR SIRS:

We are receiving enquiries from a Liverpool firm of exporters for tapered roller bearings for export to Brazil. Various bearings are covered by their enquiries including I. S. A. sizes, which we believe you do not manufacture.

Will you please advise us how you would like us to handle these enquiries and if you have no objection to our quoting for the bearings concerned, do you wish us to add any allowances.

Yours faithfully, —— ——, General Sales Manager, for British Timken Limited, Fischer Bearing Company Limited.

1-20-47	Antonio Joaquim Lopes & Cia. Lda.	Nova Lisboa, Angola, Port. W. Africa	Requested catalogues and current prices	"
5- 5-46	Mr. Michael Wolfman Eng.	Tel-Aviv, Palestine	Requested cost of airplane bearings	"
[fol. 4439]				
1- 4-47	Doka	Istanbul, Turkey	Requested prices etc. regarding plastic articles	Stated—not engaged in plastic articles
12- 8-46	Officine Meccaniche Faes	Milan, Italy	Requested catalogues covering our products	Referred to B. T.
12-28-46	Halil Tascioghn	Istanbul, Turkey	Requested catalogues covering products for building hardware	Stated not manufacturers of building hardware
1-18-47	Mr. R. Bancu Technician	Arseau (Hainaut) Belgium	Requested catalogues of products	Referred to B. T.
1-21-47	Mr. G. C. Jones	Wolverhampton, Straffordshire, England	Requested catalogues and current prices	"
1- 5-47	Joao Marques Pinto & Co.	Porto, Portugal	Requested prices and delivery of ball bearings	Not manufacturers of ball bearings—Referred to B. T.
12-14-46	A B Allmotor	Orebro, Sweden	Requested handling our products in Sweden	Referred to B. T.
1- 7-47	Empresa De Automoueis Lda.	Luanda, Angola, Portugal	Requested catalogues, price lists and delivery	"
1-30-47	Fornborg & Lundberg Aktiebolog	Stockholm, Sweden	Requested catalogues and quotations	"
12-20-46	A. Smex & Fils	Desschel, le vieux Marche, Belgium	Requested distribution of Timken bearings in Belgium	Referred to B. T.
1-10-47	Tornborg & Lundberg Aktiebolog	Stockholm, Sweden	Requested delivery and prices on ball bearings	"
1-10-47	Petros Petropoulos	Thessaloniki, Greece	Requested catalogues and price list	"
1-16-47	Mr. Tom Halleen	Helsingfere, Finland	Requested distribution of Timken bearings in Finland	"
1- 7-47	Autokampioen	The Hague, Holland	Requested distribution of Timken bearings in Holland	"
[fol. 4440]				
1- 9-47	Ardeshir Khesravani	Teheran, Iran	Requested catalogues and price lists	Referred to B. T.
1- 3-47	Fabrique de Papiers Andre Scherb	Turckheim, Haux Rhin, France	Requested to represent Timken bearings in France	Referred to S.A. Francaise Timken
1-15-47	Bucher-Geyer Mach. Wks.	Niederiveningen, Switzerland	Requested catalogues on ball bearings	Referred to B. T.
1-10-47	Spiral Co. Inc. Tools & Machy.	Basle, Switzerland	Requested catalogues, price lists and delivery conditions	"
1-10-47	Thornborg & Lundberg Aktiebolog	Stockholm, Sweden	Requested prices and delivery for ball bearings	"
1- 2-47	A. M. Daisy & Co.	Amritsar, India	Regarding importation of steel balls	Stated that we manufacture tapered bearings—not steel balls
12-23-46	S. Pittaluga Pietro	Torino, Italy	Request for distribution of Timken bearings in Italy	Referred to B. T.
1- 6-47	Stoecklin & Co.	Basel, Switzerland	Request for distribution of Timken bearings in Switzerland	"
12-28-46	O. T. I. S. A.	San Sebastian, Spain	Request importation of machinery and fittings	Stated that Timken does not make these products
1- 8-47	Establissements SIM	Morges, Switzerland	Request catalogues for selecting high precision roller and thrust bearings	Referred to B. T.
12-23-46	E.N.V. Engineering Co. Ltd.	London, England	Request price and delivery on bearings	Given price and delivery
12-23-46	Juyoti Limited	Baroda, India	Request distribution of ball bearings in India	Referred to B. T.
7- 2-46	U. M. A. L.	Bruxelles, Belgium	Request distribution of bearings in Belgium	"
[fol. 4441]				
7-11-46	Mecanique De Precision Et Ponderie Moderne	Casablanca, Morocco	Request for replacement bearings for McCormick Deering Tractor	Referred to French T.
7- 5-46	Giovanni Crochati	Trieste, Italy	Request for distribution of bearings in Italy	Referred to B. T.
6-26-46	Auto Commercial Limetoda	Luanda Portuguese W. Africa	Request catalogues and price lists	"
7-15-46	Importadoras Reunidos SA	Bilbao, Spain	Request distribution of bearings in Spain	"
5-19-46	Mr. Edmund Way	East Africa	Request distribution of bearings in East Africa	"
5-29-46	American Industrial Equipment Co.	Turin, Italy	Request distribution of bearings in Italy	"
7-11-46	Paula & Sousa Lda.	Porto, Portugal	Request distribution of bearings in Spain	"
7- 9-46	Le Grand Sutcliff & Gill Ltd.	Southall, Middlesex, England	Request for ball bearings	Referred to Fischer Brg. Co. of Wolverhampton
7- 9-46	Mr. Y. N. Basv	Bahreen Island, Persian Gulf	Request for catalogue of bearings	Referred to B. T.
7- 9-46	Torres Parra Y. Co. Lda	Madrid, Spain	Request for distribution of bearings in Spain	"
7- 9-46	Establissements A.H.A.	Thessaloniki, Greece	Request distribution of bearings in Greece	Referred to B. T.
7- 9-46	Fiat Societa Per Azioni	Torino, Italy	Request for technical data, prices and delivery	"

4- 5-46	Costa & Esteves	Porto, Portugal	Request distribution of bearings in Portugal				"
4-11-46	Inu, S. A.	Tangier, Morocco	Request distribution of bearings in Spanish Morocco				"
3-22-46	Teenica Industrial Do Libito	Lisbon, Portugal	Request distribution of bearings in Portugal				"
4-16-46	Acciaieries Feriere Lombarde Falch	Milano, Italy	Request roll neck bearings				"
3-22-46	Sociedad Iberica de Construcciones y Oluas Publicas S. A.	Valencia, Spain	Request catalog and price information				"
4-15 & 17/46	Antonopoulos Freres	Athens, Greece	Request symbol numbers for Chrysler number on Dodge trucks				"
4-16-46	Gustanfsson & Gortz A P	Orebro, Sweden	Request distribution of bearings in Sweden				"
Not dated	Reliance Technecians & Traders	Shanghai, China	Request distribution of bearings in China and regarding ball bearings				Handled by Muller & Phillips—N. Y. Moore export & import
3- 6-46	Carlos de Bianchi, Ltda.	Funchael, Madetra Portugal	Request distribution of bearings in Portugal				Referred to B. T.
[fol. 4445]							
2- 5-46	Mr. Allan Terny	Newcastle, N. S. U., Australia	Relating to distribution and engineering for Australia				Referred to B. T.
3- 7-46	Compagnie de Fives-Lillepour	Paris VIII, France	Requested catalogues and information about bearings to be used in the cylinders of sugar cane mills				Referred to S. A. Francaise Timken

January 19, 1945.

Mr. Ibrahim Tascioglu, P. O. Box 1086, Istanbul, Turkey.

DEAR SIR:

We acknowledge with thanks receipt of your letter of November 16th in which you have expressed an interest in the procurement of certain types of ball bearings.

Our company in the United States do not manufacture ball bearings; however, our associate company, British Timken Limited of Birmingham, England manufacture ball bearings and particularly the adapter type which you are interested in obtaining for transmissions and pillow blocks.

Additionally, the British Timken company handle the distribution of our tapered roller bearings as well for Turkey so we would suggest you contact them.

Very truly yours, The Timken Roller Bearing Company, —— ——, General Manager, Foreign Division.

H. C. Sauer: gm

The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

GENTLEMEN:

Indebted for your address to the Thomas' Register of American Manufacturers for the year 1938, I beg to inform

you that I require the transmission bearings as follows, from the S. K. F. serial number S 1500:

S 1505	150 pieces	S 1513	200 pieces
1506	150 pieces	1515	100 pieces
1507	250 pieces	1516	100 pieces
1508	150 pieces	1517	100 pieces
1509	250 pieces	1518	50 pieces
1510	150 pieces	1519	50 pieces
1511	250 pieces	1520	30 pieces
1512	100 pieces	1522	30 pieces

Please quote for these bearings separately with rollers and without rollers and send me the respective catalogues.

If you are manufacturing the following S. K. F. serial numbers in millimetres:

1.200, 1.300, 13.300, 10.400, 2.200, 2.300, 1.500, 1.600, 2.500, 2.600, 6.200, 6.300, 6.400, R, RL, E, 3.200, 3.300, 21.300, 22.200, 21.600, 22.500, NU, NJ, N, 30.200, 31.300, 32.200, 32.300,

please send me the respective catalogues with price lists.

Please note that I can do a great — of commerce with you on this article, if your prices are acceptable.

Looking forward to the pleasure of hearing from you, I remain,

Yours very truly, Ibrahim Tascioglu.

April 16, 1945.

France-Auto, Boulevard de Paris, Casablanca, Morocco, N. Africa.

GENTLEMEN:

This is in reference to your letter of March 8th in which you advise that your order bearing "Shipping Mark 204-106" is somewhere in the United States for a determination as it is to be filled under Lend-Lease or through commercial order.

We will endeavor to find out just how this order is being processed and if under Lend-Lease purchased through the French Mission in the United States, we can handle it.

In the event it becomes a commercial order, we will forward it to the British Timken Company in Birmingham, England, for execution as they supply our product in your country.

Very truly yours, The Timken Roller Bearing Company. —— ——, General Manager, Foreign Division.

Air Mail

The Timken Roller Bearing Company, Canton, Ohio.

GENTLEMEN:

We have again been authorized to send orders to our suppliers in the U. S. A. for separate parts practically in the same manner as we did formerly, that is to say under "lend-lease", with shipment through the French and American Authorities.

Attached herewith you will find copy of the order which we have established in your name and as you will note it bears the reference "Shipping Mark 204-106", and this reference must appear on everything connected with this order.

However, the responsible Authorities have advised us that this order temporarily passed under "lend-lease", might eventually become a direct order if certain agreements now being negotiated are carried out. Therefore you will note that the party to whom the goods is destined is no longer given as "Importateurs de l'automobile du Maroc" (Automobile Importers of Morocco), or in other words the Asso-

ciation, but the name of our own company appears which becomes therefore your direct purchaser.

We do not know the exact terms on which this new order forwarded for the second semester of 1945 will be executed, but we have considered it advisable to forward to you the attached copy and to point out to you the situation as it is at the present time.

We request you therefore, to endeavor to ascertain the terms for the eventual execution of this order at your end, and would it be possible for you to advise us by an early mail how your Government in America proposes to handle this, as perhaps you would be able to give us more precise information than what we have given you above.

We would also like you to try to give us a definite idea of the balance that you are to deliver to us on our preceding orders, and for your information, we will say that we are just now receiving the first part of the orders that we sent you for the second semester of 1944.

If you could let us know the status of the orders of the first semester of 1945 and finally the balance to be delivered [fol. 4525] on the preceeding orders, we would then have some valuable information regarding the supplies of our stock.

We thank you in anticipation for all that you may be able to do for us along these lines, and awaiting an early reply from you, we remain,

Yours very truly, France-Auto.

[fol. 4530] France-Auto

Boulevard de Paris, Casablanca, le 8 mars 1945

The Timken Roller Bearing Company
Canton—(Ohio)—U. S. A.

Messieurs,

Nous venons d'être, une fois encore, autorisés à passer à nos fournisseurs des U.S.A. des commandes de pièces détachées pratiquement établies sous la même forme que précédemment, c'est-à-dire selon la formule "prêt-bail" avec transmission par l'intermédiaire des Autorités Françaises et Américaines.

Vous trouverez ci-joint, un exemplaire de l'ordre que nous avons établi à votre intention et qui porte, vous le verrez, la référence "Shipping Mark 204-106" cette référence devant suivre toutes les périgrinations de cette commande.

Toutefois, il nous a été indiqué par les Autorités responsables, que cette commande ainsi passée pour le moment au titre "prêt-bail," pourrait éventuellement et si certains accords qui sont en cours de négociation arrivent à conclusion, devenir une commande directe et c'est pourquoi vous remarquerez que les imprimés mentionnent comme destinataire, non plus les importateurs de l'automobile du Maroc, c'est-à-dire la collectivité, mais bien notre propre Société qui redevient donc, en fait, votre acheteur direct.

Nous ignorons évidemment les modalités exactes selon lesquelles ce nouvel ordre transmis au titre du 2éme semestre 1945, sera éxecuté, mais nous avons cru bon de vous en transmettre la copie ci-jointe et de vous signaler la situation qui nous était faite, pour le moment, de ce point de vue.

Nous vous demanderons donc, si celà vous est possible, de bien vouloir de votre côté, t-cher de connaitre les détails d'exécution éventuelle de ces livraisons, et si par prochain courrier vous pouviez nous dire comment votre Administration, en Amérique, envisage la question, vous nous obligeriez grandement, puisqu'ainsi nous aurians peut-être des précisions plus nettes que celles que nous vous résumons cidessus.

Nous aimerions également à cette occasion, que vous puissiez essayer de faire le point avec nous de ce qui vous reste à nous livrer sur nos précédentes commandes, et pour vous guider, nous vous dirons que nous recevons maintenant

même, une première partie des commandes que nous vous avions transmises au titre du 2ème- semestre 1944.

Si donc vous pouviez nous dire quel est l'état d'avancement des commandes du 1° semestre 1945, et éventuellement ce qui vous reste à livrer sur de précédents ordres, nous aurions des indications précieuses quant à l'articulation de notre stock.

Nous vous remercions par avance de tout ce que vous pourrez faire dans cet ordre d'idée, et dans l'attente de vos promptes nouvelles, nous vous prions d'agréer Messieurs, nos salutations distinguées./.

F. Dorner, Administrateur-délégué.

Dear Sirs,

I beg to say that I am indebted for your address to the Chamber of Commerce of your town.

I shall feel obliged to you to let me know if you would be disposed to set up an understanding for your sales in France and French Colonies. In the affirmative case, please point to me your basis terms so that, after examination of same, I could see if it is feasible for me to give you my agreement.

My Banking references are the following: Societe Generale, 89, rue de Clichy, Paris. (———).

Banque Nationale pour le Commerce et l'Industrie, 80, rue de Clichy, Paris.

My Commercial references are at your disposal, but I would say that such concern only Manufacturers with whom I am working for about twenty years.

For your guidance, up to 1940, I exclusively dealt in the export of French goods to English and French Colonies and in the import of raw materials and colonial products. Now, owing to the circumstances, we must modify our way of working, because our country at the end of the war shall be strongly Importer and shall not be able to export for rather a long time. The moment, should be, therefore, most favourable for an understanding which would be certainly profitable for both parties.

Awaiting your good news, with Thanks, and remaining at your disposal for any information you should require from me.

I am, Dear Sirs, Yours faithfully, Rene Amiel.

The Timken Roller Bearing Service & Sales Co., Canton, Ohio, U. S. A

DEAR SIRS:

We are interested in all your industrial products, including those concerned with motors. Please let us know whether you already have an agent in Switzerland or if you would be inclined to appoint our firm as your representative. At the same time we should be glad to have your business terms, together with catalogues and price-lists. We should buy for our own account.

Looking forward to your kind reply,

Yours faithfully, Propaganda A.-G., R. Rhinehardt.

Timken Trade-Marks

This memorandum covers a meeting in Canton on February 3, 1937 of Messrs. Gravely, H. H. Timken, Jr., L. M. Klinedinst, R. P. Kelley, W. H. Richardson and G. H. Turner, in which the following decisions were made:

I—*"Timken"*

Our primary trade-mark, being a surname, is not a technical trade-mark and could not be registered until the 1920 Law was passed. The notice "Trade-Mark Reg. U. S. Pat. Off." should be used as often as consistent with good advertising and particularly on cartons.

II—*"TRB CO. in Triangle"*

This is a technical trade-mark and was registered at one time in almost as many countries as "Timken" is now registered. During latter 1928 or early 1929, a decision was made to allow these registrations to expire, presumably to save the expense of re-registration. This mark will be re-registered and registrations renewed in countries where the present potential business warrants. In the event that the present British Timken trade-mark problems are not solved satisfactorily, it might prove valuable to have the mark registered in the countries involved.

III—*"T in Oval"*

The use of this mark will be discontinued because it is not considered good and has not been registered extensively. All registrations will be allowed to expire as they come up for renewal.

IV—*"Timken Bearing Service" and "Timken Bearing Equipped" Symbols*

These symbols are not registrable unless the printed matter is disclaimed which would mean disclaiming and thereby weakening the mark "Timken".

V—*"Gilliam Tapered Roller Bearings"*

This mark is registered only in the United States and expires December 11, 1943. There is now only a small amount of Gilliam bearing replacement business. The registration will not be renewed because the amount of business probably will be negligible upon expiration.

VI—*"Bock"*

Two bearings are now manufactured for replacement in old Caterpillar tractors. U. S. registration expires June 21, 1941 and by that time Bock business probably will be very small. British Timken does not make Bock bearings any more. All registrations will be allowed to expire.

VII—*Cartons*

1. Remove "T in Oval" and "TRBCO in Triangle" from inside of front flap where they are unseen when the carton is closed.

2. Remove "Timken Bearing Service" symbols from both sides and substitute "TRBCO in Triangle" with orange background and registration notice.

[fols. 4540-4561] 3. Remove "Tapered Roller Bearings" from back and use "Timken" alone with registration notice.

4. Remove "Timken Bearing Service" symbol and "This Package Contains" from front and substitute "Timken Cup or Cone" with proper part number.

5. On the back the "Instructions for Mounting and Adjusting Timken Tapered Roller Bearings" should be condensed to be readable on small cartons. The "Caution" to replace a failed cup as well as cone could be reworded for effectiveness and to include the opposite condition.

6. The new logotype could be used on the top with registration notice above or below "Timken".

7. Remove "Patented Nov. 15, 1927" from the top. This notice refers to Buckwalter Patent No. 1,649,285 for the C-Type roll which is the only *single* feature common to *all* Timken bearings. This patent is of questionable validity, and we would not sue for infringement of any of its claims. The sole value of the notice is to permit the collection of damages, which is a remote possibility.

We do not have another patent which covers a feature common to all bearings and much confusion and error would result in printing different patent notices on cartons for various bearings. An incorrect patent notice is illegal.

At present we are using black, white and buff cartons. An effort will be made to effect a standard which will have a better appearance and protect our trade-marks.

G. H. Turner.

TREASURY DEPARTMENT, WASHINGTON

March 18, 1948.

Pursuant to the provisions of Section 661, Chapter 17, Title 28 of the United States Code (Section 882 of the Revised Statutes of the United States), I hereby certify that the annexed copies of the following five documents:

1. Application of The Timken Roller Bearing Company, Canton, Ohio, dated October 5, 1921, for the recordation in this Department of the trade-mark "Timken," registration No. 144,149;

2. Power of attorney executed by the registrant naming the firm of Carr and Carr, St. Louis, Missouri, as its attorneys in this case;

3. Letter dated October 10, 1921, from Carr and Carr formally filing the application and power of attorney;

4. Bureau letter of October 13, 1921, to Carr and Carr informing them of the recordation of the mark on that date; and

5. Bureau letter of October 13, 1921, addressed to the nine headquarters ports mentioned therein notifying them of the recordation;

are true copies of such documents on file in this Department.

In witness whereof, I have hereunto set my hand, and caused the seal of the Treasury Department to be affixed, on the day and year first above written.

By direction of the Secretary of the Treasury:

Margaret B. Choppin, Records Administration Officer, Division of Office Services, Office of Administrative Services, Department of the Treasury.

[fol. 4566] POWER OF ATTORNEY

To the Secretary of the Treasury:

The undersigned, The Timken Roller Bearing Company, hereby appoints Carr and Carr, (a firm composed of James A. Carr and T. Percy Carr, of Boatmen's Bank Building, St. Louis, Missouri), its attorneys, with full power of substitution and revocation, to prosecute this application for registration, to make alterations and amendments therein, to receive the certificate and to transact all business in the Treasury Department connected therewith.

(Internal-revenue stamp)

The Timken Roller Bearing Company By Herman Ely, Vice President

Canton, Ohio, October 5th, 1921.

[fol. 4567] To the Secretary of the Treasury:

The undersigned, The Timken Roller Bearing Company, a corporation of Ohio having its principal office and place of business at Canton, Ohio, requests that its trade-mark "Timken" for Roller Bearings and Parts Thereof be registered in the Treasury Department. Said trade-mark has heretofore been registered in the United States Patent Office, No. 144,149, dated June 21, 1921 and a certified copy of said certificate of registration and eighteen printed copies of said trade-mark are presented herewith. The goods on which said trade-mark is used are manufactured at Canton, Ohio and at Columbus, Ohio. It is desired that facsimiles of this registration be sent to the Ports of New York, Baltimore, Philadelphia, Boston, San Francisco, New Orleans, Seattle and Portland.

The Timken Roller Bearing Company By Herman Ely, Vice President

Canton, Ohio, October, 5th, 1921.

(Excerpts from the Customs Regulations of 1943)

Trade-marks and Trade Names

TD 51779.

11.14 *Trade-marks and trade names; prohibition of importation.*—(a) The importation of merchandise of foreign or domestic manufacture is prohibited if such merchandise bears a mark or name which copies or simulates a trade-mark or trade name recorded in the Treasury Department under the Trade-Mark Act of February 20, 1905, or the Trade-Mark Act of July 5, 1946, unless such merchandise is imported by or for the account of, or with the written consent of, the owner of the protected trade-mark or trade name.[16]

Bourjois & Co. v. Aldridge, 263 US 675; TD 37021.

(b) A mark or name (including a mark or name which is a genuine trade-mark or trade name in a foreign country) on an article of foreign manufacture identical with a trade-mark or trade name recorded under the above-mentioned

trade-mark laws, as well as a mark or name on an article of foreign or domestic manufacture counterfeiting such recorded trade-mark or trade name, or so resembling such recorded trade-mark or trade name as to be likely to cause confusion or mistake in the minds of the public or to deceive purchasers, shall be deemed to copy or simulate such protected trade-mark or trade name. However, merchandise manufactured or sold in a foreign country under a trade-mark or trade name, which trade-mark is registered and recorded, or which trade name is recorded under the above-mentioned trade-mark laws, shall not be deemed to copy or simulate such United States trade-mark or trade name if such foreign trade-mark or trade name and such United States trade-mark or trade name are owned by the same person, partnership, association, or corporation. (R. S. 161, sec. 27, 33 Stat. 730, sec. 42, Public No. 489, 79th Cong., secs. 526, 624, 46 Stat. 741, 759; 5 U. S. C. 22, 15 U. S. C. 196, 19 U. S. C. 1526, 1624.)

TD 51779.

11.15 *Trade-marks; recording.*[16]—(a) To record a trade-mark with the Treasury Department, an application, which may be in the form of a letter, shall be addressed to the Bureau of Customs, Washington 25, D. C., stating the name, residence, and citizenship of the owner or owners (if a partnership, the citizenship of each partner; if a corporation or association, the country or state within which it was organized or created), and the name of the locality in which the goods are manufactured. The application shall be accompanied by one certified copy of the original certificate of registration issued by the Commissioner of Patents [fol. 4569] in accordance with the Trade-Mark Act of February 20, 1905, or section 7 of the Trade-Mark Act of July 5, 1946, to which shall be attached one printed Patent Office facsimile of the statement and drawing covering the trade-mark, such of the documents mentioned in paragraph (b) as may be required to show the ownership of the applicant, and 500 uncertified facsimiles of the statement and

[16] "Registration on the supplemental register or under the Act of March 19, 1920, shall not be filed in the Department of the Treasury or be used to stop importations." (Trade-Mark Act of July 5, 1946, sec. 28; Public No. 489, 79th Cong.)

drawing covering the trade-mark (which may be reproduced privately from a Patent Office facsimile) for distribution to all collectors of customs and appraisers of merchandise.[17]

(b) If ownership of a registered trade-mark is claimed by an applicant by virtue of an assignment of such trade-mark, there shall be transmitted with the application for recording, in addition to the documents and information specified in paragraph (a) of this section, a certified abstract of title from the records of the United States Patent Office showing the ownership of the applicant. Similar documentary evidence shall accompany an application for recording if the commercial name of the applicant has been changed subsequent to registration of the trade-mark. If the application for recording is presented after the expiration of the period for which the certificate of registration or a renewal thereof was issued, the application shall be accompanied by a certified copy of a certificate of renewal from the United States Patent Office showing that the registration is in force. In order to continue to receive the protection of the trade-mark statutes with respect to imported merchandise, such a certified copy of a certificate of renewal shall be filed with the Treasury Department if the period of protection expires after the trade-mark has been recorded. (R. S. 161, sec. 27, 33 Stat. 730, sec. 42, Public No. 489, 79th Cong., secs. 526, 624, 46 Stat. 741, 759; 5 U. S. C. 22, 15 U. S. C. 106, 19 U. S. C. 1526, 1624.)

TD 51779.

11.16 *Trade names; recording.*—(a) To record the trade name (not a trade-mark) of a manufacturer or trader, an application, which may be in the form of a letter, shall be addressed to the Bureau of Customs, Washington 25, D. C., stating the trade name, the name, residence, and citizenship of the owner or owners (if a partnership, the citizenship of each partner; if a corporation or association, the country or state within which it was organized or created), a description of the class or kind of merchandise to which the trade name is applied, and the name of the locality in which the merchandise is manufactured.[17] The application shall be accompanied by supporting evidence in the form

---

[17] No fee is charged for recording trade-marks or trade names in the Treasury Department.

of affidavits by the owner or owners and by at least two other persons having actual knowledge of the facts, show- [fol. 4570] ing that the applicant has used the trade name in connection with the class or kind of merchandise described in the application for a specificed period of time, that the trade name is not identical with, or confusingly similar to, any other trade name or registered trade-mark used in connection with merchandise of such class or kind, and that the applicant has the sole and exclusive right to the use of such trade name in connection with merchandise of such class or kind.

(b) Such affidavits accompanying an application to record the trade name of a manufacturer or trader located in a foreign country shall be acknowledged before an American consular officer. (R. S. 161, sec. 27, 33 Stat. 730, sec. 42, Public No. 489, 79th Cong., secs. 526, 624, 46 Stat. 741, 759; 5 U. S. C. 22, 15 U. S. C. 106, 19 U. S. C. 1526, 1624.)

TD 51779.

11.17 *Detention; seizure; exportation; release.*—(a) Merchandise of foreign manufacture which bears a trade-mark entitled to the protection of section 526, Tariff Act of 1930,[18]

---

[18] "(a) Importation Prohibited.—It shall be unlawful to import into the United States any merchandise of foreign manufacture if such merchandise, or the label, sign, print, package, wrapper, or receptacle, bears a trade-mark owned by a citizen of, or by a corporation or association created or organized within, the United States, and registered in the Patent Office by a person domiciled in the United States, under the provisions of the Act entitled 'An Act to authorize the registration of trade-marks used in commerce with foreign nations or among the several States or with Indian tribes, and to protect the same,' approved February 20, 1905, as amended, and if a copy of the certificate of registration of such trade-mark is filed with the Secretary of the Treasury, in the manner provided in section 27 of such Act, unless written consent of the owner of such trade-mark is produced at the time of making entry.

"(b) Seizure and Forfeiture.—Any such merchandise imported into the United States in violation of the provisions of this section shall be subject to seizure and forfeiture for violation of the customs laws.

"(c) Injunction and Damages.—Any person dealing in

and merchandise which bears a mark or name copying or simulating a trade-mark or trade name entitled to the pro-
[fol. 4571] tection of section 27, Trade-Mark Act of February 20, 1905, or section 42, Trade-Mark Act of July 5, 1946,[19] if not imported by or for the account of, or with the appropriate written consent of, the owner of the United States trade-mark or trade name shall be detained for a period of 30 days from the date of notice to the importer that the merchandise is prohibited importation to permit

---

any such merchandising may be enjoined from dealing therein within the United States or may be required to export or destroy such merchandise or to remove or obliterate such trade-mark and shall be liable for the same damages and profits provided for wrongful use of a trade-mark, under the provisions of such Act of February 20, 1905, as amended." (Tariff Act of 1930, sec. 526; 19 U. S. C. 1526.)

[19] "That no article of imported merchandise which shall copy or simulate the name of any domestic manufacture, or manufacturer, or trader, or of any manufacturer or trader located in any foreign country which, by treaty, convention, or law affords similar privileges to citizens of the United States, or which shall copy or simulate a trade-mark registered in accordance with the provisions of this Act or shall bear a name or mark calculated to induce the public to believe that the article is manufactured in the United States, or that it is manufactured in any foreign country or locality other than the country or locality in which it is in fact manufactured, shall be admitted to entry at any customhouse of the United States; and, in order to aid the officers of the customs in enforcing this prohibition, any domestic manufacturer or trader, and any foreign manufacturer or trader, who is entitled under the provisions of a treaty, convention, declaration, or agreement between the United States and any foreign country to the advantages afforded by law to citizens of the United States in respect to trade-marks and commercial names, may require his name and residence, and the name of the locality in which his goods are manufactured, and a copy of the certificate of registration of his trade-mark, issued in accordance with the provisions of this Act, to be recorded in books which shall be kept for this purpose in the Department of the Treasury, under such regulations as the Secretary of the

the importer to secure the written consent of the owner of the trade-mark or trade name.

TD 47691.

(b) Whenever merchandise is detained in accordance with the foregoing provisions of this section and the importer indicates that he will not attempt to secure the [fol. 4572] written consent of the owner of the trade-mark or trade name to the importation of the merchandise, or such consent is not presented to the collector prior to the expiration of the 30-day period, the merchandise shall be seized and forfeited in the usual manner, except that in any such case within the purview of section 23.25 the collector may release the merchandise upon the condition that the name, mark, or trade-mark be removed or obliterated prior to the release, or may permit the merchandise to be exported under customs supervision and without expense to the Government. If the case is not within the purview of section 23.25 the importer may petition the Commissioner of Customs, through the collector, for the release of, or permission to export, the merchandise under the same conditions.

(c) Merchandise forfeited for violation of any trade-mark law may be disposed of in accordance with the procedure applicable to other customs forfeitures, but only after removal or obliteration of the name, mark, or trade-mark by reason of which the goods were seized.

(d) If the violation is not discovered until after entry and deposit of estimated duty, the entry shall be endorsed with an appropriate notation, the duty refunded as an erroneous collection, and the merchandise disposed of in accordance with the foregoing provisions of this section.

Treasury shall prescribe, and may furnish to the Department facsimiles of his name, the name of the locality in which his goods are manufactured, or of his registered trade-mark, and thereupon the Secretary of the Treasury shall cause one or more copies of the same to be transmitted to each collector or other proper officer of customs." (Sec. 42, Public No. 489, 79th Cong. See similar provision in Trade-Mark Act of February 20, 1905, sec. 27; 15 U. S. C. 106.)

The laws of the United States relating to patents, trade-marks, and copyrights have been extended to the Virgin Islands. (See 48 U. S. C. 1405c.)

(R. S. 161, sec. 27, 33 Stat. 730, sec. 42, Public No. 489, 79th Cong., secs. 526, 624, 46 Stat. 741, 759; 5 U. S. C. 22, 15 U. S. C. 106, 19 U. S. C. 1526, 1624.)

October 20 1928.

Britimken, Birmingham, England

Relative Ford tractor prices we have been informed they can purchase from RIV or SKF ballbearing number two eighteen at three dollars and two fourteen bearing at one dollar seventy cents stop Does this sound reasonable and could you quote replacement taper bearings at same price

or lower stop Production being planned Cork Ireland five hundred to eight hundred daily stop Can you quote better prices for tractor wheel bearings on above production than our prices we sent you recently stop All bearings go into Ireland no duty and they will purchase anywhere in world at best prices stop Providing use of our bearings we would handle production until you could get equipped for it stop Reply promptly

Inter-Organization Correspondence

The Timken Roller Bearing Company
Canton, Ohio

April 1, 1927.

Mr. Strough

Subject: British Timken Territory—Service.

In view of pending negotiations with British Timken, Limited, I believe arrangements should be made whereby the Service & Sales Company should be permitted to solicit without restrictions, Timken bearing replacement business in all territories controlled by British Timken, Limited with the possible exception of the British Isles.

We are now permitted to ship unsolicited orders into British Timken territory with the exception of France and French Colonial Possessions and Protectorates on which we give British Timken, a 10% of the net amount of the invoice commission. This arrangement results in some business, but in that we do not solicit from representatives handling American made motor vehicles, our competitors who do solicit this business secure a sizeable volume.

We would not wish to appoint Authorized Distributors in British Timken territory. Neither would we wish to make a general solicitation of the entire trade. Our suggested solicitation would be confined to representatives handling American made motor vehicles who naturally look to the American market for replacement parts and supplies. In the particular case of Hudson and Dodge, we handle all of their service. Bearings are not carried by the respec-

tive factories. On numerous occasions, Hudson and Dodge foreign agencies have complained because of the poor service they secure thru British Timken agencies. Most importers of American made motor vehicles are sizable houses and contend they are as much an importer as the concerns representing British Timken, Limited. Our experience has been that due to this fact and other jealousies, they wish to purchase direct. If we were permitted to solicit the business and handle the orders, it would keep for Timken, the bulk of the business now going to competitors.

With such an arrangement, we would be in equal competition with British Timken, Limited for all business in their territory. Between the two Companies, we could satisfy all potential buyers of bearings for service replacement purposes. Many of these buyers in the world market would favor purchasing thru the British market, while some prefer purchasing thru the American market.

One of the principal things to bear in mind is that in countries such as Australia, South Africa, India, New Zealand and many others, the car registration is largely American. It is only natural that the agencies selling these American made cars should look to the American market for their source of supply on replacement parts. With our encouragement to purchase from us, the business would not go to competitive makes of bearings.

In case of open and free solicitation of the world market, we would not of course wish to continue extending a 10% commission to British Timken, Limited, but if for any reason, it should be deemed advisable to continue the commission arrangement, it would be satisfactory to us.

R. C. Brower.

[fol. 4583] PLAINTIFF'S EXHIBIT 166

July 2, 1927.

British Timken Limited, Ward End, Birmingham, England

Attention Mr. William Dallow

GENTLEMEN:

With reference to your cable dated June 10th and your confirming letter of the same date regarding discounts extended to the service trade in your territory, we would first

ask that you discuss this thing with Mr. Hess of our company who is now in England because he familiarised himself with all conditions just prior to his departure from the States.

In explanation of our change in discount, we found it necessary to increase the discount from 35 to 50% in order to meet competition. We, of course, have not made direct quotations in your territory although it has developed in some few cases local export houses who have purchased material for shipment into countries controlled by us have also secured bearings for shipment into your territory at the same discount.

Another thing to consider is that while Gilliam and Bock were in the picture discounts of 50% and 50 and 10% were regularly extended. To show how far reaching the effects of this were, we can tell you that for the twelve months in 1926 Dock shipments into your territory were as follows:

Australia	$11,000.00
Continental Europe	34,000.00
Colonial Possessions	5,000.00

or a total of 50,000.00 in the territory controlled by you.

Some of the shipments made by us resulted from orders placed for Bock material. We happened to be out of sizes so then it came to a showdown that we would either supply Timken at the 50% discount or the order would be placed with either the Pratt Mfg. Co., or the Orange Roller Bearing Co. We assumed it would be best to accept the order because it had been our opinion right along that you would prefer to have the bearing business enjoyed either by your company or our company instead of reverting to competitors.

We, of course, can appreciate your position in that our quotations are now under yours and serious complications with your Authorized Distributors are bound to occur. On the the other hand, we know that Fichtel & Sachs are quoting a 50% discount in South America. We presume the same quotations are in existence in your territory. We fur- [fol. 4584] ther know that Pratt is quoting a 60% discount while Orange is also carrying this same discount. In order to meet competition, we believe we should have a price more comparable to competitors' quotations. Our 50% discount

which is extended to all of our export trade more or less controls this field.

As suggested before, we hope you will discuss this thing with Mr. Don Hess so that he can bring back a message covering your decision with respect to the present situation.

Very truly yours, —— ——, Vice-President.

R. C. Brower-JR.
cc—Mr. Don Hess.

[fol. 4585] PLAINTIFF'S EXHIBIT No. 167

The Timken Roller Bearing Company
Canton, Ohio

April 5, 1933.

Mr. H. H. Timkem, % Mrs. A. C. Bridges, 712 Electric Building, San Diego, Calif.

DEAR H. H.:

Louie Klinedinst and I were in New York last week and had a long talk with Fred Hughes and Lester Sigourney of New Departure and arrived at a mutually satisfactory selling price for flanged type bearings both ball and tapered roller. We held the price on these bearings at a point where a nice profit will be made for both companies, and I feel that we did a pretty good job as New Departure might have been out of line if we had not told them our prices, and in that event we should have had to cut our prices.

Later in the day Fred Griffiths and Joe Ashwell, Purchasing Agent of New Departure, came in and we talked over some steel matters, and if everything works as smoothly as at present I feel sure that we will have some New Departure business this year.

In the afternoon Louie and I called on Mr. Kennedy, Sales Manager of the Ingersoll-Rand Company and discussed with him detachable bits. Mr. Kennedy requested that we visit him to discuss this matter and see if we could arrive at a satisfactory price arrangement. Ingersoll-Rand feel that the bits should be sold for a minimum of 40 cents and do not believe that there is any future for sales to big operators. We do not agree with this idea and have proven

it to be fallacious. If the price is maintained at such a high level there is no saving over the conventional bit, and we would be licked before we started. Mr. Kennedy, of course, has as his main objective the maintenance of the old style of bit whereby he would sell more sharpening machines, jack-hammers and drill rod. The interview was a satisfactory one and we agreed to keep in touch with them from time to time and perhaps at some later date would be in better position to discuss fully the marketing practices best suited for an article of this kind. Kennedy objected very much to a quantity differential in price, but frankly admitted that he used the same selling tactics in selling drill rod, that is, a thousand ton order was sold at a considerably lower price per pound than a one ton order. Naturally this situation is a rather delicate one as we are interested in Ingersoll-Rand's bearing business and probably to some extent in their motor business through Hercules.

[fol. 4586] Chrysler is still on the fence as regards giving us 100% of their business, but we have made a definite proposal covering their requirements to January 1st, 1934, based on 100% volume and there is the bare possibility that we may get the entire line.

Most of the other automobile people have bucked off in their attitude regarding protection to January 1st.

Judd had a long talk with Strickland and he again expressed his willingness to play fair with us as regards price. While I haven't very much confidence in his integrity I do feel that he today realizes that we mean business when we say that we are going to protect our accounts and that he will be a little more careful about trying to use shady methods in chiseling in on us.

We are still experimenting with the new tube elongator and have pierced a few billets by this method. You understand, of course, that the small experimental mill which cost us around $5,000.00 was not intended for a piercing mill, but the few billets pierced came out remarkably well and very concentric.

We had a little flare-up with Ford regarding pinion bearings, and they tried to lay the fact that they have a noisy axle to bearing performance. This has been entirely

corrected, and we are today again in their good graces and our pinion bearings are going through the line 100%.

The Studebaker Company is still in the process of reorganization, and yesterday we obtained word that Ralph Vale has been made General Manager. This, of course, is very acceptable to us as Ralph is one of the best Timken boosters in the automobile business. I think it is almost certain that Erskine will not be included in any of the reorganization plans.

I think perhaps the best move we have made around here for satisfying our employees is the change in office hours effective the first of this month. All of the department heads say that it was a good move, and all the people seem to be appreciative of the fact that we have given them something instead of continually taking away.

Charlie Balough sent me a letter regarding the Diesel pump and Don Hess and I will see him sometime this afternoon to discuss the possibility of manufacturing such an article.

We have a fairly good schedule for this month and if it holds up we will work 20 days—7 hours per day.

Mr. Obermier is leaving tomorrow evening for Europe and will stop in to see W. R. in New York. The weather has changed to real Spring, and I don't believe we need expect any more rough weather.

With best regards until I see you next week.

Very truly yours, Bill.

[fol. 4587] PLAINTIFF'S EXHIBIT 168

Thurston Patents

During the week of January 21st Mr. Kilborn of the Flannery Bolt and Nut Company called me twice regarding the patent situation on Thurston Patents. Mr. Kilborn said that he had been able to get Mr. Thurston to agree to accept a royalty of 5% of the selling price of bits or a flat 1¢ per bit with a minimum royalty of $250.00 per month from each of the four participating companies, Flannery, Crucible, Ingersoll-Rand and Timken. Mr. Kilborn said that Mr.

Hufnagel was willing to go along with this and if I would agree to it he felt sure that Mr. Hufnagel and I could sell Mr. O'Neil on the idea of going along with this.

A meeting was held in the office of Mr. Hufnagel January 26th with Messrs O'Neil and Campbell of Ingersoll-Rand, Messrs. Hufnagel and Haager of Crucible Steel and Umstattd and Richardson of The Timken Roller Bearing Company. After discussing and settling a policy regarding the sale of bits to the Federal Government and other purchasers the matter of securing a license under the Thurston Patents was discussed in detail. I told of my conversations with Mr. Kilborn and Mr. Hufnagel emphatically denied that he had said or had even intimated that he would be willing to pay a 5% royalty or a flat 1¢ per bit royalty. He also said, and was firmly seconded by Mr. O'Neil, that he would not under any consideration pay a minimum royalty as his company was very much opposed to this plan of payment. Mr. O'Neil also stated that his company would under no circumstances agree to a minimum royalty.

All three of the principals involved agreed that the patent was not valid and that if any license was taken out it would be merely a move for legalizing the fixing of prices so that we would not be threatened by either the Clayton or Sherman laws.

After some half hour of discussion it was agreed that Mr. Hufnagel would inform Mr. Kilborn that we would be willing to pay a flat ½¢ per bit royalty and that it would be useless to discuss anything beyond this price. Mr. Hufnagel will get in touch with Mr. Kilborn sometime Monday and the writer will call Mr. Kilborn later in the week and substantiate the above statement.

W. E. Umstattd.

INDICTMENT

UNITED STATES OF AMERICA,
District of New Jersey, ss.

The Grand Jurors of the United States of America, duly impaneled, sworn, and charged in the District Court of the United States for the District of New Jersey at the January Term of said Court in the year 1944, and sitting at Trenton, New Jersey, having begun but not finished in the January, 1944 Term of said Court an investigation of the matters charged in this indictment and having continued to sit by order of said Court in and for said District during the September, 1944 Term of said Court, for the purpose of [fol. 4594] finishing said investigation begun but not finished during the January 1944 Term of said Court; and inquiring within the aforesaid District at the January and September, 1944 Terms of said Court, do upon their oaths present and find as follows:

1, The following corporations organized and existing under the laws of the States indicated below, having their principal offices as indicated below, and which are herein-

after sometimes referred to by the names indicated below, are hereby indicted and made defendants herein:

Name of Corporation	*Abbreviated Name*	*State of Incorporation*	*Principal place of business*
Allegheny Ludlum Steel Corporation	Allegheny Ludlum	Pennsylvania	Brackenridge, Pa.
Carnegie-Illinois Steel Corporation	Carnegie-Illinois	New Jersey	Pittsburgh, Pa.
The Carpenter Steel Company	Carpenter	New Jersey	Reading, Pa.
Crucible Steel Company of America	Crucible	New Jersey	New York, N. Y.
Republic Steel Corporation	Republic	New Jersey	Cleveland, Ohio
Rustless Iron and Steel Corporation	Rustless	Delaware	Baltimore, Md.
The American Rolling Mill Company	Armco	Ohio	Middletown, O.
Bethlehem Steel Company	Bethlehem	Pennsylvania	Bethlehem, Pa.
Eastern Stainless Steel Corporation (Corporate name was "The Eastern Rolling Mill Company" prior to Sept. 1, 1944.)	Eastern	Maryland	Baltimore, Md.
Sharon Steel Corporation (Corporate name was Sharon Steel Hoop Company prior to March 10, 1936.)	Sharon	Pennsylvania	Sharon, Pa.
Firth Sterling Steel Company	Firth Sterling	Pennsylvania	McKeesport, Pa.
[fol. 4595]			
Jessop Steel Company	Jessop	Pennsylvania	Washington, Pa.
Latrobe Electric Steel Company	Latrobe	Pennsylvania	Latrobe, Pa.
The Midvale Company	Midvale	Delaware	Nicetown, Philadelphia, Pa.
Pittsburgh Steel Company	Pittsburgh	Pennsylvania	Pittsburgh, Pa.
Superior Steel Corporation	Superior	Virginia	Carnegie, Pa.
The Timken Roller Bearing Company	Timken	Ohio	Canton, Ohio
Universal-Cyclops Steel Corporation	Universal-Cyclops	Pennsylvania	Bridgeville, Pa.

2. The following individuals are hereby indicted and made defendants herein, each having the address and being associated with the company and having the official title or position therewith as below respectively indicated:

Defendant	*Position*	*Company*	*Address*
Russell M. Allen	Vice President and General Manager of Sales	Allegheny Ludlum Steel Corporation	Oliver Bldg. Pittsburgh, Pa.
Paul F. Voigt, Jr.	Manager, Stainless Steel Division	Carnegie-Illinois Steel Corporation	Carnegie Bldg. Pittsburgh, Pa.
J. Heber Parker	President	The Carpenter Steel Company	Reading, Pa.
R. E. Christie	Vice President	Crucible Steel Company of America	405 Lexington Avenue New York, N.Y.
Martin H. Schmid	Mgr. of Sales Alloy Sales Division	Republic Steel Corporation	Republic Bldg. Cleveland, O.
T. F. McLaughlin	President	Eastern Stainless Steel Corp.	Baltimore, Md.

Defendant T. F. McLaughlin was Vice President of Rustless Iron and Steel Corporation up until about January 1, 1942.

Wherever in this indictment initials are used to describe and identify any defendant, the Christian or given name [fol. 4596] of such defendant is to the Grand Jurors unknown.

3. During all or a part of the time covered by this indictment, including the period from October 10, 1939 down to the date of this indictment each individual defendant has been actively engaged in the management of the business of the corporation with which he is connected, and, on behalf of such corporation, has conferred in his official capacity with certain of the other defendants named herein, and each has participated in, approved, authorized, ordered and done, in whole or in part, the activities constituting the offenses hereinafter charged in this indictment.

The Co-Conspirators

4. The Chemical Foundation, Incorporated, hereinafter referred to as the Chemical Foundation, is a corporation organized and existing under the laws of Delaware. It was formed in or about 1919 for the purpose of holding and licensing numerous patents acquired by it in or about 1920 from the Alien Property Custodian. During the period of time covered by this conpsiracy until in or about May 1937

it has owned and licensed patents relating to stainless steel of the type hereinafter described as chrome nickel stainless steel. Chemical Foundation is not made a defendant but is named herein as a co-conspirator.

5. The Nirosta Corporation, hereinafter referred to as Krupp Nirosta, is a corporation organized and existing under the laws of Delaware. Prior to 1940 its corporate name was Krupp Nirosta Co., Inc. It was formed in or about 1928 by Fried. Krupp, A. G. of Essen, Germany, Ludlum Steel Company, defendant Crucible, and others to exploit two Krupp patents issued after the first World War relating to heat treatment of stainless steel of the type hereinafter described as chrome nickel stainless steel. Thereafter other stainless steel patents were assigned to it by Ludlum and Crucible. From its inception a majority of the stock of Krupp Nirosta was held by Fried. Krupp, A. G. [fol. 4597] of Essen, or its nominees. This foreign held stock was seized by the Alien Property Custodian in 1942. The minority stock interest in Krupp Nirosta has been held by Americans, including Ludlum and defendant Crucible. Krupp Nirosta is not made a defendant but is named herein as a co-conspirator.

6. Allegheny Steel Company and Ludlum Steel Company were merged on or about August 16, 1938 to form defendant Allegheny Ludlum. Both Allegheny Steel Company and Ludlum Steel Company participated in whole or in part in the activities hereinafter alleged in this indictment up until the time of their merger. Allegheny Steel Company and Ludlum Steel Company are not made defendants but are named herein as co-conspirators.

7. Universal Steel Company was merged with Cyclops Steel Company on or about September 30, 1936 to form defendant Universal-Cyclops Steel Corporation. Universal Steel Company participated in whole or in part in the activities hereinafter alleged in this indictment up until the time of its merger. Universal Steel Company is not made a defendant but is named herein as a co-conspirator.

8. Illinois Steel Company, a subsidiary of United States Steel Corporation, was merged with Carnegie Steel Company, another subsidiary of United States Steel Corporation, in or about October, 1935 to form defendant Carnegie-Illinois Steel Corporation. Illinois Steel Company participated in whole or in part in the activities alleged in this indictment up until the time of its merger. Illinois Steel

Company is not made a defendant but is named herein as a co-conspirator.

9. Timken Steel and Tube Company, a subsidiary of defendant Timken Roller Bearing Company, was merged into and became a division of defendant Timken Roller Bearing Company in or about December 1936. Timken Steel and Tube Company participated in whole or in part in the activities hereinafter alleged in this indictment up until the [fol. 4598] time of its merger. Timken Steel and Tube Company is not made a defendant but is named herein as a co-conspirator.

10. Riverton Steel Company was a corporation formed on behalf of Firth Sterling, for the sole purpose of obtaining a patent license from Chemical Foundation under which Firth Sterling manufactured stainless steel. Riverton Steel Company is not made a defendant but is named herein as a co-conspirator.

11. Acts, agreements, and understandings hereinafter alleged as entered into or carried out by the corporate defendants prior to the corporate mergers or acquisitions above-mentioned refer respectively to the acts, agreements and understandings of one or more of the above-mentioned predecessors of each of said defendants. The corporate defendants respectively succeeded to the interests of such predecessors, adopted such acts, and assumed such understandings and agreements.

12. William W. Buffum, now deceased, was the Treasurer and General Manager of Chemical Foundation during the period of its participation in the activities alleged in this indictment. The said William W. Buffum is not made a defendant but is named herein as a co-conspirator.

13. Emil Schill became a Director of Krupp Nirosta in 1930 and its President in 1935 and held both positions continuously up until 1942. The said Emil Schill is not made a defendant but is named herein as a co-conspirator.

Description of the Industry

14. The original development of stainless steel resulted from the discovery by both foreign and American metallurgists that an alloy of iron and chromium, or an alloy of iron, chromium and nickel, produced a steel that was either corrosion or heat resistant, or both. Stainless steel, as now manufactured, is an alloy of iron and chromium (known as straight chrome stainless steel), or of iron and

[fol. 4599] both chromium and nickel (known as chrome nickel stainless steel). Such alloys are manufactured with or without the addition of supplementary alloying agents, such as molybdenum, columbium, titanium, selenium, and others. Stainless steel is used where metal strength together with high corrosion or heat resistant qualities are required.

15. Stainless steel is initially produced in the form of ingots. Companies producing stainless steel ingots are referred to as melters. All the corporate defendants named herein are melters, with the exception of Eastern, Pittsburgh, and Superior. These companies are engaged only in conversion or fabrication of stainless steel products from ingots purchased from melters. Defendants who are melters are also engaged in such fabrication. The ingots are processed into various semi-finished products, such as blooms, billets, slabs, sheet bars, breakdowns, etc. These are in turn converted into bars, wire, structurals, plates, sheets, hot rolled strip, cold rolled strip, forging billets, etc., which are referred to as finished products. All stainless steel sold by defendants is sold by them in the form of stainless steel finished products, except for sales to other manufacturers of stainless steel finished products.

16. Since about 1933 standard type numbers have been generally used to designate the chemical compositions constituting the different types of stainless steel. The chrome nickel types are covered by the 300 series, the regular straight chrome types by the 400 series, and the very low straight chrome types by the 500 series. The chemical composition ranges of these types have been changed by the defendants from time to time between 1933 and the date of this indictment, new type numbers have been added, and old type numbers deleted, as the types of stainless steel manufactured have varied. All commercially manufactured types of stainless steel have been covered during the period of their manufacture by these standard type numbers and composition ranges.

[fol. 4600] 17. The sales price of finished stainless steel products is composed of a base price and extras. The base price is a price quoted for a specified quantity of stainless steel of a particular unit size and quality and varies with the chemical analysis of the steel and the type of product involved. Extras are additions to the base price for specifications and quantities other than those for which

the base prices are quoted. They cover sizes other than so-called standard sizes, quantities below certain large or base amounts, packing, close tolerances, certain finishes, machine cutting, testing, and innumerable other operations necessary to conform the steel to the specifications of the particular order. The extras are the same for all types. Practically no sales of stainless steel are made on base price alone, and the extras are a substantial part of the selling price and in large part determine it.

The Interstate Trade and Commerce Involved

18. The stainless steel industry has become one of major importance. In 1942 gross sales of stainless steel finished products in the United States amounted to approximately $175,000,000. The corporate defendants named herein produce and sell more than 90% of all the stainless steel finished products produced and sold in the United States.

19. The corporate defendants produce stainless steel finished products in various states of the United States, including Ohio, Pennsylvania, New York, New Jersey, and Maryland. Substantially all of the stainless steel finished products so manufactured are sold and shipped by said defendants into states other than the states of manufacture.

Background of the Conspiracy

20. Stainless steel of the straight chromium grade was introduced in the United States and first made and sold [fol. 4601] under patent licenses from the American Stainless Steel Company, which was organized to hold and license the patents. Starting in or about 1919 this company issued licenses to various steel manufacturers, including some of the corporations named as defendants herein. These licenses contained price fixing provisions, and prices were fixed by the Board of Directors of American Stainless Steel Company. The Board consisted, in part, of representatives of some of the licensees. American Stainless Steel Company was dissolved in 1936 after the expiration of its patents.

21. Certain applications for patents relating to the manufacture of chrome nickel stainless steels were filed by Benno Strauss, an employee of Fried. Krupp, A.G. of

Essen, Germany. These applications were seized by the Alien Property Custodian during the first World War and the patents which issued thereon were subsequently sold by the Alien Property Custodian to the Chemical Foundation. Beginning in 1923, the Chemical Foundation issued licenses for the manufacture of chrome nickel stainless steel to all of the corporate defendants, or their predecessors. Prior to July 1, 1934, these licenses contained no price fixing provisions. The last of the Chemical Foundation's stainless steel patents expired on or about May 4, 1937.

22. From about 1928 Krupp Nirosta issued licenses to stainless steel producers, including some of the corporate defendants named herein, under the patents referred to in paragraph 5 above, relating mainly to heat treatment of chrome nickel stainless steels. These licenses contained price fixing provisions until 1941.

The Conspiracy

23. Beginning in or about the year 1934, the exact date being to the Grand Jurors unknown, and continuing thereafter up to and including the date of the return of this indictment, defendants and co-conspirators together with others to the Grand Jury unknown, well knowing all the [fol. 4602] facts herein alleged, have continuously engaged in a wrongful and unlawful combination and conspiracy, carried out in part within the District of New Jersey, to arbitrarily fix, establish, and maintain uniform and non-competitive prices, terms, and conditions for the sale of stainless steel finished products in restraint of the hereinabove described trade and commerce among the several states of the United States in violation of Section 1 of the Act of Congress of July 2, 1890, as amended (26 Stat. 209; 15 U. S. C. Sec. 1), commonly known as the Sherman Act. Said unlawful combination and conspiracy has consisted of a continuing agreement and concert of action between all defendants and co-conspirators, the substantial terms of which have been that:

(a) Defendants would from time to time fix uniform base prices for the various types of stainless steel finished products.

(b) Defendants would from time to time fix uniform extras on stainless steel finished products.

(c) Defendants would from time to time establish uniform cash discounts, courtesy discounts to other manufacturers, and other terms and conditions of sale of stainless steel finished products.

(d) Defendants would adopt and use Pittsburgh, Pennsylvania as the freight basing point for all sales by them of finished stainless steel products and would sell such steel to purchasers located throughout the United States only on the basis of f.o.b. Pittsburgh.

(e) Defendants would sell stainless steel finished products in the United States at uniform and arbitrary prices and upon uniform terms and conditions fixed as aforesaid.

[fol. 4603] The aforesaid unlawful combination and conspiracy has been formed and carried out by divers means, including those set forth in paragraphs 24 through 44 below.

24. Since in or about 1934 and prior thereto and continuing thereafter up to the date of the return of this indictment, defendants and co-conspirators or their representatives have continuously met together at meetings commonly known as stainless steel industry meetings, and at such meetings defendants have from time to time fixed and established uniform, arbitrary and non-competitive base prices, extras, and other terms and conditions of sale and have agreed to sell their stainless steel finished products at such fixed, uniform and non-competitive prices and on such terms and conditions of sale. All of the defendants and co-conspirators have attended some of said meetings and all defendants and co-conspirators have entered into the agreements and understandings arrived at in said meetings. Such meetings have been held at frequent intervals during the period above described, usually at the Duquesne Club, Pittsburgh, Pennsylvania; the Biltmore Hotel, New York, New York; White Sulphur Springs, West Virginia; and Hershey, Pennsylvania, the exact number and times and places of holding of all of said meetings being to the Grand Jurors unknown but known to defendants.

25. Said meetings have usually been attended by the following persons, and by other representatives and employees of defendant corporations to the Grand Jurors unknown, each representing and acting for his company or

its affiliated companies; defendant Russell M. Allen and C. B. Boyne, representing Allegheny Ludlum; G. F. Ahlbrandt, J. A. Ingwersen, and J. P. Butterfield, representing Armco; D. A. St. Clair, representing Bethlehem; defendant Paul F. Voigt, Jr. and Julian F. Gordon, representing Carnegie-Illinois; defendant J. Heber Parker and R. V. Mann, representing Carpenter; defendant R. E. Christie, F. D. Hoerle, and S. H. Reynolds, representing Crucible; J. A. Downey and J. R. Smith, representing Eastern; D. J. Clark, representing Firth Sterling; R. Edson Emory and [fol. 4604] R. J. Murray, representing Jessop; M. W. Saxman, Jr., representing Latrobe; Henry H. Ziesing, representing Midvale; defendant Martin H. Schmid and C. E. Roberts, representing Republic; defendant T. F. McLaughlin and Edward P. Geary, representing Rustless; D. B. Carson, representing Sharon and Pittsburgh; James D. Glenn, representing Sharon; W. G. Blume, representing Superior; Ben H. Miller, representing Timken; and J. O. Rinek, representing Universal-Cyclops. Within the period between October 10, 1939 and the return of this indictment, each of said individuals including each of said individual defendants, has attended one or more of said meetings, and has participated in the discussions had on the matters alleged in this indictment, and in making the herein alleged agreements and understandings reached at said meetings. All of the persons attending each of said meetings, and all of said meetings attended by each of said persons, are unknown to the Grand Jurors but known to defendants.

26. During the course of the aforesaid meetings in or about the year 1934 defendants and co-conspirators decided to utilize the patent licenses held by them from the Chemical Foundation as a means of effectuating the aforesaid combination and conspiracy. They thereupon agreed that each would accept an amendment to its said patent license which ostensibly would give the Chemical Foundation the right to fix and establish prices for stainless steel finished products made and sold thereunder and amendments to that effect were accepted by all the parties. The Chemical Foundation agreed to formally adopt and announce prices and extras for stainless steel finished products to be adopted and agreed upon by the defendants at the said industry meetings.

27. Between June 1934 and May 4, 1937 many of the stainless steel industry meetings above described were ostensibly meetings of Chemical Foundation licensees, although at some of such meetings Chemical Foundation was not represented. At these meetings changes in, and [fol. 4605] new, base prices, extras, and terms and conditions of sale for not only the chrome nickel stainless steel finished products to which the Chemical Foundation patents related, but for all types of stainless steel finished products, were discussed and agreed on by the defendants or their representatives as hereinbefore described.

28. The changes in, and new, extras, terms and conditions of sale for stainless steel finished products and some of the base prices therefor, discussed and agreed on at the industry meetings between June, 1934 and May 4, 1937, as described above, were formally confirmed in letters sent by Chemical Foundation to its licensees, including all the corporate defendants or their predecessors, announcing such changed or new extras, prices, terms, and conditions and their effective dates.

29. Chemical Foundation caused the printing from time to time, and particularly on or about April 1, 1936, August 15, 1936, and April 1, 1937, of formal booklets entitled "Stainless Steel Uniform Extras and Deductions for certain products of the Iron and Steel Industry. Approved by the Chemical Foundation, Inc.", containing all the extras then in use on all types of stainless steel finished products, which extras had been agreed upon at the above described stainless steel industry meetings. Copies of these printed books were furnished to all Chemical Foundation licensees, including all corporate defendants and their predecessors as named herein.

30. While the letters of Chemical Foundation dealing with extras and the above described printed extra books purported on their face to fix extras, terms, and conditions of sale on only the products licensed by Chemical Foundation, i. e., the chrome nickel stainless steels, defendants and their predecessors named herein intended to, agreed to, and did adopt the extras, terms, and conditions of sale in such letters and printed extra books as their own published, [fol. 4606] prices for the sale of all types of stainless steel finished products.

31. In or about 1934 defendants and co-conspirators also

agreed at the aforesaid industry meetings that the base prices for the sale of stainless steel finished products agreed upon between them at such meetings should be published by Sharon and circulated among them and used by defendants and co-conspirators in computing, determining, and publishing their own prices for all types of stainless steel products. The Sharon price lists were ordinarily published four times per year. They were published more frequently when there were base price changes. Since 1938, when base price changes have been infrequent, they have been published at longer intervals.

32. Each such list published by Sharon as aforesaid contained the chemical analyses and base prices for finished products for all types of stainless steel currently being produced commercially, including the types of chrome nickel stainless steel to which the Chemical Foundation patents related, although Sharon actually produced and sold only a few of the types appearing on such published price lists.

33. The successive issues of the Sharon price lists have been circulated among the defendants, and defendants continuously since in or about 1936 have used the Sharon lists as, or have used them in compiling, their own respective published base price lists.

34. During part or all of the time the corporate defendants or their predecessors were operating as licensees of Chemical Foundation, as hereinbefore alleged, and subsequent thereto, defendants Carpenter, Crucible, Republic, Bethlehem, Firth Sterling, and Jessop, and co-conspirator Ludlum were licensees of Krupp Nirosta under certain patents relating to heat treatment processes and other improvements on chrome nickel steels.

35. Carnegie-Illinois had the use of the Krupp Nirosta patents by virtue of a license to its parent company, United States Steel Corporation, from Fried. Krupp, A. G. of [fol. 4607] Essen, Germany. Carnegie-Illinois and United States Steel Corporation dealt with the co-conspirators Krupp Nirosta and Emil Schill, and such co-conspirators dealt with them, substantially as if they were direct licensees of Krupp Nirosta.

36. Each Krupp Nirosta license agreement contained a clause forbidding the licensee to sell at prices below those fixed by Krupp Nirosta. Co-conspirators Krupp Nirosta and Emil Schill, however, never made any independent

determination of the prices to be charged under the aforesaid license agreements. Krupp Nirosta has from time to time issued instructions under this provision of the licenses, but in all such cases has adopted the prices, terms and conditions of sale agreed upon by defendants as herein alleged.

37. The Chemical Foundation's patents expired on September 23, 1936 and May 4, 1937. During 1936 and 1937 defendants and co-conspirators held numerous meetings and discussions for the purpose of devising further means of carrying on price-fixing for stainless steel finished products. The exact places and dates of the meetings and discussions are to the Grand Jurors unknown. At these meetings defendants and co-conspirators sought to promote a pool of stainless steel patents to be contributed by members of the group, to be held and licensed by a patent holding company, for the avowed purpose of maintaining a patent cover to fix prices on stainless steel finished products. In the course of these deliberations defendants decided, however, to utilize for this purpose licenses which were then held by most of the defendants from defendant Carpenter under patents owned by the latter relating to free machining stainless steel. All of these licenses contained price fixing provisions.

38. The patents originally licensed by Carpenter as aforesaid were issued on or about December 8, 1931 and February 23, 1932. They related to the addition of sulphur, selenium and other alloying elements to stainless steel to facilitate its machining. Types of stainless steel made under these patents are known as free machining types. [fol. 4608] Carpenter had from time to time since 1932 issued licenses under these patents to various manufacturers. All the corporate defendants except Armco, Eastern, Pittsburgh, Superior, Sharon and Timken were in 1937 and have since continued to be licensees of Carpenter under the aforesaid patents. Defendants Timken and Sharon became licensees of Carpenter in 1938 and 1940 respectively. Each license granted by Carpenter has at all times contained a clause forbidding the licensee to sell stainless steel made and sold under the license at prices lower than those currently being charged by Carpenter.

39. As a result of a stainless steel industry meeting held in or about May 1937, the exact date and place being to the Grand Jurors unknown, at which most of the corporate

defendants or their predecessors were represented, defendants agreed that Carpenter in place of the Chemical Foundation would thereafter issue notices of changes in, or new, extras, terms and conditions for the sale of stainless steel finished products, and would publish printed extra books, in the manner previously carried out by the Chemical Foundation. Carpenter's aforesaid patents and others subsequently issued to it relate only to steels falling primarily within types 303, 416, 420F, and 430F, whereas there are more than 30 standard types of stainless steel. Ostensibly the instructions issued and the extra books published by Carpenter related only to the free machining types of stainless steel. Such extras could, however, and defendants agreed that they would, be used for computing extras for all types of stainless steel finished products.

40. Since 1937 and continuing thereafter up to and including the date of this indictment defendants have from time to time advised Carpenter of the changes in, and new, extras, terms and conditions for the sale of stainless steel finished products which they agreed upon either by correspondence or consultations between the defendants or at various industry meetings referred to in paragraphs 24 and 25 above. Some of these meetings were ostensibly meetings of Carpenter's licensees. Carpenter thereupon has formally [fol. 4609] confirmed by letter the changes in, or new extras, terms and conditions of sale and their effective dates so communicated to it by the defendants, all in the same manner as theretofore done by the Chemical Foundation as hereinbefore alleged. Carpenter has sent such letters to all of the defendant corporations or their predecessors who were licensees of Carpenter at the time and in most cases also to the remaining corporate defendants.

41. Defendant Carpenter from time to time, and particularly on or about July 1, 1937, April 1, 1939, January 15, 1940 and January 1, 1942, has published extra books entitled "Stainless Steel Standard Classification of Extras and Deductions", which contained the extras then in use and which had been agreed upon and fixed as above described.

42. Carpenter has sent such extra books to all the corporate defendants, irrespective of whether or not they were licensees of Carpenter. Defendants continuously since 1937

have used the Carpenter extra books as, or have used them in compiling, their own published lists of exfras.

43. While the Carpenter letters described above announcing new and changed extras, terms, and conditions for the sale of stainless steel finished products, and the printed Carpenter extra books, purported to confine the matters appearing therein to the products licensed by Carpenter, i.e., free machining stainless steels, defendants, however, agreed to and did use the extras, terms, and conditions for the sale of stainless steel finished products set forth in such letters and printed extra books as their own published extras on all types of stainless steel.

44. During the period of time covered by this indictment the United States Government and its various branches have become increasingly large purchasers and users of stainless steel finished products. As required by statute all such Government purchases are made through public competitive bidding and are awarded to the lowest bidder. The prices quoted by prospective suppliers of stainless steel [fol. 4610] thus become a matter of public record and maintenance by defendants of agreed prices on such bids has therefore been necessary in order to maintain their agreed upon price structure. Despite the fact that the defendants in preparing their bids for government purchases utilize the same base prices, extras, and terms and conditions of sale, slight differences in calculating the amount of the bids would result in minor discrepancies therein and would result in an award to the defendant whose bid was slightly lower than those of the remaining defendants. Therefore, in order to carry out the agreement of the defendants to maintain uniform prices on sales of stainless steel finished products and to avoid discrepancies in bids because of errors in computation, co-conspirator Chemical Foundation, defendant Carpenter, and, on occasion, other corporate defendants, pursuant to an agreement reached at the aforesaid industry meetings, circulating among the remaining corporate defendants so-called A.I.'s or Advance Informations. These A.I.'s showed the exact price to be used by all the defendants in quoting on designated government inquiries, and were calculated upon the agreed base prices, extras, terms and conditions of sale. The A.I.'s so sent out were used by the corporate defendants receiving them to conform their bids to those of all the other defend-

ants. As a result most of the bids submitted by the corporate defendants or their predecessors to the United States Government during the period covered by this indictment have been identical. Accordingly purchases of stainless steel finished products by the Government have by necessity been awarded among the defendants through selection by lot and competitive bidding has been prevented.

Effects of the Combination and Conspiracy

45. The aforesaid unlawful agreement, combination and conspiracy has had, as was intended by the defendants and co-conspirators, the following effects:

(a) Interstate trade and commerce in the manufac- [fol. 4611] ture and sale of stainless steel finished products has been substantially and unreasonably restrained.

(b) Prices of stainless steel finished products in the United States have been maintained at fixed, arbitrary, and non-competitive levels.

(c) Competition in the manufacture and sale of stainless steel finished products in the United States has been eliminated.

Jurisdiction and Venue

46. The combination and conspiracy hereinbefore alleged has been carried out in part in the District of New Jersey. During the period of time hereinbefore alleged, including the period from October 10, 1939 to the date of the return of this indictment, defendants and co-conspirators have performed within said District of New Jersey the following acts in effectuating and carrying out said unlawful combination and conspiracy:

(a) At various times and places so numerous as to be impractical to state specifically herein but being well known to defendants, some or all of the corporate defendants have quoted to inquiring purchasers of stainless steel within the District of New Jersey, both orally and in written bids, the prices, terms, and conditions of sale agreed upon and fixed pursuant to the aforesaid unlawful combination and conspiracy.

(b) Some or all of the corporate defendants have continuously published and circulated in the District

of New Jersey copies of their published base price and extra lists for stainless steel products, containing [fol. 4612] the prices, terms, and conditions of sale agreed on and fixed pursuant to the aforesaid unlawful combination and conspiracy.

(c) At various times so numerous as to be impractical to state specifically herein but being well known to defendants, some or all of the corporate defendants have sold and shipped large quantities of stainless steel finished products from other states than the State of New Jersey to purchasers in the said District of New Jersey, and such sales have been made at the prices, terms, and conditions of sale agreed upon and fixed pursuant to the aforesaid unlawful combination and conspiracy.

(d) At various times some or all of the corporate defendants have quoted prices on stainless steel finished products to the United States Army, particularly at Picatinny Arsenal, near Dover, in the District of New Jersey, which quotations were based on the arbitrary, uniform and non-competitive prices, terms, and conditions of sale, agreed upon and fixed pursuant to the aforesaid unlawful combination and conspiracy.

And so, the Grand Jurors aforesaid, upon their oaths aforesaid, do find and present that the defendants and co-conspirators throughout the period aforesaid, at the places and in the manner and form aforesaid, unlawfully have engaged in a continuing combination and conspiracy in restraint of trade and commerce in stainless steel finished products among the several states of the United States of America, contrary to the form of the statute of the United States in such case made and provided, and against the peace and dignity of the United States of America.

[fol. 4613] Count Two

And the Grand Jurors aforesaid, inquiring as aforesaid, upon their oaths aforesaid, do hereby re-allege, re-affirm, and incorporate as if herein set forth in full, each of the allegations set forth in paragraphs 1 through 22, inclusive, of Count One of this indictment.

Control of the Industry

47. Throughout the period of time covered by this indictment, defendants and co-conspirators have possessed the power to fix and maintain, by concerted action, uniform and non-competitive prices, terms, and conditions for the sale of stainless steel finished products.

Combination and Conspiracy

48. Beginning in or about the year 1934, the exact date being to the Grand Jurors unknown, and continuing thereafter up to and including the date of the return of this indictment, defendants and co-conspirators named herein together with others to the Grand Jurors unknown, well knowing all the facts herein alleged, have continuously engaged in a wrongful and unlawful combination and conspiracy, carried out in part within the District of New Jersey, to monopolize trade and commerce in stainless steel finished products among the several states of the United States by agreeing with each other to arbitrarily fix, establish, and maintain prices, terms, and conditions for the sale of said products in said interstate trade and commerce, in violation of Section 2 of the Act of Congress of July 2, 1890, as amended (26 Stat. 209; 15 U. S. C. Sec. 2), commonly known as the Sherman Act. Said unlawful combination and conspiracy has consisted of a continuing agreement and concert of action between all defendants and co-conspirators, the substantial terms of which have been that:

(a) Defendants would from time to time fix uniform base prices for the various types of stainless steel finished products.

[fol. 4614] (b) Defendants would from time to time fix uniform extras on stainless steel finished products.

(c) Defendants would from time to time establish uniform cash discounts, courtesy discounts to other manufacturers, and other terms and conditions of sale of stainless steel finished products.

(d) Defendants would adopt and use Pittsburgh, Pennsylvania as the freight basing point for all sales by them of stainless steel finished products and would sell such steel to purchasers located throughout the United States only on the basis of f.o.b. Pittsburgh.

(e) Defendants would sell stainless steel finished products in the United States at uniform and arbitrary prices and upon uniform terms and conditions fixed as aforesaid.

The aforesaid unlawful combination and conspiracy has been formed and carried out by divers means including those set forth in paragraphs 24 to 44 inclusive, of Count One of this indictment, which are hereby re-alleged, re-affirmed, and incorporated herein as if set forth in full.

Effects of the Combination and Conspiracy

49. The aforesaid unlawful agreement, combination and conspiracy has had, as was intended by the defendants and co-conspirators, the following effects:

(a) Prices of stainless steel finished products in the United States have been maintained at fixed, arbitrary, and non-competitive levels.

(b) Competition in the manufacture and sale of stainless steel finished products in the United States has been eliminated.

[fol. 4615] Jurisdiction and Venue

50. The combination and conspiracy hereinbefore alleged has been carried out in part in the District of New Jersey. During the period of time hereinbefore alleged, including the period from October 10, 1939 to the date of the return of this indictment, defendants and co-conspirators, in effectuating and carrying out said unlawful combination and conspiracy, have performed within said District of New Jersey the acts set forth in paragraph 46 of Count One of this indictment, which is hereby re-alleged and incorporated herein as if set forth in full.

And so, the Grand Jurors aforesaid, upon their oaths aforesaid, do find and present that the defendants and co-conspirators throughout the period aforesaid at the places and in the manner and form aforesaid, unlawfully have engaged in a continuing combination and conspiracy to monopolize trade and commerce in stainless steel finished products among the several states of the United States of America, contrary to the form of the statute of the

United States in such case made and provided, and against the dignity of the United States of America.

The Timken Roller Bearing Company, Canton, Ohio.

British Contract

Attention: Mr. Homan Ely

GENTLEMEN:

. . . . . .

Accordingly, we feel that the British Company has no legal claim for a reduction of royalty; and it is certainly obtaining favorable consideration as long as it enjoys the use of your trade-mark "Timken" and of excluding you from competition with it.

On the other hand, the contract gives the British licensee the right to terminate the contract at any time on six months notice.

Under the circumstances, it strikes us that the situation is one for negotiation rather than for adjustment through lawyers, and that Mr. Lothrop could probably do more toward adjusting the matter than legal counsel. Judging from your letter, Mr. Lothrop seems to have in mind that the patent lawyers will undertake to pass on the extent of legal protection afforded to the British licensee by the several British patents with a view to determining the justice

of the British Company's claim to a reduction of its royalty. The defect in this proposition is that it wholly overlooks the trade-mark license, that is to say, the great value to the British Company of the right to use the word "Timken" on its products and the further great right of excluding you from competition with it.

* * * * * * *

Yours truly, (S.) Carr & Carr.

St. Louis, Mo., February 23, 1924.

The Timken Roller Bearing Company, Canton, Ohio.

British Contract

Attention: Mr. Heman Ely

GENTLEMEN:

By separate letter, we are advising you of our opinion that your contract with your British licensee will not expire with the expiration of the last of your three original British patents, but will be prolonged to the expiration of other British patents subsequently acquired by you; also that the expiration of the three original British patents will not have the effect of changing the rate of royalty, but that the British licensee will remain obligated to pay to you royalties at the present rate on all roller bearings made by it; and that the license to use the word "Timken" enables the British Company to participate in the good will heretofore built up and which it would have to surrender in case the contract is terminated. Accordingly, we feel that the British Company has no legal claim for a reduction of royalty; and it is certainly obtaining favorable consideration as long as it enjoys the use of your trade-

mark "Timken" and of excluding you f[illegible]n competition with it.

On the other hand, the contract gives the British li-
[fol. 4618] censee the right to terminate the contract at any time on six months notice.

Under the circumstances, it strikes us that the situation is one for negotiation rather than for adjustment through lawyers, and that Mr. Lothrop could probably do more toward adjusting the matter than legal counsel. Judging from your letter, Mr. Lothrop seems to have in mind that the patent lawyers will undertake to pass on the extent of legal protection afforded to the British licensee by the several British patents with a view to determining the justice of the British Company's claim to a reduction of its royalty. The defect in this proposition is that it wholly overlooks the trade-mark license, that is to say, the great value to the British Company of the right to use the word "Timken" on its products and the further great right of excluding you from competition with it. In the case of a license under broad patents and patents for minor improvements, it is more or less customary to provide for a reduction of royalty when the broad patents expired, on the principle that the tail should go with the hide; but in your case, the value of the good will has been steadily increasing at the same time that the value of the patent has been decreasing, so that the British licensee is now getting as much value in the form of the trade-mark as it originally had under the patents and the trade-mark together.

As we view the matter, therefore, it should be Mr. Loth-
[fol. 4619] rop's effort not merely to make clear the importance of the after-acquired patents, but to emphasize the value of the good will in the word "Timken".

The British agents, who have been our associates for years in handling your British patent matters are Messrs. Abel & Imray, 30 Southampton Buildings, London W. C. England; and they will be glad to furnish Mr. Lothrop any information in their line. The Buckwalter E-type Cage patent and the Process of Assembling the Same were handled through Mr. Butler and we do not know who his British associates were in the matter.

Yours truly, Carr & Carr.

[fol. 4620] PLAINTIFF'S EXHIBIT No. 174

Received Nov. 21, 1927

Stibbard, Gibson & Co.

21 Leadenhall Street, London, E. C. 3

9th November, 1927.

DEAR SIRS,

Mr. Dewar has handed us the draft of an Agreement between you and British Timken Ltd. prepared by Mr. Higgins, and we have been going through this document. There is an important question at the start, as to which we should like to have your remarks.

The Agreement is substantially a license to make, use and sell under patents from time to time existing, and "Bearings" is the name given to bearings of all kinds manufactured under and in accordance with the specification of Letters Patent now or hereafter acquired by you in the Licensed Territory. Are there any patents in existence to which the Agreement will apply?; our impression is that there are none, and even if there are any at the present time, we rather think that the patent position is so shadowy that there may be no patents at some future date. The royalty is only payable upon bearings defined as above, so that if there is no patent now or at any future date, the royalty may cease to be payable.

As we understand the position, the main advantage derived by the English Company under the Agreement will [fol. 4621] be the advice and information to be received from you, the right to use the name "Timken" and the absence of your competition. Do you not think that it would be better to accentuate these advantages in the Agreement, rather than leave them merely as incidents in a patent license?

Then it would naturally follow that the royalty is payable on all bearings manufactured, used or sold by the British Company or any subsidiary or any Company, firm or person sub-licensed assisted or controlled by them.

We are to have a meeting with Mr. Dewar and Messrs. Linklaters & Paines on Friday in order, if possible, to settle

the draft Notices and Resolutions with respect to the alteration of the Articles of Association.

Yours faithfully, Stibbard, Gibson & Co.

The Timken Roller Bearing Company, Canton, Ohio.

October 22, 1934.

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W. 1., England.

DEAR MICHAEL:

As I advised you in my cablegram of Saturday, Grover Higgins and I have been going over the various new agreements sent us by Mr. Duncan, and Grover has already written Mr. Duncan regarding several of the paragraphs therein.

* * * * * * *

In all of these discussions we feel it is very important to view the different points raised on the right basis. In other words, we are now arranging a new 15 year period where both of the former partners, i.e., Michael Dewar and Timken, are ostensibly remaining the same but actually are now quite different. In the so-called "New Deal" we feel and hope that our past pleasant cordial relationship will be continued, but at the same time it is the writer's opinion that we now have to consider that 50% of British Timken stock will be in the hands of the public and in a good many ways our business transactions can be made much more open from the public's viewpoint than heretofore. Then, again, from the standpoint of Timken America, we must bear in mind that we are now becoming a 25% owner of stock in an enterprise, not a majority stockholder, and that some of the things we formerly did willingly and freely, without any recompense, as affecting only our partner Michael Dewar, and ourselves, now becomes a matter of these same things being done for another company in which we hold a 25% interest only. Thus, as you will see from my various future letters, we feel it is quite desirable to definitely set up in our new agreements several

points beyond question of a doubt that in the past would only be the occasion of a simple letter from either of us to each other, thus settling any divergence of opinion in almost every instance.

* * * * * * * * *

Very truly yours, The Timken Roller Bearing Co.
——— ———, Assistant to the President.

CC to Mr. A. J. M. Duncan

[fol. 4623] October 22, 1934

Mr. M. B. U. Dewar, 10 Mayfair Place, London, W.1., England.

DEAR MICHAEL:

As I advised you in my cablegram of Saturday, Grover Higgins and I have been going over the various new agreements sent us by Mr. Duncan, and Grover has already written Mr. Duncan regarding several of the paragraphs therein. We have just received a reply to his letter and it is having our attention. However, it is my positive opinion that it would be very desirable if you could come over here and discuss the thing with us. There are a good many points of minor importance and some of rather major nature that I know we could settle very quickly and satisfactorily in hearing each others viewpoint through personal contacts. Of course, none of these differences are of such a nature in my opinion that we cannot ultimately settle them by correspondence, but as you know this involves delay, and it is sometimes very difficult to get the right slant from rather a cold typewritten letter. However, on the assumption that you cannot come, I am writing you separate letters on each of the points involved, sending a copy of each letter to Mr. Duncan.

In all of these discussions we feel it is very important to view the different points raised on the right basis. In other words, we are now arranging a new 15 year period where both of the former partners, i.e., Michael Dewar and Timken, are ostensibly remaining the same but actually are now quite different. In the so-called "New Deal" we

feel and hope that our past pleasant cordial relationship will be continued, but at the same time it is the writer's opinion that we now have to consider that 50% of British Timken stock will be in the hands of the public and in a good many ways our business transactions can be made much more open from the public's viewpoint than heretofore. Then, again, from the standpoint of Timken America, we must bear in mind that we are now becoming a 25% owner of stock in an enterprise, not a majority stockholder, and that some of the things we formerly did willingly and freely, without any recompense, as affecting only our partner Michael Dewar, and ourselves, now becomes a matter of these same things being done for another company in which we hold a 25% interest only. Thus, as you will see from my various future letters, we feel it is quite desirable to definitely set up in our new agreements several points beyond question of a doubt that in the past would only be the occasion of a simple letter from either of us to each other, thus settling any divergence of opinion in almost every instance.

[fol. 4624] Another phase of this situation which we trust you will bear in mind is the fact that within the next 15 years, conditions in our company here may possibly change to a marked extent, and we therefore feel, both for your sake and ours, that every possible protection be given British Timken, French Timken and American Timken. Then, too, we also feel that should you in the future wish to retire from active participation in British Timken, we might be very unwilling, as far as American Timken is directly concerned, to continue the same relationship with some future partner as in the past. Of course, we fully realize that under such a condition we could purchase your intertests, but at this time we feel it would be highly desirable to have some British interest owning a considerable share of British Timken company (other than totally outside interests). This would mean that if such a person were to own such a share of British Timken stock, he would expect, in all probability, to work under the same kind of an arrangement that you and we have enjoyed for the past 7 years. Frankly, as we see it today, this might not appeal to us at such a time, and we therefore wish to view these new agreements from the possible

standpoint that some one other than Michael Dewar might eventually be a "party of the other part."

Summarizing this whole situation, we want you and your associates to get our viewpoint in as broad a manner as possible, and please do not feel, above all things, that we wish to question in any way your ability or honesty of intent. I think you know how we feel on this subject as far as you are concerned, but, as we said heretofore, we want to prepare these new agreements in as complete a manner as possible to cover all possible anticipated complications from both our view points. We hope and trust that the ownership of American Timken will remain as it is for the next 15 years, and, of course, under such circumstances you have nothing at all to be concerned about, but here, too, it is our feeling that British Timken and French Timken must be placed in a position so as not to be affected by any change whatever in our local affairs.

With kindest regards,

Very truly yours, The Timken Roller Bearing Co.

——— ———, Assistant to the President.

Mr. D. P. Hess, Timken Roller Bearing Co., Canton, Ohio.

MY DEAR DON:

New Deal

Thank you for your letter of the 22nd October which I read with great interest and a great deal of sympathy for your point of view.

. . . . . .

However, I entirely agree with you that all these agreements have now to be prepared, bearing in mind the very separate and distinct identities of the various Companies

concerned. I feel, however, it should be quite simple to do this, even if we must bear in mind, as you seem quite correctly to infer, that no one Company has the right to expect any material benefit from another Company without properly paying for it.

I look forward to your criticisms on our Draft Agreements, and for your part, please rest assured that I do see your point of view; and as far as it is physically possible, I am prepared to do everything I can to ensure that the agreements that we are now reaching shall be equitable, and shall cover as far as possible all eventualities, having regard to the various interests concerned.

Yours sincerely, /s/ M.B.U. Dewar.

[fol. 4626]

10, Mayfair Place,

5th November, 1934.

Mr. D. P. Hess, Timken Roller Bearing Co., Canton, Ohio.

My Dear Don:

New Deal

Thank you for your letter of the 22nd October, which I read with great interest and a great deal of sympathy for your point of view.

I entirely agree with you that settling all the points that may arise between us by correspondence is likely to be a much lengthier matter than settling them by personal contact round the table.

I would, however, urge that we should endeavour to settle as much as we possibly can by correspondence, leaving as little as possible to be settled by a personal meeting.

I am sure you will appreciate that it is very difficult for me to find time to make a lengthy trip to America this year; the same applies to Mr. Pascoe and I do not feel that it would be in the interests of any of the Companies for me to come without him. Nevertheless, if we can get things down so that the outstanding points can be settled in a few days, then, in view of the importance of the decisions which we are now reaching—which importance you admirably stress in the second paragraph of your letter—we will certainly consider a meeting between us.

The third paragraph of your letter rather concerns what might happen if I myself were no longer in the picture. You know at present that I have no thought of retiring from active business, neither have I at present any thought that my interests in the Timken Company, to which I have given so much of my life, should leave my family. As I see it there are two possibilities when I am no longer [fol. 4627] present:

(1) My interest would remain in my family, and although there would be no Michael Dewar in the relations between British Timken and American Timken, there would be some other Dewar. It was with the thought in mind that my and my family's interests in Timken would be a lasting one that I asked Mr. Pascoe to join the Company, in order to preserve continuity of management and association with yourselves. Should Mr. Pascoe be no longer available for any reason, I should seek someone else of equal standing, and ability to accompany me in my associations with yourselves. In this case, I should hope that the associations between the two Companies would be as pleasant as they have been in the past.

(2) The other alternative would be that you would purchase my interest. You would then own approximately 50% and the controlling interest in British Timken. You would be able to appoint your own management, and apart from the fact that you would have outside Shareholders, you would be in control of the Company as far as its association with yourselves went.

I do not quite appreciate your feeling that it might be desirable to have some other British interest owning a large block of Capital, as if we are to have any outside Shareholders at all, and we have decided to do so, then your 25% interest, with the possibility of your purchasing my 25% interest, should, I feel, give you a very satisfactory interest in the British concern.

However, I entirely agree with you that all these agreements have now to be prepared, bearing in mind the very separate and distinct identities of the various Companies concerned. I feel, however, it should be quite simple to do this, even if we must bear in mind, as you seem quite correctly to infer, that no one Company has the right to expect any material benefit from another Company without properly paying for it.

[fol. 4628] I look forward to your criticisms on our Draft Agreements, and for your part, please rest assured that I do see your point of view; and as far as it is physically possible, I am prepared to do everything I can to ensure that the agreements that we are now reaching shall be equitable, and shall cover as far as possible all eventualities, having regard to the various interests concerned.

Yours sincerely, M. B. U. Dewar

SIR,

Trade Mark Application No. 600251-5 by British Timken Limited

We send herewith the Statutory Declaration by Mr. M.B. U. Dewar who is the Chairman and Managing Director of the Applicant Company in support of the above five applications.

The Applicant Company is desirous that a date may be fixed for a hearing by the Registrar at which Counsel for the Company can have an opportunity of discussing the evidence which may be required to substantiate the claim that "Timken" is a distinctive mark before steps are taken to procure this evidence from all over the country and the Applicant Company suggests that this discussion might take place upon a hearing on the question whether the applications should be advertised with or without acceptance under Section 18 (1) of the Trade Mark Act 1938. Any such discussion would of course be entirely without prejudice to any ultimate decision of the Registrar.

We are writing this in accordance with a suggestion made by Counsel.

We are, Sir, Your Obedient Servants, Stibbard Gibson & Co.,

The Registrar,
The Patent Office,
Trade Marks Branch.

[fol. 4633] Dated 28th November, 1938.

Re "Timken" Trade Mark

Opinion of Mr. F. E. Bray K.C.

Stibbard Gibson & Co., 21, Leadenhall Street, London, E.C.3.

[fol. 4634] Opinion

In my opinion it is very doubtful whether any evidence which may be available will enable the Company to obtain registration.

The Trade Marks Act 1938, which consolidates the law as affected by the Amendment Act of 1937, does not directly improve the position. If the trade Mark were already registered the difficulty involved by the arrangement which permits of the American Company's goods being sold in the territory of the British Company might perhaps be solved by registering the American Company as a user under Section 28. Even in that case, there would still be a difficulty if the American Company has made use of the provision of Clause 6 (c) of the 1934 agreement and the Licensees use the name "Timken" in connection with their goods as there would then be goods, not only of the American Company, but of any of the 4 licensed producers coming into this country marked "Timken"; and I have considerable doubts as to whether the Registrar would allow them to be registered as users.

As matters now stand, the trade mark cannot be registered without establishing by evidence that it is adapted to distinguish the goods with which the British Company is connected in the course of trade from goods in the case of which no such connection exists (see Section 9 (1) (e) and 9 (2) of the Act of 1938). "Timken", even if there is no one of that name in England is, admittedly a surname (of Warschauer Appn, 46 R.P.C. 42).

If, with the knowledge and consent of the British Company, American goods are coming into this Country marked [fol. 4635] "Timken" without any other distinguishing mark, it cannot be proved strictly that "Timken" is adapted to distinguish the British Company's goods from the American Company's goods, as the same mark would be in use on both. If the American goods are marked "made in U. S. A.", it may be possible to get evidence that "Timken"

alone without some such addition means the British Company's goods exclusively.

Indirectly, the new Act may improve the prospects to some extent, as the fact that the legislature has expressly recognised licenses in some cases shows that the old idea that, in all circumstances, a licence to use a trade mark is contrary to public policy no longer holds the field. It is possible, therefore, that it may be found that the Registrar is more inclined to try and find a way out of the difficulty than would have been the case a few years ago.

In these circumstances I think that it is advisable to try and ascertain the views of the Registrar before going to the trouble and expense of getting evidence from all over the Country to support the case that "Timken" is a distinctive mark. Accordingly, I advise that in the first instance only one statutory declaration should be filed by a Director of the Applicant Company, and that this should be sent with a letter to the Registrar stating that before going to the expense of getting further evidence, the Applicants desire that Counsel should have the opportunity of discussing (without prejudice, of course, to any ultimate decision of the Registrar) the evidence which may be required, and suggesting that this may be obtained by a hearing before the Registrar on the question whether the Ap- [fol. 4636] plication should be advertised with, or without, acceptance under Section 18 (1) of the Act. The Registrar could not, in my opinion, refuse a hearing, and it could be attended by Counsel with a view to seeing whether there is any prospect of getting over the difficulties. This course will have the advantage of avoiding the cost of getting evidence from all over the Country (which would be necessary) unless it looks as if there is a fair chance of success; it is also possible that the Registrar, who, if approached in the right way, is nearly always helpful, may offer some useful suggestions for getting over the difficulty.

The declaration should state that the Applicant Company commenced business in 1920 and give approximate figures for the annual turnover in the different goods marked "Timken" for which registration is sought, for the last five years or thereabouts. Examples of each class of goods marked "Timken" should be exhibited. The amount spent on advertising should be given, if it is impressive, and possibly advertising matter exhibited; but this should be

carefully examined before a decision is reached. I recollect that some of it at one time rather conveyed the impression that, "Timken" was a description of a type of article irrespective of the manufacturer. The declaration should then go on to state that to the best of the declarant's belief no goods of the above mentioned descriptions other than those of the Applicant Company have been sold in the United Kingdom since 1920 except:—

(1) Goods imported as components of completed machines.

(2) Replacements for machines so imported.

Comparative figures of sales of such imported goods might be given if the figures are known and are very much less than those of British Company's goods.

[fol. 4637] Assuming that the Merchandise Marks Act 1926 has been complied with and that such goods, if marked "Timken", are also marked "made in U.S.A." or "imported", this should be stated in the declaration.

Presumably it can also be said that these imported goods are only dealt in by a comparatively small number of dealers wh are service agents for the imported machines in question or who supply such service agents.

The declaration should also state that the declarant believes that evidence can be obtained from all over the Country that the trade mark "Timken" denotes exclusively the goods of the Applicants, although there would be some witnesses who know of the imported goods and distinguish them by the fact that they are imported for foreign cars only, and (if it be the fact) are marked with an indication of origin.

It could further be stated that, wherever there are associated companies in different territories manufacturing components under the same name, some importation of this sort must inevitably take place as the importation of complete machines cannot be stopped, and that this is known to the dealers in, and users of the goods, so that no confusion arises; that the Application is made with the active support of the American Company and that it is proposed to apply to register that Company as a user in respect of goods imported as components of complete machines or replacement parts for such machines. The declaration should be settled by experienced junior counsel.

At the suggested hearing, it may be argued that it is quite illogical that the position of the Applicant Company as proprietor and the American Company as registered [fol. 4638] user, which could have been reached if the mark were registered, is made for ever impossible merely because the mark is not registered; and that the British Company is in fact entitled to the exclusive right to the trade mark, subject only to a limited concurrent right of the American Company to use the mark with a distinguishing indication of origin.

I think that this course may be successful, and in any case, will do no harm, as the real objection which might lead to a refusal will be discussed before advertisement and, thus, without publicity.

This does not get over the difficulty of the goods of other licenced manufacturers in U.S.A., if there are any which are sold as Timken. I feel that there must be some practical way of requiring that any such licensees, when they get orders from the U.K. should supply the goods to the British Company who would resell them at the same price to the person giving the order, so that the goods would be of the merchandise of the British Company. It would facilitate the matter if the American Company would do the same, as, if that were done, the only goods marked "Timken" with which the British Company was not connected in the course of trade would be those imported as parts of complete machines, and possibly the Registrar might accept the applications if the specification of goods were limited by the addition of the words "not being goods imported as part of complete machines".

In any case before the mark is advertised, steps must be taken to ensure that importers of the American goods are secured so that they will not oppose the Application.

If the Registrar expresses an unfavourable view, I think [fol. 4639] the applications should be dropped. The importance of registration can be exaggerated. I appreciate that it would be valuable in this case, and especially as, if the Agreement terminates, the new Act would enable the American Company to reacquire the trade mark without the goodwill; but, for the reasons given above, I think the new Act will indirectly ease the difficulty which might have existed before the Act in enforcing common law rights against third parties, as the Courts are likely to be less

inclined to treat a licence as destructive of trade mark rights.

F. E. Bray

Inner Temple
28th November, 1938

[fol. 4640] Dated 9th January, 1939.

Trade Marks Act, 1938.

In the matter of Trade Mark Applications No. 600,251, No. 600,252, No. 600,253, No. 600,254 and No. 600,255 British Timken Limited.

Copy

Declaration of Michael Bruce Urquhart Dewar.

[fol. 4641] Trade Marks Act 1938

In the matter of Trade Mark Applications No. 600,251, No. 600,252, No. 600,253, No. 600,254 and No. 600,255, by British Timken Limited.

I, Michael Bruce Urquhart Dewar of 65 Cheston Road Aston in the City of Birmingham, Chairman and Managing Director of the Applicant Company British Timken Limited which has its registered office at the same address solemnly and sincerely declare as follows:

1. I became Chairman of the Board of Directors and Managing Director of the Applicant Company in the year 1927, and I have occupied that position ever since and am consequently well acquainted with the history and business activities of the Company from and after that date.

2. The Applicant Company was formed in 1920 for the purpose of manufacturing and marketing anti-friction bearings suitable for all sorts of purposes and has always been and still is closely associated with The Timken Roller Bearing Company of Canton, Ohio. U.S.A. Another associated Company was formed in France for the same purpose in the year 1928 under the name Societe Anonyme Francaise Timken and I am Managing Director of that Company. The American British and French Companies have all worked in close association.

The Applicant Company has carried on the business of manufacturing and marketing bearings in this Country

since it was incorporated and since 1935 it has also sold Lubricant testing machines and the Applicant Company has in mind the manufacture and/or sale of Machine Tools and Universal Joints in which bearings are component parts. Bearings are component parts of axle boxes which are [fol. 4642] bought fitted with bearings and sold by the Applicant Company.

4. Throughout its existence the Applicant Company has continuously marked and widely advertised its products under the Trade Mark "Timken" for the purpose of indicating that the products so marked and advertised are the products of the Applicant Company and in fact throughout its whole life the said mark "Timken" alone has been exclusively used in this Country by the Applicant Company except as hereinafter mentioned.

5. The sales of the Applicant Company during its existence have been large and increasing and considerable sums have throughout the same period been expended in advertising its said products under the said mark as is indicated by the following figures of sales and of advertising costs for the five years beginning in 1933 which figures I have caused to be extracted from the books of the Applicant Company.

Turnover.

Year	Tapered Bearings		Ball and Parallel Bearings		Lubricant Testing Machines
	Number	Value £	Number	Value £	Value £
1933	1,687,614	343,170	6,306	1,008	....
1934	1,943,810	401,747	46,953	6,320	....
1935	1,774,127	413,797	86,535	10,474	1,531
1936	1,946,078	494,684	110,036	16,986	955
1937	2,339,410	589,071	165,533	21,602	548
1938	1,928,832	660,155	293,017	37,437	570

[fol. 4643] ADVERTISING COSTS

Year	Advertisements £	Exhibitions £	Total £
1933	4,887	523	5,410
1934	5,552	965	6,517
1935	7,236	461	7,697
1936	7,871	309	8,180
1937	7,888	577	8,465
1938	8,142	386	8,528

6. For the purpose of shewing the manner in which the Applicant Company has used the Trade Mark "Timken" in the course of its trade in the goods in respect of which

these Applications are made there are now produced and shewn to me marked respectively "M.B.U.D.1", "M.B.U.D.2", "M.B.U.D.3" and "M.B.U.D.4" examples of the bearings and the cartons in which the same are marketed each bearing the Trade Mark "Timken" and there is now produced and shewn to me a bundle of advertising literature marked "M.B.U.D.5" issued by the Applicant Company at about the dates respectively marked thereon.

7. As stated in paragraph 4 of this Declaration to the best of my belief, the Trade Mark "Timken" alone has been used in this Country exclusively by the Applicant Company throughout the whole of the period of its existence except as hereinafter mentioned. Throughout that time, however, business arrangements have existed between the Applicant Company and the American and French Associated Companies under which the American and French manufacturers of vehicles and other machines have imported into this country completed vehicles and other machines which have contained as component parts thereof bearings made by the American or the French Associated Company as the case may be and purchased by the said [fol. 4644] manufacturers from the American or the French Associated Company as the case may be. Bearings manufactured by the American and the French Associated Companies have also been imported into this country to serve as replacement parts for the said imported vehicles and machines. The bearings imported from the U.S.A. and France under the said business arrangements have always been marked with the words "Timken made in U.S.A." or "Timken made in France" respectively as the case may be except that I have ascertained that in the case of bearings made in France and incorporated in vehicles and machines these are not in all cases marked with the words "made in France". I have however given instructions to the French Associated Company that all bearings made by that Company shall without exception be marked "Timken made in France".

8. Wherever there are associated Companies in different territories manufacturing components under the same name and supplying them to manufacturers of machines within their own territories it is not practicable to prevent the importation of completed machines containing those components or similar parts for replacement purposes from

the territory of one associated Company into the territories of the others as mentioned in the last preceding paragraph of this Declaration, or to furnish particulars as to numbers of machines or bearings imported but in the case of bearings manufactured by the American and the French Associated Companies the number of bearings must be very inconsiderable relatively to the numbers manufactured by the Applicant Company. The practice is well understood by dealers in and users of the machines in question and no confusion arises therefrom. Such dealers and users know that the said components are incorporated in or imported for the foreign machines for which they have been supplied [fol. 4645] and are distinguished by the indication of the country of origin with which such components are marked and I am satisfied from my own experience that evidence can be obtained from traders all over the country including such persons as know of the imported components mentioned in paragraph 7 hereof that to them the Trade Mark "Timken" denotes exclusively the goods of the Applicant Company unless followed by the words "made in U.S.A." or "Made in France". It is the intention of the Applicant Company if and when it obtains registration of its said Trade Mark to seek to take advantage of the provisions of Section 28 of the Trade Marks Act 1938 and to apply to register the American and French Associated Companies as registered users of the said mark in respect of goods imported into this country as component parts of complete machines or as replacement parts for such machines. These Applications are therefore made with the active support of the said associated Companies with a view to protecting the interests of all the said Companies in the said Trade Mark and for the purpose of establishing the position clearly for the benefit of all traders in this country.

AND I make this solemn declaration conscientiously believing the same to be true and by virtue of the provisions of the Statutory Declarations Act 1835.

Declared at 8 Whittington Avenue, in the City of London, this 9th day of January, 1939. (Sgd) M. B. U. Dewar. Before me, W. F. Murly, A Commissioner for oaths.

(Here follow 2 photolithographs, side folios 4646, 4647)

CLASS 12. (Schedule IV.)

TIMKEN

Advertised before acceptance. Section 18 (1) (proviso).

600,254. Axle boxes and axle bearings for vehicles. BRITISH TIMKEN LIMITED, 85, Cheston Road, Aston, Birmingham, 7. Manufacturers.—9th August, 1938. To be Associated with No. 600,251 (3179) vi and here.

TAYWEL

603,729. Gear for use in launching ships' boats from ships. SAMUEL TAYLOR AND SONS (BRIERLEY HILL) LIMITED, Brettell Lane, Brierley Hill, Staffordshire; Manufacturers.—11th January, 1939. To be Associated with No. 518,607 (2759) xxi.

CLASS 16. (Schedule IV.)

Registration of this Trade Mark shall give no right to the exclusive use of the words "Viney's keep good time".

600,025. Paper and paper articles (except paper hangings), cardboard and cardboard articles not included in other Classes, printed matter, newspapers and periodicals, books, stationery, and playing cards. H. VINEY & COMPANY LIMITED, Strand Road, Preston. Engineers and Forwarding Agents.—28th July, 1938.

KODAPHANE

601,383. Adhesive-coated cellulose ester sheet material prepared as an article of stationery. KODAK LIMITED, Kodak House, Kingsway, London, W.C.2; Manufacturers.—30th September, 1938. To be Associated with No. 541,650 (2884) xxxix and others.

KAR-VIS

603,138. Adhesives (stationery) and transparent cellulose paper. HENRY JOHNSTON, 80, Coulstonholm Road, Pollokshaws, Glasgow. Merchant.—14th December, 1938.

"ICYMON"

603,884. Conical or cylindrical paper containers for ice cream. MONO CONTAINERS LTD., Mono Works, Cumberland Avenue, Park Royal, London, N.W.10. Manufacturers of Paper Containers.—18th January, 1939.

4646

Class 5. (Schedule IV.)—*continued.*

SANISORB

963,841. Toilet paper, paper handkerchiefs, paper towels and paper covers for lavatory seats, all being medicated, and sanitary towels. ST. ANDREW MILLS LIMITED, 34, St. Andrew Road, Walthamstow, London, E.17. Manufacturers.—17th January, 1939.

964,176. Medicated preparations for human use in the treatment of indigestion and similar ailments. JESTS LIMITED, 250, Argyll Avenue, Trading Estate, Slough, Buckinghamshire. Packers and Distributors of Medicinal Products.—27th January, 1939.

Registration of this Trade Mark shall give no right to the exclusive use of the letters "M.V."

964,862. Medicated wines. MED-VET SUPPLIES LIMITED, 45a, South End, Croydon, Surrey. Manufacturers and Merchants.—17th January, 1939.

ASPODEX

964,269. Pharmaceutical preparations. W. J. BUSH & COMPANY, LIMITED, 28, Ash Grove, Hackney, London, E.8. Chemical Manufacturers.—30th January, 1939.

KERITOX

964,278. Preparations for destroying vermin. MILES & COOPER (CHEMICALS), LIMITED, 44, Longbridge Road, Barking, Essex. Manufacturers.—1st February, 1939.

CLASS 6. (Schedule IV.)

TIMKEN

Advertised before acceptance. Section 18 (1) (proviso).

960,251. Balls for anti-friction bearings. BRITISH TIMKEN LIMITED, 65, Cheston Road, Aston, Birmingham, 7. Manufacturers.—9th August, 1938. To be Associated with No. 960,252 (B1790) viii and others.

[fol. 4648] PLAINTIFF'S EXHIBIT No. 181

March 28th, 1939.

Mr. Joseph J. Gravely, Carr & Carr & Gravely, 705 Olive Street, St. Louis, Mo.

DEAR JOE:—

With reference to your letter of March 24th to Mr. Turner, I checked the new Business Agreement. There is, as you say, no change from the old agreements with regard to the clause about assignation of registrations.

In any event, we are agreed with Mr. Dewar that British Timken, after they have been assigned their trademarks, shall aid us in qualifying as sole registered user. This would give us a strong position even if British Timken were unable legally to assign us the trademarks as provided in the agreement. They would still be forced to cease use of the name "Timken" which would leave us the only one able to use it.

Sincerely yours, W. Robert Timken.

April 8th, 1939

Mr. A. I. M. Duncan, c/o Stibbards, Gibson & Co. 21, Leadenhall Street, London, E.C.3.

DEAR MR. DUNCAN:

In reply to your letter of March 24th about the course of British trade mark registration, we had simply wished to be sure that everything was going along as agreed upon. It is quite necessary that the closest co-operation between ourselves and British Timken on these matters be maintained. As you are aware, Carr, Carr, & Gravely have been advising us on this type of legal matters for a number of years.

Their English correspondent, Skerrett, who has often been retained by British Timken in an advisory capacity,

wrote Mr. Gravely with some surprise that they had no knowledge of the applications for the British Timken Trade-mark registrations. We have no desire to attempt to choose the best counsel for this job at such a distance, but merely wished to be sure that every possible precaution was being taken to ensure the success of these applications and the subsequent registration of Timken Roller Bearing Company as sole registered licensee.

Please keep us fully informed of the future course of the applications and we will greatly appreciate it.

Sincerely yours, W. Robert Timken

c.c. to Gravely.

ENC: 2nd November, 1939.

DEAR MR. TIMKEN:

Timken Trade Mark

I enclose confirmation of cable sent to you to-day. This results from the following course of action:

As I believe I have already advised you, the Registrar of Trade Marks has required us to furnish evidence from eleven districts of the United Kingdom as to the understanding in the Trade with respect to the Trade Mark "Timken" and in addition has required us to furnish a declaration by a responsible official of a commercial organization. The proper organization in this connection is the Society of Motor Manufacturers and Traders, Ltd. and their procedure is to circularise their members before supplying a declaration; when the time for replies to the circular has expired, the matter together with any replies received is brought before the Management Committee who, if it approves, gives authority to the proper Manager to make the declaration. Automotive Products, Ltd. is apparently a member of the Society, and having received the circular, it conceived it to be its duty as representing Timken Detroit Axle Company to communicate with that Company before communicating its decision to the Society. At the same [fol. 4651] time, A.P. Co. Ltd. suggested a meeting, and we had this meeting yesterday.

The whole affair was, as you might expect, entirely friendly, both sides being anxious to meet any reasonable wishes on the part of the other party. As a result of this meeting, I sent you the cable.

Mr. Dewar and Mr. Pascoe, who were present at the meeting, stated that they did not require any protection for the Trade Mark in connection with axle boxes otherwise than for railway and tramway vehicles, and with respect to axle bearings this, I think, can be omitted from the description of goods to which the Trade Mark is to apply in connection with axles bearings being covered under No. 600,254.

I hope that I may receive a reply from you within the next day or two because I wish to get this matter settled and the declaration of the Exhibition Manager of the S.M.M.T. lodged with the other declarations with the Registrar. The time for lodging these expires on 20th inst., but no doubt, if necessary, we shall be able to get a further postponement.

Yours faithfully, A. J. M. Duncan.

British Trade-Mark Applications.

The Timken Roller Bearing Co., Canton, Ohio.

Attention: Mr. G. H. Turner

GENTLEMEN:

We regret to note from your letter of November 3, 1939 that Automotive Products Company, British representative of Timken-Detroit Axle has raised certain questions with respect to your pending British applications for registration of the trade-mark "Timken".

In view of the long concurrent user of the mark "Timken" by yourself and Timken-Detroit Axle in this country and by British Timken and Automotive Products in England, it seems to us that you must necessarily recognize that the other people have built up certain rights. Your problem, of course, is to retain your position as the prior and dominating owner of the "Timken" mark.

We see no objection to the suggested change in the description of the goods in application No. 600,254, except that we assume that bearings are to be included in the description and not eliminated as they would be if the cable be taken literally.

[fol. 4654] We see no serious objection to British Timken agreeing not to proceed against Automotive Products in respect of replacement bearings sold by Automotive Products, but used by its customer for other than replacement purposes, always provided that only bearings made by you or British Timken are sold as "Timken bearings". As a practical proposition, we would assume that the situation there would be similar to that in this country, where you have not felt free to proceed against your customers even though they re-sell your bearings or use them in a way not contemplated in the original sale. Automotive Products (and Timken-Detroit) should, of course, undertake in good faith to sell bearings only on a strictly replacement basis and to use reasonable efforts to see that their cus-

tomers do not make an improper use of the bearings. Likewise, they should undertake, as above suggested, to sell as Timken bearings only those bearings which are made by you or British Timken. We are sure that Automotive Products and Timken-Detroit Axle would be willing to agree that a reasonable understanding as to your not objecting to an occasional improper use of replacement bearings sold by them should not be made the excuse for any widespread sale of bearings in competition with British Timken.

[fol. 4655] Our first impression would be that there is no need to make Timken-Detroit (or Automotive Products) a registered user—in fact, that as the applications now stand, it would be hardly possible to make either of them a registered user. It seems to us that the present applications proceed upon the theory that British Timken will register the mark for bearings and railway journal boxes, that is to say, that it will register the mark only for its actual goods. With the cooperation of British Timken, Timken-Detroit Axle (or Automotive Products) would presumably be able to register "Timken" for automobile axles and other products upon the theory that the goods are different from roller bearings, just as both you and Timken-Detroit Axle have your separate registrations in this country.

On the other hand, your British solicitors may feel that the presence of your bearings in axles made by Timken-Detroit Axle, makes it advisable to make Timken-Detroit Axle a registered user in respect of your bearings so incorporated in axles. If so, we believe that you will have to follow the advice of your British solicitor in the matter. The Statute is so new and its working will depend so much upon the peculiarities of British law and practice, that you are necessarily dependent upon British counsel. We [fol. 4656] assume, of course, that you have your own British counsel in the matter who is not also trying to act as counsel for Timken-Detroit Axle.

The Duncan cable infers that Automotive Products understands the situation and has a reasonable attitude in the matter. Accordingly, we are disposed to agree that it would be well to try to induce Timken-Detroit Axle to give Automotive Products a free hand to dispose of the matter, as Mr. Duncan's cable suggests.

As to the method of approach to Timken-Detroit, you know all of the personal and other factors involved and are in the best position to reach a decision. If we understand the situation, it seems to us that the proper procedure is for Henry Timken, Jr. to see Willard Rockwell personally and try to obtain his cooperation. It seems to us that he need only reassure Mr. Rockwell that in Great Britain, as in this country, you will not interfere at all with the proper use by Timken-Detroit Axle of the mark "Timken" on its own line of goods. In case of absolute necessity, he could further point out that failure of you and Timken-Detroit to cooperate in establishing the mark "Timken" in Great Britain for both of you might conceivably result only in the mark losing its trade-mark status entirely. [fol. 4657] Unless necessary, however, we see no point to suggesting such possibilities. On the contrary, it seems to us that you should proceed as far as possible upon the theory that you are admittedly the originator and dominant owner of the "Timken" mark, that you are willing to agree to proper use of the mark by Timken-Detroit and that you expect, in return, proper cooperation from Timken-Detroit in respecting your dominant position.

Yours truly, Carr & Carr & Gravely; By Jos. J. Gravely.

Nov. 4th, 1939.

Mr. Walter Rockwell, c/o Timken-Detroit Axle Co., Detroit, Mich.

DEAR WALTER:

You will recall that I wrote you last spring about the British Timken trade mark applications. At that time you were willing to go along. Now, as shown by the enclosed cable, your British agents are in doubt whether they will support one of the applications.

I can readily understand that they might have some hesitance about application 54 because of the broadness of its definition of axle boxes. The cable will show what British Timken suggest.

We have sent this on to Carr, Carr and Gravely for advice in the matter and will get in touch with you when we hear from them. Meanwhile, please have your patent and trademark council go over this and see what you think about it. You will realize, of course, that we want you to be fully protected.

Sincerely yours, W. Robert Timken.

WRT/IL

[fol. 4659] PLAINTIFF'S EXHIBIT 187

November 10th, 1939.

Mr. A. I. Hawkins, Treasurer,
The Timken-Detroit Axle Company,
100-400 Clark Avenue,
Detroit, Mich.

Dear Mr. Hawkins:

Your letter of November 8th received. Thanks for your promptness in taking up this matter. British Timken apparently want to push this matter through as soon as possible.

I talked to Willard Rockwell briefly about this, explaining that we felt there were two alternative methods of settling it. First, the method suggested by Mr. Duncan of putting through the present registrations and then licensing Automotive Products without cost. Second, changing the registration to confine it to axle boxes and bearings for railway vehicles. You could then apply for your own trademarks on other types of axles. I believe either method would be suitable although I have not had time to consult British Timken on the second.

We are having British Timken take out the registrations and then license us as sole registered user. This protects us in case of any disagreement. Duncan is our representative on the Board of British Timken.

The main thing we want to avoid is a contest which might result in refusal of the registration and throw the name open to all comers. This would only hurt everyone concerned. As I said before, we want to protect you as fully as possible. So, if you will let us know your feeling in the

matter, we will pass it on to Duncan and find out what the best solution is.

Sincerely yours, W. Robert Timken.

Dear Mr. Timken:

This is regarding your letter of November 17 on British Timken trade mark proce-ding.

We have now received advice from our attorneys and have noted the copies of the letters indicating that British Timken and the Automotive Products Company have agreed on procedure. Their proposal is acceptable to us.

To expedite this matter we suggest that the following cable go out from us to the Automotive Products Company.

"Suggest you agree to British Timken registration No. 600,254 limited to axle boxes for rail vehicles"

If you agree please advise. If not, suggest revision of proposed cable.

Yours very truly, A. I. Hawkins, Treasurer.

WD/NH.

28th January, 1927.

M. B. U. Dewar Esq., 4, Central Buildings, Westminster, London, S.W.1.

DEAR MR. DEWAR:

Timken Costs

As requested, I have had prepared certain information in regard to the specifications and costs of four of the most popular Bearings which we manufacture, and have pleasure in enclosing same herewith on sheets numbered 1 to 13 as set out below:

Sheet No.	1.	Various explanatory notes.
Sheet No.	2.	Particulars of Factory General Charges and Over-head Charges.
Sheet No.	¾.	Material specification numbers, Year's output, Operations and Costs, of Bearing ..... No. 247/248
Sheet No.	5/6.	do. do. No. 319/313
Sheet No.	7/8.	do. do. No. 26118/26283
Sheet No.	9/10.	do. do. No. 6552/6521
Sheet No.	11/13.	Material specifications.

I understand that it is your intention to forward these particulars to Canton and to ask them to supply us with [fol. 4669] corresponding information of their manufactures. In doing this, will you kindly request them to be good enough to give their particulars *item for item as set out on our sheets* as far as possible, in order that nothing be overlooked.

You will observe that on Sheet 2 I have given a fair amount of details of the Charges—both Factory and Over-heads—which I presume you will wish to send.

Yours sincerely, (signed) Wm. C. Dallow.

[fol. 4670] Copy

DEFENDANT'S EXHIBIT 3

March 30, 1927.

Mr. M. B. U. Dewar, 4, Central Buildings, Westminster, London, S.W.1, England.

DEAR SIR:

We enclose a report showing the major differences between your costs and ours, on three of the bearings for which you submitted data. The fourth bearing we do not make. I would like to make a few general comments.

Nearly half the difference between your cost and ours can be accounted for by the difference in cost of cages and rolls. Should it not be practicable for you to use headers and multiple press dies, it might be possible for us to make you a considerable saving by furnishing you cages and rolls. We will be glad to make definite quotations if you will advise us what sizes and quantities you would be interested in.

Your scrap losses on cones are about three-fourths of our percentage. On cups your scrap was less than half of ours. The same is true of cages. On rolls your scrap losses are more than ours. Your costs for raw material would appear to be slightly higher than market prices for the same material in this country.

As stated in our cable to you, we believe that it is entirely possible for your costs to be reduced 25% or more.

Yours truly, The Timken Roller Bearing Co., ——
——, Secretary & Treasurer.

J. F Strough.BES

*Tubing at market.

[fol. 4672] Copy

319 Cone

Your make operation on four spindle Acme requires 325 minutes for 100 pieces; we require 115 minutes. The great difference in production is probably accounted for by the use of bar stock by you, and tubing stock by us.

For face and radius you require 100 minutes; we require 6 minutes. The great difference between your method of facing and radiusing cones is probably accounted for by your making the cone on screw machine with small end out. In this Plant we make the cone with large end out, and form the radium on machine. We chamfer the small end of our cones on four spindle machines at a speed of about 11000 pieces per hour, per operator.

Your internal grinding time is 550 minutes; our time is 49 minutes. The difference is undoubtedly due to the fact that you are using Churchhill grinders where the work must be plug-ed accurately before being removed from chuck. At this Plant we are using the Heald Sizematic grinder, which grindes to a definite size and automatically removes wheel from work, allowing ground piece to be removed from chuck without plugging.

Your time for grinding race is 200 minutes; our time is 39 minutes. We cannot account for the great difference in time on this operation; as we understand you use a machine for this operation which is similar to the one used

in this Plant. The difference must be in the speed and skill of the operators.

Your time for grinding recess is 90 minutes; ours is 26 minutes. This difference in production must also be due to skill of operators, as it is our understanding that your recess grinding machines are similar to the ones used here.

313 Cup

Your time for make operation is 450 minutes; ours is 194 minutes. We cannot account for the great difference in production on this cup, as you must use the same type of Gridley as used by us.

Your time for chamfer is 75 minutes; ours is 6 minutes. This difference is probably due to the fact that we use a four spindle machine for this operation, and you use either lathe or single spindle drill press for chamfering cups.

Your time for grinding top and bottom is 50 minutes; ours is 15 minutes. Where you grind both front and back face of cup, we have been grinding only the back face and are using a grinder of our own design.

Your time for internal grinding is 400 minutes; ours 75 minutes. The difference in production is accounted for by the use of Heald Sizematic machines for this operation. These machines, as in grinding bores of cones, grind I. D. of cup to definite size and wheel is withdrawn from work automatically.

[fol. 4673] Your time for external grinding is 225 minutes; our is 16 minutes. For this grinding operation we are using two types of machines: 1st—Norton Plunge Cut with 9½" wheel; 2nd—Cincinnati Centerless where work is pushed through grinding operation in continuous cycle. We have not definitely decided which is the better machine, but indications point toward the final adoption of the Cincinnati machine.

311-V Cage

We cannot understand the difference in weight of material per hundred cages. You show a weight of 41½ pounds, whereas our weight for 100 cages is 28.79 pounds. It would seem that the same amount of material would be required for cages made by you and by us, except that we notice you use strip steel 4¼" wide, where we use strip steel 3⅝" wide for this cage.

We notice that in the manufacture of this cage you re-

quire nine operations. In this Plant we require but three operations, consisting (1) Flange punch and size; (2) Multiple perforate; (3) Multiple wing and spread. It is of course obvious that we make a considerable saving in operating time and costs. Our total time for the three operations is 12.4 minutes, against your total time for nine operations of 390 minutes.

302 Roll

You use 3.5 pounds of material per 100 rolls, as against 2.14 pounds per 100 rolls which we require for our cold headed roll. This difference is accounted for by amount of scrap which is necessary for you to make in machining roll and the very small amount of scrap which is made in production of headed rolls. There is an enormous difference in production of rolls between the two machines. Where you require 54 minutes to produce 100 rolls, we require only 1.7 minutes.

You show 40 minutes for grinding race. We show 13 minutes for surface grind; 2.4 minutes for end grind. In addition to the grinding, we show 2 minutes for taper gauge, and 1.7 minutes for size gauge. You show no operations such as end grinding, taper, or size gauging.

26118 Cone

On the make operation we show 83 minutes as against your 500 minutes. This difference is probably accounted for to some extent by your use of bar stock. The use of tubing speeds this operation up considerably. On the face and radius operations you show a total time of 75 minutes; we show 6 minutes. This difference is undoubtedly due to the fact that we are using multiple spindle machines for chamfering operation, and are making the radius on cone on original screw machine operation. (For further explanation see reference in #319 cone).

On internal grinding operation you have a total of 550 minutes; we have a total of 47 minutes. (See explanation under 319 cone).

Grinding race you have 150 minutes; we have 43 minutes. (See explanation under 319 cone).

[fol. 4674] Grinding recess you show 90 minutes; we show 28 minutes. (For explanation see 319 cone).

26283 Cup

Your make operation for this cup requires 500 minutes, as against 82 minutes for us. You use a single spindle Gridley Automatic for this operation, and we use either four spindle Cone Automatic or four spindle Acme Automatic.

For chamfer operation you show 50 minutes; we show 6 minutes. (For explanation refer to 312 cup).

For grinding top and bottom you show 50 minutes; we show 15 minutes. (For explanation refer to 312 cup).

For internal grinding you show 425 minutes; we show 67 minutes. (For explanation refer to 312 cup).

For grinding external surface you show 200 minutes; we show 14 minutes. (For explanation refer to 312 cup).

26008 Cage

You require 37 pounds of material for 100 cages, and we require 24.62 pounds. We use .070 gauge and you use .080 gauge. You use 4" strip, where we use 3.375" strip. We make this cage in three operations, as described under 311 cage, in a total time of 12.4 minutes, against your total time of 445 minutes.

2008 Roll

Your material per hundred rolls was 2½ pounds; ours was 1.39 pounds. (See previous explanation.) Your time for making is 50 minutes, plus 4 minutes to clip ends. Our total time is 1.7 minutes.

For grinding race you show 40 minutes; we show 10 minutes.

For grinding ends we show 2.5 minutes; taper gauge 1.8 minutes; size gauge 1.6 minutes.

6552 Cone

Where you make this cone from forging, we use tubing and the cost to make is about the same in both cases.

Your time for grinding top and bottom is 75 minutes. Our time for grinding back face is 32 minutes.

Your time for grinding internal is 2500 minutes, against our time of 209 minutes. For explanation see 319 cone.

[fol. 4675] Your time for grinding race is 625 minutes; our time, 149 minutes. See 319 cone.

Your time for grinding recess is 350 minutes; our time 77 minutes. See 319 cone.

6521 Cup

Your cost up to the point of heat treating is not materially different from ours. You show 100 minutes for grinding top and bottom; we show 32 minutes for grinding back face only.

For internal grinding you show 1600 minutes; we show 200 minutes. For explanation see 312 cup.

For external grinding you show 750 minutes; we show 162 minutes. For explanation see 312 cup.

6511-V Cage

You show a total of 418 pounds per 100 cages. We show 265.08 pounds. You use a strip 9⅜" wide and .156 gauge; we use a strip 8.312" wide, .125 gauge.

Your total time shows 1994 minutes; we show 90 minutes. On this size cage it is necessary for us to add one more operation than used on lighter cages, such as 311. This operation we call "spreading", and it requires about 5 minutes per 100 cages out of the total of 90 minutes.

6003 Roll

You show a total of 24.5 pounds material; we show 16.36 pounds. This difference is caused by the amount of scrap which you must lose in machining rolls.

To make 100 rolls you require 154 minutes; we require 3 minutes.

To grind race you require 100 minutes; we require 29 minutes for surface grind and 7 minutes for end grind.

You have an operation which you call "flash" which is done on external grinders and requires 30 minutes per 100 rolls. We do not understand this operation.

We require 2.5 minutes for taper gauge, and 2.5 minutes for size gauge. You do not show these operations.

10th March, 1927.

Mr. Mark Lowthrop, Timken Roller Bearing Co., Canton, U. S. A.

Dear Mr. Lowthrop,

Last week I was elected Chairman of the British Timken Company and I have been examining the position very closely.

I have already sent you some papers dealing with the information which we should like to have. I am most anxious to achieve in some way which is possible over here a reduction in the cost of production of Timken Bearings to compete directly with ball bearings and you kindly promised all your help towards that end.

When I was in Berlin last I took the opportunity of discussing with Krupp the question of them taking up the manufacture of Timken bearings at Essen. Unfortunately they do not want to do so as they are such very large suppliers of steel for anti-friction bearings that they think it would not be well to go into the business themselves. I have consequently resumed negotiations with Herr von Gontard, Chairman of what used to be the D. W. F., and I hope that he will be coming over to London to see me in [fol. 4677] the near future.

As I mentioned to you when I was at Canton I know that the difficulty will arise on the question of Royalty. There is already in Germany a firm who are manufacturing and selling not only in Germany but in Norway and Sweden a bearing, of which I will send you a sample, which is an exact copy of the Timken Bearing, on which of course this manufacturer pays no licence fee of any sort.

I believe that the largest total licence fee which we shall be able to obtain either from Germany or from France or Italy will be 4 per cent, and I would suggest to you that this fee should be divided equally between us. I hope to arrange with von Gontard that we shall continue to manufacture for Germany certain of the bearings which are not required in very large quantities, and also the special

bearings of larger sizes. On these of course you would get the full royalty.

I should be glad if you would let me know in principle whether you would be prepared to accept an arrangement on these lines, as on any other lines it is really not worth our while to make arrangements because we should undoubtedly spend in time and trouble in getting the Germans going a greater sum than we should ever be likely to make in Royalties. At the same time, I think it is essential to start manufacture in Germany as the motor industry, [fol. 4678] owing to the war, is more behind than in any other manufacturing country, but this is bound to right itself shortly and we ought to get in now or not at all. Further, the spirit of Germany will within a short time insist on manufacturing in their country rather than importing from outside. Incidentally the financial position of Germany will aid strongly in this direction.

I am looking forward with great interest to seeing the figures which you will, I hope, send to me, to see where it is that we do not get the best results in cost of production.

I do not know whether you are likely to be in Europe this year, but if you are I should very much like to discuss with you the question of the Timken name in Europe, which is very complicated, and about which I should like to take some action.

There is further the question of the continuation of our existing agreement.

I have also been thinking of making an offer to Vickers for the Timken business as it is so much outside their own lines now that they have so little association with the motor car trade. I fancy that the total capital that would be required to take it over would be about £300,000. I do not know whether your company would care to be interested if I were to make such an offer, either permanently or on [fol. 4679] the basis of the money loaned being repaid out of profits.

With kindest regards to you and your wife, to Mr. Timken and Mr. Straugh.

Yours very sincerely, (signed) M. B. U. Dewar.

Canton Mar 29, 1927.

M. B. U. Dewar, 4 Central Buildings, Westminster S. W. 1, London

Replying your letters and cable we are willing to give consideration to ten-year term of license and reduction in foreign royalty. We also have written you today fully about manufacturing costs. We feel your costs can with our cooperation be reduced twenty-five percent or more. We would be more interested however in joining with you in purchasing company from Vickers and making the necessary investment. Do you plan to give your full time to British Timken. Can you inform us what net earnings have been also total assets and liabilities. If we can come to substantial agreement on major matters could you come here at this time our expense to close deal in case we could not send representative to England?

April 4, 1927.

Mr. M. B. U. Dewar, 4, Central Buildings, Westminster, London, S.W.1, England.

DEAR MR. DEWAR:

After notifying you that Mr. Heman Ely is sailing on Friday, the 8th, on the Steamer "Homeric," it occurred to us that you had never met Mr. Ely, although your associates at British Timken will undoubtedly remember him from his previous visit.

Mr. Ely was formerly Vice President & Treasurer of this Company for a great many years, and of course carries with him the proper credentials to represent and act for us in the pending neg-tiations with you and with British Timken.

Mr. Ely is naturally a close personal friend of the writer and of Mr. Lothrop, and we feel sure that you will enjoy your contact with him. (We have assured him that he will enjoy meeting you.)

We hope that Mr. Ely may conclude satisfactory arrangements with yourself and British Timken, and that the new arrangements will be pleasant and profitable to all concerned.

Mr. Lothrop left yesterday on a business trip but asked to be particularly remembered to you, and with my own personal regards, I beg to remain.

Yours truly, —— ——, Secretary & Treasurer.

J F Strough. BES

11th April, 1927.

DEAR MR. DEWAR:

There are one or two points which I think we might possibly be making some progress with before the representative of the American Company arrives here. I refer to the following:

1. Do you propose to form a new Company or do you propose to work with the existing Company?
2. Will there be any change in the name of the Company?
3. Do you propose a public Company or a private Company?
4. Some alterations in the existing Articles of Association or new A.A. will be needed; which do you propose?
5. What do you propose for the share capital of the new Company?
6. Will all the shares be of one class? If not what will be the preferential rights?
7. *Transfers.* Do you propose to have a simple clause that no transfer can be registered without the consent of the Directors?
8. You have already mentioned to me what you propose in the case of one of the parties wishing to sell his shares as to the other party having the refusal of them at a price to be fixed.

[fol. 4691] 9. What do you suggest as the number of Directors?

10. I presume that you will wish to leave over the final selection of the first Directors until the American Company's representative arrives.

11. Have you any suggestion to make as yet with respect to Directors' remuneration?

12. The same with respect to Directors' qualification.

13. The appointment of Directors will require consideration so as to secure adequate representation for the American Company. Have you any ideas on this subject?

14. There is also the question of retation, retirement and removal.

Yours faithfully, (S.) A. J. M. Duncan.

13th April, 1927.

DEAR SIRS:

Mr. Dewar has called here to-day, and we went over with him the points in our letter dated the 11th inst. The following are the notes we made as to his replies:

1. Will work with existing Company.
2. No change.
3. Private Company.
4. No preference.
5. 200,000.
6. All one class.
7. No transfer without consent.
8. Each party to have refusal of the shares of the other party.
9. Five Directors.
10. Will be settled with Mr. Ely.
11. Same.
12. Same.
13. Same.
14. Depends on 13.

Yours faithfully, The Timken Roller Bearing Company.

[fol. 4693] DEFENDANT'S EXHIBIT 15

British Timken Limited

("the Company")

Heads of Agreement

The Timken Roller Bearing Company of Canton Ohio United States of America ("the American Company") and Michael Bruce Urquhart Dewar of Number 4 Central Buildings Westminster ("Mr. Dewar") are proposing to purchase the whole of the issued Share Capital (Fifty-thousand Shares of One Pound each fully paid) of the Company and in connection therewith have agreed to the following terms and conditions:

1. The purchase price for the said Shares One hundred thousand pounds shall be provided Fifty two thousand five hundred pounds by the American Company and Forty seven thousand five hundred pounds by Mr. Dewar and upon the purchase being completed twenty six thousand two hundred and fifty Shares shall belong and be transferred to the former or its nominees and twenty three thousand seven hundred and fifty Shares to the latter or his nominees.

2. The Capital of the Company shall be divided into twenty five thousand issued and twenty five thousand unissued A. Shares and twenty five thousand issued and twenty five thousand unissued B. Shares all ranking pari passu in all respects except as hereinafter mentioned and of the said issued Shares eleven thousand five hundred A. and fourteen thousand seven hundred and fifty B. Shares shall represent the above twenty six thousand two hundred and fifty Shares which will belong to the American Company and its nominees and thirteen thousand five hundred [fol. 4694] A. and ten thousand two hundred and fifty B. Shares shall represent the above twenty three thousand seven hundred and fifty Shares which will belong to Mr. Dewar and his nominees.

3. No alteration shall be made in the share capital of the Company or the rights and interests attaching to the respective classes of shares and no further shares in the Company shall be issued and no loan capital by way of Debentures or otherwise (excluding temporary Bank loans in the ordinary course of business) shall be taken up with-

out the consent in writing of the holders of a majority of the shares of each class for the time being issued. If any further share capital is issued it will be issued in A. and B. Shares to the American Company or its nominees and to Mr. Dewar or his nominees in the same proportions as those respectively specified in the last preceding clause.

4. (a) A shareholder in the Company shall be entitled to transfer any of his shares with the consent in writing of the holders of a majority of the other shares in the Company but otherwise a shareholder shall not be entitled to transfer any share except by a transfer on sale and a shareholder in the Company shall not be entitled to sell any of his shares at any price unless he shall have previously offered them at the same or a less price to the other shareholders in the Company by registered letter and such offer shall not have been accepted in writing within sixty days after the letter containing the offer is posted. Any offer shall state the number of shares offered and [fol. 4695] the price and the offer can be accepted as to all or any of the shares offered. If the offer is accepted to the extent of more shares than are offered the shares offered shall be apportioned amongst the acceptors pro rata according to the number of shares in the Company held by the acceptors but so that the number apportioned to any acceptor shall not exceed the number for which he has accepted the offer. Any shareholder who has made an offer of shares shall be entitled at any time within one month after the result of the offer is communicated to him to sell and transfer any of the shares included in the offer which are not purchased under the offer but subject to the Directors' right to refuse to register the transfer. All offers and acceptances shall be made and given through the Directors of the Company who shall make the apportionment and communicate the offer and the result forthwith to the other shareholders or to the offering shareholder as the case may require.

(b) Each of them the Company and Mr. Dewar agrees that he will not unreasonably stand in the way of the other of them selling or transferring shares during the period of one month hereinbefore mentioned and unless he shall have a reasonable objection to the proposed purchaser or transferee will give any consent and exercise any voting powers in order that the party desiring to sell or transfer may effect such sale or transfer.

5. The Directors of the Company shall have an absolute right to refuse to register any transfer to a non-member without giving any reason except in the case of a transfer with consent as hereinbefore provided.

6. The control of the Company's affairs shall be regulated in the manner and to the extent following:

[fol. 4696] . (a) Control shall belong to the holders of the A. shares until the first Annual General Meeting of the Company at which the accounts of the Company for the financial year submitted at such Meeting shew a net profit before charging income tax or any other tax on profits which shall not amount to Fifteen thousand pounds and at which a dividend of less than twenty five per cent gross shall be declared. If the issued share capital of the Company is increased beyond the present issued share capital of Fifty thousand pounds otherwise than by way of a capitalization of profits the said sum of Fifteen thousand pounds shall be increased by a sum equal to Fifteen per cent upon the amounts received by the Company in respect of the shares issued beyond the present issued share capital including any monies received by way of premium.

(b) After the termination of control belonging to the holders of the A. Shares in manner aforesaid control shall belong to the holders of the B. Shares.

(c) Upon a poll at any meeting of the Company in the case of an ordinary resolution the holders of the class of shares to whom control belongs shall have two votes for each share of that class held and the holders of the other class of shares shall have one vote for every two shares of that class held and in the case of an extraordinary resolution or a resolution confirming an extraordinary resolution as a special resolution every shareholder shall have one vote for each share held by him. Any shareholder may demand a poll at a meeting.

(d) At a Board Meeting of the Directors of the Company if any Director so requires the voting shall be by classes and in such case the decision of the Directors representing [fol. 4697] the class of shareholders to whom control belongs or a majority of them shall have effect as the decision of the Board.

7. The number of Directors shall be not less than three nor more than five or such greater number as may be agreed in writing by the holders of three-fourths of the issued

shares of the Company for the time being. The holders of each class of shares or a majority of the shares of that class shall be entitled from time to time to appoint one or more Directors to represent that class and to cancel any such appointment and make another appointment. If the number of Directors is an even number the holders of each class of shares shall be entitled to appoint one-half of the Directors and if the number is uneven the class to whom control belongs shall be entitled to appoint one more Director than the other class. Upon a change of control if there is a majority of Directors representing the A. shareholders the holders of the B. Shares or a majority of such shares shall be entitled to cancel the appointment of one of the Directors appointed by the holders of the A. Shares.

8. A Director shall be disqualified by bankruptcy lunacy incapacity conviction of a criminal offence or resignation accepted by the Board.

9. Mr. Dewar shall be Managing Director while control belongs to the holders of the A. Shares and shall receive a salary of Three thousand pounds per annum or such larger sum as may be agreed by the American Company, and shall also be an A. Director during his life so long as he holds Twenty per cent of the issued share capital of the Company. He shall undertake the control and manage-
[fols. 4698-4699] ment of the Company's affairs as his principal occupation and shall devote so much time and attention to the Company's business as may be needed for efficient supervision and control.

10. An Agreement shall be entered into between the American Company and the Company extending for Ten years the terms of the existing Agreements between them subject to modifications and generally upon such terms and conditions to be mutually agreed including the following:

(a) Any practicable steps to be taken for the protection of the name Timken and securing the exclusive reversion of the name in all countries to the American Company at the termination of the Agreement.

(b) Arrangements to be made for the formation of Continental Companies for the manufacture and/or sale of bearings subject to a royalty to be divided equally between the American Company and the Company.

(c) The American Company to be at liberty from time to time to authorise any one or more of the four largest Motor Car producers in the United States of America at the time of such authorisation to import into the territory of the Company bearings manufactured by the producer holding such authority in the United States of America but only for incorporation in new cars or as spares in old cars manufactured or assembled by such producer or his subsidiaries in the territory of the Company.

10A. Upon the death of Mr. Dewar or if he shall become incapable for a period of six consecutive calendar months of performing the duties of a Director the Timken Company shall have an option to purchase the shares belonging to him as at the date of such death or the expiration of sick period and such option shall be exercisable by notice in writing given by the Timken Company to Mr. Dewar or his representatives within a period of three months after such death or after the expiration of sick period and the price payable for the said shares shall be in case of difference be settled by a reference to two London Chartered Accountants one to be appointed by each party or a referee to be appointed by the said Accountant and such reference shall for all purposes be deemed to be a reference to arbitration under the British Arbitration Act 1889.

11. These Heads of Agreement will be amplified and with any other terms and conditions which the occasion requires will be embodied in more formal documents so soon as practicable and if any question arises as to the documents required and the terms thereof the same shall be settled [fol. 4700] by a London Solicitor to be nominated in case of difference by the President of the Law Society and the parties hereto will take all necessary steps by voting and otherwise to make such documents effective.

Dated this Sixteenth day of May One thousand nine hundred and twenty-seven.

M. B. U. Dewar; Heman Ely, for The Timken Roller Bearing Company.

Witness: A. J. M. Duncan.

The Timken Roller Bearing Co.
Canton, Ohio, U.S.A.
Attention J. F. Strough
Gentlemen,

I have just received your night letter-cable dated yesterday, which is a bit confusing, as it appears to answer only my first cable to you, without referring to the second

cable, which you received shortly after 10 o'clock yesterday morning. However, it does not make much difference.

Vickers have assumed that we would renew their present contract, such being the case, they felt they had something to sell. I have, however, advised them through Mr. Dewar, their Chairman, that we would not consider a renewal without material changes in the contract.

Now Vickers appreciate that a contract with only 18 months to run has no great value, and it makes our trading position, as a prospective buyer in whole or part satisfactory.

I feel that there are three plans that should be given consideration.

1. Our complete control of British-Timken or its successor, without other stock holders, other than qualifying directors' shares, and this is the plan I would recommend if there was available in our organization on the proper person or persons, to spend a year to 2 years re-organizing plant, sales etc. capable of contacting properly in Germany, and starting there a small company, and making entirely new arrangements in France. The present arrangement is most unsatisfactory.

2. Our control with a working minority of British interest. This also requires time in making proper and suitable [fol. 4705] connections and would be probably the best plan, if Mr. Dewar, or a man of his type were available. To my straight question to Mr. Dewar on this set-up, he said "No" without qualification.

3. British control of new Company, only so long as British control operates Company with satisfactory profit and dividends. This is the plan I now recommend, and will cover in more detail.

In connection with the third plan its whole success depends upon the ability of the British control.

This brings us to Mr. Dewar—I have interviewed the London Manager of the National City Bank, and he speaks in the highest terms of Mr. Dewar, and as a man of very marked executive and managerial abilities. He has done many big things since the war.

Mr. Duncan has been getting information on Mr. D. and it parallels the above.

Sir William Letts, Managing Director of the Crossley

Company, I saw yesterday (I have known Sir William for several years). He does not personally know Mr. D. but knows of him and quite favourably. I interviewed after lunch to-day the Right Hon. Reginald McKenna, Chairman of the Midland Bank (Largest in England), and one of England's big men, and he says he can vouch fully for Mr. D's integrity, fairness and honesty, and he has been greatly impressed with his sales ability, not only in England, but in his contacts on the continent, in Russia and the Far East. He has also found him at all times most reasonable, and as Mr. McKenna said, is far from being the proverbial stubborn Briton. On all these points Mr. McKenna leaves nothing to be desired, but Mr. McKenna says frankly he has no knowledge of Mr. D's production ability.

Mr. D's first experience was as a carpet manufacturer, at which he was successful and made money, but did not like the business.

Mr. D's principal recent activity is as one of the three Managing Directors of the Metropolitan, Carriage, Wagon and Finance Company. This Company has works in Spain, Roumania, Belgium and Italy, and a close working arrangement with Krupps in Germany.

[fol. 4706] This Company is the largest producer of railway rolling stock outside of the United States, and has as customers, every railway in England, and their colonial possessions; as well as securing a majority of business on the continent, it also does large business in Japan and China, and has just taken away from American Companies recent South American orders, which American builders secured right after the war. The Metropolitan Company feel that they have regained this market.

Mr. D. is a member of Vickers Industrial Board, which is the operating Committee. Mr. D. is also Chairman of Vickers Committee on Sales throughout the world.

Vickers supply about 70% of all crank shafts and steel used by British motor car companies. I am enclosing a circular listing Vickers activities.

Mr. D. was a member of the Re-organization Committee of Vickers, which has been cleaning up that whole situation, disposing of losing companies and those foreign to their experience. They shrunk their capital two-thirds, and have

apparently done a real job—Vickers are now making money instead of losing millions, as was the case a short time ago.

Mr. D. is a trained engineer and technical graduate, and served his original apprenticeship in the forging business.

Mr. D. advises that he is just a hired man with Vickers, but from all I hear, an able one. He holds no stock in any of their companies. Has accumulated some means and wishes to invest a greater part of this in the new British-Timken Company.

Mr. D. feels that with his connections and business he actually controls, particularly on industrial work, that he can make handsome profits from an aggressive operation of British-Timken, and he is definitely counting on the further fact that costs can be reduced 20 to 25%, as Lothrop advised him.

Subject to your approval we have agreed on major points as follows:

That we will together treat with Vickers for Britsh-Timkens' shares, and it is agreed that we must buy them considerably under the figure first given.

[fol. 4707] That if satisfactory figure is agreed upon, some changes should be made in British-Timkens articles of incorporation to take care of the new deal.

That British-Timken must clear the Timken name in Germany. To do this they will probably have to buy off Prausnitzer.

The proposed capital authorized 200,000
Divided into 100,000 A. Stock
Divided into 100,000 B. Stock.

Both A. and B. Stock are equal as to dividends and in liquidation, and the cost of A. and B. shares shall be the same, but B. Stock is to control the Board and Manage the Company.

If 12½% is not earned and paid in dividends on both stocks for a period of one year, then A. Stock controls Board and Management.

Proposed Division of Stock:

A. Stock 100,000.

Timken takes and pays for 55% of amount issued
Dewar takes and pays for 45% of amount issued

B. Stock 100,000

Timken takes and pays for 45% of amount issued
Dewar takes and pays for 55% of amount issued

Of the total we each then have 50% and our investment would be equal.

So long as 12½% earnings are made and 12½% dividends are paid, B. Stock has three Directors and A. Stock two Directors, for publicity A. Directors should probably be Britons of Timken choosing and representing Timken.

The Company should be a private Company, then earnings are not published.

Neither party shall sell his shares without first offering the other party, at a price agreed to by public accountants appointed by each party, and they failing to agree, by a third accountant chosen by the other two.

[fol. 4708] Timken interest must be safeguarded by fair option on Mr. D's stock, in event of Mr. D's death or incapacity.

Mr. D. desires agreement that he remain a Director as long as he is a stockholder, and this seems fair.

Of course a new ten year license agreement must be drawn, covering complete interchange of ideas, methods, etc. etc. It must cover royalty, make mutually satisfactory arrangements as to the service business, arrange for Timken supplying rolls and cages and many other details that it seemed unnecessary to discuss in detail, until we could agree fully on a new set-up.

As an alternative, if Timken does not wish to be a partner, Mr. D. will put up all the money, provided, of course, a satisfactory ten year contract is agreed upon, and if this should be done, then Mr. D. might form a public company, and sell some preference shares, giving small bonus of common stock, keeping the balance of common stock for himself.

I do not think, however, you would care for this arrangement, and Mr. D. very much wants us as partners, on account of our interest then in the profitable operation of the Company.

The present British-Timken Company is at present more or less asleep. Hall would be let out under the new arrangement, and a new General Manager installed, as well as

considerable reorganizing of the balance of the organization.

I am to meet to-morrow, the man Mr. D. has in mind for General Manager, in actual charge of operations. This man has been associated with Mr. D. in the Metropolitan Company for 7 years, and Mr. D. believes he is very well fitted for the job.

You can see from Mr. D's connections, it would be a mistake to ask him to relinquish these, and devote his sole time to the new Company, and this he refuses to do. He knows his connection will be of great value to the new Company, but I am sure that where his personal dollars are invested will secure first call on his time and attention.

The longer I wait the more information I could send you but feel it important that I get this letter off to you on the "Mauretania" sailing Saturday. You should receive this letter about April 30. Give it some thought May 2 or 3 and cable me May 4, approval or disapproval of general set-up, and will you please ask any questions that occur [fol. 4709] to you, as I am a little hurried in making connections with the boat, so that this letter is not as complete as it otherwise would be.

We now propose a new deal that we hope will be profitable for a long time, and we must take sufficient time to cover the job thoroughly. Mr. D. is obliged to go to the continent the middle of May; but I hope in the ten days preceding we can get the matter concluded.

Tell Charlie Balough that I have nothing yet on E. T. White & Company, but will not overlook it, and am now securing reports on this company, and will interview them when I know their outside standing a little better.

I may run over to Paris for a few days awaiting your cable reply, but will of course cable you if I do.

I almost overlooked giving you information regarding the motor car industry here. I have secured this information from various sources, principally from Sir W. Letts. The largest producer of motor cars here is Morris, next comes Austin, between them they produce about 60% of all the British motor cars. Morris is a close personal friend of Mr. D's, and Mr. D feels sure he can get this business with a small price reduction. Ford is no longer a factor in England and appears to be definitely out of the picture. You

see very few Ford cars on the street, and everyone says the Ford car is a dead one. Morris has taken his business.

There is no interlocking directorates of bearing manufacturers and motor car companies, the market is an open one.

Yours truly,
(Signed) HEMAN ELY

P.S. Am enclosing copies cables 19 and 21st.

London.
12th May, 1927.

Dear Sir Mark Jenkinson,

Referring to our interview with respect to British Timken, Limited, I confirm the offer which I have made to you on behalf of The Timken Roller Bearing Company of Canton, viz: that they are willing to purchase the whole of the shares in British Timken Limited at the price of 2. per share, the shares will pass to the purchasers assets and liabilities as at 30th September, 1926 and also all profits and losses since that date less the dividend of 40,000 paid since the 30th September, 1926. The offer is subject to the following conditions:—

(1) The accounts of British Timken Limited to be examined on behalf of the purchasers and their report to be satisfactory to the purchasers.

(2) An arrangement satisfactory to the purchasers to be made with the German Company and Mr. Prausnitzer.

(3) A more formal contract to be entered into satisfactory to the purchasers Solicitors if required.

(4) The Directors and Secretary to hand in their resignations and the purchasers nominees to be appointed and any other necessary steps to be taken for the transfer of the management and control when required.

Yours truly,

[fol. 4714] Vickers Limited, Vickers House
Broadway, Westminster, London, S.W. 1

12th May, 1927.

Dear Mr. Ely,

I have to thank you for your letter of the 12th inst., and on behalf of Messrs. Vickers Limited I hereby accept your offer to purchase on behalf of the Timken Roller Bearing Company of Canton the whole of the shares held by Vickers Limited in British Timken Limited at the price of 2. per share, the purchasers to have the benefit of any profits earned since the 30th September, 1926, from which date

they are to take over the shares, subject, however, to the retention by Messrs. Vickers Limited of the dividend of 40,000 net declared on the 10th November, 1926.

With regard to the conditions set out in your letter, I understand from Mr. Dewar that you are now prepared to waive condition No. 2. regarding the German Company and Mr. Prausnitzer. The other conditions are satisfactory to us.

I shall be glad to learn when you desire to inspect the accounts and complete the contract.

[fol. 4715] The acceptance of the offer is conditional on the transaction being completed within three weeks of this date.

Yours truly,

Heman Ely Esq.,
Room 708
Savoy Hotel,

H. Ely Esq.,
Savoy Hotel,
London.

Dear Mr. Ely,

As requested by Mr. Dewar, I enclose Inventory of Plant which it is proposed should be purchased from the Wolseley Company, showing the year of purchase.

The original cost of this Plant (excluding the Mill Gearing and Loose Tools which are included in the Inventory) was, so far as I can ascertain, £77,000, and had been written down in the Wolseley Books to £21,500. In the writing down, the Pre-War Plant had been written off entirely and the War Plant subjected to very heavy depreciation, which accounts for the low book figure.

Calculating on a 5% rate of depreciation and assuming an average age of 17 years for Pre-War, 11 for War, and 5 for Post-War, the value would stand at approximately £36,000.00.

The Presses and Capstans in the large Press Shop employed on Cage production, in the latter figure (£36,000) would be included at £3,000.

[fol. 4721] Nothing is included in the above figures for Mill Gearing including Pulleys, Belts, Shafting, Countershafting, and also the Loose Tools, although these are in the Inventory.

The present day cost of the Machines, etc., has not been taken out, but I think a fair conclusion as to its value can be determined from the above information.

Yours sincerely,

/s/. WM. DALLOW

[fol. 4730] Sundry Plant—British Timken Limited

Description	Year
Counting Machine	1921
Trays, Pulley Blocks, etc.	1921
Hemp Slings	1921
Developing Tank	1923
Iron Trays	1924

All Pyrometers and Instruments which are directly connected to the Rotary and Revergen Furnaces.

Mill Gearing

All Pulleys, Belts and Shafting and Countershafting at present used with the Steel work carrying countershafting on present stanchions. With the exception of the Motors, Switch Gear, and Pulleys and Belts for same.

Tools

All existing Press Tools and Capstan Tools and all Gauges for Cage making as at present in use and in Stores.

All loose Cutting Tools and Gauges in Timken Department used in connection with the production of Bearings or Universal Joints.

(Also:—

Tool hardening Furnace (on Vickers side)
Planer (" " ")

[fol. 4731] DEFENDANT'S EXHIBIT No. 22

London.
16th May, 1927.

Dear Sir Mark Jenkinson,

I have your letter dated the 12th instant. I am now prepared to waive the first three conditions in my letter of the same date and to complete the purchase forthwith so that it will only rest with Messrs. Vickers to give effect to the fourth condition when required.

Yours faithfully,

(sgd) HEMAN ELY

Sir Mark Jenkinson

16th May 1927

Heman Ely Esq.,

Messrs. The Timken Roller Bearing Company,
of Canton, Ohio, U.S.A.

Dear Sir,

We beg to acknowledge receipt of your letter of even date, addressed to Sir Mark Webster Jenkinson, waiving the first three conditions stated in your letter of the 12th May 1927, with which we are in agreement.

Yours faithfully,

FOR VICKERS LIMITED,
(Signed) G. G. Sim
Secretary

[fol. 4733] Defendant's Exhibit No. 23

Dated: 1st January, 1928

The Timken Roller Bearing Company and
British Timken Limited

Agreement

[fol. 4734] This agreement executed as of the..... First day of January One thousand nine hundred and twenty-eight BY and BETWEEN The Timken Roller Bearing Company, a Corporation organized under the laws of the State of Ohio and having its principal office in the City of Canton Ohio in the United States of America (hereinafter for convenience called "The American Company") and British Timken Limited a joint stock company incorporated under the laws of the United Kingdom of Great Britain and Ireland and having its registered office at

Birmingham in the Kingdom of England (hereinafter for convenience called "the British Company")

Witnesseth:

Whereas the American Company manufactures anti friction bearings (hereinafter called "bearings") in the United States of America and has a very special experience in the manufacture of bearings

And whereas the American Company is or may be or become the owner of Patents in the United Kingdom of Great Britain and Northern Ireland and in various other parts of the world covering inventions relating to bearings and improvements therein

Now the parties hereto AGREE as follows:—

1. For the purposes of this Agreement the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all colonies or dependencies of said United Kingdom and European countries except in or adjacent to North or South America shall be deemed to be the territory of the British Company and the rest of the world shall be deemed to be the territory of the American Company.

2. (a) Each of the parties hereto will as fully and [fol. 4735] freely as its patent and contractual rights and obligations permit and free of expense to the other party except as to out-of-pocket expenses inform the other party as to all inventions, discoveries, improvements and practices useful in connection with the manufacture of bearings whether patented or not.

(b) The American Company will so far as its patent and contractual rights and obligations permit and free of expense to the British Company except as to out-of-pocket expenses license the British Company to operate, manufacture and sell bearings in the territory of the British Company during the life of this Agreement under any Letters Patent or other patent rights now or hereafter from time to time owned by the American Company and pertaining to the manufacture or sale of bearings in the territory of the British Company.

(c) The British Company will so far as its patent and contractual rights and obligations permit and free of expense to the American Company except as to out-of-

pocket expenses assign absolutely and for all time to the American Company all Letters Patent or other patent rights now or hereafter from time to time owned by the British Company and pertaining to the manufacture or sale of bearings in the territory of the American Company.

(d) Provided however that nothing in this Agreement contained shall obligate either party to acquire or enlarge its interest in any Letters Patent or other patent rights.

3. (a) Each of the parties hereto will use its best endeavours to maintain the distinctive character of the Trade Mark "Timken" and refrain from any act calculated to prejudice the rights of the parties hereto in respect thereof as now existing.

[fol. 4736] (b) The British Company if and when requested by the American Company will join with the American Company in an application for concurrent registration of the trade mark "Timken" in accordance with the rights aforesaid.

(c) The British Company upon the termination of this Agreement if and so far as it may be requested in writing by the American Company will cause the name "Timken" to be eliminated from its corporate name and from the name of any person, firm or Company controlled by it and will refrain and will cause any person, firm or Company controlled by it to refrain from using the name "Timken" as part of or in connection with his, their or its name or as a trade mark or trade name or otherwise and from any act calculated to prevent or delay any concurrent right which the American Company may then possess in respect of the said name from becoming a sole and exclusive right and so far as practicable will assign or cause any person, firm or Company controlled by it to assign to the American Company or as it may direct any trade mark or other rights in respect of the said name.

4. (a) The American Company will from time to time advise and instruct the British Company in the manufacture of bearings and particularly in connection with the quality of the steel used and its composition and analysis the method of case hardening the machinery and processes for grinding gauging sizing quenching die working forging upsetting forming sorting plating and other opera-

tions and in connection with any special tools and machinery.

(b) The British Company will carefully and faithfully follow such advice and instructions so far as the same shall be economically practicable under the circumstances of the business of the British Company.

[fol. 4737] (c) The British Company's manufacturing operations shall at all reasonable times be open to inspection by the American Company or its representatives.

5. (a) The British Company by itself or its sub-licensees approved by the American Company will manufacture bearings in such quantities and in such States within the British Company's territory and will exercise all such rights in connection with the manufacture of bearings as shall be required to maintain all Letters Patent from time to time owned by the American Company in any State or States within the British Company's territory.

(b) If the British Company desires to be relieved of the obligation contained in paragraph (a) of this section with respect to any State it shall be entitled to give notice in writing to the American Company that it excludes such State from the British Company's territory and thereupon such State shall be withdrawn from the British Company's territory and shall be added to the American Company's territory.

(c) For the purposes of this clause a State shall mean a territorial area in which there is a separate jurisdiction for patent purposes.

6. Except with the consent of the American Company the British Company shall not manufacture, sell or deal in any bearings except under and in accordance with the terms and provisions of this Agreement and under the Trade Mark "Timken".

7. During the life of this Agreement the American Company shall not directly or indirectly make or sell or license [fol. 4738] others to make or sell bearings in the British Company's territory or in the American Company's territory knowing them to be for shipment into the British Company's territory save and except as follows to wit:

(a) The American Company may make or sell or license others to make or sell in its territory bearings

for delivery or shipment into the British Company's territory as assembled component parts of completed articles of manufacture manufactured in its territory or as assembled component parts of completed units of manufacture manufactured in its territory for incorporation into such completed articles of manufacture.

(b) The American Company in its territory may accept and execute orders for bearings for ultimate destination in the British Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the British Company's territory and the American Company from time to time shall notify the British Company of the details of the sales authorised under this paragraph and shall pay to the British Company an amount equal to ten per centum (10%) of the net sale price thereof.

(c) The American Company may authorise not more than four manufacturers or producers of vehicles in the United States of America to import into the British Company's territory bearings manufactured by said producers in the American Company's territory for incorporation in new products or for bearing replacement purposes for products previously manufactured or assembled by said manufacturers or producers or their subsidiaries in the British Company's territory provided that they are not stamped or identified by the name Timken.

[fol. 4739] (d) For the purposes of this section a holding Company as for instance General Motors Corporation and its constituent and subsidiary Companies shall be deemed to be one manufacturer or producer.

(e) The parties hereto recognize and approve the mutual licensing agreement entered into between the American Company and International Harvesters Company dated the Thirty first December One thousand nine hundred and twenty seven of which a copy has been supplied by the American Company to the British Company.

8. During the life of this Agreement the British Company shall not directly or indirectly make or sell or license others to make or sell bearings in the American Company's territory or in the British Company's territory knowing them to be for shipment into the American Company's territory save and except as follows to wit:

(a) The British Company may make or sell or license others to make or sell in the British Company's territory bearings for delivery or shipment into the American Company's territory as assembled component parts of completed articles of manufacture manufactured in its territory or as assembled component parts of completed units of manufacture manufactured in its territory for incorporation into such completed articles of manufacture.

[fol. 4740] (b) The British Company in the British Company's territory may accept and execute orders for bearings for ultimate destination in the American Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the American Company's territory and the British Company shall from time to time notify the American Company of the details of the sales authorised under this paragraph and shall pay to the American Company an amount equal to ten per centum (10%) of the net sale price thereof.

9. (a) Subject to the approval in writing of the American Company as to both terms and personnel to be exercised at its absolute discretion but not otherwise the British Company may from time to time grant sub-licenses to others to make, use and vend bearings in the British Company's territory and may communicate to such sub-licensees any information with respect to inventions, discoveries, improvements and practices whether patented or not received from the American Company.

(b) Every such sub-license shall be deemed to be a license granted by the American Company and all royalties payable thereunder shall belong to the American Company and shall be made payable direct to the American Company accordingly.

(c) All the terms and conditions establishing the business and other relations between the British Company and any sub-license within the British Company's territory shall be submitted to and approved in writing by the American Company before the same are agreed to by the British Company and no alteration shall be made therein without the like approval.

[fol. 4741] (d) If the British Company shall acquire any stocks shares securities or other interest in any Company or Association manufacturing or selling bearings in the British Company's territory the British Company shall not sell or dispose of such stocks shares securities or interest without the consent in writing of the American Company.

10. (a) During the life of this Agreement the British Company shall pay to the American Company a royalty equal to four per centum (4%) of the net invoice prices after deduction of all bearings manufactured or sold by the British Company less amounts equal to one-half (½) of the royalties paid directly to the American Company by sub-licensees pursuant to the last previous Section thereof.

(b) Provided however that no royalties shall be paid hereunder by the British Company in respect to (1) completed bearings purchased by the British Company from the American Company or (2) bearings manufactured by the British Company and sold by it to sub-licensees appointed under the authority of the last previous Section hereof which are owned or controlled jointly by the American Company and Michael Bruce Urquhart Dewar of Number 4 Central Buildings Westminster London, England or (3) bearings upon which the royalties are paid directly to the American Company by sub-licensees pursuant to the last previous Section hereof.

(c) In the case of bad accounts written off by the British Company the American Company shall refund to the British Company royalties paid in respect to bearings giving rise to said accounts.

[fol. 4742] 11. The said royalties shall be paid on the First days of January April July and October of each year or within thirty days thereafter for the bearings sold during the quarter-year prior to said respective dates.

12. (A) The remittance of said royalties shall be accompanied by statements shown in detail:

(a) The number of bearings made during the preceding quarter-year.

(b) The number of bearings sold during the preceding quarter-year.

(B) The statements in respect thereto furnished during January of each year shall also be accompanied by a certified statement prepared by the Auditors of the British Company or its sub-licensees as the case may be based upon an actual examination of the books and records of the British Company or its sub-licensees giving the same data as above required in respect of sales made during the year prior to said month of January and said January statements shall if required by the American Company be further verified by Statutory Declaration of the Secretary for the time being of the British Company or its sub-licensees.

(C) The American Company may once in each year at its own expense employ a Chartered Accountant who shall have the privilege of examining the books, records and plant of the British Company and its sub-licensees with a view to determining how many bearings the British Company and its sub-licensees shall have made and sold up to the time of such examination and to whom and when and for what prices.

13. (a) The American Company shall pay all renewal fees required to maintain and keep on foot all Letters [fol. 4743] Patent in respect to bearings owned by the American Company in the British Company's territory which it shall desire to maintain and keep on foot.

(b) Provided however that if the American Company shall elect to discontinue or refrain from maintaining any such Letters Patent it will give not less than four (4) months' written notice to the British Company and during the said interval the American Company if requested so to do shall assign to the British Company at the expense of the British Company any of said Letters Patent which it shall so elect to discontinue or refrain from maintaining.

(c) The American Company at its own cost shall defend every action of proceeding instituted for the purpose of

revoking any Letters Patent in respect to bearings owned by the American Company which it desires to maintain.

(d) Provided however that if any of said Letters Patent shall be revoked solely on some ground which would not have been available if the British Company had duly performed its obligations under this Agreement then and in any such case the American Company in addition to any other rights which it might have against the British Company shall be entitled to recover from the British Company all costs charges and expenses reasonably incurred in such defense.

14. Upon the termination of this agreement whether under any of the provisions hereof or otherwise howsoever the British Company for a period of six (6) months thereafter shall have the privilege of completing and selling its stock of bearings on hand at the date of said termination upon the terms which would have ruled if this Agreement had not been so terminated and subject to the payment of royalties as herein provided.

[fol. 4744] 15. (a) In the event of liquidation (except for the purpose of capital reorganization) of the British Company this Agreement shall immediately terminate and cease.

(b) The rights and privileges of the British Company hereunder shall be assignable only with the consent in writing of the American Company.

16. This Agreement unless otherwise terminated as herein provided for shall continue in full force and effect for a period of ten (10) years from the First day of January One thousand nine hundred and twenty-eight and if the American Company shall desire to extend the life of this Agreement for a further period of ten years and of such desire shall give notice in writing to the British Company before the First day of January One thousand nine hundred and thirty-seven then and in such case this Agreement shall be read and take effect as if the said period of ten years had been a period of twenty years.

In witness whereof The Timken Roller Bearing Company by the authority of its Board of Directors has caused these presents to be executed in duplicate by its Secretary and its corporate seal to be hereto affixed and British Timken Limited under the authority of its Board of Directors has

caused its Common Seal to be affixed hereto in duplicate as of the day and year first above written.

THE TIMKEN ROLLER BEARING COMPANY,
By

Secretary.

The Common Seal of British Timken Limited was hereunto affixed in the presence of:

Directors,
Secretary.

[fol. 4745] DEFENDANT'S EXHIBIT No. 24

An Agreement made the 20th day of April, 1928, between British Timken Limited (hereinafter called "the Company") of the one part and Michael Bruce Urquhart Dewar (hereinafter called "Mr. Dewar") of the other part.

Whereas Mr. Dewar is the present Managing Director of the Company and it is desired to define the terms upon which he is to continue to hold that office.

And whereas the expression "the first control period" as hereinafter used is intended to bear the same meaning as such expression is defined to have by the by-laws of the Company as to voting adopted by resolution of the Company passed on the 20th day of April, 1928, a copy of such definition being contained in the Schedule hereto.

Now it is Hereby Agreed as follows:

1. Mr. Dewar shall be the Managing Director of the Company and so long as he holds office as such no other Managing Director shall be appointed without his previous consent in writing.

2. There shall be entrusted to Mr. Dewar as Managing Director the general supervision and management of the Company's business and affairs which Mr. Dewar shall regard as his principal occupation and to which he shall devote so much of his time and attention as shall be necessary for the proper and efficient conduct thereof.

3. In the performance of his duties and exercise of his powers as Managing Director Mr. Dewar shall have regard and conform to any reasonable instructions or regulations given or made by the Board of Directors of the Company

and subject to any such instructions or regulations Mr. Dewar shall manage and conduct the Company's business and affairs in such manner as he may consider most beneficial to the Company and shall have and be entitled to [fol. 4746] exercise for this purpose all powers conferred upon the Directors generally by the Company's Articles of Association. In particular Mr. Dewar shall be entitled to exercise all the powers of the Directors under the Articles as regards the borrowing raising and securing of money and the appointment remuneration terms of service and dismissal of all managers and employees of the Company shall be in his discretion.

4. Subject as hereinafter provided Mr. Dewar shall hold office as Managing Director during his life or until he shall resign such office by not less than six months' notice in writing to the Company.

5. Should Mr. Dewar at any time be incapacitated by ill-health or otherwise from performing his duties as Managing Director for a continuous period of six months the Company may at any time whilst such incapacity continues by notice in writing to Mr. Dewar determine his appointment as Managing Director.

6. Mr. Dewar's appointment as Managing Director shall *ipso facto* cease and determine:

(a) On the termination of the first control period or

(b) If Mr. Dewar vacates office as a Director of the Company.

7. Mr. Dewar shall be paid by the Company remuneration for his services as Managing Director at the rate of £3,000 per annum (such remuneration to commence as from the 1st May 1927 and to be payable monthly on the last day of each month) or at such higher rate if any as shall from time to time be fixed by the Directors with consent in writing under the hands of the holders of a majority of the "B" shares of the Company for the time being issued.

8. Mr. Dewar shall also be entitled to be recouped by the Company all travelling and other expenses incurred by him in or about the performance of his duties as Managing Director.

In witness whereof the Company has caused its Common Seal to be hereunto affixed and Mr. Dewar has hereunto

set his hand and Seal the day and year first above written.
[fols. 4747-4748] The Schedule above referred to.

The expression "the first control period" shall mean the period from the 20th day of April 1928 until the date in or after the year 1929 of the holding of an ordinary meeting of the Company at which for the first time either (i) accounts of the Company are submitted which show that during the financial year or period covered by such accounts the net profits earned by the Company for such year or period (before charging income tax or any other tax on profits) have been at a rate which is less than £15,000 per annum plus £15 per annum in respect of every sum of £100 paid up (whether by way of capital or premium) on any shares issued after the date of the adoption of these by-laws otherwise than by way of capitalisation of profits (hereinafter referred to as "the minimum rate of profits") or (ii) no dividend is declared on any shares of the Company or the dividend or dividends declared (including as dividends declared or part thereof any interim dividends already paid in respect of that year or period) are at a rate which does not require for the payment thereof (in the gross and subject to deduction of tax) a sum equal to five-sixths of the minimum rate of profits for such year or period.

The Common Seal of British Timken Limited was hereunto affixed by order of the Board in the presence of
Wm. Dallow,
A. J. M. Duncan,
Directors.

R. O. Squire,
Secretary.

Signed, Sealed and Delivered by the above named Michael Bruce Urquhart Dewar in the presence of
M. B. U. Dewar.
A. A. Hill,
42, Anderton Road,
Sparkbrook,
Birmingham.

[fol. 4749] DEFENDANT'S EXHIBIT No. 25

New York, N. Y., June 7, 1929.

Mr. M. B. U. Dewar,
New York, N. Y.

Dear Sir;

In view of the proposed enlarged activities of French and German companies operating under license agreements from British Timken Ltd. and in view of your increased responsibilities in connection with the supervision of such operations, we propose to you as follows:

1. The existing license agreement between the Timken Roller Bearing Company and British Timken Ltd. shall be amended to the effect that such agreement shall continue in force for 15 years instead of 10 years as now provided and with an option in the Timken Roller Bearing Company to extend such period for an additional 15 years.

2. Your compensation from British Timken Ltd. now provided by contract to be £3,000 per year shall, as of January 1, 1929, be increased to £5,000 per year.

Your approval hereof by notation hereon will constitute agreement between us.

Very truly yours,
THE TIMKEN ROLLER BEARING COMPANY,
By (signed) M. T. Lothrop, *President.*

Approved: June 7, 1929.
(signed) M. B. U. Dewar.

[fol. 4750] DEFENDANT'S EXHIBIT No. 26

BRITISH TIMKEN.

The original arrangements for the taking over of British Timken Ltd. from Vickers Ltd. were made in 1926.

We have now had seven years working based on agreements made in the years 1926 and 1927.

We feel that a stage has been reached at which, in the light of experience we can review these agreements and, I hope, agree on modifications.

In 1927 this company was making about 6,000 bearings a week, it is today making nearly 50,000 bearing a week. During these seven years the Timken Roller Bearing Co., on an original investment of $255,510 have received in Royalties and Dividends (after deduction of British Income Tax) a sum of $461,000 and their share of British Timken, as shown on the memorandum you have already seen, can be valued at $1,171,000.

This increase in the value of B. T. and the increase of $915,490 on T.R.B.'s share has been achieved by retaining in the business the profits made.

This increase in value has been achieved in spite of an unprecedented world depression.

The rate of increase of the assets of B. T. is not likely to be so rapid in the future, owing to the fact that now our product is far from being unique.

The general position and the increasing competition in the Taper Roller bearing market causes me to raise the following points:

1. Royalties.
2. Possibility of putting B. T. shares on the market, so as to permit T.R.B. and myself to convert some of our assets into cash.
3. Control.

1. Royalties

The following are the points which I suggest should now be taken into consideration.

[fol. 4751] (a) There are in Europe no Timken bearing patents.

(b) The name Timken has ceased to have its former great value owing to the growth of competition not only in Europe but also in the U. S. A.

(c) Bearing makers can now obtain all details of the manufacture of Taper Roller Bearings from Machine Tool makers.

(d) Technical assistance now does not give B. T. the advantage over its competitors which it did in the past and further, manufacturing problems in England and U. S. A. are different.

(e) The right to certain territories is not today as valuable as when the U. S. A. was the largest exporter of automobiles equipped with Timken Roller Bearings.

Not only has the demand for service bearings fallen off but also the prices are being depressed by R.I.V. by Fischer and now even by the T.R.B. themselves.

The question of Royalties has often been discussed and I consider the time is opportune to ask for a revision of Royalties to the point of cancellation.

2. Placing B. T. Shares on the Market

This question has a definite relation to the Royalty question.

I am getting no younger, and, as the B. T. profits have not been distributed, I should welcome, as I daresay you would too, the possibility of cashing some of my investment.

This could be done, as I have shown in a short memorandum, by the T. R. B. and myself selling shares on the British Market, while the control of the company could still remain between the T. R. B. Co., and myself through the formation of a holding company, holding say 51% of B. T. share capital.

[fol. 4752] The price at which the shares could be sold would depend on the state of the market and on the results of the trading of B. T. in the past and particularly during the present year.

The price should be such as to capitalize B. T. at a minimum of £300,000.

B. T.'s average profits for the last seven years amount to £45,560 per annum, but the last two years only to £17,000.

Consequently 1934 must show good profit figures to enable a high rate of capitalization to be obtained.

If Royalties are cancelled this year the average profit will be much higher and if they are added back to the results of the last few years, these results would show such profit figures as should result in a capitalization high enough to allow the T. R. B. to compensate themselves to a considerable extent for loss of Royalties by the higher price they would obtain for their shares.

We have already asked as a first step, that the capital of B. T. should be increased to £200,000. We hope that the

difficulties of your tax position will be overcome, as we consider that this step should be taken at once.

3. Control.

If the above scheme is carried out, I suggest that I can justifiably ask that the present conditions as to control should be cancelled. I would suggest that control through the proposed holding company should remain with my shares as long as these shares are controlled by myself or Mr. Pascoe.

[fol. 4753] S. A. F. T.

The position of S. A. F. T. as at the end of 1933 was that available for a total share and loan capital of 21,714,000 frs. there was a surplus of 12,273,756 frs.

Whinny Murray Company's report shows a surplus of only 559,756 frs. as in this report the I. B. I. loan is not regarded as capital.

The share and loan capital of S.A.F.T. is 21,714,000 frs. but in order to arrive at the actual amount subscribed by T.R.B. and (Dewar to a small extent) it is reasonable to deduct interest and half the royalties which were received by T.R.B. either inscript or cash amounting to 2,884,488 frs. We then arrive at a figure of 18,829,512 frs. as the amount of capital actually found in cash of which 6,079,037 frs. has been lost.

Owing to the exchange position and the appreciation of the franc in terms of the dollar, the present value of the surplus is $818,250 (at 15 frs. to dollar) against a total share and loan capital actually invested of $868,560 (at 25 frs. to dollar).

The actual position of S.A.F.T. as shown by the latest accounts is that 9,440,244 frs. have been lost and should be replaced by earnings before dividends can be paid, although it might be argued that a certain proportion of this sum, as shown in the balance sheet under the heading of formation expenses and development accounts, might be carried in that balance sheet as goodwill, thus permitting the payment of dividends subject to capital requirements before the whole of the 9,440,244 frs. are replaced out of earnings.

The above is a summary of the present position without making any attempt to give reasons or explanations for the

losses as these are well known to the T. R. B. Co., and ourselves.

My agreements definitely show that the control to I.C.I. of the French company can now pass into your hands.

[fol. 4754] 1. Under our agreements regarding the S.A.F.T. the control of that Company should now pass into your hands.

2. Bearing in mind that the personnel at Canton may change at any time, we do not feel that this situation is a very happy one under which to carry on.

3. Consequently we should welcome a decision by the T.R.B.Co., either to assume control at once or to make some arrangement such as an agreement with Mr. Pascoe and myself to exercise control for a period of years.

4. Further reference to the control situation is made under the heading of I.C.I.

[fol. 4755] I.C.I. Under our agreement T.R.B. and myself have undertaken to set aside out of dividends received from BT. each year an amount equal to one-third of the profits to take up common stock in I.C.I.

Owing to the fluctuating exchange position, it has been agreed in the past not to implement this arrangement.

Owing to intense competition during the past two years, B.T. profits have only been at the rate of £15,000 a year instead of between £50,000 and £60,000 which was the case when the agreements were made.

Another consideration is that owing to capital requirements of B.T. it was not possible to distribute as dividends the amounts originally contemplated.

As a private individual, I frankly feel it hard only to receive a dividend of approximately £4,500 with the obligation to put half of it aside for a further investment in the anti-friction bearing industry in Europe.

Consequently I ask for and would suggest a settlement on the lines of cancellation of the present agreements with a new agreement as to a definite sum to be invested by me in I.C.I.

As regards to control of I.C.I. and through I.C.I. of the French Company, we are quite prepared to settle this matter in any way that you wish.

[fol. 4756] D. T. G.

The accounts of the German Company as at December 31, 1933, show a surplus of 239,527 R.M. available for a total loan and share capital of 1,013,930 R.M.

The difficult position in Germany, both financially and politically, under the present regime, leaves no doubt that the only course to pursue is to shut down completely in Germany and to realize the remaining assets as soon as possible.

This is the plan we are adopting.

[fol. 4757]

[fol. 4758] DEFENDANT'S EXHIBIT No. 27

Dated, 28th November, 1938

The Timken Roller Bearing Company, British Timken Limited and Societe Francaise Timken.

Business Agreement

Stibbard, Gibson & Co.,
21, Leadenhall Street,
London, E.C.3

[fol. 4759] An Agreement made the Twenty-eighth day of November one thousand nine hundred and thirty-eight between The Timken Roller Bearing Company a Corporation organized under the Laws of the State of Ohio in the United States of America and having its principal office in the City of Canton in the said State (hereinafter for convenience called "the American Company") of the first

part British Timken Limited a Joint Stock Company incorporated under the Laws of the United Kingdom of Great Britain and Ireland and having its principal office in the City of Birmingham in the United Kingdom of Great Britain and Northern Ireland (hereinafter for convenience called "the British Company") of the second part and Societe Francaise Timken a Societe Anonyme incorporated under the Laws of France and having its principal office in Asnieres in the Department of Seine France (hereinafter for convenience call "the French Company") of the third part.

Whereas

(A) The American Company in the United States aforesaid the British Company in the United Kingdom of Great Britain and Northern Ireland and the French Company in France carry on business as manufacturers of anti-friction bearings (hereinafter called "bearings") and the American Company in the United States aforesaid also carries on business as manufacturers of steel used in the manufacture of bearings.

(B) The Companies parties hereto for their mutual advantage and convenience in working have agreed to make arrangements for an interchange between them of information and facilities and in connection therewith to define their respective territories and for other purposes in manner hereinafter appearing.

(C) A Company party to this Agreement covenating agreeing or undertaking with or to the other Companies parties to this Agreement or either of them is hereinafter sometimes referred to as a covenantor Company and the Companies or Company with or to which the covenanting Company covenants agrees or undertakes are hereinafter sometimes referred to as covenantee Companies or a covenantee Company.

Now

The Companies parties hereto agree as follows:

1. For the purpose of this Agreement

(A) The territory of the French Company means the territories of the Republic of France on the Continent of Europe and its Dominions Colonies Dependencies and

[fol. 4760] Mandatory Territories in any part of the world except in or adjacent to North or South America.

(B) The territory of the British Company means the United Kingdom of Great Britain and Northern Ireland Eire and all countries other than France on the Continent of Europe and all Dominions Colonies Dependencies and Mandatory Territorities of the United Kingdom aforesaid and other European countries except France in any part of the world except in or adjacent to North or South America but does not include any part of the terrifory of the French Company.

(C) The territory of the American Company means the rest of the world outside the territories of the French Company and the British Company.

(D) The foregoing territories and the corresponding meanings shall be subject to alteration from time to time by agreement between the parties hereto by letter or other writing.

2. (A) Each of the Companies parties hereto as fully and freely as its patent and contractual rights and obligations permit and free of expense to the other Companies parties hereto except as to out of pocket expenses will inform the other Companies parties hereto as to all inventions discoveries improvements and practises useful in connection with the manufacture of bearings whether patented or not.

(B) The British Company in its territory and the French Company in its territory shall be at liberty during the life of this Agreement to manufacture and sell bearings under any Letters Patent or other patent rights now or hereafter from time to time owned by the American Company or in the case of the French Company by the British Company and pertaining to the manufacture or sale of bearings so far as the owning Company's patent and contractual rights permit and free of expense except as to out of pocket expenses.

(C) Each of them, the British Company and the French Company as a covenantor Company so far as its patent and contractual rights and obligations permit and free of expense except as to out of pocket expenses will assign absolutely and for time to the American Company or the British Company as a covenantee Company all Letters

Patent or other patent rights now or hereafter from time to time owned by the covenantor Company and pertaining to the manufacture or sale of bearings in the territory of the covenantee Company.

(D) The French Company as a covenantor Company if and when requested by the British Company as a covenantee Company and each of them the British Company and the French Company as a covenantor Company if and when requested by the American Company as a covenantee Company and in each case at the expense of the covenantee Company will execute and do or cause to be executed and done all deeds acts and things which the covenantee Company may consider to be necessary or desirable in order that any inventions discoveries improvements or practices useful in connection with the manufacture of bearings which may come to the knowledge of the covenantor Company and which such Company shall be entitle to communicate to the covenantee Company for this purpose may be protected by Letters Patent or other patent rights in such parts of the territory of the covenantee Company and in such names as the covenantee Company shall specify with a view to such patent rights being assigned to or otherwise vested in the covenantee Company or its nominees in accordance with the provisions hereinbefore contained.

[fol. 4761] (E) Each of the covenantor Companies hereinbefore mentioned hereby irrevocably appoints the covenantee Company with power of substitution to be its Attorney for and in its name and on its behalf but at the expense of the covenantee Company to execute and do all deeds acts and things which the covenantee Company or its substitutes from time to time may consider to be necessary or desirable for the purpose of giving effect to the agreements on the part of the covenantor Company contained in this clause.

(F) Provided however that nothing in this Agreement contained shall obligate any party to acquire or enlarge its interest in any Letters Patent or other patent rights.

3. (A) Each of the Companies parties hereto will use its best endeavours to maintain the distinctive character of the trade mark "Timken" and refrain from any act calculated to prejudice the rights of the parties hereto in respect thereof as now existing.

(B) Each of them, the British Company and the French Company as a covenantor Company upon the termination of this Agreement if and so far as it may be requested in writing the British Company by the American Company as a covenantee Company or the French Company by the American Company or the British Company as a covenantee Company and if and so far as the provisions of this clause are binding upon the covenantor Company will cause the name "Timken" to be eliminated from its corporate name and from the name of any person firm or company controlled by it and will refrain and will cause any person firm or company controlled by it to refrain from using the name "Timken" as part of or in connection with his their or its name or as a trade mark or trade name or otherwise and from any act calculated to obstruct or delay the covenantee Company in any steps which it may take with a view to establishing the exclusive right of the covenantee Company to the said name in the territory of the covenantor Company and so far as practicable the covenantor Company will assign or cause any person firm or company controlled by it to assign to the covenantee Company or as it may direct any trade mark or other rights in respect of the said name in its ownership or control and in the meantime after the termination of this Agreement will authorise the covenantee Company to use the name Timken in any way in the territory of the covenantor Company.

4. From time to time during the life of this Agreement so long as the British Company or the French Company shall be actually engaged in the manufacture of bearings the American Company will give advice to the British Company or the French Company and the British Company will give advice to the French Company as the case may require with respect to the manufacture of bearings and particularly in connection with the quality of steel used and its composition and analysis the method of case hardening the machinery and processes for grinding gauging sizing quenching die working forging upsetting forming sorting plating and other operations in connection with any special tools and machinery.

5. (A) Each of them the British Company in the British Company's territory and the French Company in the French Company's territory as a covenantor Company by

itself or others if and when required the British Company by the American Company as a covenantee Company and the French Company by the American Company or the British Company as a covenantee Company will manufacture bearings in such quantities and in such States within the territory of the covenantor Company and will exercise all such rights in connection with the manufacture of bearings as shall be required to maintain all Letters Patent from time to time owned by the covenantee Company in any State or States within the territory of the covenantor Company.

[fol. 4762] (B) If the covenantor Company desires to be relieved of the obligation contained in paragraph (A) of this clause with respect to any State it shall be entitled to give notice in writing to the covenantee Company that it excludes such State from the territory of the covenantor Company and thereupon for the purposes of this clause such State shall be withdrawn from the territory of the covenantor Company and shall be added to and included in the territory of the covenantee Company.

(C) For the purposes of this clause a State shall mean a territorial area in which there is separate jurisdiction for patent purposes.

6. Each of the Companies parties hereto as a covenantor Company hereby covenants with each of the other Companies parties hereto as a covenantee Company that during the life of this Agreement the covenantor Company will not directly or indirectly make or sell or authorise others to make or sell bearings in the territory of the covenantee Company or in the territory of the covenantor Company knowing them to be for shipment into the territory of the covenantee Company save and except as follows to wit:

(A) The covenantor Company may make or sell or authorise others to make or sell in its territory bearings for delivery or shipment into the territory of the covenantee Company as assembled component parts of completed articles of manufacture manufactured in the territory of the covenantor Company or as assembled component parts of completed units of manufacture manufactured in the territory of the covenantor Company for incorporation into such completed articles of manufacture.

(B) The covenantor Company in its territory may accept and execute orders for bearings for ultimate destination in the territory of the covenantee Company for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the territory of the covenantee Company or sales at prices in conflict with the wishes of the covenantee Company and the covenantor Company from time to time will notify the covenantee Company of the details of the sales authorized under this paragraph and will pay to the covenantee Company an amount equal to five per centum of the net sale price received under any sales so authorized not being sales made through or at the request of the covenantee Company.

(C) The American Company may authorise not more than four manufacturers or producers of vehicles in the United States of America to import into the territory of the covenantee Company bearings manufactured by the said producers in the territory of the American Company for incorporation in new products or for bearing replacement purposes for products previously manufactured or assembled by the said manufacturers or producers or their subsidiaries in the territory of the covenantee Company Provided that they are not stamped with or identified by the name Timken.

(D) For the purposes of this clause a holding Company as for instance General Motors Corporation and its constituent and subsidiary Companies shall be deemed to be one manufacturer or producer.

(E) The parties hereto recognize and approve the mutual licensing Agreement entered into between the American Company and International Harvesters Company dated the thirty-first day of December one thousand nine hundred and twenty-seven and the American Company when requested will supply to the British Company or the French Company a copy of the said Agreement.

[fol. 4763] 7. Notwithstanding anything in this Agreement the American Company shall be at liberty to authorise manufacturers to make and sell in the territory of the British Company or the French Company steel and/or

tubes under Patents or according to methods and processes belonging to the American Company provided always that the American Company will make arrangements so that any royalty or charge which may be payable by any such authorised manufacturer in respect of steel and/or tubes supplied to the British Company or the French Company shall be credited to the British Company or the French Company as the case may be.

8. (A) Each of the Companies parties hereto as a covenantor Company during the life of this Agreement will pay all renewal fees require to maintain and keep on foot all Letters Patent with respect to bearings in the territory of the covenantor Company which are owned by either of the other Companies parties hereto as a covenantee Company and of which particulars from time to time have been supplied to the covenantor Company by the covenantee Company.

(B) Provided however that if the covenantor Company shall desire to discontinue or refrain from maintaining any such Letters Patent the covenantor Company shall be at liberty to give not less than three months written notice to the covenantee Company and upon the expiration of the said period of three months the Letters Patent to which such notice relates shall belong to and be at the disposal of the covenantee Company free from any rights of the convenantor Company under this Agreement and the covenantor Company shall be under no obligation to maintain and keep on foot such Letters Patent.

(C) The covenantor Company at its own cost will defend every action or proceeding instituted for the purpose of revoking any Letters Patent with respect to bearings in the territory of the covenantor Company owned by the covenantee Company so long as such Letters Patent is being maintained and kept foot by the covenantor Company under the provisions of this Agreement.

(D) If any of the said Letters Patent shall be revoked solely on some ground which would not have been available if the covenantor Company had duly performed its obligations under this Agreement then and in any such case the covenantee Company in addition to any other rights which

it might have against the covenantor Company shall be entitled to recover from the covenantor Company all costs, charges and expenses reasonably incurred by it in defending the action or proceeding in which such Letters Patent is revoked.

9. Upon the termination of this Agreement so far as regards any of the Companies parties hereto whether under the provisions hereof or otherwise howsoever such Company shall be at liberty to complete and sell its stock of bearings on hand at the date of the said termination upon the terms which would have ruled if this Agreement had not been so terminated.

10. In the event of liquidation of the British Company or the French Company (except for the purpose of capital reorganization) or the appointment of a Receiver of the undertaking of either of these Companies this Agreement except the last previous clause hereof shall immediately terminate and cease as between such Company and the other Companies parties hereto.

[fol. 4764] 11. This Agreement unless otherwise terminated as herein provided shall continue in full force and effect for a period of twenty-seven years from the first day of January one thousand nine hundred and thirty-eight.

12. If for any reason this Agreement shall be terminated during the said period of twenty-seven years as regards any of the Companies parties hereto such termination shall not affect the continuance of this Agreement as regards the other Companies parties hereto.

13. This Agreement shall be construed and take effect according to English law.

[fol. 4765] DEFENDANT'S EXHIBIT No. 28

Dated 20th November, 1938

The Timken Roller Bearing Company M. B. U. Dewar, Esq. and British Timken Limited

Supplemental Business Agreement

Stibbard, Gibson & Co.
21, Leadenhall Street,
London, E.C.3.

[fol. 4766] This agreement is made the Twenty-ninth day of November one thousand nine hundred and thirty eight

between the Timken Roller Bearing Company a corporation organized under the Laws of the State of Ohio in the United States of America and having its principal Office in the City of Canton in the said State (hereinafter for convenience called "the American Company") of the first part Michael Bruce Urquhart Dewar of No. 10, Mayfair Place in the County of London (hereinafter for convenience called "Mr. Dewar") of the second part and British Timken Limited, a Joint Stock Company incorporated under the Laws of the United Kingdom of Great Britain and Ireland and having its Registered Office at Birmingham in the United Kingdom of Great Britain and Northern Ireland (hereinafter for convenience called "the British Company") of the third part

Whereas:

(A) The American Company in the United States aforesaid the British Company in the United Kingdom of Great Britain and Northern Ireland and Societe Francaise Timken a Company incorporated under the Laws of France and having its Principal Office in Asnieres in the Department of Seine France (hereinafter for convenience called "the French Company") carry on business as manfacturers of anti-friction bearings (hereinafter called "bearings").

(B) Under an Agreement (hereinafter called "the Business Agreement") made the Twenty-eight day of November one thousand nine hundred and thirty eight between the American Company (1) the British Company (2) and the French Company (3) these Companies have made business arrangements for an interchange between them of information and facilities for defining their respective territories and for other purposes.

(C) The parties hereto desire to supplement the provisions of the Business Agreement in manner hereinafter appearing.

Now the parties hereto agree as follows:—

1. This Agreement is supplemental to the Business Agreement and the expressions defined in the Business Agreement shall have the meanings so defined in this Agreement.

2. If the Business Agreement shall be terminated so far as regards the French Company before it is terminated as between the American Company and the British Company then during the remainder of the life of the Business Agree-

ment the territory of the French Company shall be added to and included in the territory of the British Company for all purposes as between the American Company and the British Company and the Business Agreement shall operate and take effect accordingly.

3. (A) Each of the parties hereto will use his best endeavours to maintain the distinctive character of the Trade Mark "Timken" and refrain from any act calculated to prejudice the rights of the parties hereto in respect thereof as now existing.

(B) It is intended that if the American Company shall so request then the British Company in its territory and if the American Company or the British Company shall so request then the French Company in its territory shall join with the requesting Company in an application for concurrent registration of the Trade Mark "Timken" if and so far as such registration is possible in the territory of the requested Company.

[fol. 4767] (C) It is intended that if and when the Business Agreement shall be terminated so far as regards the British Company or the French Company the British Company in the former case if and so far as it may be requested in writing by the American Company and the French Company in the latter case if and so far as it may be requested in writing by the American Company or the British Company shall cause the name "Timken" to be eliminated from its corporate name and from the name of any person firm or Company controlled by it and shall refrain and cause any person firm or Company controlled by it to refrain from using the name "Timken" as part of or in connection with his their or its name or as a Trade Mark or Trade Name or otherwise and shall refrain from any act calculated to obstruct or delay the requesting company in any steps which it may take with a view to establishing the right of the requesting company to the use exclusively so far as practicable of the said name in the territory of the requested Company and so far as practicable shall assign or cause any person firm or Company controlled by it to assign to the requesting Company or as it may direct any Trade Mark or other rights in respect of the said name in its ownership or control.

4. (A) It is intended that so long as the British Company or the French Company is actually engaged in the manufacture of bearings the British Company shall follow any advice given by the American Company or the British Company with respect to the manufacture of bearings pursuant to the Business Agreement so far as the same shall be economically practicable under the circumstances of the business of the Company advised.

(B) It is also intended that the manufacturing operations of the British Company and the French Company shall at all reasonable times be open to inspection in the former case by the American Company and in the latter case by the American Company and the British Company or the representatives of the Company desiring such inspection.

5. It is intended that the British Company and the French Company shall not manufacture sell or deal in bearings except under and in accordance with the terms and provisions of the Business Agreement and this Agreement and under the Trade Mark "Timken" unless in the former case the American Company and in the latter case the American Company and the British Company shall consent in writing to such manufacture sale or dealing and that the French Company shall not commence to manufacture sell or deal in any other products except with the consent in writing of the British Company and the American Company.

6. (A) Subject to the approval in writing of the American Company as to both terms and personnel to be exercised at its absolute discretion but not otherwise the British Company may from time to time authorise others to make use and vend bearings in the territory of the British Company and may communicate to the parties so authorised any information with respect to inventions discoveries improvements and practices whether patented or not received from the American Company.

(B) Every such authorisation shall be deemed to be granted by the American Company and to be personal to the party authorised and shall contain a provision to that effect similar to the provision in that behalf contained in this Agreement and all royalties payable thereunder in respect of tapered roller bearings shall belong to the American Company and shall be made payable to the American Company accordingly."

(C) All the terms and conditions establishing the business and other relations between the British Company and any party so authorised within the territory of the British Company shall be submitted to and approved in writing by the [fol. 4768] American Company before the same are agreed to by the British Company and no alteration shall be made therein without the like approval.

(D) If the British Company shall acquire any stocks, shares, securities or other interest in any Company or Association manufacturing or selling bearings in the territory of the British Company the British Company shall not sell or dispose of such stocks shares securities or interest without the consent in writing of the American Company.

(E) It is intended that the foregoing provisions of this clause except as to royalties shall operate and take effect as between the American Company and the French Company as if the French Company were referred to in the place of the British Company and the territory of the French Company were referred to in the place of the territory of the British Company.

7. (A) During the life of the Business Agreement the British Company shall pay to the American Company a royalty equal to one half of one per cent (½%) on the net invoice prices after deduction of all discounts of all Tapered Roller Bearings manufactured or sold by the British Company less amounts equal to one half (½) of the royalties actually received directly by the American Company under the provisions of the last previous clause hereof.

(B) Provided however that no royalties shall be paid hereunder by the British Company in respect of (1) completed Taper Roller Bearings purchased by the British Company from the American Company or (2) Tapered Roller Bearings manufactured by the British Company and sold by it to the French Company or to parties authorised under the provisions of the last previous clause hereof or (3) Tapered Roller Bearings upon which royalties are paid directly to the American Company pursuant to the last previous clause hereof.

(C) Provided also that when quoting or selling Tapered Roller Bearings manufactured by it to the French Company the British Company will give to the French Company the benefit of the said royalty which is not payable as hereinbefore provided in respect of the bearings sold by way of

an equivalent discount or other allowance from the price to be paid for such bearings.

(D) In the case of bad accounts written off by the British Company the American Company shall refund to the British Company royalties paid in respect to bearings giving rise to such accounts.

8. The said royalties shall be paid on the first days of January April July and October of each year or within thirty days thereafter for the bearings sold during the quarter year prior to the said respective dates.

9. (A) The remittance of the said royalties shall be accompanied by statements showing in detail:

(1) The number of bearings made during the preceding quarter year.

(2) The number of bearings sold during the preceding quarter year.

(B) The statements in respect thereto furnished during January of each year shall also be accompanied by a certified statement prepared by the Auditors of the British Company or the parties authorised by it as aforesaid as the case may be based upon an actual examination of the [fol. 4769] books and records of the British Company or the parties authorised as aforesaid giving the same data as above provided in respect of sales made during the year prior to the said month of January and the said January statements if required by the American Company shall be further verified by Statutory Declaration of the Secretary for the time being of the British Company or the parties aforesaid.

(C) The American Company may once in each year at its own expense employ a Chartered Accountant who shall have the privilege of examining the books records and plant of the British Company and the partiest authorised by it as aforesaid with a view to determining how many Tapered Roller Bearings the British Company and the parties authorised by it as aforesaid shall have made and sold up to the time of such examination and to whom and when and for what prices.

10. It is intended that the American Company shall be entitled once in each year at his own expenses to employ

a Chartered Accountant who shall have the privilege of examining the books of account and records of the French Company and any parties authorized by the French Company under the preceding clause in that behalf and taking notes or extracts therefrom.

(A) If at any time during the life of the Business Agreement there are Companies or Associations engaged in the manufacture or sale of bearings in the territory of the British Company which are authorised by the British Company under the preceding clause in that behalf to make use and vend bearings in the territory of the British Company either immediately or at one or more removes (such Companies or Associations being hereinafter for convenience referred to as "subsidiary Companies") each of them the American Company and the British Company shall have the right to have at least one representative on the Board having the chief authority over a subsidiary Company whatever may be the functions or description of such Board whether Directorial Administrative Supervisory or otherwise so long as the American Company or the British Company as the case may be shall hold any stocks shares securities or other proprietary interests in such subsidiary Company.

(B) If either of the Companies parties hereto shall at any time hold any stocks shares securities or other proprietary interest in a subsidiary Company either in its own name or in the name of a nominee (i.e., a bare Trustee for such Company) such Company shall be entitled at its own will and pleasure to transfer or cause to be transferred the said stocks shares securities or other proprietary interest or any part thereof from itself to a nominee or from a nominee to itself or another nominee as such Company may decide.

(C) Neither of the said Companies shall sell or transfer any stocks shares securities or other proprietary interest in a subsidiary Company belonging to it (except as aforesaid) without first offering the same to the other Company.

(D) Every such offer shall be made by notice in writing specifying the interest to which it relates and shall remain open for acceptance by the other Company for thirty days after it is received by the other Company and any acceptance of an offer shall be signified by notice in writing to the offering Company.

(E) If any such offer is duly accepted the price payable

for the interest specified in the offer shall be determined and the sale and transfer of the interest specified in the offer shall be completed in the manner and at the time which shall be fixed under the provisions hereinafter contained.

[fol. 4770] (F) The said companies will give any consents and exercise any voting powers and execute and do any other deeds acts or things which may be necessary for the purpose of giving effect to this Agreement or any Award made in an Arbitration under this Agreement.

(G) If any question shall arise between the said Companies with respect to the price aforesaid or the completion of any such sale or transfer or any matter or thing to be done under this Agreement in connection with such sale or transfer every such question is default of agreement shall be settled by arbitration under the English Arbitration Act 1889 or any statutory modification or re-enactment thereof for the time being in force.

(H) It is intended that the foregoing provisions of this clause shall operate and take effect as between the American Company and the French Company as if the French Company were referred to in the place of the British Company and the territory of the French Company were referred to in the place of the territory of the British Company.

12. (A) The provisions of this clause shall take effect notwithstanding anything to the contrary contained in the Business Agreement or this Agreement and the other provisions of this Agreement shall be deemed to be modified accordingly.

(B) It is intended that during the life of this Agreement and so long as the French Company or any other French Company acquiring and carrying on the business now carried on by the French Company shall carry on the said business the French Company which from time to time is carrying on the said business shall be at liberty in France and the Dominions Colonies and Dependencies of France to make and sell bearings in and for use in the French territories aforesaid under any French Patents from time to time belonging to the American Company or the British Company and to make use of the name Timken in connection with its business without payment of any royalty or other charge and the British Company subject to the approval of the American Company shall enter into any Agree-

ment or Agreements with any French Company which may be necessary for this purpose.

(C) During the life of this Agreement each of them the American Company and the British Company shall be at liberty to sell bearings for delivery and use in Russia without reference to the other of them but they shall keep each other advised with full details of all enquiries negotiations and orders and generally consult with one another in regard to Russian business whether with the Government Authorities in Moscow or with or through any of the Russian Agencies or Trading Companies and if the American Company or the British Company shall secure any orders for or in connection with bearings for delivery and use in Russia a commission of two per cent upon the net moneys received in respect of such orders shall be paid by the Company executing the orders to the other Company and all expenses incurred by either Company in negotiating or securing orders for or in connection with bearings for delivery and use in Russia with the approval of the other Company shall be borne and paid by the two Companies in equal shares and no royalty or other charge under the other provisions of this Agreement shall be payable in respect of bearings in respect of which the said commission of two per cent is payable. The details above mentioned shall include blue prints statistical reports and other data. The prices and terms at or upon which offers are made and orders are accepted shall so far as practicable be mutually agreed from time to time but nevertheless either of the two Companies shall be at liberty to quote and accept orders at low prices and extended times for payment without the consent of the other Company after having first submitted the prices and other terms to the other Company for its consideration and remarks provided that any such quotation or acceptance shall not involve under cutting some quotation already made by the other Company.

[fol. 4771] 13. With respect to the provisions of this Agreement expressing the intentions of the parties hereto each of the parties hereto will give effect to such intentions so far as the same entail performance or observance by such party and so far as the same entail performance or observance by the French Company each of the parties hereto by himself or itself and by or through any Company firm or person under his or its control will give any consents and

exercise any voting powers and execute and do any other deeds acts or things which may be necessary for the purpose of giving effect to such intentions.

14. This Agreement shall be read and carried into effect in conjunction with the Business Agreement.

In Witness whereof the Timken Roller Bearing Company by the authority of its Board of Directors has caused these presents to be executed in triplicate by its Secretary and its Corporate Seal to be thereto affixed all in Canton Ohio United States of America and Michael Bruce Urquhart Dewar has executed these presents in triplicate in Paris France and British Timken Limited by the authority of its Board of Directors has caused its Common Seal to be affixed to these presents in triplicate and two of its Directors and its Secretary to execute the same all in Birmingham England the day and year first above written.

The Timken Roller Bearing Company by —— ——,
President. —— ——, Secretary.

Signed and sealed by or on behalf of the Timken Roller Bearing Company in the presence of Bessie E. Stokey, Canton, Ohio, U.S.A., Clerk.

Signed, sealed and delivered by the above named Michael Bruce Urquahrt Dewar in the presence of the common seal of British Timken Limited was hereunto affixed in the presence of —— ——, —— ——, Directors. —— ——, Secretary.

[fol. 4772] DEFENDANT'S EXHIBIT No. 29

An agreement made as at the sixteenth day of June One thousand nine hundred and twenty-eight between British Timken Limited a Joint Stock Company incorporated under the Laws of the United Kingdom of Great Britain and Ireland and having its principal office in the City of Birmingham England (hereinafter for convenience called "the British Company") and Societe Francaise Timken, a Societe Anonyme incorporated under the Laws of France and having its principal office in the Town of Asnieres in

the Department of Seine France (hereinafter for convenience called "the French Company").

Whereas:

(a) The British Company manufactures anti-friction bearings (hereinafter called "bearings") in England and has great experience in the manufacture of bearings:

(b) The French Company is the registered owner of the trade mark "Timken" in France.

(c) The British Company or the French Company is or may be or become the owner of patents or patent rights in various parts of the world covering inventions relating to bearings and improvements therein.

(d) The Timken Roller Bearing Company of Canton, Ohio, United States of America is hereinafter for convenience called "the American Company."

Now the parties hereto agree as follows:

1. For the purposes of this Agreement:

(a) The territory of the French Company shall mean the territories of the Republic of France on the Continent of Europe and her colonies dependencies and mandatory territories in any part of the world except in or adjacent to North or South America.

(b) The territory of the British Company shall mean the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe and all colonies dependencies and mandatory territories of the United Kingdom and other European countries except in or adjacent to North or South America but shall not include the territory of the French Company.

(c) The territory of the American Company shall mean the rest of the world outside the territories of the French Company and the British Company.

[fol. 4773] (d) The British American territory shall mean the territories of the British Company and the American Company in combination; and

(e) These territories and the corresponding meanings shall be subject to alteration from time to time by agreement between the parties hereto by letter or other writing.

2. (a) Each of the parties hereto as fully and freely as its patent and contractual rights and obligations permit and

free of expense to the other party except as to out of pocket expenses will inform the other party as to all inventions discoveries improvements and practices useful in connection with the manufacture of bearings whether patented or not.

(b) The British Company so far as its patent and contractual rights and obligations permit and free of expense to the French Company except as to out of pocket expenses will license the French Company to operate manufacture and sell bearings in the territory of the French Company during the life of this Agreement under any Letters Patent or other patent rights now or hereafter from time to time owned by the British Company and pertaining to the manufacture or sale of bearings in the territory of the French Company.

(c) The French Company so far as its patent and contractual rights and obligations permit and free of expense to the British Company except as to out of pocket expenses will assign absolutely and for all time to the British Company or its nominees all Letters Patent or other patent rights now or hereafter from time to time owned by the French Company and pertaining to the manufacture or sale of bearings in the British American territory.

(d) The French Company if and when requested by and at the expense of the British Company will execute and do or cause to be executed and done all deeds acts and things which the British Company may consider necessary or desirable in order that any inventions discoveries improvements or practices useful in connection with the manufacture of bearings which may come to the knowledge of the French Company and which the French Company shall be entitled to communicate to the British Company for this purpose may be protected by Letters Patent or other patent rights in such parts of the British American territory and in such names as the British Company shall specify with a view to such patent rights being assigned to or otherwise [fol. 4774] vested in the British Company or its nominees in accordance with the provisions hereinbefore contained.

(e) The French Company hereby irrevocably appoints the British Company with power of substitution to be its Attorney for it and in its name and on its behalf but at the expense of the British Company to execute and do all deeds acts and things which the British Company or its substitutes from time to time may consider necessary or desirable

for the purpose of giving effect to the agreements on the part of the French Company contained in this section.

(f) Provided however that nothing in this Agreement contained shall obligate either party to acquire or enlarge its interest in any Letters Patent or other patent rights.

3. (a) Each of the parties hereto will use its best endeavours to maintain the distinctive character of the trade mark "Timken" and refrain from any act calculated to prejudice the rights of the parties hereto or the American Company in respect thereof as now existing.

(b) The French Company if and when requested by the British Company will join with the British Company or the American Company in an application for concurrent registration of the trade mark "Timken" if and so far as such registration is possible in the territory of the French Company.

(c) The French Company upon the termination of this Agreement if and so far as it may be requested in writing by the British Company or the American Company will cause the name "Timken" to be eliminated from its corporate name and from the name of any person firm or company controlled by it and will refrain and will cause any person, firm or company controlled by it to refrain from using the name "Timken" as part of or in connection with his their or its name or as a trade mark or trade name or otherwise and from any act calculated to obstruct or delay the British Company or the American Company in any steps which it may take with a view to establishing the exclusive right of the British Company or the American Company to the said name in the territory of the French Company and so far as practicable the French Company will assign or cause any person firm or company controlled by it to assign to the British Company or as it may direct any trade mark or other rights in respect of the said name in its ownership or control.

[fol. 4775] 4. (a) The British Company if and when the French Company shall be actually engaged in the manufacture of bearings will from time to time give advice to the French Company with respect to the manufacture of bearings and particularly in connection with the quality of the steel used and its composition and analysis the method of case hardening the machinery and processes for grind-

ing gauging sizing quenching die working forging upsetting form sorting plating and other operations and in connection with any special tools and machinery so long as the French Company follow such advice so far as the same shall be economically practicable under the circumstances of the business of the French Company.

(b) The French Company's manufacturing operations shall at all reasonable times be open to inspection by the British Company and the American Company or their representatives.

5. (a) The French Company by itself or its sub-licensees approved by the British Company if and when required by the British Company or the American Company will manufacture bearings in such quantities and in such States within the French Company's territory and will exercise all such rights in connection with the manufacture of bearings as shall be required to maintain all Letters Patent from time to time owned by the British Company or the American Company in any State or States within the French Company's territory.

(b) If the French Company desires to be relieved of the obligation contained in paragraph (a) of this section with respect to any State it shall be entitled to give notice in writing to the British Company that it excludes such State from the French Company's territory and thereupon such State shall be withdrawn from the French Company's territory and shall be added to the British American territory.

(c) For the purposes of this clause a State shall mean a territorial area in which there is separate jurisdiction for patent purposes.

6. Except with the consent of the British Company the French Company shall not manufacture, sell or deal in any bearings except under and in accordance with the terms and provisions of this agreement and under the trade name "Timken".

7. The British Company undertakes that during the life of this Agreement the American Company and the British Company shall not directly or indirectly make or sell or license others to make or sell bearings in the French Company's territory or in the British American territory knowing them to be for shipment into the French Company's territory save and except as follows to wit:

[fol. 4776] (a) The British Company and the American Company may make or sell or license others to make or sell in the British American territory bearings for delivery or shipment into the French Company's territory as assembled component parts of completed articles of manufacture manufactured in the British American territory or as assembled component parts of completed units of manufacture manufactured in the British American territory for incorporation into such completed articles of manufacture.

(b) The British Company and the American Company in the British American territory may accept and execute orders for bearings for ultimate destination in the French Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the French Company's territory and the British Company from time to time will notify the French Company of the details of the sales authorised under this paragraph and will pay to the French Company an amount equal to ten per centum (10%) of the net sale price received under any sales so authorised not being sales made through or at the request of the French Company.

(c) The American Company may authorise not more than four manufacturers or producers of vehicles in the United States of America to import into the French Company's territory bearings manufactured by said producers in the American Company's territory for incorporation in new products or for bearing replacement purposes for products previously manufactured or assembled by said manufacturers or producers or their subsidiaries in the French Company's territory Provided that they are not stamped or identified by the name Timken.

(d) For the purposes of this section a holding company as for instance General Motors Corporation and its constituent and subsidiary companies shall be deemed to be one manufacturer or producer.

(e) The parties hereto recognize and aprove the mutual licensing Agreement entered into between the American Company and International Harvesters Company dated the thirty-first day of December One thousand nine hundred [fol. 4777] and twenty-seven and the British Company

when requested by the French Company will supply to the French Company a copy of the said Agreement.

8. During the life of this Agreement the French Company shall not directly or indirectly make or sell or license others to make or sell bearings in the British American territory or in the French Company's territory knowing them to be for shipment into the British American territory save and except as follows to wit:

(a) The French Company may make or sell or license others to make or sell in the French Company's territory bearings for delivery or shipment into the British American territory as assembled component parts of completed articles of manufacture manufactured in its territory or as assembled component parts of completed units of manufacture manufactured in its territory for incorporation into such completed articles of manufacture.

(b) The French Company in the French Company's territory may accept and execute orders for bearings for ultimate destination in the British American territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorize sales to or known to be destined for manufacturers in the British American territory and the French Company shall from time to time notify the British Company of the details of the sales authorised under this paragraph and shall pay to the British Company an amount equal to ten per centum (10%) of the net sale price received under any sales so authorised not being sales made through or at the request of the British Company.

9. (A) Subject to the approval in writing of the British Company as to both terms and personnel to be exercised at its absolute discretion but not otherwise the French Company may from time to time grant sub-licenses to others to make use and vend bearings in the French Company's territory and may communicate to such sub-licensees any information with respect to inventions, discoveries, improvements and practices whether patented or not received from the British Company.

(b) Every such sub-license shall be deemed to be a license granted by the American Company and shall contain a provision to that effect similar to the provision in that behalf contained in this Agreement and all royalties pay-

able thereunder shall belong to the American Company and shall be made payable direct to the American Company accordingly but any amounts payable under the last preced- [fol. 4778] ing clause or any similar provision shall not be regarded as royalties.

(c) All the terms and conditions establishing the business and other relations between the French Company and any sub-licensee within the French Company's territory shall be submitted to and approved in writing by the British Company before the same are agreed to by the French Company and no alteration shall be made therein without the like approval.

(d) If the French Company shall acquire any stocks shares securities or other interest in any company or association manufacturing or selling bearings in the French Company's territory the French Company shall not sell or dispose of such stocks shares securities or interest without the consent in writing of the British Company.

10. (a) During the life of this Agreement the French Company shall pay to the American Company a royalty equal to four percentum (4%) of the net invoice prices after deduction of all discounts of all bearings manufactured or sold by the French Company less amounts equal to one-half (½) of the royalties paid directly to the American Company by sub-licensees pursuant to the last previous section hereof.

(b) Provided however that no royalties shall be paid hereunder by the French Company in respect to (1) completed bearings manufactured by the American Company and purchased from or through the British Company (2) bearings manufactured by the French Company and sold by it to sublicensees appointed under the authority of the last previous section hereof which are owned or controlled jointly by the American Company and Michael Bruce Urquhart Dewar of Number 4 Central Buildings Westminster London England or (3) bearings upon which the royalties are paid directly to the American Company by sub-licensees pursuant to the last previous section hereof.

11. The said royalties shall be paid on the first days of January April July and October of each year or within thirty days thereafter for the bearings sold during the quarter year prior to said respective dates.

12. (a) The remittance of the said royalties shall be accompanied by statements showing in detail:

(1) The number of bearings made during the preceding quarter year.

[fol. 4779] 2. The number of bearings sold during the preceding quarter year.

(b) The statements in respect thereto furnished during January of each year shall also be accompanied by a certified statement prepared by the auditors of the French Company or its sub-licensees as the case may be based upon an actual examination of the books and records of the French Company or its sub-licensees giving the same data as above required in respect of sales made during the year prior to said month of January and said January statements shall if required by the British Company be further verified by sworn declaration of the Managing Director for the time being of the French Company of its sub-licensees.

(c) The British Company and the American Company may once in each year at its own expense employ a chartered accountant who shall have the privilege of examining the books records and plant of the French Company and its sub-licensees with a view to determining how many bearings the French Company and its sublicensees shall have made and sold up to the time of such examination and to whom and when and for what prices.

13. (a) The British Company shall pay all renewal fees required to maintain and keep on foot all Letters Patent in respect to bearings owned by the British Company or the American Company in the French Company's territory which it shall desire to maintain and keep on foot.

(b) Provided however that if the British Company shall elect to discontinue or refrain from maintaining any such Letters Patent the British Company will give not less than three (3) months' written notice to the French Company and during the said interval the British Company if requested so to do shall assign or cause to be assigned to the French Company at the expense of the French Company any of said Letters Patent which the British Company shall so elect to discontinue or refrain from maintaining.

(c) The British Company at its own cost shall defend or cause the American Company to defend every action or

proceeding instituted for the purpose of revoking any Letters Patent in respect to bearings owned by the British Company or the American Company which it desires to maintain.

[fol. 4780] (d) Provided however that if any of said Letters Patents shall be revoked solely on some ground which would not have been available if the French Company had duly performed its obligations under this Agreement then and in any such case the British Company in addition to any other rights which it might have against the French Company shall be entitled to recover from the French Company all costs charges and expenses reasonably incurred in such defence.

14. Upon the termination of this Agreement whether under any of the provisions hereof or otherwise howsoever the French Company for a period of six (6) months thereafter shall have the privilege of completing and selling its stock of bearings on hand at the date of said termination upon the terms which would have ruled if this Agreement had not been so terminated and subject to the payment of royalties as herein provided.

15. (a) In the event of liquidation (except for the purpose of capital reorganization) of the French Company this Agreement shall immediately terminate and cease.

(b) The rights and privileges of the French Company hereunder shall be assignable only with the consent in writing of the British Company.

16. This Agreement unless otherwise terminated as herein provided for shall continue in full force and effect for a period of ten (10) years from the first day of January One thousand nine hundred and twenty-eight.

17. This Agreement is and shall be deemed to be entered into by the British Company on its own account and also for and on behalf of the American Company as a separate party so far as regards any rights benefits or obligations expressly granted reserved or undertaken by or to the American Company and so far as regards such rights benefits and obligations the American Company shall be entitled to claim the benefit and be subject to the burden of this Agreement accordingly.

18. This Agreement is entered into in England and shall be construed and take effect according to English Law.

In Witness whereof British Timken Limited under the authority of its Board of Directors has caused its Common Seal to be affixed to these presents in duplicate and Societe Francaise Timken under the authority of its Board of Directors has caused these presents to be signed by Wil-
[fol. 4781] liam Eric Lou Seward the Managing Director of the French Company in duplicate the day and year first above written.

Report on British Timken

Submitted by D. P. Hess, August 1, 1927.

[fol. 4786] British Timken, Ltd.

Birmingham, England

Manufacturing

Plant

At the present time we are occupying a modern type of one-story building, leased from Wolsely Motors, at an annual rental of $20,000.00. This rental covers the use, not only of the building proper, but also of all the machinery used therein, for the making of our bearings, with the exception of that used for the manufacture of cages. However, we do own in the British Timken name the following machinery, which was purchased during the year 1926:

2—No. 3 Cincinnati Centerless Grinders
2—No. 2 Cincinnati Centerless Grinders
3—10-inch Internal Grinders (Churchill Type)

The Wolsely Motor Company has recently been purchased, in receivership, by Mr. Morris, of Morris Motors, who is planning to continue the manufacture of the Wolsely car, and who requested that we give up our lease on the building we now occupy. This lease has 19 years to run, but we have complied with Mr. Morris' request and are arranging to vacate this property on October 31st of the current year. We have also agreed to purchase from Mr. Morris all of the equipment now covered by the heretofore mentioned yearly rental for a sum of $160,000.00. We have no written agreement nor any definite verbal agreement that we will obtain Mr. Morris' bearing business as a result of taking this equipment off his hands, other than the statement that he would be glad to consider us when we can quote prices of bearings more in accord with the prices he is now paying for ball bearings. Frankly, the purchase of this machinery was a mistake, as, with the exception of 22 Gridley Automatics, the entire list of machinery is obsolete as far as our present practice of manufacturing roller bearings goes. I immediately requested that this deal be held up, but was advised by both Mr. Dewar and Mr. Dallow, who are the executive managers of our British Timken business, that the deal had gone through and could not be changed.

Mr. Dewar stated that it was necessary to purchase the machinery from Mr. Morris in order to keep his good-will and to have a chance for the Morris business, and also that if we did not do this, Mr. Morris might enter the roller bearing business himself. While there may be some substance to the first statement, we must bear in mind, that, in the second regard, anyone using the present equipment for the manufacture of bearings would be at a great disadvantage in cost, and I explained to Mr. Dewar that we could have purchased at least 50 percent of a complete new bearing plant for the amount that was paid for the obsolete equipment from Morris.

[fol. 4787] We have just completed transactions covering a lease for 13 years on the plant originally used by the Electric Ordnance Company, and wherein the manufacture of Timken Bearings originally took place. This plant is known as the Aston Plant, and is located in the heard of Birmingham. It will give us approximately 100,000 square feet of manufacturing space in a three-story plant 35 years

old, and which is not nearly as well suited for our business, but which will give us approximately twice the floor space as the plant we now occupy. This lease provides fer an option to cancel every two years after three years of occupancy, and we are paying an annual rental of $10,000.00: However, we must bear in mind that in our new location we will be forced to carry our own depreciation and other charges which heretofore have been covered in our lease from the Wolsely Motors Company, so that the apparent saving of 50 percent in annual rental does not hold good, as depreciation charges will almost entirely wipe out this difference. This means, in summary, that we shall have obtained for practically the same annual expenditure a building giving us about twice the floor space now occupied, of which we will only need at the present time, one-third of the space available, or, we will use practically all of the entire ground floor. The main drawback to this building is the fact that it must be completely wired for our use, and the estimated cost on this work is about $30,000.00. We shall incur an additional expense in moving, such as re-hanging lineshafts, countershafts and locating machinery, of another $30,000.00 so that at least $30,000.00 will have to be charged into operating expense, which could have been avoided had we maintained our present quarters.

The writer also requested that this transaction be held up, and that a strenuous effort should be made to obtain a modern factory building where electric conduits, etc. were installed. I was advised here again by Mr. Dewar and Mr. Dallow, that they had been searching for such a place for the past three months without being able to find it. This statement does not check with that of Mr. Ellis, Works Engineer, who confidentially advised me that an ideal building about a mile distant from our present plant had been available, but which had since been sold. He flatly states that the move to Aston is not at all desirable, and he opposed it as much as he could. It might be well to state here that Mr. Loader, Shop Superintendent, also stated that, in his opinion, we could have found much better plant facilities, and also that it was a grave mistake to purchase the equipment from Wolsely Motors. This plant at Aston which we have purchased, was formerly occupied and owned by a subsidiary of Vickers, Limited, known as the Blick Works, who manufactured porcelain insulators, and who

used only a small part of this plant. Mr. Dallow, our director at Birmingham, is also a director of the Blick Works, and while he is very enthusiastic over the splendid deal that he made in leasing so large a plant for so little money, it is the writer's opinion that he was entirely too conscientious in seeing the Blick Works plant have a tenant. Please bear in mind that both Dewar and Mr. Dallow are very familiar with the writer's criticism of these two transactions.

[fol. 4788] At the present time our British Plant is making both "V" type and "F" type cones, but only approximately 15 percent is changed over to "F" type production. This is due to the fact that they have never been sold on the "F" type bearing, and as a result have been unwilling to adopt it. The writer was successful, however, in showing them the advantages of this type of bearing, and they have agreed to make a complete changeover by January 1st, 1928. Furthermore, the present design of the "F" type was not satisfactory, in the sense that they had departed from the location of the undercut as we use it, taking this undercut entirely on the rib itself, thus decreasing the rib area very noticeably. This was also changed at the writer's request, and they will follow our method in exact detail.

British Timken have also departed from us in the taper of their rolls, with the corresponding changes in cone tapers, but they have retained the same cup tapers that we use. The idea in this was to standardize and decrease the variety of rollers from the taper standpoint, and their present practice compares with ours as follows:

BRITISH MODIFICATIONS TO ROLLERS MAKING CONSTANT ANGLE

Existing Cups Unaltered

Number	American	New B, T. Standard	Series
202	3° 4′	3° 10′	200
302	3° 8′	3° 10′	300
2003	3° 4′	3° 10′	2300–2700 inc.
3003	3° 8′	3° 10′	3300–3700 "
5003	3° 14′	3° 10′	5300–5700 "
6003	3° 35′	3° 34′	6300–6500 "

Rolls Unaltered

Nos. 40–103–402–502–702–902–1008–2005–2008–2009–3008–4004–Ford

It was decided that in view of the complications such as would be incurred in changing back to our taper design, and its effect on the "F" type program completion, that

British Timken will continue to use the tapers they have set up insofar as possible, and the limiting factor will be the ability of the hardened rolls that we send them, to clean up in the grinding operation. In other words, if our rollers will not clean up with their tapers, they will change over and follow our tapers in every detail. A rather hurried study of this problem indicates that there is sufficient stock on our rollers to clean up practically all part numbers.

[fol. 4789] Cages

The cages are now purchased complete from Wolsely Motors, and the equipment is owned and operated by Wolsely Motors in their own shops. However, we have since purchased this equipment, but, regardless of this fact, British Timken will purchase all cages from us at our cost plus 75 percent. These cages will in all probability carry a 33⅓ percent duty, as it was the opinion of British Timken that the spreading operation was not of sufficient importance to have cages lacking this operation, placed in the classification of "Raw and Process Steel".

Summary of Product

Summarizing this individual part situation, we shall receive purchase orders from British Timken for approximately eight and one-half million hardened rolls annually, and about eight hundred thousand finished cages annually. This will save British Timken about 30 percent in their present cost of rolls and cages.

Material

At the present time British Timken are using four different kinds of steel, viz.,

(a) Low carbon chrome alloy
(b) High carbon chrome alloy, direct hardening
(c) Low carbon mild steel
(d) Stainless steel

The major part of their production is made from the first classification, low carbon chrome alloy, but about 25 percent of the rollers are made from direct hardening steel. This is due to the fact that several years ago they were having considerable trouble with defective material in

rollers, and at that time changed over to direct hardening steel for several of their customers. This practice is still in use. The low carbon mild steel is used for the Ford bearings now manufactured, and the stainless steel is used in a few instances for customers requesting this kind of material.

They are paying the following prices for their materials:

BRITISH TIMKEN MATERIAL COSTS

	British Coast	Canton Cost
Tubing	$.12 per lb.	$.06 per lb.
Bars (Cups & Cones)	.08 per lb.	.055 per lb.
Bars (Rolls)	.09 per lb.	
Cage Stock	.065 per lb.	.031 per lb.
Gas (460 B.T.U.)	.54 per 1,000 cu. ft.	.45 per 1,000 cu. ft. (1000 B.T.U.)
Electricity	.015 per k.w.h.	.0075" k.w.h.
Fuel (Coal)	5.00 per ton	3.75 per ton
Fuel (Oil)	.075 per gallon	.05 per gallon
Water	.01 per 1,000 gallons	.02 per 1,000 gallons

(Note: Matters in second column shown in red on original.)

[fol. 4790] During the year 1926 the following material was consumed:

Bars—for cups and cones	100 tons
Bars—for rollers	140 "
Tubes—for cups and cones	300 "
Forgings	300 "

In order to facilitate the heat treating problem and the various other problems entailed in the handling of four different grades of steel, it was decided to standardize on one kind of steel, viz., low carbon chrome alloy, and use this for everything. It was further decided to purchase all tubing from us, at a price of $.095 F.O.B. Canton, or approximately $.105 Birmingham. As will be noted, this is a direct saving of approximately 10 percent, but will be a much greater saving, as we can supply tubing where forgings are now being used. Details will be given later in this report. So far, they have been unable to purchase or even get prices on our nickel molybdenum steel, for the reason that it is apparently very difficult to obtain molybdenum in England, and also is very costly. The writer explained the qualities of this particular type of steel and its superiority over the chrome alloy in roller bearing use, and this had additional influence on their deciding to purchase all tubing from us.

Production

At the present time British Timken are manufacturing 3,000 bearings a day, with a force of 460 people in the plant and 70 people on their office payroll, including Sales and Engineering Departments. This production is the highest they have ever attained and is 50 percent greater than the average 9 months' production from October 1, 1926 to June 30, 1927, amounting to 2,000 pieces daily. This increased production has been warranted almost entirely by increased sales in the commercial vehicle and motorcycle field. Details of these matters will be given under the "Sales" heading later in this report.

Screw Machines

At the present time our British Plant is using Acmes and Gridley Automatics for their bar and tube work, and Potter & Johnson and Gisholt Chucking Machines for their forging work. Production on all of this equipment is very much slower than ours, as evidenced by the following figures:

SCREW MACHINE COMPARISONS

	Part No.	Type Machine	Pieces per hour
Canton	14120	Acme No. 56	60 (120 on 2" Acme)
[British Timken	14120	Acme No. 56	29]
Canton	419	Gridley 3¼"	17
[British Timken	419	Gridley 3¼"	12]
Canton	09074	Acme No. 56	67 (180 on 2" Acme)
[British Timken	09074	Acme No. 56	33]
Canton	412	Gridley 4¼"	21
[British Timken	412	Gridley 4¼"	10]

(Note: Matters in brackets shown in red on original.)

[fol. 4791] The quality of work is about on a par with ours. A large part of the slowness of British production is explained by the fact that they are considerably handicapped, due to inadequate raw material. All part numbers up to and through the 200 series are made from bars and tubes are used for the larger sizes. However in order to keep raw material inventories down to the extent of limiting sizes of tubing for different cups and cones, it is the practice to make a large number of cups and cones from the same size of tubing, with the result that in many cases a great deal of excess stock is removed.

I was further advised that the quality of tubing is very uncertain, and ranges in hardness from 150 Brinnell to 250 Brinnell, and that, as a result of this condition, they slow down the machines to keep the tools in a fairly satisfactory operating condition. Mr. Leader, Superintendent, stressed this point very much, and stated that if he were given material similar to the kind we were using, that he could equal our unit production in almost all cases, but that his general overall efficiency in the Screw Machine Department would be lower than ours, on account of the great number of changes he was called upon to make. As an indication of this latter problem, the writer made a study of the product sold from October 1st, 1926 to June 30th of the current year, and finds that during this interval 38 percent of the cones sold were in quantities of less than 50 pieces for the entire period. This of course, complicates the manufacturing problem at British Timken, particularly in the Screw Machine Department; and the remedy for this will be dealt with later in this report.

All automatic screw machines, both multiple and single spindles, are operated on a basis of a man and a helper to 6 machines. The Potter & Johnson chucking machines are operated on a similar basis; the Gisholts are operated one man per machine. At the present time 31 different parts are made from forgings on these chucking machines, and machine times compare with ours as follows:

CHUCKING WORK

	Part No.	Type Mach.	Pieces per hour
Canton (2 operations)	6552 cone	Gridley	4
British Timken (3 operations)	6552 cone	P & J	2
Canton (2 operations)	6520 cup	Gridley	5 (4 mach. to 1 man)
British Timken (3 operations)	6520 cup	Gisholt	2 (1 machine to 1 man)
Canton (from tubing)	5520 cup	Cleveland	10 (4 mach. to 1 man)
British Timken (from forging)	5520 cup	Gisholt	2 (1 machine to 1 man)

British Timken has just purchased the following used machinery from Wolsely Motors:

6 Potter & Johnson Automatics at $1,500.00 each	$9,000.00
3 Gisholt Lathes at $1,000.00 each	$3,000.00
Total	$12,000.00

[fol. 4792] These machines are now being rebuilt at an estimated cost of $200.00 each. Here again it would have been far more advisable to have purchased modern ma-

chinery, such as Gridley Single Spindles with the necessary tooling, and for the amount invested we could have purchased four of this type of machines, which would have handled, with adequate forgings, more production that the heretofore mentioned Potter & Johnson and Gisholt equipment. This was explained to Mr. Dallow, who of course had no knowledge of this type of equipment, but with which Mr. Loader, Shop Superintendent, was acquainted.

The writer discussed with Mr. Loader the question of speeding up present Acme Automatics, as they were cutting a very thin chip and seemed to be under no handicap due to the material situation heretofore described. Mr. Loader was quite reluctant to do this, but with the help of Mr. Drissner, of the National Acme Company, we finally persuaded him to try one machine. This was done, and after four days' operating conditions he was satisfied that all of this type of equipment could be speeded up 30 percent, and he further agreed to do this at the earliest possible moment. Mr. Loader is very enthusiastic about using our tubing, and feels confident that he can reach our productive times on various part numbers as soon as he has a complete supply of our materials.

The methods now used for the machining of forgings are very obsolete, and we can, through the use of tubing, replace forging now used on 23 part numbers. However, in order to do this, at least 2 large, single spindle automatic machines of 6½" to 7" capacity should be purchased. They now have one 6" Cleveland Automatic, but in order to take advantage of tubing in place of forgings, they will need two additional machines. Furthermore, two single spindle chucking machines of the Gridley type should be purchased, one for the inside operations and one for the outside operations. The commercial vehicle end of our business is growing very rapidly, and it can be readily seen from the figures heretofore submitted, that their present method of making these cones and cups on Potter & Johnsons and Gisholt lathes is simply throwing money away. Furthermore, one small 2" fast automatic of the Cone or Acme type should be purchased for the manufacture of the smaller bearings, such as the 09070 series and the 1100 series which is used on motorcycle work. We have been unable to obtain the Ford replacement business, due to high costs; and it is the writer's opinion that with adequate

screw machines of a modern type we can materially reduce our costs in this operation. Details of this matter will be given under "Sales".

Summarizing the general screw machine situation, the following action should be taken:

All Acme Automatics on cups and cones should be speeded up at least 30 percent.

The following equipment should be purchased:

2—Cleveland Single Spindle Automatics, 6½" to 7" capacity, approximate cost $2,500.00 each. Total	$ 5,000.00
[fol. 4793]	
1—2" Cone or Acme Automatic, approximate cost	5,000.00
2—4¼" Single Spindle Gridley Automatic Chucking machines, approximate cost $3,000.00 each. Total	6,000.00
Total investment	$16,000.00

In the manufacture of rollers they are now using roll automatics similar to ours, but it was decided to purchase all rollers from us, in a hardened condition, and I quoted a price of our cost plus 75 percent F.O.B. Canton. No duty will be incurred, as this class of material will come under the classification of "Raw and Process Materials". However, sufficient material is on hand and on order to cover their roll needs until approximately January 1st, 1928.

Carburising

Our British Plant is using at present eight pot type carburizing furnaces, four of which are fired by gas, and the remaining four by coke. These furnaces are used on cups and cones, with bone-meal as an energizer in the ratio of one part new meal to three parts old meal. The time of product in the furnaces is about the same as ours for this type of work, but there was considerable variation in quali. The writer examined fractures from day to day, in which this variation reached a strong 1/32, and in a few cases reached 3/64. This part of their work was not receiving the attention it deserved, and I requested that this be given better supervision, which was done, and will be described a little later on in this report. Roll carburizing is done with small gas type furnaces, similar in general design to our furnaces, but built very crudely by British Timken many years ago. These furnaces hold 100 pounds each, and the product was being quenched in water from

50 to 70 degrees Fahrenheit. Fractures also showed considerable variation here, and I was told that these small gas furnaces were not very satisfactory. At my request, the quenching medium was changed to oil. Due to the fact that Mr. Morris, when he takes over the present plant, does not wish to give up the carburizing furnaces, it was necessary for us to place orders for new furnaces. As a result, six pot type furnaces were ordered and are to be installed at the Aston Plant by October 1st. These furnaces are approximately the same as our- (costing $800.00), but will be gas-fired and of a modern design. I requested that they be made high enough so that our obsolete nichrome carburizing pots could be used. This was not possible, except by breaking off the legs or our nichrome pots, which will be done if we decide to sell them our pots.

Due to the fact that the gas available in Birmingham has a B.T.U. content of 460 to 480, it is impossible to use gas carburizing furnaces.

[fol. 4794] Hardening

Cup and cone hardening is done on a stationary hearth type of furnace, a good deal like the standard heating furnace used in a forge shop. Four of these furnaces are in use, all gas-fired, and with pyrometric control. Quenching is done in exactly the same way we used ten years ago, viz., using a tank with a hand-operated quenching plate, on which are inserted plugs of the cast iron type. They also have two roll-retort furnaces which are used for roll hardening. However, due to the lack of equipment, rolls are receiving only one treatment, and only fair results are being obtained.

Following is a comparison of cup and cone hardening times:

	Part No.	Furnace	Pcs. per hour
Canton	5720 cup	Rotary Hearth	120
British Timken	5720 cup	Stationary Hearth	27
Canton	319 cone	Rotary Hearth	185
British Timken	319 cone	Stationary Hearth	40

The writer was very much disturbed by the inefficiency of the entire Heat Treating Department, and especially of the fact that practically no fractures were being made from the hardening furnaces. The first two days I was there,

only three fractures had been made, and only one of these fractures showed even a fairly good satisfactory heat treatment. Supervision of this department is not good, and has been handled by the Wolsely Motors through their metallurgists. Our Superintendent, Mr. Leader, disclaimed all responsibility except that for the past 60 days, and it is very evident he knows practically nothing about this branch of the business, other than the labor element. I explained to both Mr. Dewar and Mr. Dallow that we were in real trouble in this department, and that intelligent supervision must be installed at once. As a result, a metallurgist by the name of Evans was hired from Wolsely Motors, and I was pleased to find he is thoroughly familiar with our work, and also he realized our wretched practice in this department. He promised me that if I would obtained permission for him to spend all of his time in the Heat Treating Department he would materially improve it, even with its present poor equipment, within 30 days time. I obtained this permissions from Mr. Dewar, and, as a result quality should be somewhat better in the very near future. To give an indication of this department, we are heat treating approximately 6,500 cups and cones and 40,000 rolls a day, on a three 8-hour shift basis, using a total of 30 men.

The following equipment should be installed in this department at once, and upon such a basis I am very confident this force can operate one shift, with a maximum number of ten men:

6—Carburizing furnaces (now ordered) at $800.00 each	$ 4,800.00
2—Rotary hearth furnaces at $1,000.00 ea.	2,000.00
1—Rotary retort furnace, cup and cone plug type	3,000.00

[fol. 4795]

Carried Forward	$ 9,800.00
1—Rotary retort furnace, cup and cone drop type	$ 3,000.00
3—Quenching machines at $700.00 each	$ 2,100.00
Total	$14,900.00

This department will be greatly aided in its operation, first by the elimination of four different kinds of steel which are now being used, which will be done at once, and secondly, by the use of our nickel molybdenum steel with its resulting heat treating practice, and third, by eliminating all roll hardening due to obtaining hardened rolls from us.

Back Face Grinding

Due to the demands of the British trade, our cups and cones are ground on both faces on a vertical type of machine, similar in design to the Heald Grinder used in our tool-room. The quality of the work is very good with regard to the flatness, although the surface finish is inclined to be slightly rougher than ours. Production times compare as follows:

BACK FACE GRINDING

	Part No.	Type Mach.	Piece per hr.
Canton	419 cone	Own design	300 (each face)
[British Timken	419 cone	P & W (Vert. surf. gr.)]	200 (each face)]
Canton	3320 cup	Own design	300
[British Timken	3320 cup	P & W	143]

Internal Cone Grinding

The present method of grinding cone bores is to use machines similar to our old B & S and Modern types. Quality is very good, as all bores are held to .0006 and my inspection showed that they seem to have very little trouble with either a "bell mouth" or "taper" condition. Men are used to operate these machines, but production is very slow, as will be noted in the following comparative figures:

INTERNAL CONE GRINDING

	Part No.	Type Machine	Pcs. per hr.
Canton	419	Heald	87
[British Timken	419	B & S	7]
Canton	09074	Heald	95
[British Timken	09074	B & S	15]

(Note: Line in brackets shown in red in original.)

External Cone Grinding

This operation is done on machines similar again to our B & S External Grinder, and here again production is very [fol. 4796] slow, but surface finish is good, and I saw no chatter whatever in this operation.

Comparison of production is as follows:

EXTERNAL CONE GRINDING

	Part No.	Type Machine	Pcs. per hr.
Canton	419	Own design	124
British Timken	419	B & S	17
Canton	09074	Own design	195
British Timken	09074	B & S	40

Rib Grinding

Rib Grinding is done on a very light machine, using a solid non-expanding arbor, and while eccentricity limits are .011, I found approximately 10 percent of the product ran as high as .0015 in eccentricity. Production here is also slow, in accordance with the following comparisons:

RIB CONE GRINDING

	Part No.	Type Machine	Pcs. per hr.
Canton	419	Own design	150 (F type)
British Timken	419	Churchill	40 (V type)
Canton	09074	Own design	150 (F type)
British Timken	09074	Churchill	67 (V type)

I advised British Timken that as soon as we had developed a satisfactory external cone and rib machine we would send a machine to them for trial and observation.

Only one inspection is used at British Timken, and this is done after the rib grinding operation. Scrap figures for the month of May, compared with our practice, show the following results:

COMPARISON OF SCRAP

(All Operations)

	Cones			Total
Canton	"To man" 5.4%	"Not to man" ...	1.7%	7.0%
British Timken	"To man" 4.0%	"Not to man" ...	.3%	4.3%

When I rrached Birmingham an order had already been placed for one Internal Heald Cone Grinder, at the price of $5,000.00. Three more of these machines were optioned at the same figure, which I advised was entirely too much to pay for these machines. The sales representatives for the Heald Company were called in, and after considerable negotiating they reduced the price of the machines on option, $500.00 each, but refused to reduce the price of the machine now on order. At my request they cabled the Heald Machine Company to equip the machine on order with Timken Bearings, and all machines in the future will be so equipped. Delivery of this machine was promised for September 1st-15th, and in order to avoid the delay which would have been incurred through British Timken [fol. 4797] experimenting with spindles, etc., the writer cabled the Canton Plant to forward one internal cone machine completely set up, with extra emery wheels and spindles. This made a decidedly good impression on Brit-

ish Timken, and Mr. Dewar in particular was very grateful for our help in this regard.

In the Cone Grinding Department we should order the following machinery at once:

3—Internal cone grinders @ $4,500.00 each—$13,500.00 (Now on option)

These three machines for internal cone grinding, will, in conjunction with the two machines available, be sufficient for all of British Timken's present production on one shift, provided they can reach our production figures on this operation. This, in my opinion, is quite possible.

Internal Cup Grinding

This operation is done on machines similar to our Moderns and B & S, with resulting slow production, as evidenced by the following figures:

INTERNAL CUP GRINDING COMPARISON

	Part No.	Type Machine	Pcs. per hr.
Canton	1730	Heald	90
British Timken	1730	B & S	24
Canton	3320	Heald	53
British Timken	3320	B & S	9

Surface finish is very good, and all cups are held to a stand of .006 high and .000 low.

British Timken were not familiar with our Heald Internal Cup Grinders, and as a result, the writer cabled for one of these machines to be shipped to them. This will be put into production as soon as it arrives. For this operation the following equipment should be ordered at once:

4—Heald Sizematic Internal Cup Grinders @ $4,500.00 each—$18,000.00

With this quantity of machines it is felt all of British Timken production can be handled on one shift. Reasons for not operating two shifts will be given later in this report.

External Cup Grinding

This operation is done on Landis External Grinders at a slow production rate, but with fairly good quality and

the surface finish is good, and limits for size and out-of-round are held to .001. At the present time British Timken have one O. D. Centerless Cup Grinder in use, which is operating very satisfactorily. Production time on these "O. D." machines is as follows:

[fol. 4798]

EXTERNAL CUP GRINDING COMPARISON

	Part No.	Type Machine	Pcs. per hr.
Canton	1730	Cinci. Centerless	400 (4-pass)
British Timken	1730	Cinci. Centerless	120 (5-pass)
Canton	3320	Norton	300
British Timken	3320	Landis	21

They are giving their cups five passes, and the examination of the product showed that all of these cups were being held within a .0006 limit, and that the surface finish was fairly satisfactory; the only objection in this latter regard being a slight roughness, which of course was of no great importance. British Timken had ordered an additional external cup grinder from Cincinnati Centerless, at a price of $7,800.00, compared with our price for a similar machine of $6,500.00.

This additional machine will give British Timken, so I was advised, sufficient equipment to handle all of their cup production on one shift. The writer does not agree with them on this point, as they will have considerable changes to make, with a resulting decrease in machine efficiency. However, no recommendations for further equipment of this kind will be made, in view of the heretofore mentioned British statement.

At this point it should be stated that the writer was very blunt in his criticisms, both to Mr. Dewar and Mr. Dallow, of the British Timken purchasing policy with reference to machine tools. I requested that in the future no purchases should be made of any kind of machinery without first discussing it with us and ascertaining in particular the prices we pay for such equipment. It apparently is not the British attitude to be what we term "close buyers", and I spent a great deal of time getting this idea across to them. In most cases it was not possible to go back over past transactions, but I was assured by Mr. Dallow that he would be very careful in this regard in the future, and both Mr. Dewar and Mr. Dallow agreed to purchase absolutely nothing of a major nature without consulting with us in advance.

Only one cup inspection is used, and results compare with ours as follows:

COMPARISON OF SCRAP

(All Operations)

	Cups		Total
Canton	"To man" 3.4%	"Not to man" .. 3.5%	6.9%
British Timken	"To man" 4.7%	"Not to man" 1%	4.8%

Roll Grinding.

The present method of grinding rolls is on machines somewhat similar to our old roll grinders, and these machines are of a semi-automatic nature, operated by girls, so that one girl is required for each machine. Production [fol. 4799] is very slow, and surface quality is about the same as ours. The taper on the rolls I examined was very good, but "out-of-round" ran from .0002 to .0004. This type of machinery is obsolete with British Timken, as they are now using three Cincinnati Centerless Grinders for this operation. All rolls are given two passes at a production rate of 60 and 45 per minute. At present two girls are operating these three machines, with the aid of a lineman. Quality of product is practically identical with ours, to the extent that they are having a difficult time in overcoming a slight chatter; but "out-of-round" and taper was very good. I was unable to obtain any definite figures with regard to rejections for taper, as all of the rolls were being mixed with similar rolls ground on both types of machines; but the total taper rejections were .5 percent. British Timken have placed orders with the Cincinnati Centerless Grinder Company for the following additional equipment.

3—No. 2 Centerless Grinders for rolls @ $5,375.00 each —$16,125.00

Delivery about September 1st, 1927.

This compares with our price for similar equipment of $4,400.00 each. This equipment will be sufficient to handle all British roll production on one shift, according to Mr. Loader. I explained to him in this regard that he would probably have to operate two shifts, as the hardened rolls that we would supply him would be made on the headers and have about .025 to remove, whereas his present rolls have only .010 to .012. He said he thoroughly understood this, and was prrpared to make any necessary changes in

his production plan, even to the extent of giving additional passes should he feel the same was necessary. No recommendations will be made for the purchase of any additional roll grinding equipment, as the writer feels the present equipment is ample.

The end grinding of rollers is done on a very small machine, similar to the Woods Grinder we formerly used, where the roll is placed in a collet and fed up to the emery wheel. This applies both to the "V" type and the "F" type roll now in use. British Timken are very desirous of obtaining a Keller Grinder from us, but the writer explained to them that this machine was obsolete with us, and as soon as our new machine had progressed far enough along, we would be glad to forward one to them.

[fol. 4800] Scrap rejections for rolls are running as follows:

ROLLS

(All Operations)

			Total
Canton	"To man—0.0%	"Not to man"—0.1%	0.1% (a)
British Timken ..	"To man—2.4%	"Not to man"—1.0%	3.4%

(a) Covers past three months—centerless grinders, 3-pass roll.

Here again it was not possible to separate the rejections for the centerless ground rollers from the other rolls, but I was told that centerless rejections were materially less, and Mr. Loader stated that he would have his total rejections so that they would compare very favorably with ours.

Inspection

British Timken inspection methods are quite thorough, but rather badly managed as far as organization of the Inspection Department goes. For example, their Inspection Department consists of 38 girls and 19 men. A careful analysis by the writer convinced me that this work could be done with approximately 30 people, of which 90 percent would be girls. This information and details were given Mr. Dallow, our director at Birmingham, who assured me that he would take the necessary action to accomplish this end. They do not use any cone hole gauging machines or cup stand machines nor O. D. cup gauge machines, but sufficient equipment along this line will be built at once. Cones are not size-gauged, but this operation is eliminated due to the very slow external grinding, where uniform cone sizes are

obtained. Roll inspection for taper is done on a small hand gauge at the same time the rolls are given visual inspection. Roll gauging for size is done on a home-built machine, with the principle of passing the roll automatically between two hardened and ground plates, reaching an apex. Drawings of this machine are in our hands, and a detailed explanation can be given by the writer.

Production on these gauging machines runs about 600 pieces per hour, and in view of our contemplated changes in gauging practice, the writer made no recommendations covering a change in this equipment.

Assembly, Testing, Packing

British Timken use men on the assembly bench, and at present, assemble 3,000 cones daily with 9 men. Their assembly practice differs from ours, to the extent that the rolls and cages are assembled and immediately closed in on small hand presses by the assembler, who also places the equivalent cup with the assembled cone. The product is then passed through a very crude sound testing machine, which is nothing more than a small drill press operated by a boy. No test pieces were available, and this boy's judgment, backed by Mr. Loader, are the limiting elements for this test.

[fol. 4801] Assembled cones are measured for stand in cup by one man, who in turn passes them, still accompanied by the cups, to a girl, who slushes and sends them to the Shipping Department. All product is shipped in individual containers, and in boxes which compare in size with ours, to the extent of being just twice as heavy, and considerably over-built with regard to re enforcement pieces, etc. It might be well to remark here that there is no reason in the world why this assembly cannot be done by girls, as well as the succeeding inspection operation, and I was assured by Mr. Dewar that this change would be made when we move to the new plant at Aston. Furthermore, the earnings of these assemblers are out of all proportion to the rest of the plant, as will be noted later on in this report, under the heading of "Payroll and Wages". Stocks of finished non-assembled cones and assembled cones are handled in exactly the same manner as ours, with the exception heretofore mentioned, that all single cones are packed individually with the corresponding cups.

Payroll and Wages

At the present time British Timken shop payroll is running $40,000.00 monthly, and shows an average hourly earning rate of $.36. The general office and departmental payroll, including the Sales Department, but excluding the salaries of Mr. Dewar, Managing Director, and Mr. Dallow, Director at Birmingham, runs $6,700.00 monthly. All major departments are operating three shifts. The day shifts operate on a 47-hour a week basis, at the rate of 8 to 9 hours per day. The night shift operates on a 45-hour basis at the rate of 9 hours per day. The Heat Treating Department operates three 8-hour shifts six days per week. All major operations are on piece-work, and payroll figures show that approximately 65 percent of the shop force is on a wage incentive basis of some kind, and develop an average hourly rate of $.40 per hours.

The wage situation in England is controlled by the unions to the extent that hourly rates are set up for each occupation, and to which all manufacturers agree. The unions also set and control conditions of employment along the line that 47 hours is the normal working week, and any time over this is considered extra time and paid on a varying scale, such as time and a half and double time, which in turn is controlled as follows:

All time after 5:45 must be paid at the rate of time and one-half, and all Saturday afternoon or Sunday time is considered overtime and is paid at the rate of double time. All night shift operators are paid at the rate of time and one-third. (This makes night shift operation very expensive and to be avoided.)

Piece-work is permitted and used in England, under the condition that all piece-work rates shall develop earnings at least 33⅓ percent higher than the union hourly rate for such occupation or work in which the piece-work is used. Furthermore, no changes in the piece-work rates can be made, unless there is a definite change in the method of manufacture. As an example, to change the camming and the tooling on an automatic to speed up the work is not consid- [fol. 4802] ered a definite change in method, and no change in a piece-work price is permitted. However, if the product was originally made, for example, on a No. 56 Acme and changed over and manufactured on a 2-inch Acme, this would be considered a change in method, and the resulting decrease in piece-work rates could be made. There is still standing in

British union labor agreements a clause to the effect that men will not earn over a certain amount, but this is no longer in force, and everyone earns all he can.

There is now in use in England a plan of wage payment which is an outgrowth of the war, known as the National Wage Advance, hereinafter referred to as "N. W. A." It appears that during the war these N. W. A.'s were made periodically by the government in the form of a certain amount to be added to the weekly wages of each employee. No varying amount was given, based on a 47-hour week for day workers (and amounts to approximately $3.15 per week to night workers), regardless of the amount of earnings made in their regular routine work. As a result, for the lower-paid workers this so-called bonus amounts to approximately 30 percent of their wages, and drops down for the higher-paid workers to about 20 percent. Please understand that the employer has no control over this particular feature of wage payment. Just before the writer left England, the engineering unions, which we would call in our country "machinists unions", had succeeded in obtaining an increase amounting to $.50 per week. They had originally asked for a $5.00 per week increase, but were vigorously fought by the manufacturers, who finally compromised on the 50-cent rate increase. This takes effect August 1st.

Labor unions are accepting the use of production machinery, and while they still cling in principle to the old theory of limited production per man, I was advised everywhere in England that this had been abandoned, but had not been officially abandoned in any published statements up to this time. However, the situation in Birmingham, not only in our plant, but in two others that the writer visited, viz., the Hardy-Spicer Universal Joint people and the Wolsely Motors people, all stated that production machinery was accepted by the unions in every regard. This same statement was made at the Gillette plant, which is located 20 miles south of London, and in which plant all American machinery and American methods are now in use.

However, in our British Timken plant the method used when installing new machinery, is to place the new machines in a separate room away from the general production routine, where all tests are conducted and piece-rates are figured. After an interval of from three to six months the machines are then transferred to the production line and immediately accepted by the employees, regardless of

the fact of how many are dropped from the payroll as a result of the higher rate of production per machine.

[fol. 4803] One of the outstanding labor situations in England is the wide employment of boys and young girls. Anyone reaching 14 years of age can go to work, but it was my observation that enforcement of this regulation was very lax, and it seemed to me that boys of 10 and 12 years of age working in plants, was very common. It is a very distressing sight to see little, slight, slender lands trying to lift heavy pans, etc., and our plant at Birmingham is no exception to the rule. Of course, this has a very decided advantage in low labor costs, as evidenced by figures set forth a little later on in this report. All of these boys, incidentally, are used for secondary operations, such as chamfering, etc., whereas girls are used both on roll surface and roll end grinding, and in the usual Inspection Departments, etc.

Following is a table showing comparison of British rates as compared with Canton rates:

COMPARISON OF WAGE RATES

Department	British Timken		Canton	
	Hourly rate	Av. Earned rate	Hourly rate	Av. Earned rate
Automatic operator (c)	.24 (a)	.59	.47 (b)	.91
Automatic helper	.18	.45	.42	.55
Chamfering, etc. (boys) (d)	.12	.16	.40	.52
Heat Treating (fireman)	.22	...	.55	...
Heat Treating (operator)	.20	...	.45	...
Cone grinders (lineman)	.24	.52	.65	.78
Cone grinders (operator)	.19	.51	.50	.76
Cup grinders (lineman)	.24	.52	.65	.78
Cup grinders (operator)	.19	.51	.50	.76
Roll grinders (lineman)	.24	.52	.65	.77
Roll grinders (female oper.)	.14	.21	.50 (e)	.77
Inspectors (male)	.21	...	.44	...
Inspectors (female)	.14	...	.29	...
Assemblers (male)	.20	.65	.25 (female)	.40
Storekeepers, stockmen	.18	...	.50	...
Toolmakers	.24	.50	.65	1.05
Laborers	.16	...	.40	...
Millwrights	.24	...	.50	...
Electricians	.24	...	.55	...
Pipefitters	.24	...	.55	...
Office clerks (male)	65.00 per mo.		115.00 per mo.	...
Office clerks (female)	35.00 per mo.		60.00 per mo.	...
Stenographers (female)	40.00 per mo.		85.00 per mo.	

(a) Earnings per hour include day rate plus N.W.A. award plus piece-work earnings.

(b) Earnings per hour represent departmental average.

(c) All automatic operators are capable of setting up jobs. No linemen are used.

(d) Fluctuating wage scale for boys and girls, based on age of employee. Eighteen-year wage scale used.

(e) Represents male operator.

[fol. 4804] There is no question but that we can reduce British Timken costs 20 percent, and the writer is convinced that if they will use just a little American aggressiveness in the handling of indirect labor, they can increase this figure to 25 percent. During my visit with them we made a very thorough study of this factor, and made detail costs of the following part numbers:

Cones	Cups	Cages	Rolls
419	412-A	411-V	402
365	363-A	361-L	302
1351	1330	1311-L	1003
740	742	741-L	702
537	532	531-L	502
247	243	241-L	202
5356	5320-A	5311-L	5003
2687	2620	2611-V	2003
26118	26283	26008	2008
09074	09194	09001-L	1003
09075-6	09194	09001-L	1003
14120	14273	14001-L	1003
6552	6521	6511-L	6003

In setting up these costs we used revised manufacturing practices in the following manner:

Our screw machine times were used, but discounted 25 percent to make up for the various changes necessary in British Timken production. This condition can be aided materially by British Timken purchasing from us, if we care to sell, cones made in the green, in the sizes where they have only small requirements. This will be done by British Timken if we so decide.

Carburizing and hardening times used were those of present British Timken practice, which as heretofore stated, can be materially reduced at least 33⅓ percent. In the grinding operations our productive times were again used, less 25 percent for all internal operations on both cups and cones; and the present British productive times for centerless cup grinding were used, but no change was made in the present British productive time on the O. D. and rib grinding operations of cones. The prices quoted by the writer for both cages and hardened rolls were used, and the centerless roll grinding times used, were predicated on the 3-pass principle, but with productive time 25 percent slower than ours. The saving incurred by using our raw material to the extent of 10 percent lower price per pound was taken into consideration, but we did not take into consideration the fact that the screw machines can be materially speeded

up using our material, and further, no consideration was made of the fact heretofore mentioned, that tubing can be used for 23 parts now manufactured from forgings. The [fol. 4805] part numbers set up herewith, represent over a nine months period, 20 percent of the total production, and are fairly indicative by size, so that the writer feels that, when we say we can reduce British costs by 20 percent, I am very conservative, and that this figure can be increased to between 25 and 30 percent by making machinery investments heretofore recommended, but which will be summarized a little later on.

British Timken methods of computing costs are done on the usual shop order basis, that is, the cost of these shop orders is figured individually. Mr. Dallow is a very keen cost man, and keeps well-posted on any variation, etc. up or down, in their costs. Overhead charges are now running around 130 percent, and administrative, including sales overhead, runs 20 percent, but include our royalty, which will run from 10 to 12 percent of the administrative charges. Details with reference to the computation of British costs are in the writer's possession, but are too voluminous to set up in this report.

Personnel

Mr. Dewar, as Managing Director of the British Timken Company, has his headquarters in London, and spends, so far as I was able to determine, one day each week at Birmingham. He advised me that in the very near future he will have terminated all his other connections and will be in a position to spend all of his time in the development of the Timken business. There is no question but that Mr. Dewar is tied up with a very powerful industrial group in England, headed by Mr. Dudley Docker. This group controls and manages a great variety of industries, ranging from street railway companies to paint works, and is also connected all over the world through the export sales of the Metropolitan Carriage, Wagon & Finance Company, builders of railroad cars. It is my impression that Mr. Dewar is Mr. Docker's "right-hand" man, and I know positively that Mr. Docker will be interested financially in the Timken Company, and may even ultimately be on the Board of Directors. Mr. Dewar is trying to arrange this at the present time. Naturally, the influence in our behalf which

can be expended by Mr. Docker, should prove very beneficial to us. The writer's impressions of Mr. Dewar were that he is very capable along the sales lines, and has considerable more agressiveness than the average Britisher. He is a keen thinker, and his only drawback in my opinion is that his judgment is not of the best, especially in the expenditure of money. All the time I spent with him, he endeavored to impress me with the fact that he wanted to go very slow in the expenditure of funds, but at the same time, as heretofore outlined in this report, his past actions do not bear out these statements. He is exceedingly optimistic as to our prospects, and states that there should be no question but that we can sell 2,000,000 bearings in England, with a decrease of 15 to 20 percent in our selling price. Generally summarizing Mr. Dewar's capabilities, I would say that we are very well represented, and our British Timken interests will be more capably managed than at any time in its history. However, we must be prepared to watch this very closely and keep thoroughly in touch, particularly with its financial and purchasing divisions.
[fol. 4806] Mr. Dallow, who Mr. Dewar has appointed as a Director at Birmingham, was formerly an accountant, and is very capable along lines of cost work and general detailed expenditures. He knows very little about the bearing business, and as a result, is considerably handicapped. He does not have the vision or aggressiveness of Mr. Dewar, and, in the writer's opinion, is not capable of handling the management of our business if Mr. Dewar should die or become seriously ill. Upon inquiry, I gave this same statement to Mr. Dewar, and he assured me that I was in error, but that, to give us a feeling of protection, he would agree to have Mr. Docker take over the active management temporarily of our affairs if anything should happen to him. While I was still in England, Mr. Docker agreed to do this.

Mr. Loader, Shop Superintendent, is of course well-known to us, and is a good mechanic; but he is typically British, slow-moving and of egotistical nature. He feels he has a severe grievance against the British Timken Company, to the extent that none of his recommendations were ever followed, and that from the remuneration point of view he has been sadly neglected. I was quite successful during the time I was with him, in changing his attitude

in these respects, and before I left he assured me that he felt very much better and would start anew to put Timken Bearings, as far as he was concerned, to the point of meeting American practice in every regard, and exceeding it in many cases.

Mr. Wood, Automotive Engineer, has been with the British Timken Company for 14 years, and is fairly capable as far as the writer could judge, but at the same time I feel that we would be greatly benefited by having a considerably higher grade type of man in this particular place. Mr. Dewar does not agree with me in this respect, and feels Mr. Wood is quite capable.

Mr. Ellis, Works Engineer, has been with the British Timken Company for 9 years, and has charge of all shop engineering, as well as industrial work. While he is very slow-moving and positive in his actions, I feel he is a good man as far as the shop is concerned, but that he is entirely unsuited to handle the industrial engineering from any other standpoint than from that of merely checking and approving layouts. He has no sales ability whatsoever.

Mr. Hobley, Sales Manager, has been with the company approximately 10 years, and is thoroughly versed in taper bearing conditions in England. He is not blessed with a very quick or active mind, but at the same time, I feel he has a better knowledge and insight regarding our business, than any other man in the organization. I further believe that with the right kind of leadership, Mr. Hobley will develop very rapidly, and will make us a valuable man.

Summarizing the general attitude of the entire British Timken staff, I would say that it is rather disorganized, due to the entire lack of leadership during the past 2 years; but that they all have great confidence in Mr. Dewar, and all like him very much. There still is considerable diver-
[fol. 4807] gence of opinion in the organization as to policies, etc., but this, I think, is a natural outgrowth of the heretofore mentioned lack of strong leadership, and I believe this condition will be capably corrected by Mr. Dewar.

Manufacturing Summary

Summarizing the entire manufacturing practice at British Timken, we face the following conditions:

1. British Timken will purchase all hardened rollers and cages from us, starting about January 1st, 1928. The

reason for this delay in starting is due to the fact that materials are now on order and in process covering their production for the balance of the year.

2. British Timken will purchase all tubing from us, at a price of $.095 Canton, which will give them a net saving in raw material costs of at least 10 percent annually ($20,000.00). This will be greater, dependent on the use of tubes replacing bars as heretofore described. Purchase orders will start coming through at once for tubing, but only in small quantities, as practically all material needed for the balance of the year is now on order with English manufacturers.

3. The following equipment should be purchased at the earliest possible moment and put in operation in our British plant:

2—6½" Cleveland Single Spindle Machines at $2,500.00 each	$5,000.00
2—4¼' Gridley Forging Machines at $3,000.00 each	6,000.00
1—2" Acme or Cone Automatic Screw Machine	5,000.00
2—Rotary Hearth Furnaces at $1,000.00 each	2,000.00
1—Rotary Retort Furnace (Drop Type)	3,000.00
1—Rotary Retort Furnace (Plug Type)	3,000.00
3—Quenching Machines at $700.00 each	2,100.00
4—Internal Heald Cup Grinders at $4,500.00 each	18,000.00
1—Internal Heald Cup Grinder (coming from Canton)	4,500.00
1—Internal Heald Cone Grinder (coming from Canton)	4,500.00
Total	$53,100.00

Equipment now on order:

2—No. 2 Centerless Roll Grinders at $5,375.00 each	$16,125.00
1—No. 3 Centerless Cup Grinder	7,800.00
1—No. 72 Heald Internal Cone Grinder	5,000.00
3—No. 72 Heald Internal Cone Grinders (option only) at $4,500.00 each	13,500.00
6—Pot Type Carburizing Furnaces at $800.00 each	4,800.00
Total	$47,225.00

[fol. 4808] Financial

At the present time our financial situation is fairly satisfactory, but by the end of November we shall be overdrawn at the bank approximately $136,000.00. It is the practice in England to overdraw rather than to have credit extended through the use of commercial paper, etc. This large overdraft is developed through unusual charges in October amounting to the following:

Purchase of roller bearing equipment from Wolsely Motors	$129,600.00
Machine tool purchases (This also includes motors for the Aston Plant)	60,000.00
Dividends	60,000.00
Total	$149,600.00

Mr. Dewar has made the necessary arrangements at our bank to carry this overdraft as long as necessary, and he expects to pay a rate of 4¾ percent. However, we face an income tax payment in February of 1928 for approximately $77,000.00. Furthermore, we have made no provision under these circumstances for the purchasing of any machine tools other than those on order and on option. As explained previously in this report, an investment of $53,000.00 is badly needed along this line, to aid in the reduction of our costs.

The entire financial situation was discussed at length with Mr. Dewar and Mr. Dallow, and I explained to them our attitude of incurring "overdraft" obligations without discussing the matter with us, and that we were not at all in favor of having "overdrafts" at any time.

Summarizing the financial situation, it is recommended that we pass payment of the dividend due in October, amounting to $60,000.00 on the condition that this entire fund be re-invested in machinery for the plant. Mr. Dewar is entirely satisfied with such an arrangement, and the matter is up to us for consideration at this time.

With the investment for this equipment, we shall be in a position to start aggressively at once, widening our market in England, details of which will be given under "Sales".

Sales

Automotive Production

At the present time there are being built in England annually about 200,000 pleasure cars and about 25,000 commercial vehicles, and 500,000 motorcycles. Total registration in the United Kingdom is approximately 1,000,000 [fol. 4809] automotive vehicles. Like in our country, production of cars is gradually being centralized in strong hands, so that at the present time the three largest builders in England are as follows:

Morris and allied interests (Wolsely	73,000 annually
Austin	50,000 annually
Clyne	10,000 annually

These three manufacturers represent approximately 65 percent of the total production of pleasure and commercial vehicles, and unfortunately our bearings are used in only 8,000 of this total, being in the Wolsely car, which has just been purchased by Morris.

Prices

Our sales problem in obtaining this volume business is dependent first on reduced costs, and second, the consideration of Mr. Morris to abandon the use of ball bearings in his cars regardless of the fact that he is an active director in Ransom & Marels, ball bearing manufacturers.

With reference to the first condition, it has been our practice in the main to quote bearings at 70 percent off list, as compared with ball bearing manufacturers quoting 85% off list. I was advised that these list prices are practically identical in the popular sizes. We do have taper competition in England, both from SKF and Bock. Up to six months ago Mr. Dewar had a price agreement with SKF to the effect that we would both quote the same prices on bearings; but this was cancelled by Mr. Dewar. In the writer's judgment this was a very wise cancellation, as SKF in England make both ball and roller bearings, and while on the one hand they would maintain prices on the taper bearings, they would quote ball bearings at such prices as to prohibit the use of taper bearings. They have since tried to renew this agreement twice with Mr. Dewar,

but have been unsuccessful. Bock competition is practically dead, and we have not met it for some little time.

Bearing Application

The British Timken sales and engineering policy has not been very aggressive along the lines of laying in small taper bearings to replace ball bearings; and while I was given very many reasons why this was impossible, it is my personal observation that our efforts have not been successful for the main reason that we were laying in entirely too large a type of bearing to replace ball bearings, rather than to sell the manufacturer on the idea of changing his layouts and using smaller taper bearings. This matter was discussed at great length with Mr. Dewar, Mr. Hobley, Sales Manager, and Mr. Wood, Automotive Engineer, and it was decided to start anew in this regard, and the writer forwarded to our Canton Engineering Department full drawing details covering installations in both the Morris and Austin cars for modernized taper bearing installations. [fol. 4810] British Timken are very anxious to have our suggestions in this regard, and Mr. Dewar in particular feels that in the case of the Austin we can surely get this business if we can show them where they can install taper bearings even for the same price as ball bearings. The Morris situation is pretty complicated, due largely to his connection heretofore mentioned, with the ball bearing manufacturer, but we do have some leverage in this respect, in view of the fact that we have purchased all our roller bearing equipment from him. Just how strong this leverage will prove to be is very uncertain, but Mr. Dewar feels if we can quote the same prices as ball bearings, we shall get this business. The question of obtaining Clyne business is dependent entirely on price, and with lower manufacturing costs with resulting lower sales prices, we should be able to obtain all of this business.

Sales Analysis

The following figures will give some indication of British Timken Sales for 1925 and 1926:

ANALYSIS OF BRITISH TIMKEN SALES

	Bearings	Value	Per Bearg	Oct. 1, 1925 to Sept. 30, 1926	Corresponding period 1924-1925
Automobile manufacturers	256,568	$538,305.60	$2.40	38½%	49%
Motorcycles	103,529	49,119.00	.54	16%	5%
Home service	74,180	141,170.40	2.16	11%	17%
Overseas	216,629	380,007.60	2.01	33%	25%
Industrial	9,308	17,526.60	2.16	1½%	4%
	660,214	$1,126,129.20			

From the analysis given above, it will be noticed that Home Service Sales Service has fallen 6 percent during the year 1926. Our Sales Department was unable to explain this, but it is the writer's opinion that some of this drop in sales can be attributed to the rather long prices we are getting in our service business. Discounts quoted in the past have never exceeded 40 percent, and there is no question but that competition has gotten a foothold, not only in England proper, but in English territory.

When I arrived in England it was both Mr. Dewar's opinion and Mr. Hobley's that we in Canton were making a great mistake in selling service bearings at 50 percent off list, and they were quite resentful of the fact that we had been selling bearings at such prices into British territory. This problem proved quite a serious one, and British Timken were flatly unwilling to make any changes in discounts to their dealers, being entirely satisfied with the present progress of service sales.

Upon receipt of Mr. Browers' letter, showing that Bock, during 1926 had sold approximately $50,000.00 worth of products in British territory, the complexion of the situation entirely changed, and it was decided to change discounts to British dealers from 40 percent to 50 percent, and in some cases 55 percent off list.

[fol. 4811] It was further agreed in this matter that British Timken would revise their list prices to correspond with our list prices. It so happens in this regard that on the smaller popular sizes their list is higher than ours, but on the larger sizes where they have no competition what-

soever, their list is lower than ours. This point was quickly grasped by Mr. Dewar, and they will follow our practice in every respect along this line.

A general picture of the use of Timken Bearings in both pleasure cars and commercial vehicles is set up as follows:

Total pleasure cars manufactured	200,000	
Cars manufactured using Timken Bearings in both front wheels	29,000	or 14%
Cars manufactured using Timken Bearings throughout	23,000	or 11%
Cars manufactured using Timken Bearings in either front or rear wheels	19,000	or 9%
Commercial vehicles manufactured	25,000	
Commercial vehicles using Timken Bearings in both front and rear wheels	20,000	or 80%
Commercial vehicles using Timken Bearings throughout	5,000	or 20%

The figures set forth herewith cover only wheel and rear drive installations, and do not take any transmission installations into consideration, as we have made no installations in transmissions.

Bearing Manufacture

At the present time there are being manufactured in England approximately 7,500,000 bearings of all types, such as ball, straight roller and tapered roller bearings. Of this total we manufacture 660,000 or 8½ percent.

The three largest makers of bearings are as follows:

Hoffman Manufacturing Co., Ltd.	3,000,000
Ransome & Marles Bearing Co., Ltd.	2,000,000
Skefke Ball Bearing Co., Ltd.	1,500,000

It should be understood that all of the heretofore mentioned figures, not only with relation to bearing manufacture, but to automotive manufacture, are estimates furnished by the British Timken Sales Department. There are no statistics covering the automotive industry in England, other than those showing total registration.

[fol. 4812] During 1927 our business in the commercial vehicle field and the motorcycle field has improved, and at the time I was in England we were having great difficulty in making deliveries for truck bearings. I was advised by Mr. Hobley, Sales Director, that he felt our business in 1927 along this line would be double that of 1926, but he was unable to give me any definite figures in this regard.

The motorcycle business in England is very large, 500,000 being produced annually, and, if we can lower our

selling prices we shall get the bulk of this business, as apparently ball bearings, especially in larger motorcycles, do not stand up.

The Ford replacement business has been largely obtained by SKF, and we recently lost an order for 5,000 sets of bearings, due to higher prices. Here again, lower selling prices, which can be made with lower manufacturing costs, should get this business for us.

British export sales, classed heretofore as overseas sales, will be even greater in 1927 than in 1926, the particular reason for this being that we have considerably broadened our sales in Germany. Details of this will be given later in this report under the heading "Germany".

Industrial

The industrial sales activity in England has been rather negligible up to this time, as evidenced by figures heretofore set forth, showing such sales as one and one-half percent of our total for the year 1926. However, during the past six months interest in this line has greatly increased, and Mr. Ellis, Engineer in charge of this work, is now keeping three men busy making layouts, etc. He is handicapped considerably in this regard, due to lack of industrial bearing experience, and we must supply them with every possible aid, based on our past five years experience in industrial work. The entire British Timken organization has an entirely new feeling about industrial work, which, up to the time I arrived, was being considered as a very small sideline. I explained to them our progress along this line, and our future prospects, with the result that they plan to go aggressively after everything in this respect.

Railway

The railroad field in England has shown practically no interest in our bearings, but great interest has been shown in Germany, and which will be dealt with later on in this report.

Apparently the limiting factor in the use of our bearings in England is the typical British reluctance to try anything new. The freight cars in England are practically nothing more than wagons, weighing 12 and 18 tons. These cars cost approximately $500.00 each, and I was advised by Mr. Dewar that they only are in transit about one and one-

[fol. 4813] half percent of the time. All of the other time is used at terminals or as storage vans on sidetracks. The passenger coach situation, so I was advised by Mr. Dewar, is complicated by the fact that in all of the larger cities, such as London, Birmingham and Manchester it will be impossible to lengthen the station platform to use longer trains, and that he did not feel he could at this time show sufficient advantage in savings to obtain any orders. The writer does not agree with Mr. Dewar in this respect, and I believe that he will become more enthusiastic when he sees our progress when he comes to this country in October. We have, however, obtained an order to equip six underground (subway) railway cars in London, with our bearings as soon as we are in position to do so. British Timken are now preparing layouts which they will forward to us for approval and suggestion in the very near future.

Summary

Summarizing the sales situation now existing at British Timken, the following recommendations are made:

First—Reduce selling prices to automotive manufacturers by quoting discounts of 80 to 85 percent off list, so that we can get volume production, even at a narrower margin of profit. Mr. Dewar concurred in this idea, and it should be understood that with the new manufacturing equipment now on order and to be purchased, we can still maintain a very good margin of profit, even revising our discounts as herein outlined.

Second—Supply to British Timken at the earliest possible moment, experienced automotive engineering counsel.

Third—Send to British Timken an experienced man from our Sales staff, who is capable of organizing in conjunction with Mr. Hobley, a strong Sales staff, not only in England, but on the continent as well, covering both automotive and industrial sales. This may not be necessary if Mr. Hobley will, in his visit in September, assimilate American methods to such an extent that he can train his own staff.

[fol. 4815] DEFENDANT'S EXHIBIT 32

Report on Timken Representation in France

Submitted by D. P. Hess, August 1, 1927.

[fol. 4816] FRANCE

Representation

At the present time our bearings are being manufactured by the S M G Company, who are the second largest ball bearing makers in France, and who, at this time, are making approximately 100 taper bearings daily.

Their plant is a quite modern four-story affair, and they manufacture wherever possible, cups and cones with the trepanning method from direct hardening steel. Machining times which the writer has available, show that their practice is in many cases 20 percent better than the present British practice, and there is no question in my mind but that they are more aggressive, particularly from a manufacturing standpoint, than British Timken.

The quality of their bearings seems excellent, with the exception that they do not grind the end of rollers.

Labor

The labor situation in France is about the same as in England, as far as wages paid are concerned, but there is no union domination in any respect. The general practice in France is to run either one or two 9-hour shifts, and girls are used on all classes of machines in conjunction with men. Usually 10 percent additional wage is paid to night-shift operators.

Sales

Sales for the past two and one-half years have been as follows:

	1925	1926	1927(*)
(S M G)—manufacturing	$22,150.00	$22,000.00	$25,300.00
service	48,300.00	70,236.00	63,000.00
Total	$70,450.00	$92,236.00	$88,300.00

(*) Based on first 6 months.

It will be noted from the foregoing that this year's sales show a slight decrease in the service division, but this was explained by Mr. Wineberg, Sales Manager, as being due to a falling off in service demands from American manufactured trucks.

The S M G Company have made practically no attempt to develop industrial sales, and they advise me that their

reason for this is they have no information from British Timken along this line.

Costs & Prices

The writer found it very difficult to get any information from them. I spent considerable time with Mr. Almy, the [fol. 4817] President, Mr. Weinberg, Salesmanager, and Mr. Durignier, Works Manager. Upon asking for their costs, etc., I was given their manufacturing costs by Mr. Durignier, showing a shop overhead of approximately 400 percent on direct labor. I questioned this fact, but was told that the same overhead used for ball bearings is used in the computation of tapered bearing costs, but in a careful study of their plant I was unable to find wherein any such overhead was developed. Upon asking Mr. Almy for a verification of this figure, he claimed that he did not know what it was. He also declined, upon the same basis, to give me any figures at all as to their sales expenses. I requested this same information from Mr. Wineberg, who told me that they did not care to give us this information at the present time, but would be glad to discuss it with us at the time the contract was renewed. I questioned Mr. Wineberg particularly as to the prices quoted for tapered bearings, as compared with ball bearings, and was given the following figures:

319-313	Tapered bearings price each	$1.32
	Ball bearing price each	.76
339-333	Tapered bearing price each	$1.52
	Ball bearing price each	.88
357-353	Tapered bearing price each	$1.60
	Ball bearing price each	.84
344-333	Tapered bearing price each	$1.48
	Ball bearing price each	.84

At the present time the only French competition we have is supplied by the S K F Company, who have a plant in France, but who are doing very little at this time. I was unable to obtain any figures with reference to their production.

The French situation as regards British Timken is in bad shape. The feeling toward British Timken is very bitter, and one must understand the French nature to be able to find any ground for such a feeling. The S M G Company

blame their lack of development in tapered bearing sales entirely onto the fact that British Timken has failed to supply them with information relative to the latest and newest methods of manufacture, and that they deliberately withhold from them every possible amount of data relative to sales development work. While the writer does admit that British Timken have been very lax in their transactions with the S M G Company, I also feel that the present French feeling is largely uncalled for.

The French company have never received any drawings or data relative to the "F" type of bearing, nor any information with reference to the use of centerless roll grinders, Heald internal grinders, etc. All of this information has come to them from machine tool representatives, and of course they resent this fact considerably. At the present time in their plant they are using a few "Terromatic" internal grinders on ball bearings, and also have one internal Heald cone grinder on which they started to grind cone bores a few days before I reached there. They also have one centerless cup grinder which they are using on ball bearing cups at the present time. They plan to try this machine on tapered cups at the earliest possible moment.

[fol. 4818] They are very anxious to obtain all possible data with relation to our methods of manufacture, but the writer was forced in every way possible to avoid giving any detailed information. This is due to the fact that our contract expires next year, and Mr. Dewar feels it will be very unwise to renew it with S M G. The writer is inclined to agree with him in this regard, as the manufacture and sale of tapered bearings and ball bearings do not mix, and the only successful way to handle this situation is, in my opinion, to manufacture our own bearings in France. Whether this will be feasible or not, must be thoroughly studied, as considerable depends on the French tariff situation, which changes almost daily. To give an example of this condition, while I was in Paris I was given three different tariff rates by the S M G Company, and received still a different rate in England.

At the present time Mr. Dewar is investigating the possibilities of cancelling the French agreement at once, so that we shall not lose an entire year's time in getting started making our own bearings in France. As is probably known, the S M G Company have written a letter asking for

a renewal of the contract on their own terms, which incorporate a much smaller royalty, etc. They also expressed the opinion that they might undertake the manufacture of tapered bearings themselves, and of course this is a possibility.

The writer wishes to recommend the following:

First: That the present French contract with British Timken be not renewed, and

Second: That we be prepared to invest, through British Timken, whatever may be necessary to at least perform finishing operations in France, should be present tariff situation be in effect at the time the contract expires. Or, if a contrary tariff is in effect, to prepare to manufacture completely in France at least the popular sizes in bearings.

[fol. 4819] DEFENDANT'S EXHIBIT 33

Report on Timken Representation in Germany

Submitted by D. P. Hess, August 1, 1927.

[fol. 4820] Germany

Sales Representation

At the present time, all business done in Germany is handled by Deutsche Timken Geselleschaft, which is located in Berlin, and which is exclusively a sales organization operating under the direction of a certain Mr. Prausnitzer. All bearings sold in Germany are made in England and quoted f.o.b. Birmingham to Mr. Prausnitzer, who is turn adds on the usual charges for freight and tariff, which, as he explains, amounts to 15 percent. He then further stated that he adds 15 percent for his profit. Unfortunately, the writer found upon investigation that this is not always done, and in one instance I checked and found the profit ran as high as 25 percent, and in still another instance only 10 percent had been added for freight and tariff. It should be understood that British Timken exercises no supervision over and have no knowledge of the prices quoted by Mr. Prausnitzer to our German customers. He makes no reports as to the sales he loses, and he has no records along this line.

This gentleman is about 55 years old, and his experience has been of rather a varied nature along the following lines:

He formerly sold machine tools for the Gridley people, and has the occupation of a consulting engineer. During the war he acted in this capacity for the German government, in the manufacture of all vehicles, airplanes and such allied articles. His ability seems above the average as far as the selling of Timken Bearings is concerned, as he was very anxious to advise me, and there is no question but that he has done so far a splendid job, as will be shown later on in this report.

He is very well acquainted with a certain Mr. von Gontard, who is the head of the D W F Company, manufacturers of ball and tapered bearings; and he was quite enthusiastic in describing to me a plan he had worked out for the D W F Company to act as selling agents for Timken Bearings. His ideas were very visionary, and I believe originated in the mind of Mr. von Gontard. I told him that we were not very keen about such an arrangement, but that the entire matter would be handled by Mr. Dewar.

Mr. Prausnitzer was very anxious to have me look over several sites for establishing manufacturing operations in Berlin, which I accordingly did; but it so happened that three of the plants I was taken to, were owned by the D W F Company, and I was quoted rental prices of approximately $2.50 per square foot, which I explained to them was nothing but nonsense. I told them that we would probably consider paying $.25 per square foot, and furthermore, that we would under no consideration manufacture in old, worn-out buildings such as Mr. Prausnitzer and the D W F people had been offering. They further stated that they were convinced that they could get a plant such as we de- [fol. 4821] sired, for the price we wanted to pay, if I would take the time to spend another day with them, which I declined to do.

As is probably known, the Timken name is registered in control of Mr. Prausnitzer, and while he has a contract to give up his rights to this name under certain conditions, I was advised by Mr. Dewar that in his opinion this contract cannot be enforced, and he would have to come to some terms with him.

Mr. Prausnitzer is inclined to be very talkative, and based on the contact I had with him, there is some question

in my mind as to his veracity and honesty of character under certain conditions.

He has made a proposition to Mr. Dewar to relinquish his rights to the Timken name under the following conditions:

A German Timken Company to be organized, with a capital stock of $50,000 of which he is to be given in stock $12,500.00. He is to be the managing director of this company, on an annual salary of $3,000.00 plus a bonus of 3 percent of total sales. It is further agreed that in any increase in capitalization up to $100,000.00 he is to be given his pro-rata share on a 24 percent basis. It is the writer's personal feeling that these terms are entirely too high, and while I feel that we are in a way at the mercy of Mr. Prausnitzer, I also feel very confident that the proposition herewith set forth is merely an asking proposition, and that we can do considerably better. Mr. Dewar is planning to discuss this with us upon his visit to this country.

Mr. Dewar claims that Mr. Prausnitzer is very well regarded in Germany, but from my personal contact with him, I am inclined to think that he must be watched very carefully, and I so advised Mr. Dewar.

Automotive

Figures given me by Mr. Prausnitzer show that there are approximately 225,000 cars now being built in Germany annually. From what information I could get from other sources, this figure is high, and the production figure is probably nearer 150,000. There are approximately 319,000 cars registered in Germany at this time. The largest builder is Opel, building 60,000 cars annually, and the next largest builder is Damler-Benz, building 30,000 cars annually.

Both of these concerns are using F & S tapered bearings in the front wheels, and a mixture of straight roller bearings and ball bearings in the rear wheels and rear drive applications. It was impossible to obtain from Mr. Prausnitzer any idea in detail as to prices that we would have to make to further broaden our sales in Germany. However, I did obtain the list prices quoted by the F & S Company, together with their discounts, which were reputed to be given to manufacturers and service dealers. A rather hasty comparison of their lists with British Timken lists

shows them to be low in the popular sizes to an extent of 10 percent.

[fol. 4822]

ANALYSIS OF GERMAN SALES

(Through British Timken)

	1925	1926	1927 (")
Manufacturing	$33,000.00	$12,000.00	$53,000.00
Service	7,300.00	6,000.00	17,300.00
Total	$40,300.00	$18,000.00	$70,300.00

(") Based on first 6 months.

Mr. Prausnitzer made very broad statements as to our possibilities, should we reduce our selling prices 20 percent, but the writer does not feel it advisable to set forth any of these statements, as I am inclined to believe he is over-optimistic and cannot be relied upon along this line.

The decrease in sales in 1926, I was told, was due to two things. First, the demoralization of German industry, and secondly, Mr. Prausnitzer was seriously ill for six months; and as he has no assistants or sales representative, our sales fell off considerably.

Competition

It must be born in mind that we face very severe competition in Germany. At the present time the following manufacturers are making roller bearings exactly similar to ours:

F & S—production 4,000 daily (Estimated by Mr. Prausnitzer)
S K F—production 3,000 daily (Estimated by Mr. Prausnitzer)
D W F—production 1,000 daily (Estimated by Mr. Prausnitzer)

While the above figures look very high, and there is no doubt they can be discounted at least 30 percent, we should understand that this production has been developed with the past two years, and is being aggressively pushed at this time. British Timken has very materially felt the competition of F & S in export sales, and we have heard of some of their sales in our South American territory. All of these manufacturers make ball bearings as well, and I was told are very well fixed financially.

Mr. Dewar has told me that our severest competition will come from the F & S Company, who are very well equipped to manufacture and sell on a very lost cost basis.

Labor

It might be well to state that the labor situation is quite different in Germany than anywhere else. Everyone is working and there is no question about how long anyone shall work or any union domination.

Labor rates are approximately 15 percent lower than in England.

[fol. 4823]

German Manufacture

The writer was very much impressed with the layouts and organization of the D W F factory, located just outside of Berlin through which I was taken. I was refused permission to go through the F & S plant in the south of Germany, and neither was I permitted to see the ball or roller manufacturing in the D W F plant. Mr. Prausnitzer stated that the German manufacturers have not the slightest fear of British or French competition, and have set their goal to stop American competition, particularly in exports. This statement the writer believes to be true, because nowhere in England or on the Continent did I meet such a very evident feeling of duplicating and copying American practices as in Germany. From my observations there are more American motor cars in Berlin than there are in London and Paris added together, and everywhere you go you receive the most kindly attention from the German people.

Industrial Sales

The industrial sales field in Germany is developing very rapidly, and British Timken during the time I spent with them, received 10 inquiries from Germany along this line. I was advised by Mr. Prausnitzer that our competitors in Germany have not as yet attempted to sell the industrial field with tapered bearings, being entirely content to sell ball bearings. This means that we have an opportunity at present to develop this field, but it cannot be done by one man, and Mr. Dewar has arranged to employ a young German engineer at British Timken for a period of three months training, and then send him back to Germany as a sales representative. While this idea is good, the writer feels an older man with at least some selling experience should be obtained, as time is an important element and three months is not very long for a total stranger to learn our product from the industrial standpoint.

The railroad field in Germany has a real future, as evidenced by the fact that the S K F Company recently received an order for $500,000.00 worth of bearings to be used on fast freight car service between Berlin and Cologne. We had presented a bearing for test some six months before, but, according to British Timken, this bearing, No. 942-933, failed in test due to defective grease. This information was not given me originally by British Timken, but was developed while I was in Berlin with Mr. Prausnitzer, who in turn was unable to give me any details whatever as to the length of service, loads, etc. He did say, however, that in obtaining the order the S K F Company guaranteed the bearing for two years without lubrication. It was also impossible to ascertain what price was paid for them, although I asked Mr. Prausnitzer, if at all possible, to get this information.

It might be well to state that in order to obtain this business it would be necessary for us to at least perform the finishing operation on such bearings in Germany.

[fol. 4824]

Summary

Summarizing the German situation, the writer does not wish to make any recommendations other than to straighten out the sales situation to the extent that British Timken will, at the earliest possible moment, quote direct selling prices to German customers through Mr. Prausnitzer, and that they will exercise detailed control and supervision over him.

The question of manufacturing bearings in Germany is very complicated, due to two things:

First, our increasing sales seem to show that we can manufacture in England and still pay the prevailing tariff rates with fairly good success.

Second, should we manufacture in Germany, we will be called upon in all probability to join the association of German ball and roller bearing interests, who have interlocking price agreements, and who pool all patents and methods. Should we refuse to join this association, we of course face the possibility of having to fight very strenuously to maintain our standing which we now have.

The writer is planning to make a very careful study of the tariff situation, but it is necessary to obtain considerable further data before this can be done, as the information supplied by Mr. Prausnitzer must be thoroughly checked.

7th and 10th of August 1928

Assignment of a Trademark

By the Société de Mécanique of Gennevilliers to the Société Timken

Before Me Albert Jean Constantin and Me Albert Pere, undersigned, both notaries in Paris.

Appeared

Monsieur Amédée Marie Joseph Alby, engineer, residing in Paris Boulevard Lannes No. 55,

Acting on behalf of and as one of the Managing Directors of the Societe de Mecanique of Gennevilliers, A French Joint Stock Company with a capital for the time being of fourteen million francs whose Registered Office is in Paris, rue de Colisée No. 40.

The aforesaid Company duly created and constituted under the name "Société de Mecanique de Précision" with a capital originally of one million francs and with a Registered Office at Clichy (Seine) Quai de Clichy No. 18, as appears

From its Articles of Association drawn up according to a private deed dated May 31st nineteen hundred and eleven of which one of the original copies bearing the following mention: "Registered in Paris, fourth office, book 678, Folio 42 square 5, on the second day of June nineteen hundred and eleven, collected three francs seventy five cents. signed illegible" has been filed among the records of Me Pere, one of the undersigned notaries on the first day of June nineteen hundred and eleven.

From a deed of application for shares and payment taken by the aforesaid notary on the same day

And from two Constitutive Extraordinary General Meetings of Shareholders on the days of June second and ninth nineteen hundred and eleven, of which a copy of the minutes has been affixed to the records of an act proving the filing thereof with the records of the aforesaid notary Me Pere on the twelfth day of June nineteen hundred and eleven.

All which duly filed and published as proved by the docu-

ments filed among the records of the above mentioned Me Pere on the thirty first day of August nineteen hundred and eleven

Whose name has become Societe de Mecanique de Gennevilliers in pursuance to an extraordinary General resolution on the twenty fourth day of July nineteen hundred and fifteen, of which a copy of the minutes has been filed among the records of the above mentioned Me Pere on the twelfth day of August nineteen hundred and fifteen.

All of which being regularly published as shown by the documents filed among the records of the above mentioned Me Pere on the sixteenth day of September nineteen hundred and twenty five.

Whose Registered Office has been transferred to Paris rue d'Aguesseau no. 12 in pursuance to a Resolution of the Board of Directors on the fourteenth day of January nineteen hundred and eighteen of which an excerpt has been affixed to an act proving the filing thereof with the records of Me Pere one of the undersigned notaries on the fourth day of February nineteen hundred and eighteen.

[fol. 4847] Which transfer of Registered Office has been duly filed and published as shown by the deeds filed among the records of Me Pere, on the thirteenth day of May nineteen hundred and eighteen.

Whose Registered Office has been transferred to Paris rue de Colisee No. 40 in pursuance to a resolution of the Board of Directors on the Twenty fifth day of June nineteen hundred and twenty five, of which a excerpt has been affixed to a act proving the filing thereof with the records of Me Pere one of the undersigned notaries on the seventh day of October nineteen hundred and twenty five.

Which transfer of Registered Office has been duly filed and published as shown by the deeds filed among the records of Me Pere on the ninth day of December nineteen hundred and twenty five.

Lastly whose nominal capital had been first raised to the present capital of fourteen millions francs.

All of which being duly filed and published as declared by Monsieur Alby.

And specially known as having the necessary powers to the effect of these presents in pursuance to a resolution of the Board of Directors on the days of the twentieth of February nineteen hundred and eighteen and the ninth of June nineteen hundred and twenty six of which an excerpt

certified to be genuine has been hereto affixed after mention of affixation.

Which Board of Directors is vested, in accordance with the section twenty of the abovementioned articles of Association with the widest authorities for the management of the Company's activities with the right in particular to dispose of and buy any kind of personal or real property and rights.

Who in his abovementioned capacity, has, by these presents sold, assigned and set over, binding the company whom he represents to hold ordinary and legal guarantees.

To the French Joint Stock Company "Timken" a Joint Stock Company with a capital of one million francs whose Registered Office is situated in Asnières (Seine) Quai Aulagnier No. 5.

The above mentioned Company duly constituted as results

1°) From its Articles of Association drawn up according to a privately signed agreement dated in Paris June sixteenth nineteen hundred and twenty eight.

2°) From a deed of application for shares and payment taken by Me Constantin one of the undersigned notaries on the sixteenth of June nineteen hundred and twenty eight.

3°) And From a Constitutive General Meeting of the Shareholders held on the sixteenth day of June nineteen hundred and twenty eight of which a copy of the minutes has been filed among the records of Me Constantin, undersigned notary on the same day as above mentioned.

[fol. 4848] All which duly filed and published pursuant to the law.

Which is accepted on behalf of the above mentioned Company by Mr. William Eric Louis Seward, Manufacturer, residing in London W. 128 Picadilly.

Speaking and comprehending the French language.

Acting on behalf of and in the capacity of Managing Director of the Societe Timken, a duty to which he was appointed according to a resolution of the Board of Directors of the above mentioned Company on the sixteenth day of June nineteen hundred and twenty eight, a copy of which has been affixed to an act proving the filing thereof with Me Constantin one of the undersigned notaries on the same day as above mentioned.

Mr. Seward present thereto and agreeing on behalf of the Company.

The Trademark "Timken" as resulting from its registration at the Office Nationale de la Propriété Industrielle Paris filed on the fourteenth day of October nineteen hundred and twenty one under the No. 205.223 and registered as follows in the Bulletin Officiel de la Propriété Industrielle et Commerciale, issue of the tenth of November nineteen hundred and twenty one under No. 18.225.

"M.P. Wheelwrighting, coachwork, farriery, motor cars and bicycles, tyres, and all bearings intended to diminish friction and in particular conical roller bearings, filed on the fourteenth day of October nineteen hundred and twenty one with the Registrar's Office of the Commercial Court of the Seine, at four p.m. under number 205.223 by the Société de Mecanique de Gennevilliers situated in Paris rue d'Aguesseau No. 12.

Property and Use

The Purchasing Company will have the property of the trademark hereinabove described to date from this day in pursuance to the presents and it will equally have the use thereof to date from this day.

To this effect Monsieur Alby on behalf of the Société de Mecanique de Gennevilliers substitutes and subrogates in its place the Purchasing Timken Company, which is accepted on its behalf by Mr. Seward in all the rights of the Vendor Company referring to the abovementioned trademark.

Conditions

The present assignment is taking place subject to compliance by the Timken Company, as it has been bound by Mr. Seward with the conditions set forth as follows:

1°) To fulfil in the place and stead of the abovementioned Vendor Company all the stipulations and obligations which could proceed from the Trademark sold hereby.

2°) And to pay all the costs and fees of these presents.

[fol. 4849] Price

Moreover the present assignment is carried out, consented and accepted in consideration of the principal sum of twelve thousand francs which Mr. Seward paid at this

same instant in authentic coins and notes of the Banque de France, accepted as legal tender, counted and delivered before the undersigned notaries, to Monsieur Alby who acknowledges it and a receipt for it to the Purchasing Company is given. . . . Of which receipt —— ——.

Formalities

The purchasing Company will cause a copy of these presents to be registered at the Office Nationale de la Propriété Industrielle.

To register these presents and to see that they are mentioned every place where it be necessary, complete authority is given to the bearer of a copy or an excerpt of these presents.

Domicile

For the execution of these presents the contracting parties took up domicile at the respective Registered Offices of the companies concerned.

Reading of the Laws

Before concluding and pursuant to the law Me Constantin one of the undersigned notaries gave reading to the appearing parties of the sections twelve and thirteen of the law of the twenty third of August eighteen hundred and seventy-one, section seven of the law of the twenty seventh of Febuary nin-teen hundred and twelve, sections seven and eight of the law of the eighteenth of April nineteen hundred and eighteen and section three hundred and sixty six of the Code Penal concerning and punishing the concealments.

The contracting parties affirm on pain of being punished according to the section eight of the law of the eighteenth of April nineteen hundred and eighteen that the present deed expresses the integrality of the agreed price.

The undersigned notaries have more-over affirmed that, to the best of their knowledge and belief, the present deed has not been modified or gainsaid by any defeasances containing an increase of the price hereinabove agreed to.

Wherefore This Deed

Drawn up and dated in Paris, rue Boissy d'Anglas no. 9.

In the office of Me Constantin for Mr. Seward, and in the office of Me Pere notary, Place des Petits Pères for Monsieur Alby.

In the year nineteen hundred and twenty eight.

The seventh and tenth of August.

[fol. 4850] After perusal of this deed the contracting parties have signed with the notaries.

Follows the signatures.

Then is written:

"Registered in Paris, fourteenth of notaries.

"The thirteenth of August nineteen hundred and twenty eight.

"Book 42 B, Folio 153 square 4.

"Collected seven hundred and ninety two francs.

(Signed) Illegible.

Is affixed hereto the deed the contents of which are as follows.

Societe de Mecanique de Gennevilliers

Joint Stock Company with a nominal capital of fourteen million francs.

Registered Office in Paris 40 rue de Colisee.

Excerpt of the Resolution of the Board of Directors on the twentieth day of February nineteen hundred and eighteen.

Are present: Messieurs Le Cesne, President, Brault, Mitranga, G. Robert, Alby, Mario Constant.

Messieurs Amédée Alby, Camille Brault, et Pierre Seligmann, can each one separately conclude any deals and agreements of any character, take any patents on behalf of the Company, become assignee of any patent already taken and of all licenses.

Purchase, sell and exchange all personal property rights and valuables, conclude any and all agreements of leasing leases and hiring.

Receive any sum which might become due to the Company by any public or private administration of any description, tender all receipts, discharges and acknowledgements, perform or authorise the subscription and negociation of all agreements bills of commerce and letters of exchange.

Represent the Company in Justice either as the Plaintiff or Defendant, negociate, transact, compromise in anything concerning the company's interests.

Take part in any auction and in a general manner complete authority for the execution and proper management of the Company's business is conferred upon them.

Messieurs A. Alby, C. Brault, and P. Seligmann have the above mentioned authorities with the right to substitute.

Excerpt of the resolution of the Board of Directors on the ninth of June nineteen twenty six.

The Board of Directors of the S.M.G. held a Meeting on the ninth of June nineteen twenty six, following the General Meeting, at the Registered Office rue de Colisee No. 40.

[fol. 4851] Were present: Messieurs Le Cesne, Honorary President Alby, President of the Board, Seligmann, Managing Director, Baudelot, Courvoisier, Fredric Moreau, Giros de Grailly, Mitaranga, Morillon, Max Robert— —.

The Board of Directors renew in the terms of their precedent mandates the authorities which have been conferred upon Messieurs A. Alby and Pierre Seligmann by a resolution of the Board of Directors on the twentieth day of February Nineteen hundred and eighteen and renewed for the first time during the Meeting of the twentyninth of April nineteen hundred and twenty ——.

DEFENDANT'S EXHIBIT D-38

[fol. 4874] DEFENDANT'S EXHIBIT 43

"STATISTIQUE MENSUELLE DU COMMERCE EXTERIEUR DE LA FRANCE"

Published monthly by the "Imprimerie Nationale" (a state owned printing works) Paris, under the auspices of the French Ministry of Finance, Palais du Louvre, Paris. (Direction generale des Douanes).

[fol. 4875] Proces—Verbal de Constat

L'an mil neuf cent quarante sept, et le Douze Juin.

A la requête des Etablissements Timken, société anonyme dont le siège est à Asnieres, 5 Quai Aulagnier agissant poursuites et diligences de ses directeur et administrateurs y domiciliés.

Il m'a été exposé par Monsieur Gautrot représentant ladite société:

Que la Maison Timken await fait dresser un certain nombre de tableaux statistiques présentés et établis d'après les tarifs de la douane francaise tels qu'ils figurent aux documents statistiques conservés dans les bureaux de la direction des douanes, 7 Rue Euler à Paris.

Qu'en vue de certifier l'exactitude des chiffres portés aux dits tableaux et leur conformité avec ceux des registres tenus à la disposition du public, la société requérante me requérait de me transporter sur place, dans les bureaux de la direction des Douanes, d'accord avec cette administration pour procéder à toutes vérifications utiles.

Déférant à cette réquisition,

[fol. 4876] Je, Georges Bernard, Huissier près le Tribunal Civil de la Seine, séant à Paris, y demeurant 27 Boulevard des Italiens, soussigné;

Me suis transporté ce jour à Paris, 7 Rue Euler, à la direction du Service des Douanes, et là étant à Quatorze Heures Trente de relevée, sur l' autorisation expresse que m'a accordée le sous-chef du service rèmplaçant le chef de service empêché, j'ai procédé comme suit:

Monsieur Gautrot m'a remis une première série de sept tableaux contenant les chiffres relatifs aux importations françaises de 1928 à 1946.

J'ai compulsé l'une après l'autre les publications correspondant aux dits tableaux et j'ai constaté que les chiffres

inscrits dans les tableaux préparés par la société Timken sont rigoureusement conformes à ceux des publications que j'ai compulsés; observation est faite toutefois en ce qui concerne l'année 1946, les chiffres de la direction des Statistiques sont inscrits à la main et ne sont pas définitifs.

Les sept tableaux relatifs aux importations sont annexés au présent procès-verbal sous le numéro 1 à 7.

Ensuite, Monsieur Gautrot m'a représenté une série de [fol. 4877] sept autres tableaux concernant les exportations.

Mêmes observations qu'en ce qui concerne les importations, et mêmes remarques en ce qui concerne l'année 1946, lesdits tableaux sont annexés au présent procès-verbal sous le numéro 1 à 7, avec la mention exportation dans le coin de chaque feuille.

Ces constatations faites, ma mission terminée, je me suis retiré.

Et, de tout ce que dessus, j'ai fait et dressé le présent procès-verbal de Constat pour servir et valoir ce que de droit.

Cout: (illegible).

[fol. 4878] REPORT OF ASCERTAINMENT

In the year nineteen hundred and forty seven on the twelfth day of June.

(1) At the request of Etáblissements TIMKEN, French Joint Stock Company, the head office of which is in ASNIERES, 5 Quai Aulagnier, acting proceedings and diligences of its manager and directors domiciled there.

Mr. GAUTROT, representative of the said Company stated to me that:

The firm TIMKEN had drawn up a certain number of statistic tables shown and established according to the tariffs of the French Customs such as they appear in the statistical documents in safekeeping in the offices of the Customs management at seven rue Euler, PARIS.

That with a view to certifying the accuracy of the figures shown in the said tables and their conformity with those of the registers kept at the disposal of the public, the applicant company requested me to proceed to the offices of the Customs management, with the consent of that

administration in order to proceed to all useful verifications.

Acceding to that request

I, Georges BERNARD, court officer attached to the Civil Tribunal of the Seine, sitting in Paris, residing there at number 27, boulevard des Italiens, undersigned;

I proceeded this day to No. 7 rue Euler, to the management of the Customs Department and being there at fourteen hours thirty, upon the express authorization granted [fol. 4879] to me by the assistant head of the department replacing the head of the department, otherwise engaged, I effected the following operations:

Mr. GAUTROT handed me a first series of seven tables made up of figures relative to French importations for the years 1928 to 1946.

I examined, one after the other, publications corresponding to the said tables and I ascertained that the figures entered in the tables prepared by the Company TIMKEN are in strict conformity with those of the publications I examined; the remark is made however in connection with the year 1946 that the figures of the Statisties Department have been entered in writing and are not final.

The seven tables connected with importations are annexed to the present report under numbers 1 to 7.

Mr. GAUTROT then handed me a series of seven tables connected with exportations.

The remarks are the same as those for importations also those for the year 1946; the said tables are annexed to the present report under numbers 1 to 7 with the mention exportation in the corner of each sheet.

When those ascertainments were ended, my mission being over, I withdrew.

Concerning all the foregoing I have made out and drawn up the present Report of Ascertainment to be of use and of value as shall be rightful.

Cost four thousand nine hundred and twenty five francs including stamps of annexe. Signed Georges Barnard. Registered in Paris, Third Huissiers, 16th June 1947. Folio 96 Square 33 dues sixty francs. Sgd. Illegible. Attached to the said report are the fourteen sheets referred to in the said report.

(2) Ministry of National Economy and Finances Manage-

ment General of Customs, 1st Division 2nd Bureau No. 737, TARIFF. PARIS, 14th June 1947. Gentlemen, *Object* Customs dues on bearings and spare parts and components for those bearings *Reference* Your letter Ca 47/5.416 AG/GP of 11th June 1947. In reply to your letter mentioned as reference I have the honor to remit you attached, after having had it verified and checked by my services, the statement you submitted to me concerning the rates of Customs dues that have been levied on certain bearings and their component parts since the year 1928. I remain, Yours truly, The Director Sgd. Illegible (the stamp). The statement referred to is attached to that letter and bears the certification of the Customs Director dated in Paris on the 14th June 1947.

(3) Societe Anonyme Francaise TIMKEN (French Joint Stock Company) Tapered Roller Bearings Head Office 5 to 11 Quai Aulagnier ASNIERES (Seine) Capital Frs eleven million entirely paid up. REPORT CONCERNING THE STEPS AND APPLICATIONS TO BE MADE IN ORDER TO OBTAIN, IN FRANCE, IMPORTATION LICENCES FOR BEARINGS, SPARE PARTS AND COMPONENT PARTS FOR BEARINGS.

1. Make out an application, in six copies, for an Importa-[fol. 4880] tion authorization, on the special printed form supplied by the French Exchange Control.

This application is transmitted, by the Importer, to the Exchange Control at 8, rue de la Tour-des-Dames, PARIS where it is registered and, within a period of about eight days, the Control informs the Importer as to the number under which the application has been registered.

2. The application for authorization to import is then sent, by the Exchange Control, to the Ministry for Industrial Production, Management of Electrical Mechanical Industries Precision Mechanics Department, at 41, Avenue Hoche, PARIS which is in charge of the "BEARINGS" Section.

According to the credits allotted monthly by the MINISTRY of FINANCE to that Department, so does the latter grant or refuse a favorable reply to the applications for licenses.

3. The Precision Mechanics Department sends the application for license authorization, to the Exchange Control with the reply.

4. If the Department has given a favorable reply, the Exchange Control authorizes delivery of the license, send-

ing such license to the Importer, within fifteen days after the Ministry of Industrial Production has made its decision.

In the most favorable cases, that is to say, when the Ministry of Industrial Production has adequate credits, an Importation license is granted within a period of approximately two months.

5. Should the Ministry of Industrial Production be unable to give a favorable reply, through lack of credits, the Exchange Control returns the refused application for a license, to the Importer. It sometimes happens that a license is granted for only a part of the requested value; this compels the Importer to submit a fresh application for the difference, thus incurring a further delay of about two months.

(4) Report on the French Production of Bearings

In France, the total consumption of steel for bearings, monthly, is round about *1,600 tons* (French steel and imported steel).

Taking into account the fact that for the Société Anonyme Francaise Timken, consumption of steel for bearings is about: *150 to 160 tons a month* the approximate percentage of the production of Société Anonyme Francaise Timken, in proportion to the total French production, is therefore around 10%.

I, the undersigned, N. N. Gourot, Sworn Translator to the French Law Courts, Ex-translator to the French Supreme Command (Intelligence Service, otherwise Second Bureau) fully qualified to translate from French into [fol. 4881] English and vice versa Make Oath and Certify that I have made the foregoing translations which are true, correct and entire transcripts of the relative French originals, visaed by me "ne varietur" sub Number 21856 1. 2. 3. 4.

Paris, this twentieth day of June 1947.

Signature illegible.

DEFENDANT'S EXHIBIT D-39

[fol. 4896] DEFENDANT'S EXHIBIT 44

Certified Translation

Notarial Register No. 141, year 1928

Berlin, May 5, 1928.

Before the undersigned Notary in the area of the Court of Appeals at Berlin Counselor at Law Dr. Wilhelm Beutner there appeared this day:

1) the civil engineer Max Prausnitzer of Berlin W.50 Rankestrasse 5.

2) the merchant Michael Bruce Urquhart Dewar, No. 4 Central Buildings, Westminster (England)

3) the merchant William Eric Louis Seward, No. 128 Piccadilly, London (England)

The parties sub (1) and (3) are personally known to the Notary, the party sub (2) identified himself to the satisfaction of the Notary by exhibiting his passport, bearing his photograph, No. 492277, issued by the Foreign Office at London on July 11, 1927.

Mr. Dewar and Mr. Seward declared that they do not understand the German but only the English language. So also the Notary found that Messrs. Dewar and Seward do not understand the German language. For this reason the sworn interpreter of the English language, the American lawyer Ludwig Zeisler, Berlin, W. Friedrichstrasse 59 was called in.

The party sub (1) and the party sub (2) acted in their own behalf; the party sub (3) acted under a power of attorney in behalf of Mr. Henry Timken of Canton, Ohio, U.S.A. and the British Timken Limited, a company located in Cheston Road, Aston, Birmingham, England.

I

The party sub (1), civil engineer Max Prausnitzer is the sole member of Deutsche Timken Gesellschaft mit beschrankter Haftung of Berlin. He herewith holds a general [fol. 4897] meeting of the Deutsche Timken Gesellschaft mit Beschrankter Haftung and resolves:

1

The articles of incorporation of Deutsche Timken Gesellschaft mit beschrankter Haftung are hereby given the wording appearing from the annex hereto in lieu of the previous wording.

2

The capital stock of the company is increased from 5000 Reichsmarks to 400,000 Reichsmarks. Commencing on January 1, 1928 the new shares are entitled to participation in the profits of the company. The taking over of the new shares is provided for by II of this Agreement and is consented to.

II

All of the parties declared:

1

The increased capital stock shall be taken over as follows:

a) Mr. Henry Timken a common share of	RM.	225,000
b) British Timken Limited a common share of	RM.	4,000
and a preferred share of	RM.	1,000
c) Mr. Michael Bruce Urquhart Dewar a common share of	RM.	105,000
d) Mr. Prausnitzer a common share of	RM.	60,000
plus his previous shares of	RM.	4,800
and	RM.	200

Civil engineer Max Prausnitzer pays for his new common share of RM. 60,000 by a transfer of the trademark registered for him in the Federal Patent Office in class 10, No. 225230, file No. 15319. The value of such contribution is fixed at RM. 60,000. In this manner the share of Mr. Prausnitzer of RM. 60,000 is fully paid in. Mr. Timken, British Timken Limited and Mr. Dewar pay for all of their [fol. 4898] shares in cash and are obligated to make one half of their payments prior to the registration of the company.

3

Mr. Prausnitzer continues to be the sole managing director (Geschaftsfuhrer) of the company irrevocably for the period of five years commencing on January 1, 1928 and

ending on December 31, 1932. The detailed provisions governing the employment of Mr. Prausnitzer are contained in a contract of employment.

4

As members of the first Board of Supervisors (Aufsichtsrat) there are hereby appointed:

a) Mr. Henry Timken.
b) Mr. Michael Bruce Urquhart Dewar.
c) Mr. Andrew Jameson Matthews Duncan.
d) Mr. William Eric Louis Seward.
e) Freiherr Trabart von und zu der Tann, Rathsamhausen.

5

Supplemental Agreement

The parties empower Mr. Gert von Natzmer of Berlin-Schmargendorf, 17 Friedrichshallerstrasse, to declare any changes of a formal character which the Commercial Register Judge may require with respect to these declarations or to the annex, with binding effect upon all the contracting parties. To such extent the agent shall be released from the restrictions contained in § 181 of the Civil Code.

III

The parties and their constituents enter into the following agreement:

1

In the event that the capital stock of the company is increased the voting power of the preferred share shall be increased in such manner that in all cases where according [fol. 4899] to the provisions of the German Law a simple majority of the votes is sufficient the preferred share shall be entitled to at least one vote more than the votes pertaining to the entirety of the common shares.

2

Mr. Prausnitzer affirms that, so far as he knows, no protective rights other than the trademark mentioned in Section II, 2 hereof exist with or in connection with the word "Timken" in Germany. Should any protective rights

of such character nevertheless be in existence in Germany, Mr. Prausnitzer agrees, if required by the Deutsche Timken Gesellschaft m.b.H. to use all means within his power to transfer such rights to Deutsche Timken Gesellschaft mit beschrankter Haftung. The foregoing declaration, Mr. Prausnitzer also makes to the Deutsche Timken Gesellschaft mit beschrankter Haftung, with direct effect in favour of such company.

Mr. Prausnitzer guarantees that the balance-sheet as of December 31, 1927, which has been handed by him to the party sub (3) this day, signed by him for the purpose of identification, is correct and especially that the claims and other assets of the Company, exclusive of objects of no material value, will upon realization bring at least the amounts therein stated and that the liabilities of the company do not exceed the amounts therein stated. Mr. Prausnitzer furthermore guarantees that the company had sufficient earnings from December 31, 1927 to March 31, 1928 to cover the amounts of his salary and commission for such period stipulated in his above mentioned contract of employment. In conclusion Mr. Prausnitzer warrants that the stock on hand, cash, outstanding accounts as well as bills payable of the company as per December 31, 1927 are correctly stated in the balance sheet delivered and also that the declaration written at the end of such balance sheet is correct.

[fol. 4900]

IV

All disputes regarding the conclusion, interpretation and performance of this agreement and the annex thereto shall be decided by a board of arbitration, eliminating proceedings before the courts. Each party appoints an arbiter and the arbiters so appointed choose a chairman. If they are unable to agree upon a chairman, the same shall be appointed by the president of the Chamber of Commerce (Industrie- und Handelskammer) of Berlin. The award of the board of arbitration is made by a majority of the votes. In case of a tie the chairman is to give the casting vote.

V

The company will bear the stamp duties of this contract and of the contract of employment to be entered into between the company and Mr. Prausnitzer as well as the

costs of registration of the above resolutions in the Commercial Register.

The notarial costs and the costs incurred by Mr. Prausnitzer for legal advice in connection with the conclusion of the contract are borne by British Timken Ltd.

The record was read, translated to the parties sub (2) and (3) into the English language by the interpreter, approved by the parties and personally signed by them as well as by the interpreter as follows:

Michael Bruce Urquhart Dewar, William Eric Louis Seward, Max Prausnitzer, Ludwig Zeisler, Dr. Beutner, Notary.

Annex I to the notarial record of this day. Notarial Register No. 141, year 1928, Berlin, May 5, 1928.

Dr. Beutner, Notary.

S. 1

The name of the company is:

[fol. 4901] "Deutsche Timken Gesellschaft mit beschränkter Haftung".

The location of the company is in Berlin.

S. 2

The object of the enterprise is the manufacture and sale of anti-friction bearings of all kinds and of component parts of all kinds of machinery fitted with anti-friction bearings.

S. 3

The amount of the capital stock is 400,000 Reichsmarks, divided into common shares of the aggregate amount of 399,000 Reichsmarks (shares A) and a preferred share of 1000 Reichsmarks (share B).

The common shares belong to the following members:

(1) Mr. Henry Timken, RM. 225,000.

(2) British Timken Limited, RM. 4,000.

(3) Mr. Michael Bruce Urquhart Dewar, RM 105,000.

(4) Mr. Max Prausnitzer, RM. 4,800, 200, 60,000, being common shares in the aggregate amount of RM. 65,000.

The preferred share in the amount of RM. 1,000 belongs to British Timken Limited.

The preferred share of RM. 1,000 is indivisible. The transfer of the preferred share or of a common share or part thereof to persons other than members of the company requires the consent of the general meeting. The resolutions of the general meeting are passed by a three quarters majority, the preferred share having ten votes only.

The general meeting is obligated to give its consent in the following cases:

(1) Where evidence of the written consent of shareholders representing at least three fourths of the capital stock of the company is furnished, the general meeting is obligated to consent to a sale and transfer in accordance with such consent.

[fol. 4902] (2) A member of the company may give notice to the chairman of the Board of Supervisors or to his authorized representative of an intention to sell a common share or part thereof. Such notice shall state the price for the share or part thereof and shall empower the chairman of the Board of Supervisors or his representative to transfer the share or part thereof at the price stated to another member of the company. Such declaration is irrevocable without the consent of the chairman of the Board of Supervisors or his representative for a period of 60 days.

A member who upon enquiry made by the Chairman or his representative expresses his willingness within the period above mentioned to take over the share or part thereof at the price stated is entitled upon payment of the price stated to acquire the share or part thereof. Payment of the purchase price to the offering member shall be made in the manner to be determined by the chairman of the Board of Supervisors or his representative not later than 28 days after the purchasing member has declared his readiness to acquire the share or part thereof.

If the chairman of the Board of Supervisors or his representative shall not within 60 days from the date of offer find a member ready to acquire the share or part thereof at the said price he shall give written notice thereof to the offering member. In such case the general meeting is obligated to consent to the sale of the share or part thereof to another party, provided however that the sale and

transfer of the share or part thereof shall be made within one month from the giving of such notice and that it shall not be made at a price below that stated to the chairman of the Board of Supervisors or his representative at the time of offering, nor shall such price be lowered through the medium of rebates, deductions or similar understandings.

The chairman of the Board of Supervisors or his repre- [fol. 4903] sentative shall offer the share or part thereof to all the members of the company upon the terms stated and in the case of several acceptances apportion it among the applicants in proportion to their holdings of common shares.

The assignment of parts of shares does not require any consent other than that above mentioned.

S. 5

If a member owning less than one quarter of the capital stock of the company dies, becomes incapable of disposing, becomes a bankrupt or insolvent, or if Mr. Prausnitzer retires from the company or ceases to be active in behalf of the same, he or the heirs or the legal representative or the trustee in bankruptcy, as the case may be, are obligated to offer his share in the company to the other members for purchase through the chairman of the Board of Supervisors or his representative. If the chairman of the Board of Supervisors or his representative does not within 90 days find a member ready to take over the share, he shall give notice thereof to the heirs of the deceased member or to their legal representative or to the trustee in bankruptcy, as the case may be, and the general meeting is obligated to give its consent to the sale of the share to another person, provided however that the sale shall not be made at a price below that stated to the chairman of the Board of Supervisors or his representative and provided further that it shall not be lowered through the medium of rebates, deductions or similar understandings.

The chairman of the Board of Supervisors or his representative shall offer the share or part thereof to all the members upon the terms stated and in the case of several acceptances he shall apportion same among the applicants in proportion to their holdings of common shares.

[fol. 4904] S.6

In case Mr. Prausnitzer dies, becomes incapable of disposing or ceases to exercise any activity in behalf of the company or becomes a bankrupt he or his heirs or his legal representative or the trustee in bankruptcy, as the case may be, shall receive as the price for his shares an amount to be determined by arbitration, but such amount shall not be smaller than the par value of the share. If there are no members willing to pay such price, the company is obligated to retire such share and to pay to Mr. Prausnitzer or to his heirs the amount calculated in the manner aforesaid.

S.7

The appointment of the managing director as well as the revocation thereof is made by the general meeting. The conclusion of the contract with the managing director is effected by written agreement with the chairman of the Board of Supervisors.

S.8

A Board of Supervisors is formed, composed of at least three individuals. A change of the membership of the Board of Supervisors does not require notice to the Court or publication. The term of office of the members of the Board of Supervisors is one year. Upon the expiration of the term of office the members of the Board of Supervisors continue to hold office until new elections are held. If any member of the Board of Supervisors retires before the expiration of his term, a substitutional election shall be held upon the application of at least two members of the company. The resolutions of the Board of Supervisors are adopted by a majority of the individual votes present at meetings or pursuant to written or telegraphic expressions.

The members of the Board of Supervisors may cause [fol. 4905] themselves to be represented by proxies. A proxy may represent several members of the Board of Supervisors. Any member of the Board of Supervisors may be represented by another member of the Board of Supervisors as proxy. In such case the representing member of the Board of Supervisors may also vote in behalf of the member or members of the Board of Supervisors rep-

resented by him and add the vote of his constituent or constituents to his own vote.

The Board of Supervisors may appoint committees; its responsibility shall not be affected thereby.

S.9

The Board of Supervisors shall settle the subjects to be submitted to the meeting of the members of the company, so also in particular the balance sheet.

The members of the Board of Supervisors except Mr. Seward receive reimbursement of their reasonable cash expenditures and such remuneration as shall be determined by the general meeting by a three quarters majority, the preferred share having 10 votes only. The compensation payable to all of the members of the Board of Supervisors shall not however exceed 10% of the profits of the company for the fiscal year.

S. 10

Each RM. 100 of a common share is entitled to one vote in the general meeting. The preferred share is entitled to 4000 votes in all cases where according to the provisions of the German Law a simple majority of the votes is sufficient; in the case where the law requires an increased majority, be it compulsory or optional, the preferred share is entitled to 10 votes. In lieu of voting at the general meetings votes may be taken in writing or by telegram, addressed to the chairman of the Board of Supervisors [fol. 4906] or his representative, except where the law prescribes notarial authentication of the resolutions of the general meeting. The representation by proxies is permissible.

S. 11

The annual regular meeting of the members of the company shall take place on the second Thursday after the third Monday in March in each year.

S. 12

The fiscal year of the company is the calendar year commencing on January 1st and ending on December 31st.

S. 13

The balance sheet shall be prepared by the managing director during the first two months after the close of a

fiscal year and examined by the Board of Supervisors. The approval of the balance sheet formation of a reserve fund, fixing the dividends and discharge to be granted to the managing director are passed upon by the regular meeting of the members of the company pursuant to proposal of the Board of Supervisors.

The Board of Supervisors is in particular authorised to appoint accountants, who shall examine the books of the company and have access to all books, records and writings of the company at all times. The employes of the company are obligated to give all assistance and information to the accountants so that they may be able to discharge their duties in the best manner possible. A report of the accountants upon the balance sheet and the book keeping shall be submitted to the regular annual meeting of the members of the company.

S. 14

Unless the meeting of the members of the company resolves differently the net profits are distributed among the [fol. 4907] members of the company.

Out of the net profits distributable among the members the preferred share is entitled to a preferred cumulative dividend of five per cent per annum. The remainder of the net profits shall be apportioned pro rata amongst the common shares.

Upon a dissolution of the company the assets remaining after providing for the liabilities shall be distributed among the common shares and the preferred share according to the par value thereof.

(Notary's bill of costs and disbursements)

I hereby certify that the above and foregoing is a correct and complete translation of the German original submitted to me.

Berlin, W.8. May 11, 1928.

Ludwig Zeisler, official translator of the English language in and for the area of the Court of Appeals in Berlin, Germany.

[fol. 4908] CERTIFIED TRANSLATION

Berlin, May 8, 1928.

Before the undersigned Notary in the area of the Court of Appeals at Berlin Counselor at Law Dr. Wilhelm Beutner there appeared this day:

1) the civil engineer Max Prausnitzer of Berlin W. 50, Rankestrasse 5.

2) the merchant Michael Bruce Urquhart Dewar, No. 4, Central Buildings, Westminster, England.

3) the merchant William Eric Louis Seward, No. 128 Piccadilly, London, England.

The parties sub (1) and (3) are personally known to the Notary, the party sub (2) identified himself to the satisfaction of the Notary by exhibiting his passport, bearing his photograph, No. 492277 issued by the Foreign Office at London on July 11, 1927.

Mr. Dewar and Mr. Seward declared that they do not understand the German but only the English language. So also the Notary found that Messrs. Dewar and Seward do not understand the German language. For this reason the sworn interpreter of the English language, the American lawyer, Ludwig Zeisler, Berlin W. Friedrichstrasse 59 was called in.

The party sub (1) and the party sub (2) acted in their own behalf; the party sub (3) acted under a power of attorney in behalf of Mr. Henry Timken of Canton, Ohio, U. S. A. and British Timken Limited, a company located in Cheston Road, Aston Birmingham, England.

The parties declared:

Our declaration made in the notarial proceeding of May 5, 1928—Notarial Register No. 141 of the year 1928 of the officiating Notary—we hereby amend by omitting in Article 4 of the said notarial proceeding the party sub (e), Freiherr [fol. 4909] Trabart von und zu der Tann, Rathsamhausen.

Article 4 will therefore read as follows: "As members of the first Board of Supervisors there are hereby appointed:

a) Mr. Henry Timken,

b) Mr. Michael Bruce Urquhart Dewar,

c) Mr. Andrew Jameson Matthews Duncan,

d) Mr. William Eric Louis Seward."

The record was read, translated to the parties sub (2) and (3) by the interpreter into the English language, approved by the parties and personally signed by them as well as by the interpreter as follows:

Michael Bruce Urquhart Dewar, William Eric Louis Seward, Max Prausnitzer, Ludwig Zeisler, Dr. Beutner, Notary.

Re: Deutsche Timken Gesellschaft mit beschrankter Haftung.

I hereby repeat my notice to the Commercial Register regarding the increase of the capital stock and the amendment of the articles of incorporation of Deutsche Timken Gesellschaft mit beschrankter Haftung of Berlin, made in the notarial declaration of May 5, 1928; so far as legally requisite, I also include in the notice the amendment of the notarial proceeding mentioned in the notarial proceeding of May 8, 1928.

Berlin, May 8, 1928.

Max Prausnitzer.

To the District Court, Berlin-Centre:

I hereby certify that the above and foregoing is a [fol. 4910] correct and complete translation of the German original submitted to me.

Berlin, W. 8. May 11, 1928.

Ludwig Zeisler, Official translator of the English language in and for the area of the Court of Appeals in Berlin, Germany.

[fol. 4911] CERTIFIED TRANSLATION

Contract of Employment

between Deutsche Timken Gesellschaft mit beschrankter Haftung of Berlin and Mr. Max Prausnitzer of Berlin.

1

In accordance with the provisions of this contract Mr. Prausnitzer is made managing director (Geschaftsfuhrer) of Deutsche Timken Gessellschaft mit beschrankter Haftung for a period of five years, that is to say from January 1, 1928 to December 31, 1932. Without his written consent no additional managing director shall be appointed during

such period. Mr. Prausnitzer will regard the conduct and supervision of all the affairs and business of the company as his principal occupation and will devote his entire time and energies thereto. In the execution of his duties and functions Mr. Prausnitzer will be guided by and follow the instructions and orders given to him by the board of supervisors (Aufsichtsrat).

2

This contract terminates,

a) if Mr. Prausnitzer has been unable to fulfil his duties as managing director for a period of six consecutive months,

b) if the turnover of the company (viz. the net amounts of invoices made out by the company in respect of merchandise sold directly or indirectly) does not reach RM. 250,000 in the year 1928, RM.350,000 in the year 1929, RM. 450,000 in the year 1930, RM.900,000 in the year 1931 or RM.1,200,000 in the year 1932 and if for such reason the board of supervisors decides to terminate the contract. The board of supervisors shall however make an appropriate deduction from the above mentioned figures, if the reduction of the turnover has been due to strikes, lock- [fol. 4912] outs, delays in delivery or to any other causes over which Mr. Prausnitzer has no control.

c) if Mr. Prausnitzer becomes a bankrupt, is put under guardianship or resigns from his office with the concurrence of the board of supervisors.

d) if Mr. Prausnitzer dies.

3

In the event mentioned sub (d) the contractual commission and salary of Mr. Prausnitzer shall be paid to his heirs for a period of three months next succeeding his death.

4

The parties hereto regard it as a moral though not a legal obligation that at the end of the five years a further contract shall be entered into between the company and Mr. Prausnitzer, containing such terms and conditions as may be mutually agreed upon, provided that Mr. Prausnitzer will have conducted the business of the company to the satisfaction of the other members of the company.

5

During the life of this contract Mr. Prausnitzer receive a fixed salary of RM.12,000 per year and a commission of 2½% upon the turnover (i.e. the net amounts of invoices collected by the company in respect of merchandise sold directly or indirectly) from January 1, 1928 to the end of the fiscal year 1928; of 2% for the year 1929 up to a turnover of RM.350,000; for the fiscal year 1930 up to a turnover of RM.450,000, for the fiscal year 1931 up to a turnover of RM.900,000 and for the fiscal year 1932 up to a turnover of RM.1,200,000; and of 3% for the fiscal year 1929 and the succeeding fiscal years upon the excess over the foregoing amounts.

[fol. 4913] 6

Mr. Prausnitzer is entitled to receive from the company adequate reimbursement of his proper travelling expenses as well as of other expenses incurred by him in the direct execution of his duties as managing director.

7

Mr. Prausnitzer has the right in each year to take two vacations of not exceeding 4 weeks each, that is to say one in Summer and one in Winter.

8

Without the previous consent of the board of supervisors Mr. Prausnitzer shall not negotiate any of the following transactions:

1) the acquisition sale or encumbrance of real estate,
2) leases running for more than one year,
3) the appointment of procurist,
4) the calling up of amounts unpaid upon shares in the company,
5) the purchase of merchandise exceeding RM.2,000 in any one case.
6 any other transactions which may from time to time be determined by the board of supervisors to be subject to this provision.

The amount expended or caused to be expended by Mr. Prausnitzer for advertising shall not exceed the amount

fixed by the board of supervisors, unless the board of supervisors has previously given its consent. Nor shall Mr. Prausnitzer make any sales upon any basis or at prices other than those fixed from time to time by the chairman of the board of supervisors, unless the chairman of the board of supervisors has previously given his [fol. 4914] express consent.

Mr. Prausnitzer is authorised to employ persons in behalf of the company, whose salaries received by them from the company shall not exceed RM.6,000 per year each. Employes whose aggregate compensation exceeds that amount may be appointed by Mr. Prausnitzer only with the consent of the chairman of the board of supervisors.

Mr. Prausnitzer has the right, with the concurrence of the board of supervisors, to choose suitable persons as procurists. Such procurists may sign only jointly with Mr. Prausnitzer.

The duties of Mr. Prausnitzer as managing director are governed by the provisions of the German law.

9

All disputes regarding the conclusion, interpretation and performance of this agreement shall be decided by a board of arbitration, thus barring proceedings before the regular courts. Each party, that is to say Deutsche Timken G.m.b.H. on the one hand and Mr. Prausnitzer on the other, will appoint an arbiter, the latter will choose a chairman. If they are unable to agree upon a chairman, the latter shall be appointed by the president of the Chamber of Commerce (Industrie-und Handelskammer) in Berlin.

The award of the board of arbitration is made by a majority of the votes.

In the event contemplated in the first paragraph of this article Deutsche Timken G.m.b.H. will be represented by the chairman of its board of supervisors or his substitute.

Berlin, May 5, 1928.

Michael Bruce Urquhart Dewar, William Eric Louis Seward, Max Prausnitzer.

[fol. 4915] The foregoing signatures before me of

1) the merchant Michael Bruce Urquhart Dewar of No. 4, Central Buildings, Westminster, England.
2) the merchant William Eric Louis Seward, of No. 128, Piccadilly, London, England.
3) the civil engineer Max Prausnitzer of 5 Rankestrasse, Berlin W.50.

are hereby authenticated.

Notarial Register No. 142, year 1928. Berlin, May 5, 1928. Dr. Beutner, Notary. (Notarial Seal)

(Notary's Bill of Costs and Disbursements)

I hereby certify that the above and foregoing is a correct and complete translation of the German original submitted to me.

Berlin, W.8. May 15, 1928.

[fol. 4918] DEFENDANT'S EXHIBIT 45

re Deutsche Timken G. M. B. H. (The German Company)

It Is Hereby Agreed between the undersigned Henry Heinzelman Timken of Canton Ohio U. S. A. British Timken Limited of London England Michael Bruce Urquhart Dewar of London England and Max Prausnitzer of Berlin Germany.

1. Each of the parties hereto hereby agrees with each of the other parties hereto that he will forthwith do or cause to be done all things necessary for the purpose of reconstituting the German Company in accordance with the

conditions contained in the Annexure marked A and carrying these conditions into effect and that after such reconstitution he will forthwith do or cause to be done all things necessary for the purpose of securing the completion of an Agreement between Mr. Prausnitzer and the German Company in accordance with the conditions contained in the Annexure B.

2. The Annexures A and B shall be regarded merely as specifying the terms and conditions which are to be embodied in the formal documents to be drawn up in German in accordance with German Law and the formal documents and all the proceedings necessary to give them proper effect in accordance with German Law shall be settled and carried out by or under the supervision of Dr. Wilhelm Beutner of No. 53 Mauerstrasse Berlin after consultation with Mr. Prausnitzer and his lawyer.

3. In particular Dr. Beutner shall settle the terms and conditions of Section 4 of the Annex referred to in Annexure A and for this purpose the following conditions shall apply:

(a) The accounts of the German Company shall be adjusted and a balance sheet showing the financial position of the German Company shall be prepared as at the Thirty-first December One thousand nine hundred [fol. 4919] and twenty seven no allowance being made therein for goodwill trade marks or other like intangible assets and the amount if any owing by Mr. Prausnitzer to the Germany Company or vice versa shall be shown therein apart from his common share of R. M. Five thousand and for this purpose all profits or losses down to the said date shall be credited or debited as the case may be to Mr. Prausnitzer.

(b) Any amount found to be owing to Mr. Prausnitzer in respect of salary for the year One thousand nine hundred and twenty seven shall be paid to him in cash and any further amount found to be owing to Mr. Prausnitzer shall be credited to him in part payment of his new common share and any amount owing by him shall be forthwith paid by him to the German Company in cash.

(c) Mr. Prausnitzer guarantees the accuracy of the said Balance Sheet at the Thirty first December One

thousand nine hundred and twenty seven and that the book debts and other assets of the German Company exclusive of the intangible assets aforesaid will produce and the liabilities of the German Company will not exceed the respective amounts shown in the said Balance Sheet. Mr. Prausnitzer further guarantees that the German Company has since the Thirty first December One thousand nine hundred and twenty seven down to the date hereof earned a profit sufficient to pay his salary and commission for that period under the Agreement in Annexure B.

(d) Mr. Prausnitzer further guarantees that the stocks cash and book debts of the Germany Company [fol. 4920] at the Thirty first December One thousand nine hundred and twenty seven will shew a surplus of not less than RM. 25,899.20 over the liabilities of the German Company at that date inclusive of any amount owing to him in respect of salary for the year One thousand nine hundred and twenty seven but exclusive of any other amount owing to him and exclusive of his common share of R. M. Five thousand.

(e) The aforesaid guarantee can be established by a separate private Agreement collateral to the formal documents if this will be in order.

Dated this Thirteenth day of March One thousand nine hundred and twenty eight.

Henry Heinzelman Timken, by J. F. Strough, Agent.
British Timken Ltd., by M. B. U. Dewar, Director.
M. B. U. Dewar, Max Prausnitzer.

[fol. 4921] Annexure A

Before the undersigned Notary in the area of the Court of Appeals in Berlin there appeared:

1) The Civil Engineer Max Prausnitzer.
2)
3)

The parties are acting

The parties declared:

The party sub 1), civil engineer Max Prausnitzer, is the sole member of "Deutsche Timken Gesellschaft mit beschrankter Haftung" of Berlin (The Company)

The parties hereby agree that the constituents of the party sub 2) viz.

1) Mr. Henry Heinzelman Timken of Canton, Ohio, U. S. A.

2) British Timken Limited of London, England.

3) Mr. Michael Bruce Urquhart Dewar of London, England, shall become members of the Company.

For such purpose they enter into the following agreement:

1) Mr. Prausnitzer will procure the Articles of Incorporation of the Company to have the wording contained in Annex hereto in substitution for and to the exclusion of all existing Articles.

2) The capital stock shall be increased from RM.5,000 to RM.400,000, and is hereby taken over as follows:

a) Mr. Timken a common share of	RM.225,000
b) British Timken Limited a common share of	RM. 4,000
and a preferred share of	RM. 1,000
c) Mr. Dewar a common share of	RM.105,000
d) Mr. Prausnitzer another common share of	RM. 60,000
in addition to his existing common [fol. 4922] share of	RM. 5,000
	RM.400,000

If the capital stock of the Company is increased, the voting power of the preferred share shall be increased in such manner that in the cases mentioned in S.10 of the Articles of Incorporation the preferred share shall be entitled to one more vote than the entirety of the common shares.

3) Mr. Prausnitzer continues to be the sole Managing Director (Geschaftsfuhrer) of the Company without recall for a period of Five years from the 1st January 1928 i. e. until the 31st December 1932. The terms and conditions of employment of Mr. Prausnitzer are laid down in a special contract of employment.

4) As members of the first Board of Supervisors there are appointed herewith:

a) Mr. Henry Heinzelman Timken

b) Mr. Michael Bruce Urquhart Dewar,

c) Mr. Andrew Jameson Matthews Duncan

d) Mr. William Eric Louis Seward

e) Freiherr Trabart von u Zu der Tann Rathsamhausen.

5) Mr. Prausnitzer affirms that no protective rights other than the trade mark mentioned in S.4 of the accompanying Articles of Incorporation exist in Germany. Should any protective rights of such character nevertheless be in existence in Germany, Mr. Prausnitzer agrees to assign or cause to be assigned the same to the Company without cost.

6) All disputes regarding the conclusion, interpretation and performance of this Agreement and the annexes thereto [fol. 4923] shall be decided by a board of arbitration, it being understood that regular legal proceedings are excluded. Each party appoints an arbitrator and the arbiters so appointed choose a chairman, if they do not agree. If they are unable to agree upon a chairman, the same shall be appointed by the President of the Chamber of Commerce (Industrieund Handelskammer) of Berlin. The award of the board of arbitration is made by a majority of the votes. In the event of any equal number of votes, the chairman is to have the casting vote.

Annex

S.1

The name of the Company is "Deutsche Timken Gesellschaft mit beschrankter Haftung".

The location of the Company is in Berlin.

S.2

The object of the enterprise is the manufacture and the sale of anti-friction bearings of all kinds and of component parts of all kinds of machinery fitted with anti-friction bearings.

S.3

The amount of the capital stock is 400,000 reichsmarks divided into common shares of the aggregate amount of 399,000 reichsmarks (shares A) and a preferred share of 1,000 reichsmarks (share B)

The common shares belong to the following members:

[fol. 4924] 1) Mr. Timken	RM. 225,000
2) British Timken Limited	RM. 4,000
3) Mr. Dewar	RM. 105,000
4) Mr. Prausnitzer	RM. 65,000
The preferred share in the amount of belongs to British Timken Limited	RM. 1,000
	RM. 400,000

S.4

Mr. Prausnitzer pays for his new Common Share of RM. 60,000 by assigning the trade mark registered for him in the Imperial Patent Office in Clause 10, No. 225,230., file No. 15-319. The value of such contribution is fixed at such amount and the balance making up the sum of RM.60,000 is paid by Mr. Prausnitzer by means of such consideration as shall be specified herein by Dr. Beutner after consultation with Mr. Prausnitzer and his lawyer so that without involving Mr. Prausnitzer in any further contribution in cash the share of Mr. Prausnitzer of RM.60,000 is fully paid for. Mr. Timken, British Timken Limited and Mr. Dewar pay for all of their shares in cash and agree to make one-half of such payments prior to the registration of the Company.

S.5

The preferred share of RM.1,000 is indivisible. The transfer of the preferred share and the transfer of a common share or part thereof is permissible only with the consent of a General Meeting. The resolution of the General Meeting in the aforesaid case must be passed by three quarter majority, the preferred share only having ten votes.

The General Meeting is obligated to give the consent in [fol. 4925] the following cases:

1) where evidence of the written consent of all the members of the Company is furnished.

2) where a member of the Company has given previous notice to the Chairman of the Board of Supervisors or to his representative of an intention to sell a common share (which includes a part share). Such notice shall state the price for the share and shall empower the Chairman of the

Board of Supervisors or his representative to transfer the share at the price stated to another member of the Company. Such declaration is irrevocable without the consent of the Chairman of the Board of Supervisors or his representative for a period of 60 days.

A member who upon enquiry made by the Chairman or his representative within the period above mentioned expresses his willing-ness to take over the share at the price stated is entitled upon payment of the price stated to acquire the share of the retiring member. The General Meeting is obligated to consent to the transfer and payment of the purchase-price shall be made in the manner to be determined by the Chairman of the Board of Supervisors or by his representative not later than 28 days after the member has declared his readiness to take over the share.

If the Chairman of the Board of Supervisors or his representative shall not within sixty (60) days from the offering date find a member ready to take over the share, he shall give written notice thereof to the offering member. In such case the General Meeting is obligated to consent to the sale and transfer of the share to another party, provided however, that the sale and transfer shall [fol. 4926] be made within one month of the giving of such notice and shall not be made at a price below that stated to the Chairman of the Board of Supervisors or representative at the time of offering, nor shall such price be lowered through the medium of rebates, deductions or similar understandings.

The Chairman of the Board of Supervisors or his representative shall offer the share to all the members upon the terms stated and in the case of several acceptances he shall apportion it among the applicants in proportion to their holdings of common shares.

S. 6

In case of the death lunacy or bankruptcy of any member of the Company holding less than one quarter of the Common Shares his heirs or representatives are obligated to offer his share for purchase to the other members through the Chairman of the Board of Supervisors or his representative. If the Chairman of the Board of Supervisors or his representative does not within 90 days find a member ready

to take over the share he shall give notice thereof to the heirs of the deceased member and the Board of Supervisors and the Company are obligated to give their consent to the sale and transfer of the share to another person provided however, that the sale shall not be made at a price below that stated to the Chairman of the Board of Supervisors or his representative nor shall it be lowered through the medium of rebates deductions or similar understandings. The Chairman of the Board of Supervisors shall offer the share to all the other members upon the terms stated and in the care of several acceptances he shall apportion same [fol. 4927] among the applicants in proportion to their holdings of common shares.

In the case of Mr. Prausnitzer's death, lunacy, bankruptcy or retirement from the office of Managing Director he or his heirs or representatives, as the case may be, shall receive as the price of his share an amount to be determined by arbitration, but such amount shall not be smaller than the par value of the share. If there are no members of the Comapny willing to pay such price the Company is obligated to retire such share and to pay to Mr. Prausnitzer or his heirs or representatives the amount calculated in the manner aforesaid.

S. 7

The appointment of a Managing Director as well as the revocation thereof are made by the General Meeting.

S. 8

A Board of Supervisors is constituted, composed of at least three (3) persons. A change of the membership of the Board of Supervisors does not require notice to the Court or publication. The term of office of the members of the Board of Supervisors is one year. Upon the expiration of the term the members of the Board of Supervisors continue to hold office until new elections are made. If any member of the Board of Supervisors retires before the expiration of his term, a substitutional election shall be held upon application of at least two members of the Company. The resolutions of the Board of Supervisors are adopted by a majority of the votes, either in meetings, or pursuant to written or telegraphic expressions. The Members of the Board of Supervisors may cause themselves to

[fol. 4928] be represented by proxies and any member of the Board may be appointed as proxy for another member and shall be entitled to vote in respect of the member or members by whom he has been appointed as proxy and any vote given as proxy shall be additional to his own vote. The Board of Supervisors is entitled to form subcommittee without however thereby reducing its own responsibility.

S. 9

The Board of Supervisors shall furthermore settle the subjects to be submitted to the meeting of the members of the Company for their action thereon, expecially also the Balance Sheet.

The members of the Board of Supervisors (except Mr. Seward) receive reimbursement of their reasonable cash expenditures and such remuneration as shall be decided by a three quarter majority of a General Meeting but so that the amount of such remuneration for any year shall not exceed Ten per cent of the profits of the Company for such year. The preferred share only having ten votes.

S. 10

Each RM. 100 of a common share is entitled to one vote. The preferred share is entitled to 4,000 votes in all cases where according to the provisions of the German Law a simple majority of the votes is sufficient; In the cases however in which the law requires an increased voting power, be it compulsory or optional, the preferred share is entitled to ten votes. The votes may be taken in writing or by telegram addressed to the Chairman of the Board of Supervisors or his representative except where the law prescribes Notarial authentications of the resolutions of the corporate meeting.

[fol. 4929] S. 11

The Balance Sheet shall be prepared by the Managing Director during the first two months after the close of a fiscal year and examined by the Board of Supervisors. The approval of the Balance Sheet, formation of a reserve fund fixing the dividends and discharge to be granted to the Managing Director are passed upon by the regular

meeting of the Company pursuant to proposal of the Board of Supervisors.

S. 12

Unless the meeting of the members of the Company resolves differently the net profits are distributed among the members of the Company.

Out of the net profits subject to distribution the preferred share is entitled to a preferred dividend of 5%. The remainder of the net profits is divided equally among the common shares according to the holdings.

Upon a liquidation of the Company the assets remaining after providing for the liabilities shall be distributed among the common shares and the preferred share according to the par value thereof.

S. 13

The fiscal year of the Company shall be the calendar year from the 1st January to the 31st December.

S. 14

The regular annual meeting of the Company shall be held on the second Tuesday after the third Monday in March in each year.

S. 15

The Board of Supervisors shall appoint Auditors who [fol. 4930] shall audit the accounts of the Company and shall have access at all times to all the books, records and documents of the Company and every Officer of the Company shall give to the Auditors all assistance and information required to enable them to perform their duties and at every regular annual meeting of the Company a Balance sheet and Profit and Loss Account for the last previous fiscal year together with a report by the Auditors with respect to such Balance Sheet and Account shall be submitted to the Meeting.

[fol. 4931]

ANNEXURE B

HEADS of AGREEMENT

between

Mr. MAX PRAUSNITZER

and the

DEUTSCHE TIMKEN GESELLSCHAFT m.b.H.

1. Subject as hereinafter mentioned Mr. Prausnitzer shall be Managing Director of the Deutsche Timken Gesellschaft M.B.H. for a period of Five Years from the first January 1928 i.e. until the 31st December 1932 and so long as he holds office as such no other Managing Director shall be appointed without his consent in writing.

2. Mr. Prausnitzer shall regard the supervision and management of the Company's business and affairs as his principal occupation to which he shall devote the whole of his time and attention. In the performance of his duties and the exercise of his powers as Managing Director Mr. Prausnitzer shall have regard and conform to any instructions or regulations given or made by the Board of Supervision of the Company.

3. This contract shall be terminated:

(a) If Mr. Prausnitzer cannot perform his duties as Managing Director for a period of six consecutive months.

(b) If the turnover of the Company (i.e. the nett invoice price encashed of all goods sold directly or indirectly by the Company) does not amount in the year 1928 to RM. 250,000, in the year 1929 to RM. 350,000, in the year [fol. 4932] 1930 to RM. 450,000, in the year 1931 to RM. 900,000 or in the year 1932 to RM. 1,200,000. and the Board of Supervisors decide that this contract shall be terminated. Provided always that if the turnover shall be reduced by strikes lockouts default in the delivery of supplies or other causes beyond the control of Mr. Prausnitzer a fair allowance shall be made by the Board of Supervisors.

(c) If Mr. Prausnitzer should become bankrupt lunatic or should resign with the consent of the Board of Supervisors.

(d) If Mr. Prausnitzer should die.

In the case (d) the commission and salary payable under this contract shall be paid to Mr. Prausnitzer's legal personal representative for the period of three months immediately subsequent to his death.

4. It is to be an honourable but not legally binding agreement between the parties that at the end of the period of Five years if Mr. Prausnitzer's administration of the Company has proved satisfactory to the other members of the Company a further contract for a period of Three years on terms to be agreed on shall be entered into.

5. During the continuance of this contract Mr. Prausnitzer shall receive a fixed salary at the rate of RM.12,-000.—per annum and a commission of 2½% on the turnover as hereinbefore defined from the 1st January 1928 until the end of the year 1928, 2% on the turnover as hereinbefore defined for the year 1929 up to RM. 350,000 for the year 1930 up to RM. 450,000, for the year 1931 up [fol. 4933] to RM. 900,000 and for the year 1932 up to RM. 1,200,000 and 3% on the turnover as hereinbefore defined for the year 19 .9 and any subsequent year or period in excess of the amounts aforesaid.

6. Mr. Prausnitzer shall also be entitled to be recouped by the Company all reasonable travelling and other expenses incurred by him in or about the performance of his duties as Managing Director.

7. Mr. Prausnitzer shall be entitled to take two vacations annually of not more than four weeks each one in Winter and one in Summer.

8. Mr. Prausnitzer shall not conclude any transaction of the nature following without the previous approval of the Board of Supervisors:

1. The acquisition sale or mortgage of real estate.
2. The grant or acceptance of leases for more than one year.
3. The appointment of holders of procuration.
4. The calling up of money uncalled upon shares.
5. Purchases of goods in excess of RM. 2,000. in any one case.
6. Any other transactions to be specified from time to time by the Board of Supervisors.

The amount to be expended or authorised for advertising during any period by Mr. Prausnitzer shall not exceed the

sum agreed with the Board of Supervision unless express sanction is first obtained. Mr. Prausnitzer shall not sell or cause to be sold goods at prices other than on the basis or at the amount fixed from time to time by the Chairman of the Board of Supervision unless express sanction is [fols. 4934-4935] first obtained.

Mr. Prausnitzer shall have the right to engage employees whose total remuneration from the Company does not exceed RM. 6,000. per annum each. Employees whose total remuneration exceeds that amount shall only be engaged with the consent of the Board of Supervision.

Mr. Prausnitzer shall have the right to grant procuration to suitable persons to sign jointly with him subject to the approval of the Chairman of the Board of Supervision.

Mr. Prausnitzer's duties as Managing Director so far as not laid down in this or any other contract between the parties shall be regulated in accordance with German Law.

[fol. 4936] DEFENDANT'S EXHIBIT 46

Certificate

I herewith certify that the following shareholders are holding shares of Deutsche Timken Gesellschaft mit beschränkter Haftung, the capital stock of which amounts to 400,000 RM (Fourhundred Thousand Reichmarks), in the following amounts:

(a) Mr. Henry Timken a common share of	225,000 RM
(b) British Timken Limited a common share of	4,000 RM
a preferred share of	1,000 RM
(c) Mr. Michael Bruce Urquhart Dewar a common share of	105,000 RM
(d) Mr. Prausnitzer common shares in the amount of	65,000 RM

Berlin, September 29, 1928.

—— ——, Notary Public.

[fol. 4937] DEFENDANT'S EXHIBIT 47

This Agreement executed as of the first day of January One thousand nine hundred and twenty-eight by and Between British Timken Limited a Joint Stock Company incorporated under the Laws of the United Kingdom of Great Britain and Ireland and having its registered office in the City of Birmingham England (hereinafter for convenience called "the British Company") and Deutsche Timken Gesellschaft mit beschrankter Haftung incorporated under the Laws of the German Reich and having its registered office in the City of Berlin Germany (hereinafter for convenience called "the German Company").

WITNESSETH:

Whereas the British Company manufactures anti-friction bearings (hereinafter called "bearings") in England and has great experience in the manufacture of bearings.

And Whereas the German Company is the registered owner in Germany of the trade mark "Timken".

And Whereas the British Company or the German Company is or may be or become the owner of patents or patent rights in various parts of the world covering inventions relating to bearings and improvements therein.

And Whereas the Timken Roller Bearing Company of Canton Ohio U. S. A. is hereinafter for convenience called "the American Company."

Now the parties hereto Agree as follows:—

1. For the purposes of this Agreement:—

(a) The territory of the German Company shall mean the German Reich.

(b) The territory of the British Company shall mean the United Kingdom of Great Britain and Northern Ireland and all other countries of Europe except the German Reich and all colonies or dependencies of said United Kingdom and European countries except in or adjacent to North or South America.

(c) The territory of the American Company shall mean the rest of the world outside the territories of the German Company and the British Company.

(d) The British American territory shall mean the territories of the British Company and the American Company in combination and

(e) These territories and the corresponding meanings shall be subject to alteration from time to time by agreement between the parties hereto by letter or other writing.

2. (a) Each of the parties hereto will as fully and freely as its patent and contractual rights and obligations permit inform the other party as to all inventions discoveries im- [fol. 4938] provements and practices useful in connection with the manufacture of bearings whether patented or not.

(b) The British Company will so far as its patent and contractual rights and obligations permit license the German Company to operate manufacture and sell bearings in the territory of the German Company during the life of this Agreement under any Letters Patent or other patent rights now or hereafter from time to time owned by the British Company and pertaining to the manufacture or sale of bearings in the territory of the German Company.

(c) The German Company will so far as its patent and contractual rights and obligations permit assign absolutely and for all time to the British Company or its nominees all Letters Patent or other patent rights now or hereafter from time to time owned by the German Company and pertaining to the manufacture or sale of bearings in the British American territory.

(d) The German Company if and when requested by and at the expense of the British Company will execute and do or cause to be executed and done all deeds acts and things which the British Company may consider necessary or desirable in order that any inventions discoveries improvements or practices useful in connection with the manufacture of bearings which may come to the knowledge of the German Company and which the German Company shall be entitled to communicate to the British Company for this purpose may be protected by Letters Patent or other patent rights in such parts of the British American territory and in such names as the British Company shall specify with a view to such patent rights being assigned to or otherwise vested in the British Company or its nominees in accordance with the provisions hereinbefore contained.

(e) The German Company hereby irrevocably appoints the British Company with power of substitution to be its Attorney for it and in its name and on its behalf but at the expense of the British Company to execute and do all

deeds acts and things which the British Company or its substitutes from time to time may consider necessary or desirable for the purpose of giving effect to the agreements on the part of the German Company contained in this section.

(f) Provided however that nothing in this Agreement contained shall obligate either party to acquire or enlarge its interest in any Letters Patent or other patent rights.

3. (a) Each of the parties hereto will use its best endeavours to maintain the distinctive character of the trade mark "Timken" and refrain from any act calculated to prejudice the rights of the parties hereto or the American Company in respect thereof as now existing.

(b) The German Company if and when requested by the British Company will join with the British Company or the American Company in an application for concurrent registration of the trade mark "Timken" if and so far as such [fol. 4939] registration is possible in the territory of the German Company.

(c) The Germany Company upon the termination of this Agreement if and so far as it may be requested in writing by the British Company or the American Company will cause the name "Timken" to be eliminated from its corporate name and from the name of any person, firm or company controlled by it and will refrain and will cause any person firm or company controlled by it to refrain from using the name "Timken" as part of or in connection with his, their or its name or as a trade mark or trade name or otherwise and from any act calculated to obstruct or delay the British Company or the American Company in any steps which it may take with a view to establishing the exclusive right of the British Company or the American Company to the said name in the territory of the German Company and so far as practicable the German Company will assign or cause any person, firm or company controlled by it to assign to the British Company or as it may direct any trade mark or other rights in respect of the said name in its ownership or control.

4. (a). The British Company if and when the German Company shall be actually engaged in the manufacture of bearings will from time to time advise the German Company in the manufacture of bearings and particularly in connection with the quality of the steel used and its com-

position and analysis the method of case hardening the machinery and processes for grinding, gauging, sizing, quenching, die working, forging upsetting, forming, sorting, plating and other operations and in connection with any special tools and machinery so long as the German Company follows such advice and instructions so far as the same shall be economically practicable under the circumstances of the business of the German Company.

(b) The German Company's manufacturing operations shall at all reasonable times be open to inspection by the British Company and the American Company or their representatives.

5. (a) The German Company by itself or its sub-licensees approved by the British Company if and when required by the British Company or the American Company will manufacture bearings in such quantities and in such states within the German Company's territory and will exercise all such rights in connection with the manufacture of bearings as shall be required to maintain all Letters Patent from time to time owned by the British Company or the American Company in any state or states within the German Company's territory.

(b) If the German Company desires to be relieved of the obligation contained in paragraph (a) of this section with respect to any state it shall be entitled to give notice in writing to the British Company that it excludes such state [fol. 4940] from the German Company's territory and thereupon such state shall be withdrawn from the German Company's territory and shall be added to the British-American territory.

(c) For the purposes of this clause a state shall mean a territorial area in which there is separate jurisdiction for patent purposes.

6. Except with the consent of the British Company the German Company shall not manufacture, sell or deal in any bearings except under and in accordance with the terms and provisions of this Agreement and under the trade mark "Timken."

7. The British Company undertakes that during the life of this Agreement the American Company and the British Company shall not directly or indirectly make or sell or license others to make or sell bearings in the German Company's territory or in the British-American territory

knowing them to be for shipment into the German Company's territory save and except as follows to wit:

(a) The British Company and the American Company may make or sell or license others to make or sell in the British-American territory bearings for delivery or shipment into the German Company's territory as assembled component parts of completed articles of manufacture manufactured in the British-American territory or as assembled component parts of completed units of manufacture manufactured in the British-American territory for incorporation into such completed articles of manufacture.

(b) The British Company and the American Company in the British-American territory may accept and execute orders for bearings for ultimate destination in the German Company's territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the Germany Company's territory and the British Company from time to time will notify the German Company of the details of the sales authorised under this paragraph and will pay to the German Company an amount equal to ten per cent (10%) of the net sale price received under any sales so authorised not being sales made through or at the request of the German Company.

(c) The American Company may authorise not more than four manufacturers or producers of vehicles in the United States of America to import into the German Company's territory bearings manufactured by said producers in the American Company's territory for incorporation in new products or for bearing replacement purposes for products previously manufactured or assembled by said manufacturers or producers or their subsidiaries in the German Company's territory Provided that they are not stamped or identified by the name "Timken."

[fol. 4941] (d) For the purposes of this section a holding company as for instance General Motors Corporation and its constituent and subsidiary companies shall be deemed to be one manufacturer or producer.

(e) The parties hereto recognise and approve the mutual licensing agreement entered into between the American Company and International Harvesters Company dated the thirty-first day of December One thousand nine hundred and twenty-seven and the British Company when requested by the German Company will supply to the German Company a copy of the said Agreement.

8. During the life of this Agreement the German Company shall not directly or indirectly make or sell or license others to make or sell bearings in the British-American territory or in the German Company's Territory knowing them to be for shipment into the British-American territory save and except as follows to wit:

(a) The German Company may make or sell or license others to make or sell in the German Company's territory bearings for delivery or shipment into the British-American territory as assembled component parts of completed articles of manufacture manufactured in its territory or as assembled component parts of completed units of manufacture manufactured in its territory for incorporation into such completed articles of manufacture.

(b) The German Company in the German Company's territory may accept and execute orders for bearings for ultimate destination in the British-American territory for use for bearing replacement purposes in such completed articles of manufacture but such right shall not authorise sales to or known to be destined for manufacturers in the British-American territory and the German Company shall from time to time notify the British Company of the details of the sales authorised under this paragraph and shall pay to the British Company an amount equal to ten per cent (10%) of the net sale price received under any sales so authorised not being sales made through or at the request of the British Company.

9. (a) Subject to the approval in writing of the British Company as to both terms and personnel to be exercised at its absolute discretion but not otherwise, the German Company may from time to time grant sub-licenses to others to make use and vend bearings in the German Company's

territory and may communicate to such sub-licensees any information with respect to inventions discoveries improvements and practices whether patented or not received from the British Company.

(b) Every such sub-license shall be deemed to be a license granted by the American Company and shall contain a provision to that effect similar to the provision in that behalf contained in this Agreement and all royalties payable thereunder shall belong to the American Company [fol. 4942] and shall be made payable direct to the American Company accordingly but any amounts payable under the last preceding clause or any similar provision shall not be regarded as royalties.

(c) All the terms and conditions establishing the business and other relations between the German Company and any sub-licensee within the German Company's territory shall be submitted to and approved in writing by the British Company before the same are agreed to by the German Company and no alteration shall be made therein without the like approval.

(d) If the German Company shall acquire any stocks shares, securities or other interest in any company or association, manufacturing or selling bearings in the German Company's territory the German Company shall not sell or dispose of such stocks, shares, securities or interest without the consent in writing of the British Company.

10. (a) During the life of this Agreement the German Company shall pay to the American Company a royalty equal to four per cent (4%) of the net invoice prices after deduction of all discounts of all bearings manufactured or sold by the German Company less amounts equal to one-half (½) of the royalties paid directly to the American Company by sub-licensees pursuant to the last previous section hereof.

(b) Provided however that no royalties shall be paid hereunder by the German Company in respect to (i) completed bearings manufactured by the American Company and purchased from or through the British Company (ii) bearings manufactured by the German Company and sold by it to sub-licensees appointed under the authority of the last previous section hereof which are owned or controlled jointly by the American Company and Michael Bruce Urquhart Dewar of Number 4 Central Buildings, West-

minster, London, England or (iii) bearings upon which the royalties are paid directly to the American Company by sub-licensees pursuant to the last previous section hereof.

(c) The royalties hereby made payable to the American Company are part consideration for the advantages and benefits to be enjoyed by the Germany Company under Sections 2 and 4 of this Agreement and the other provisions of this Agreement in favour of the German Company the American Company having been nominated by the British Company to receive such royalties.

(d) The portion of the said royalties forming part of the consideration for patent rights granted to the German Company under this Agreement is nominal there being no patent rights belonging to the British Company or none of any value now in existence and the grant of patent rights being reciprocal.

11. The said royalties shall be paid on the first days of January, April, July and October of each year or within thirty days thereafter for the bearings sold during the quarter-year prior to said respective dates:

[fol. 4943] 12. (a) The remittance of the said royalties shall be accompanied by statements showing in detail:

(i) The number of bearings made during the preceding quarter-year.

(ii) The number of bearings sold during the preceding quarter-year.

(b) The statements in respect thereto furnished during January of each year shall also be accompanied by a certified statement prepared by the Auditors of the German Company or its sub-licensees as the case may be based upon an actual examination of the books and records of the German Company or its sub-licensees giving the same data as above required in respect of sales made during the year prior to said month of January and said January statements shall if required by the British Company be further verified by sworn declaration of the Managing Director for the time being of the German Company or its sub-licensees.

(c) The British Company and the American Company may once in each year at its own expense employ a chartered accountant who shall have the privilege of examining the books, records and plant of the German

Company and its sub-licensees with a view to determining how many bearings the German Company and its sub-licensees shall have made and sold up to the time of such examination and to whom and when and for what prices.

13. (a) The British Company shall pay all renewal fees required to maintain and keep on foot all Letters Patent in respect to bearings owned by the British Company or the American Company in the German Company's territory which it shall desire to maintain and keep on foot.

(b) Provided however that if the British Company shall elect to discontinue or refrain from maintaining any such Letters Patent the British Company will give not less than three (3) months' written notice to the German Company and during the said interval the British Company if requested so to do shall assign or cause to be assigned to the German Company at the expense of the German Company any of said Letters Patent which the British Company shall so elect to discontinue or refrain from maintaining.

(c) The British Company at its own cost shall defend or cause the American Company to defend every action or proceeding instituted for the purpose of revoking any Letters Patent in respect to bearings owned by the British Company or the American Company which it desires to maintain.

(d) Provided however that if any of said Letters Patent shall be revoked solely on some ground which would not have been available if the German Company had duly performed its obligations under this Agreement then and in any such case the British Company in addition to any other rights which it might have against the German Com- [fol. 4944] pany shall be entitled to recover from the German Company all costs, charges and expenses reasonably incurred in such defence.

14. Upon the termination of this Agreement whether under any of the provisions hereof or otherwise howsoever the German Company for a period of six (6) months thereafter shall have the privilege of completing and selling its stock of bearings on hand at the date of said termination upon the terms which would have ruled if this Agreement had not been so terminated and subject to the payment of royalties as herein provided.

15. (a) In the event of liquidation (except for the purpose of capital reorganization) of the German Company this Agreement shall immediately terminate and cease.

(b) The rights and privileges of the German Company hereunder shall be assignable only with the consent in writing of the British Company.

16. This Agreement unless otherwise terminated as herein provided for shall continue in full force and effect for a period of ten (10) years from the first day of January One thousand nine hundred and twenty-eight.

17. This Agreement is and shall be deemed to be entered into by the British Company on its own account and also for and on behalf of the American Company as a separate party so far as regards any rights, benefits or obligations expressly granted reserved or undertaken by or to the American Company and so far as regards such rights, benefits and obligations the American Company shall be entitled to claim the benefit and be subject to the burden of this Agreement accordingly.

18. This Agreement is made in England and shall be construed and take effect according to English Law.

In Witness whereof British Timken Limited under the authority of its Board of Directors has caused its Common Seal to be affixed to these presents in duplicate and Deutsche Timken Gesellschaft mit beschrankter Haftung under the authority of its Board of Supervisors has caused these presents to be signed by Max Wrba its General Manager in duplicate as of the day and year first above written.

The Common Seal of British Timken Limited was hereunto affixed in the presence of —— ——, Directors.

—— —— Secretary.

[fols. 4945-4946] Witness to the signature of Max Wrba, —— ——.

DEFENDANT'S EXHIBIT 53

4948

[fol. 4949] DEFENDANT'S EXHIBIT 60

The Timken Roller Bearing Co.

Canton, Ohio.
5/6/11.

Lynch & Day, City.

GENTLEMEN:

We received a letter from the Birmingham people reading as follows:

"Our principals have decided that their subsidiary Companies will in future give greater prominence to their proprietorship, and we are to use the word "Vickers" in connection with our various manufactures. We propose in future to call your bearing within our territory, "Vickers-Timken Bearings. We trust that this will meet with your approval". Signed by the Electric & Ordnance Accessories Co.

Vickers Son & Maxim are the owners of the above Company together with a dozen more prominent Companies, but the Vickers, while one of the most prominent firms in England, are not bearing manufacturers and are not known as such. Therefore the word "Vickers" to an automobile bearing will have no weight in the eyes of the automobile trade. When the name "Vickers" is put before the name "Timken" then the Timken name becomes secondary and is rather lost sight of. If a hyphenated name were used, it is only natural to drop the second word, and we feel that shortly the bearings would be called the "Vickers Bearings". They might have shown us more courtesy in asking the privilege of calling them the "Timken-Vickers" Bearings".

The point is this. Will you kindly look up the contract and see if you can find in it any clause in which they are obligated to advertise, sell and call our bearing the Timken Roller Bearing.

As we wish to cable them to head them off, ask that you make this investigation and advise us very promptly.

Yours truly, The Timken Roller Bearing Co., W. R. Timken, Vice Prest.

WRT-5.

[fol. 4950] DEFENDANT'S EXHIBIT 61

May 8, 1911.

The Timken Roller Bearing Co., City.

GENTLEMEN:

We have yours of the 6th. repeating part of letter from the Birmingham people indicating their purpose to call your bearings "Vickers—Timken" bearings, and asking if you will approve of the same.

Replying to your request to see what bearing your contract with them has upon the subject, would report that we find the following to be a part of Article Eleven of your Agreement with them, namely; "And it (The Electric & Ordnance Accessories Company) shall use the word "Timken" exclusively in connection with the roller bearings made or sold by it under this Agreement and in connection with the sale of such bearings. Always provided however that the Licensee shall be entitled to describe itself as sole licensee within the said limits."

Yours very truly, —— ——.

AL/HLR.

[fol. 4951] DEFENDANT'S EXHIBIT 62

May 21, 1920.

Messrs. Carr & Carr, Suite 610 Boatmen's Bank Bldg., St. Louis, Mo.

Attention: Mr. James Carr

DEAR MR. CARR:

In connection with the trademark matter which you discussed with the writer yesterday, would appreciate your writing us in some detail as to this situation, so that we can instruct all in our organization clearly in connection with the matter.

If the writer remembers correctly, you strongly recommend a distinctive type for the word "Timken", and have this appear on all packages and packing boxes.

I would also like your detailed advice regarding the use of the name "Timken" as stamped on bearings, by the English and French Companies, just what is involved by

this, and whether we can require that bearings should be so stamped. The writer does not clearly remember all the points you made, and therefore wishes in front of him a record of just the rulings on this whole proposition.

Thanking you for giving this matter your prompt attention, we are.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice Pres. & Treas.

Trade-Mark. Case No. 24214. Civil Defendant's Exhibit No. 63

The Timken Roller Bearing Co., Canton, Ohio

Attention of Mr. Ely

GENTLEMEN:

* * * * * * *

The exploitation of your inventions abroad involves some difficulty growing out of the legal proposition that a trade-mark is exclusive property and that the same mark cannot be owned by two different concerns for goods of the same kind. The first exception is based on territorial limitation; for it seems that one concern may own a trade-mark for certain goods in one territory and another concern may own the same trade-mark for goods of the same kind in a different territory. According to this doctrine, your British licensee might acquire ownership of the trade-mark "Timken" in a certain territory and wholly exclude you from selling your trade-marked product in that territory,—unless the matter was taken care of by contract. Second, a

concern is liable to lose its trade-mark by permitting others to use it, unless such permission is coupled with conditions which require the licensee's products to conform to certain standards prescribed by the owner of the trade-mark. In such case, the licensee can be treated as an agent of the owner of the mark and, if proper precautions are taken, the mark used by the licensee or agent will, upon termination of the agency, revert to the original owner of the mark and may be transferred by such owner to a new agent or licensee [fol. 4953] in the same territory. Such precautions should include a promise on the part of your British associate not only to discontinue use of the name "Timken" upon termination of the license or agency but also a promise to assign to you all rights and claims to the trade-mark "Timken."

In this matter of foreign exploitation, it would seem wise to require your British associate to use, in connection with the word "Timken", some identifying matter by which its product can be distinguished from yours.

As for the manner of applying the mark to the goods, you have a wide option. You can stamp the mark directly on the goods, or you can stencil it on the goods or containers, or print it on shipping tags, labels, cartons or other containers. Wherever it is practicable, the word "trade-mark" had better be associated with the word "Timken", as above suggested.

Yours truly, (S.) Carr & Carr.

JAC-L.

Austin Lynch, David S. Day, John H. Fimple, James K. Lynch, R. J. Bour, Jr.

Case No. 24214, Civil Defendant's Exhibit, No. 64

June 10th, 1920.

Heman Ely, Esq., % Timken Roller Bearing Co., Canton, Ohio

DEAR SIR:

• • • • • • •

The above provisions in your English contracts probably do not meet all the suggestions contained in the letter of Messrs. Carr & Carr for the protection of your name as against parties other than your English Licensees, but it occurs to the writer that it is not advisable to endeavor now to carry in any further changes in the existing agreements with Woseley Motors, for I assume that such matters could be worked out by correspondence.

Might it not be well if Messrs. Carr & Carr would restate in a letter to you such part of their communication of May 25th as would relate to the marking of bearings and the containers, etc. by Wolseley Motors. You can then use their suggestions in a letter addressed to your English Licensee with a view of having them adopt the same or follow such plan as would adequately protect the name against others attempting to use the same.

Yours truly, (S.) Austin Lynch

AL/MM.

[fol. 4955] DEFENDANT'S EXHIBIT 65

Carr & Carr

Attorneys-At-Law

Suite 610 Boatmen's Bank Building

Patent Law a Specialty

St. Louis, Mo., Sept. 4, 1920.

The Timken Roller Bearing Co., Canton, Ohio.

Attention of Mr. Ely.

GENTLEMEN:

We acknowledge receipt of your letter of Aug. 30th and beg your pardon for the neglect of your earlier letter in regard to the word "Timken". Upon taking this matter up for review, we find it desirable for you to send us a copy of your contracts with your British licensees; for we had a look at one of these contracts in Mr. Ely's office and have the impression that it contains clauses that do not deal directly with the matter of trade-marks but indirectly affect your rights.

Our information is that you never effected registration of the word "Timken" in Great Britain as your trade-mark; in fact, it would seem that the word "Timken" was not registrable in Great Britain under the general trade-mark act of that country. However, a new trade-mark act was passed in Great Britain Dec. 23, 1919 which would cover the word "Timken"; and it would seem to be advisable to effect registration in Great Britain under the new law, from which we quote Sec. 2:

[fol. 4956] "Where any mark has for not less than two years been bona-fide used in the United Kingdom upon or in connection with any goods (whether for sale in the United Kingdom or exportation abroad), for the purpose of indicating that they are the goods of the proprietor of the mark by virtue of manufacture, selection, certification, dealing with or offering for sale, the person claiming to be the proprietor of the mark may apply in writing to the registrar in the prescribed manner to have the mark entered as his

registered trade mark in part B. of the register in respect of such goods."

The first question that arises is: Who is the "proprietor of the mark",—you or your British licensees. Ordinarily a trade-mark can not be assigned except in connection with the goodwill of the business; nor can a trade-mark be maintained indefinitely unless it is actually used by the owner or with his direct sanction. Accordingly, it seems highly desirable to ascertain the ownership of the British trade-mark rights in the word "Timken", effect registration of the mark in conformity with the new British trade-mark act, and have a full understanding with your British licensees.

As we have already written, an act of Congress was passed in March, 1920 that entitles you to register the word "Timken" in this country. While this act is extremely obscure in many particulars, we are satisfied that there would be no special difficulty in obtaining registra- [fol. 4957] tion of the word "Timken". Our recollection is that you have only recently begun the practice of stamping the word "Timken" on your product, whereas the right to registration is restricted to marks that have been used more than a year prior to application for registration. It is our recollection that Mr. Ely was going to send us a memorandum of the different products on which the word "Timken" is used as a trade-mark and of the various ways in which said word is stamped or applied to such articles.

It may be well to note that one of the principal ideas underlying both the new British act and the new American act is to establish a basis for registration abroad. This is particularly true with reference to the American act which was primarily intended to carry out the Pan-American Trade-Mark Treaty of 1910 and to enable the citizens of the United States to obtain the benefit of International registration at Havana.

As soon as we receive copy of your contracts with your British licensees, we will give the matter further consideration.

Yours truly, Carr & Carr.

JAC-M

[fol. 4958] DEFENDANT'S EXHIBIT No. 66

Carr & Carr

Attorneys-at-Law

Suite 610 Boatmen's Bank Building

Patent Law a Speciality

James A. Carr, Thomas Percy Carr—Joseph J. Gravely
Edgar T. Farmer

St. Louis, Mo., Oct. 7, 1920.

The Timken Roller Bearing Co., Canton, Ohio.
Attention of Mr. Ely

GENTLEMEN:

* * * * * * *

It would seem advisable, therefore, to revise your supplemental agreement, if feasible, so as to have the licensee definitely recognize your proprietary right in the word "Timken" and to definitely agree that all rights in the word "Timken" will revert to you at the expiration of the agreement or on its termination in any other manner.

We are returning herewith one copy of the supplemental agreement and suggest that you send us a copy of the principal agreement and then we will reconsider the matter on receipt thereof. While the supplemental agreement is entirely silent as to inventions and copyrights, we imagine that these are covered by the principal agreement and that the provisions relative thereto may have a bearing on the trade-mark matter.

Yours truly, (S.) Carr & Carr.

JAC-L
Inc.—1.

[fol. 4959] DEFENDANT'S EXHIBIT 67

Canton, Ohio,
October 16, 1920.

Timken Roller Bearing Co., City.

Attention: Mr. Ely.

GENTLEMEN:

I have your letter of October 13th enclosing letter from Messrs. Carr & Carr of October 7th, with copy of the supplementary agreement entered into by your Company with Wolseley Motors Ltd., both of which I return herewith.

In view of the fact that Messrs. Carr & Carr did not have the use of the *principal agreement* I beg leave to suggest that you return to them this supplementary agreement together with a copy of the principal agreement, as that may enable them to give a more conclusive opinion on the question whether anything further should be done to protect your use of the word "Timken".

This suggestion occurs to me, if Messrs. Carr & Carr (after considering the original and the recent agreement) conclude you can be better protected by an addenda to the supplementary agreement, that they prepare a form of such addenda in order that you may take it up with Mr. Duncan with a view of having him consider same and if deemed advisable try to get the English Company to consent to such amendment of the recent agreement.

Yours truly, Austin Lynch.

AL/MT

[fol. 4960] DEFENDANT'S EXHIBIT No. 68

October 26th, 1920.

Carr & Carr, St. Louis, Mo.

GENTLEMEN:

* * * * * * *

We are quite anxious to have your opinion on the British trade mark question as soon as possible, as we naturally desire better and fuller protection in Great Britain and

in the countries covered by our British agreement than in any other part of the world."

If you have replied to this letter, will you kindly send carbon copy to the attention of the writer.

Yours truly, The Timken Roller Bearing Co.
—— ——, Secretary.

JFS/SM

[fol. 4961] DEFENDANT'S EXHIBIT No. 69

November 20, 1920.

The Timken Roller Bearing Company, Canton, Ohio.
British Trade-Mark "Timken".

Attention of Mr. Ely.

GENTLEMEN:

We have given careful consideration to your two contracts of June 16—July 16, 1909 with Electric & Ordnance Accessories Company Limited, designated as the principal agreement and as the supplemental agreement, and to your supplemental agreement of 1920 with the Wolseley Motors Limited, with a view to determining what rights the respective parties may have in the word "Timken".

* * * * * * *

In a letter of even date herewith we are recommending the filing of an application for registration in Great Britain of the trade-mark "Timken"; and we further recommend that in connection with the preparation of such application, you have a definite understanding with your licensee that whenever the contract shall be terminated by expiration of time or otherwise, your rights and its obligations in respect of the trade-mark "Timken" and in the good-will pertaining thereto shall be the same as set forth in Article 10 of the 1920 Contract in the event of the contract being "rescinded".

Yours truly, —— ——.

JAC-M

[fol. 4962] November 20, 1920.

The Timken Roller Bearing Company, Canton, Ohio.
British Trade-Mark "Timken".

Attention of Mr. Ely.

GENTLEMEN:

* * * * * * *

It is our recommendation that an application for registration be made in the name of The Timken Roller Bearing Company under the Act of 1905 as amended; and that if such application meets with difficulty, it be converted into or replaced with an application in the name of The Timken Roller Bearing Company for registration under the Act of 1919.

In connection with the preparation of an application for registration, there should be a definite understanding that the trade-mark "Timken" is your trade-mark but that your licensee shall have the right to use your trade-mark under your sanction and during the continuance and subject to the conditions of the existing contract, such right to use the trade-mark to terminate with the expiration of the contract and to be limited to products manufactured under your sanction.

Yours truly, —— ——.

JAC-M

[fol. 4963] DEFENDANT'S EXHIBIT 70

November 29th, 1920.

Carr & Carr, 610 Boatmen's Bank Bldg., St. Louis, Mo.

GENTLEMEN:

Mr. Ely has gone over your letters of Nov. 20th, regarding the British Trade-Mark "Timken". We wish to follow out your recommendations and ask that you prepare the necessary papers.

We would also like to have you prepare the agreement to be signed by ourselves and by our British connection, as described in your letter. We can then forward this agreement to our London attorney who has been handling

legal matters between this Company and the British Company.

Yours truly, The Timken Roller Bearing Co., ——
——, Secretary.

JFS/SH

[fol. 4964] DEFENDANT'S EXHIBIT 71

December 8, 1920.

The Timken Roller Bearing Company, Canton, Ohio.

Attention of Mr. Ely.

GENTLEMEN:

Mr. Strough's letter of Nov. 29th was duly received and we note your instructions with reference to the British trade-mark "Timken".

It strikes us that in lieu of a new formal contract, the matter in hand can probably be better handled in the form of a letter to your British licensees; and we suggest that you write them a letter similar to what follows:

> When we were registering the word "Timken" in various countries as our trade-mark for roller bearings, we omitted to apply for registration in Great Britain and the United States because we were advised that, on account of "Timken" being a surname, it was not such a trade-mark as would be registrable under the laws of Great Britain and the United States as they existed at that time. We are now advised, however, that both of these countries have recently amended their laws in such way as probably to entitle us to registration. Accordingly we are filing an application in the United States and we are forwarding to Messrs. Abel & Imray, Chartered Patent Agents, 30 Southampton Buildings, London, a power of attorney to apply for registration in Great Britain.
>
> As we understand the new British law, it will be necessary for us to submit "evidence of distinctiveness" of the word "Timken" as applied to roller bearings, and for this purpose we shall cite the facts that the name is an extremely uncommon surname,

that it has been identified with the business of ourselves and our predecessors, licensees and associates for many years, that it has no meaning apart from [fol. 4965] our business and products, and has never been applied to roller bearings made by others without our license and has been so very extensively and for so long a time advertised that it is recognized throughout the United States and other countries as indicating exclusively the products of ourselves and our licensees and associates.

As your license from us entitles you to the exclusive use in Great Britain of our trade-mark "Timkin" for roller bearings during the continuance of the license agreement, we will expect you to assist us, so far as you can, in obtaining favorable action on our application for registration in Great Britain. We do not know in what manner or to what extent your assistance may be required; but if Messrs. Abel & Imray have occasion to call on you for assistance in the prosecution of the application, we will appreciate whatever help you give them and will, of course, pay all expenses connected therewith.

Yours truly, —— ——.

JAC—L

[fol. 4966] DEFENDANT'S EXHIBIT 72

December 15, 1920.

The British-Timken Company, Ward End, Birmingham, England.

GENTLEMEN:

When we were registering the word "Timken" in various countries as our trade-mark for roller bearings, we omitted to apply for registration in Great Britain and the United States because we were advised that on account of "Timken" being a surname, it was not such a trade-mark as would be registrable under the laws of Great Britain and the United States as they existed at that time. We are now advised, however, that both of these countries have recently amended their laws in such way as probably to entitle us to registration. Accordingly we are filing an ap-

plication in the United States and we are forwarding to Messrs. Abel & Imray, Chartered Patent Agents, 30 Southhampton Buildings, London, a power o attorney to apply for registration in Great Britain.

As we understand the new British law, it will be necessary for us to submit "evidence of distinctiveness" of the word "Timken" as applied to roller bearings, and for this purpose we shall cite the facts that the name is an extremely uncommon surname, that it has been identified with the business of ourselves and our predecessors, licensees and and associates for years, that it has no meaning apart from our business and products, and has never been applied to roller bearings made by others without our license and has been so very extensively and for so long a time advertised that it is recognized throughout the United States and other countries as indicating exclusively the products of ourselves and our licensees and associates.

As your license from us entitles you to the exclusive use in Great Britain of our trade-mark "Timken" for roller bearings during the continuance of the license agreement, we will expect you to assist us, so far as you can, in obtaining favorable action on our application for registration in Great Britain. We do not know in what manner or to what extent your assistance may be required; but if Messrs. Abel & Imray have occasion to call on you for assistance in the prosecution of the application, we will appreciate whatever help you give them and will, of course, pay all expenses connected therewith.

Yours truly, The Timken Roller Bearing Company,
—— ——, Vice Pres. & Treasurer.

ME/SM

[fol. 4967] DEFENDANT'S EXHIBIT No. 73

British Timken Limited

Ward End, Birmingham, 19th January, 1921.

Messrs. The Timken Roller Bearing Co., Canton, Ohio.

DEAR SIRS,

Registering the work "Timken"

We have your letter of the 15th inst. and have carefully noted your remarks.

We sha ll be pleased to assist you where possible in obtaining a favourable action with regard to your application for registration of the word "Timken" in Great Britain, and if Messrs. Abel & Imray have occasion to call on us for assistance you can be assured of our hearty co-operation.

. . . . . .

Again assuring you of our desire to help you in every possible way,

We remain, Yours faithfully, For British Timken Limited, G. H. Rodway, Chief Engineer.

[fol. 4968] DEFENDANT'S EXHIBIT No. 74

Dec. 28, 1920.

Messrs. Abel & Imray, 30 Southampton Buildings, London, W. C. England.

GENTLEMEN:—

The Timken Roller Bearing Company desires to register in Great Britain, under the act of 1905, its trade-mark "Timken"; and we enclose herewith a power of attorney authorizing you to act as its attorneys in the prosecution of the application for registration. We also enclose herewith a blue-print of the drawing filed in connection with the application for registration of this mark in the United States Patent Office; and for your information we also enclose a photograph of an assembled bearing showing the word "Timken" stamped on the end of the cone or inner bearing member.

. . . . . .

In view of the very extensive use of the trade-mark "Timken" and its distinctiveness in fact, it is believed that the mark is registrable under the main trade-mark act. If such registration is refused, it might be advisable to seek to register the mark under the act of 1919.

In a separate letter we are setting out certain facts concerning the relation of The Timken Roller Bearing Company to its British Licensee that we believe you should bear in mind in preparing the application. Please advise us promptly of all developments in connection with the application and call upon us for any additional information that you may require.

Yours truly, —— ——.

18th January, 1921.

Messrs. Carr & Carr.

DEAR SIRS,

Timken Roller Bearing Co. Trade Mark.

We acknowledge your letter of December the 28th with the enclosures referred to therein. Now, the 1905 trade mark Act, absolutely bars the registration of a surname as a trade mark and we do not think there is any possibility of getting the name "Timken" registered as a trade mark unless we apply under section 9, clause 5, as a special application to the Board of Trade, which is an expensive procedure and probably requires some 20 different declarations from different parts of England, North, South, West and East (and Midlands), from Wales, Ireland and Scotland testifying as to user and as to the name "Timken" being identified with your particular goods.

Now, under the new Act, trade marks are registrable under two parts, A and B, and if one can satisfy the authorities, under B, that the mark has been in use and fully identified in this country for the past two years, one might get registration of such a word and the procedure is much more simple. We therefore think it would be advisable

to apply under part B of the Act of 1919 and in that case we should require a declaration from the Timken Roller Bearing Company as to the date of the first actual user of the name "Timken" by the Applicant Company in this country, and we therefore before we file the application, require your information on this point. It will therefore be necessary for you to give us the date of the contract with Wolseley Motors Limited and to obtain information from them as to when they first used these Timken rollers in this country. • • •

We are sending a copy of this letter to the Wolseley Company asking them if they can supply us with the information to enable us to prepare the necessary declaration for your client Company to sign.

If this mark has been registered in America, please send us three copies of the print of the American registration.

Yours truly, Abel & Imray.

OI/EC

Messrs. Carr & Carr

DEAR SIRS,

Timken Roller Bearing Company—Trade Mark. With further reference to your letter of 28th December and our reply of 18th January, we have received a letter from the Wolsely Motors Limited of which we enclose you a copy, from which you will see that they have not heard from your Clients, that they were not the original Licensees, but that they took over the business of Electric & Ordnance Accessories Company Limited, and that they have since formed a new Company to work this business independently.

Now the idea of the registration of a trade mark is not to protect the proprietor of the mark, but to protect the general public by assuring them that they are obtaining the goods of a particular manufacturer. In the present case the goods actually sold in this country are not manu-

factured by the Timken Roller Bearing Company, but have been manufactured first of all by the Electric & Ordnance Accessories Company Limited, then by Wolseley Motors Limited and now by British Timken Ltd. and if we are to apply under part B of the Act it seems to us that the application should be made in the name of British Timken Ltd. as they would have to prove actual use of the mark for more than two years either by themselves or their Predecessors in business. Now if registered in the name of British Timken Ltd. your Clients would have no rights in this trade mark unless some specific arrangement were made whereby, on the termination of the agreement under which these rollers are at present being manufactured here, the goodwill of the business in respect thereof must revert to the Timken Roller Bearing Company.

You will thus see that the matter is somewhat complicated and requires furthur consideration on the part of your Clients.

Yours truly, Abel & Imray.

The Timken Bearing Co., Canton, Ohio, May 18, 1921.

Carr & Carr, 610 Boatmen's Bank Bldg., St. Louis, Mo.

GENTLEMEN:

Mr. Lothrop has advised the writer that in a recent letter to him, you made the following statement:

> "British registration of the trademark "Timken". Apparently this application will have to be filed in the name of your British licensee, and the application has been held up until a satisfactory arrangement could be made for protecting your rights in the British trade-mark in case your relations with your British licensee should terminate."

We have taken for granted that you are going ahead and taking care of this.

In this connection, further records show that you are still holding copies of our contracts with the British Com-

pany. If you are through with these, please return them for our files. If you are not through with them you should have copies made for your own convenience and return the originals to us.

* * * * * * *

Yours truly, The Timken Roller Bearing Company

[fol.4972] DEFENDANT'S EXHIBIT 79

June 28, 1921.

The Timken Roller Bearing Co., Canton, Ohio. Attention of Mr. Ely. British Trade-mark.

GENTLEMEN:—

On my last trip to Canton I intended to discuss with Mr. Ely the matter of your application for registration in Great Britain of the word "Timken" as your trade-mark. I did not, however, get an opportunity to do so.

When we forwarded the application papers we called our correspondent's attention to your contract with Wolseley Motors, Ltd. and stated that you had already written to the Wolseley Company concerning the application. Our correspondents took the matter up with the Wolseley Company and received a letter from them under date of January 19, 1921 saying they had not received any communication from you in this matter and also stating that they had organized the British Timken, Ltd. to handle bearing business.

There are numerous difficulties in connection with the registration of the word "Timken" by reason of its being a surname and also by reason of the fact that it is not you but your licensee that is carrying on the business in Great Britain. Under the circumstances, I am enclosing my correspondence file and I wish you would carefully consider it and return to me with your comments and suggestions. While there would be little difficulty in obtain-[fol.4973] ing registration in the name of your licensee, it does not strike me as the right thing to do, so long as

there is a reasonable chance of obtaining registration in your own name.

Yours truly, —— ——.

[fol.4974] DEFENDANT'S EXHIBIT 80

The Timken Roller Bearing Co., Canton, Ohio.

August 22, 1921.

Messrs. Carr & Carr, St. Louis, Mo.

GENTLEMEN:—

We are referring to your letter of June 28th, regarding British registration of "Timken" as a trade mark, and we are returning the correspondence from your files. We have held this matter pending, expecting we would have time to take with you on one of your trips, but it looks as though it will be better to clean this up by correspondence.

Your correspondence with the Wolseley Company was of course an error. You should have written British Timken Limited. We had written British Timken Company under date of December 15, 1920, in accordance with your suggestions, and had their acknowledgment dated January 19, 1921, signed by Mr. G. H. Rodway, Chief Engineer, stating they would assist us wherever possible in getting this registration.

As the only way to get this registration is through our British connection (as suggested by your British attorneys), please go ahead along these lines, and prepare the necessary agreements, providing for the assignment of this registration upon the termination of the present contracts, etc.

In this connection will it not be possible for you to go ahead with this registration in other European countries at this time without waiting for the British matter to be settled?

Please let us hear from you on this.

Yours truly, The Timken Roller Bearing Co., J. F. Strough, Secretary.

[fol.4976] DEFENDANT'S EXHIBIT 82

Dec. 12, 1921

Carr & Carr, 610 Boatmen's Bank Bldg., St. Louis, Mo.

GENTLEMEN:

We are enclosing herewith letter just received from Langner, Parry, Card & Langner, New York, stating that the Societe de Mecanique de Gennevilliers has obtained a registration in France of the Trademark "Timken". This is a surprise to us.

You will recall that on June 2nd we requested you to have this trademark registered in all the civilized countries and asked that you take the proper steps at once towards having this done.

What can you advise us about this situation? Where do we stand on this matter with other countries?

Yours truly, The Timkin Roller Bearing Company,
—— ——, Secretary.

JFS/SM

[fol. 4977] DEFENDANT'S EXHIBIT 83

March 25, 1924.

Mr. A. J. M. Duncan, 21, Leadenhall St., London, E. C. 3, England.

DEAR SIR:—

You are familiar with our Contracts with the British Timken Limited. Under these Contracts they originally paid us 15% royalty. Some years ago, at their earnest solicitation, we reduced the royalty to 10%. During the past year they have at various times brought pressure to bear for us to still further reduce our royalty. We felt that if the British Timken Limited would make full use of methods and processes of manufacture that we have developed here, the saving they could make in their costs thereby would far outweigh any possible reduction in royalty.

On receipt of letter from the Wolseley Motors Limited, dated December 14, 1923, of which we enclose copy, we decided to send to England our Works Manager, Mr. M. T. Lothrop, that he might get fully in touch with their operations and bring them up to date on our latest practices of production.

One particular point that we wished Mr. Lothrop to check up was their costs on bearings for the Ford car. We have successfully been selling the Ford Company in this Country front wheel bearings for a number of years; their business is in large volume and profitable to us. We learned from England that a competitor was supplying the Ford Company in England with a competing product, and we were particularly desirous that the British Timken Limited maintain somewhat the same position in England as we do here, particularly with reference to their supplying the Ford Company with front wheel bearings, as we felt this would be a growing business in England and on the Continent and would help to continue and increase our prestige in that territory.

As a result of our pressure on the English Company to give most careful attention to the Ford Company requirements, they have now secured large orders from the Ford Company. They state that in securing this business they

have been obliged to cut the figure of royalty down to about 2½%.

[fol. 4978] Mr. Lothrop has now returned from England, and with his report before us we are ready to discuss with the English people the matter of royalty reduction. There are many reasons why their costs are higher than ours, the principal one being their restricted output. We produce eight to ten times as many bearings, per day, as they do per week. Equipment that we can afford to purchase to produce this large volume they cannot afford, and for many other reasons their costs will always be higher than ours, and we feel that they have a valid claim for asking a reduction in royalty and we are willing to consider giving them a reduction. You must realize in this connection, whereas the royalty new stands at 10%, due to British taxes we only net about 7½%.

However, in granting a reduction of royalty there appear to be other matters which should be cleared at the same time so that we do not grant further concessions without gaining something in return.

The English people gave Mr. Lothrop the impression that we have no right under any condition to the name "Timken". As we read the Supplemental Contract, it seems to us that in view of the fact that British Timken Limited have not produced the minimum number of bearings specified we could, if we wished, rescind our Contract and have the name "Timken" restored to us. They apparently hold otherwise. Could they possibly claim that because of the patent situation (all basic patents having expired) the Agreement is already out of existence and therefore our notice of rescinding is too late and without effect in restoring to us the name "Timken"?

The one thing that we prize over all else is the name "Timken" and we must have entire control of this name. How can we now, in making a revised Agreement, protect ourselves on our ownership and right to the name "Timken"? Would it be possible to have a cancellation clause that either party can cancel by giving the other party one year's notice, and in such event the name "Timken" be restored to us entirely?

In connection with the patent situation, it is true that the original basic patents have expired, and the British patents that we now have cover processes of manufacture and details of production methods. Very few of these are being

used by the British Company, and one which they are using they claim the patent does not cover completely.

The English correspondents of our local patent counsel Messrs. Carr & Carr, of St. Louis, Missouri, are Messrs. Abel & Imray, 30, Southampton Buildings, London, with whom Mr. Lothrop got in touch when he was in England, and we are enclosing herewith copy of their letter of March 6th to Mr. Lothrop, for your information.

We now come to a matter which is confusing to us, and that is that we are receiving the principal correspondence regarding our English Contract from Wolseley Motors Limited; we are also receiving from Wolseley Motors purchase orders. The English people maintain that Wolseley Motors are losing money. British Timken are making money, and therefore by consolidating the operation there will be a saving in taxes. This no doubt is true, but we feel that it is of no price benefit to us, and may be some [fol. 4979] detriment unless they are very careful in seeing that the trade to whom they sell, considers British Timken as an independent Vickers subsidiary. We wish your advice as to how we should handle this correspondence with Wolseley Motors Limited.

We are enclosing a copy of letter just received from Wolseley Motors Limited dated March 10th, this year. This covers many of the points that were recited in theirs of December 14, 1923. One point not common to both is the matter of the 10% extra that we have made in our sales to British Timken Limited over our lowest American prices. The reason for putting this in the Supplemental Agreement was on account of the small volume of their purchases not entitling them to our lowest quantity prices. Their purchases from us however are small, and it makes little difference one way or the other, and we would be perfectly willing to waive this and agree to give them at all times the lowest prices prevailing to any of our American customers.

As to royalty: If the matter of the Timken name can be satisfactorily settled, we feel that a 5% flat royalty on all business should be satisfactory to them, and if they feel that the Ford business cannot stand this much royalty, it is a simple matter of bookkeeping for them to figure a little more royalty on their other business and a little less on the Ford, but handling their accounting with us all on a flat 5% basis.

As a last resort, however, in order to get everything that we desire in clearing the name "Timken", and in having entire control of it, we would consider even down to 2½% on the Ford business only, and 5% on all other business. This must include royalty on all bearings produced, and we can see no reason why the Wolseley Motors Limited should be relieved from payment of royalty any more than any other European user.

You can appreciate in the review of these various matters that we cannot by correspondence handle this matter with the English people to advantage and promptly. We are therefore writing them that you have our wishes on the matter and will get in touch with them to negotiate changes which will be agreeable to both sides; and to cover this we are enclosing copy of letter addressed to the British Timken Limited, which however replies to letters from Wolseley Motors.

We hope you can give this matter prompt attention, and if necessary or wise, please feel free to cable us and we will promptly advise you on any points not clear to you.

Very truly yours, The Timken Roller Bearing Co.,
——— ———, Vice Pres. & Treas.

Heman Ely. B

Enclosures: Copy of Letter from Wolseley Motors Limited, dated December 14, 1923. Copy of letter from Abel & Imray, dated March 6, 1924. Copy of letter from Wolseley Motors Limited, dated March 10, 1924. Copy of letter to British Timken Limited, dated March 25, 1924.

6th November, 1924.

Messrs. The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

For the attention of Mr. Heman Ely

DEAR SIRS:

Messrs Amerikanska Gummi A/B, Stockholm

This firm are our Service Representatives in Stockholm and through their branches in the important centres distribute our bearings throughout the whole of Sweden, and

they are working very hard to educate the motoring public to always specify the Timken bearing in the face of competition from the Bock, Gilliam and Skefko organizations.

A few days ago we were discussing the situation with Mr. Lindqvist, the Managing Director of this company, and he is much disturbed at the number of bearings that are imported from America through export houses who appear to be able to procure their supplies at very low prices. His suggestion to us is that the name "Timken", which you have registered in Sweden, be transferred to them as long as they are associated with us as authorized Timken bearing distributors, when, under Swedish law, they would be able to prevent other firms from selling tapered roller bearings under the name "Timken". As you must realise, the Timken bearing is extremely popular and there is always the possibility of imitations being foisted on an unsuspecting public by dealers who are selling a competitive line.

We realise that this is an unusual request to make but would like to have your views.

Yours faithfully, For British Timken Limited, W. W. Sharpe, General Manager.

[fol. 4981] DEFENDANT'S EXHIBIT 85

November 17, 1924.

British Timken Limited, Ward End, Birmingham, England.

Attention: Mr. W. W. Sharpe, General Manager

DEAR SIR:

We are in receipt of yours of the 6th regarding Messrs. Amerikanska Gummi A/B, Stockholm, and note your suggestion that the name TIMKEN, which we have registered in Sweden, be transferred to them.

We hardly think this is wise, as their connection with you may not be a permanent one, and we do not think it wise for us to lose control of our name in this manner.

We hope that your Swedish distributors will promptly advise you of any Timken imitations, and we will ask that you in turn advise us, giving full details. We of course have somewhat the same problem to meet here, and have been very successful in meeting it up to date. If there

are any flagrant cases of close pirating on the name TIMKEN, you should be fully advised and so should we. Please let us hear further from you if there are any actual cases of this sort.

Very truly yours, The Timken Roller Bearing Co., ——— ———, Vice Pres. & Treas.

Heman Ely. B.

[fol. 4982] DEFENDANT'S EXHIBIT 86

27th November, 1924.

Messrs. The Timken Roller Bearing Co., Canton, Ohio, U. S. A.

For the attention of Mr. Heman Ely

DEAR SIRS:

This is to acknowledge your favour of the 17th inst., and note that you do not consider it wise to transfer the registration of the name "Timken" to our Dealer in Sweden. In this matter we are in perfect agreement with you, but as we had promised our representative that the matter would be discussed with you, we felt that it was only right to lay the facts before you.

Timken business in Sweden you will appreciate must necessarily be mainly of a service character as there are no motor car vehicles made there to our knowledge, although there is an industrial field where we are trying hard to introduce Timken bearings. The consequence is that the whole country is over-run with motorcar and accessory dealers, and they are all endeavouring in someway or other to get the advantage of the other. This was doubtless in the mind of our Dealer when the request of the transfer of the name was put forward and we think you are quite right in your attitude. We shall in other ways endeavour to satisfy Messrs. Amerikanska Gummi so that we can keep them enthusiastic in the sale of the Timken bearing, and you may rely upon us reporting to you any flagrant imitations that come to our notice.

Yours faithfully, For British Timken Limited, W. W. Sharpe, General Manager.

France	330118	January 30, 1929	January 31, 1955	Indefinitely

[fol. 5004] DEFENDANT'S EXHIBIT 88

Agreement made the First day of January One thousand nine hundred and twenty five between the Timken Roller Bearing Company a Corporation organized under the laws of the State of Ohio in the United States of America and having its office and principal place of business in the City of Canton in the State of Ohio aforesaid (hereinafter called "the Licensor Company") of the one part and British Timken Limited a Joint Stock Company incorporated under the Laws of Great Britain and having its registered office at Adderley Park Birmingham in the Kingdom of England (hereinafter called "the Licensee Company") of the other part

Supplemental to:

(1) An Agreement (hereinafter referred to as "the Principal Agreement") dated the sixteenth day of June and sixteenth day of July One thousand nine hundred and nine and made between the Licensor Company of the one part and The Electric & Ordnance Accessories Company Limited of the other part being a Licence for the manufacture and sale of Timken Roller Bearings in the United Kingdom of Great Britain and Ireland and the Isle of Man and

(2) An Agreement (hereinafter referred to as "the Second Agreement") made the sixth day of April One thousand nine hundred and twenty between the Licensor Company of the one part and Wolseley Motors Limited of the other part whereby the terms and conditions of the Principal Agreement were modified.

Whereas the benefits and obligations of the Electric & Ordnance Accessories Company Limited under the Principal Agreement with the consent of the Licensor Company

were assigned by the Electric and Ordnance Accessories Company Limited to Wolseley Motors Limited previous [fol. 5005] to the date of the Second Agreement and since that date have been assigned by Wolseley Motors Limited to the Licensee Company.

And whereas the parties hereto are desirous of further modifying the terms of the Principal Agreement as more particularly hereinafter appears.

Now these presents witness and it is hereby declared and agreed by and between the parties hereto as follows (namely):

1. The Principal Agreement as modified by the Second Agreement shall be further modified so far as necessary in order to give effect to the following provisions of this Agreement.

2. The Royalty payable under Clause 4 of Article 7 of the Principal Agreement shall be equal to Five per cent of the net invoice prices therein mentioned instead of Fifteen per cent except in the case of Roller Bearing delivered to the Ford Motor Company (England) Limited for use on cars manufactured by them in which case the royalty shall be equal to two and a half per cent of the net invoice prices aforesaid instead of Fifteen per cent.

3. This Agreement shall take effect as from the First day of January One thousand nine hundred and twenty four and the Principal Agreement as modified by the Second Agreement and this Agreement shall continue for a term of Five years from the First day of January One thousand nine hundred and twenty four and thereafter unless and until one party shall determine the same at the end of the said term of five years or at any time afterwards by at least six months previous notice in writing to the other party.

[fol. 5006] 4. The name "Timken" shall belong exclusively to the Licensor Company and during the continuance of the Principal Agreement as modified from time to time the Licensee Company shall be deemed to be using the said name as part of the subject matter of the licence contained in the Principal Agreement and shall have the right to use the said name accordingly and upon the expiration or other determination of the Principal Agreement as modified from time to time the Licensee Company will take such steps as may be necessary to change its name and will

otherwise cease to have any right in the said name or to make use of the same in any way and during the continuance and after the expiration or sooner determination of the Principal Agreement as modified from time to time the Licensee Company will execute and do at the expense of the Licensor Company such acts and things as may be reasonably necessary to secure for the Licensor Company so far as practicable an exclusive right to use the said name in connection with bearings and other products dealt in by the Licensor Company and to secure and protect so far as practicable the property and rights of the Licensor Company in respect of the said name and enable the Licensor Company to obtain or preserve the exclusive right aforesaid but nothing herein contained shall in any way affect or restrict the right of the Licensor Company to change its name in any manner during the continuance of this Agreement.

In Witness whereof the respective Common Seals of the [fols. 5007-5008] parties hereto have been affixed the day and year first above written.

Sealed with the Common Seal of The Timken Roller Bearing Cohmpany in the presence of J. F. Strongh, Secretary; Heman Ely, Vice President & Treasurer. (Seal)

The Common Seal of British Timken Limited was affixed hereto by Order of the Board in the presence of B. L. P. Caillard, G. W. Grazelbrook, Directors; A. Jacob, Secretary. (Seal)

[fol. 5009] DEFENDANT'S EXHIBIT No. 89

July 30, 1925.

The Timken Roller Bearing Company, Canton, Ohio.
Attention: Mr. Strough

GENTLEMEN:

. . . . . .

An application was filed in Germany; but it developed that Max Prausnitzer (who, as we understand, is the German representative of your British licensee) had already registered the mark and he successfully opposed our application for registration. There is no use to file another application for registration in Germany without

first obtaining the assurance of Mr. Prausnitzer that he will not oppose the application. Another way of handling the matter would be for Mr. Prausnitzer to execute an assignment of the registration to you.

No application has been filed in France, Great Britian or Ireland, because the laws of those countries seem to require actual use of the trade-mark before registration. Accordingly, such applications would have to be filed in the name of your British licensee or their subsidiaries. Such applications should be filed with the clear understanding that upon the termination of your relations with British Timken the registrations will be assigned to you.

We were under the impression that you had advised us that the mark "Timken" had already been registered in [fol. 5010] France by Societe Mecaniche de Gennevilliers (or some such name) and that this concern is the French agent or subsidiary of British Timken. If that is the fact, it would be impossible for you to obtain registration of the "Timken" mark in France and, as suggested in the case of Mr. Prausnitzer, you may obtain an assignment thereof. Apparently the best way of handling the matter will be for us to instruct Messrs. Skerrett & Skerrett to file applications in Great Britain, Ireland and France in the name of British Timken or its subsidiaries; but we await definite instructions from you before so doing. In writing Messrs. Skerrett & Skerrett we will, of course, raise once more the question of filing these applications in your name instead of in the name of British Timken or its subsidiary; but we anticipate that such procedure will not be found practicable, since you are not actually engaged in business in those countries.

Yours truly, —— ——.

JJG:K.
CC to Mr. Brooks.

[fol. 5011] DEFENDANT'S EXHIBIT No. 90

August 15, 1925.

Messrs. Skerrett & Skerrett, 24 Temple Row, (Next Bank of England) Birmingham, England.

GENTLEMEN:

The Timken Roller Bearing Company has its trade-mark "Timken" registered in the United States and in a great many foreign countries. From time to time the question has arisen of registering the trade-mark in Great Britain; but it was only recently that the British law was changed to permit the registration of surnames. Even after such change, there was the further question of whether the Timken Roller Bearing Company could make a successful application in view of the fact that the business in England had been conducted through British Timken and its predecessors. We believe that it will probably be advisable to file the application in the name of British Timken but we will be governed by your judgment in the matter.

It is also desired to register the trade-mark "Timken" in Ireland. As we understand the new law, the simplest way to obtain a registration is to file an application based on the British application and an application in Ireland will be filed in the name of the British registrant or applicant.

It is also desired to register the trade-mark in France; but as we understand the French law, the appli-[fol. 5012] cation should be filed in the name of the person actually conducting the business in France which, as we understand, is a corporate subsidiary of British Timken, Ltd. We are under the impression that a registration may already have been obtained in France in the name of such subsidiary and, if such is the fact, a new application will, of course, be necessary. Registration in Germany has been obtained by Max Prausnitzer.

* * * * * * *

Please go into this matter with British Timken and arrange to file applications in Great Britain and Ireland, and in France, if registration has not already been obtained. We are not sending formal documents, since we understand that they will probably be executed in the name of British

Timken. If it should be decided to file applications in the name of The Timken Roller Bearing Company, please send us the required documents for execution, particularly in the case of Ireland; because we have no information as to the form of the documents required under the new Irish law. Please also arrange for an assignment to the Praus-nitzer German registration, to the The Timken Roller Bearing Company and for the assignment of other registrations as soon as issued.

Yours truly, ——— ———.

21 Leadenhall Street,
London, E. C. 3,
14th Septr., 1925.

E

DEAR SIRS:

Timken Trade Marks

We enclose a copy of the proposed statement of grounds for the Trade Mark Application which Messrs. Abel & Imray inform us can be signed by them and filed in their name; the information contained in this has been supplied by British Timken, Ltd.

If the application proceeds to advertisement in the Trade Mark Journal, Messrs. Abel expect that the Registrar will afterwards require a similar document in the form of a statutory declaration to file as evidence in support of the application, and he will probably also ask for declarations by traders in various parts of Great Britain before the application can be put upon the Registrar.

We have sent a copy of the enclosed document to British Timken, Ltd. for their approval, and in case of need, they will no doubt supply the statutory declaration and traders' declarations if occasion arises.

If you will kindly cable us the word "approve", we shall understand that you have no remarks to make upon the

enclosed document, and that we can instruct Messrs. Abel & Imray to sign it, and lodge it with the Trade Mark Office. We should be glad to get on with this.

Yours faithfully, Stibbard, Gibson & Co.

The Timken Roller Bearing Company.

[fol. 5014] Copy

DEFENDANT'S EXHIBIT 92

Trade Marks Acts

In the Matter of TRADE MARK APPLICATIONS, Nos. 459791-2 of TIMKEN ROLLER BEARING CO. and BRITISH TIMKEN LIMITED

STATEMENT OF GROUNDS

We, Timken Roller Bearing Company, and British Timken Limited, joint Applicants for the registration of the Mark Timken in Classes 6 and 13, hereby Give Notice that the following are the grounds on which we rely in supporting our Application:

1. The manufacture of these bearings was begun under a licence from the Timken Roller Bearing Company of Canton, Ohio United States of America, in the year 1908. We are unable to give particulars of the numbers of bearings delivered to customers in Great Britain for the years 1908 and 1910 owing to the records for these years not having been kept distinct from other business, but we give below the quantities for the succeeding years to the 30th September 1924:

Year ending September, 1911	27,125
Year ending September, 1912	56,988
Year ending September, 1913	57,471
Year ending September, 1914	73,028
Year ending September, 1915	64,027
Year ending September, 1916	50,276
Year ending September, 1917	58,437
Year ending September, 1918	66,240
Year ending September, 1919	111,862
Year ending September, 1920	225,848

Year ending September, 1921	178,362
Year ending September, 1922	145,884
Year ending September, 1923	255,358
Year ending September, 1924	363,549

2. All the bearings supplied as above have been stamped with the mark "Timken" and enclosed in boxes bearing the name "Timken". A specimen bearing in box marked "A" a catalogue marked "B", and a bundle of sample [fol. 5015] advertisements marked "C" are sent herewith.

3. It has been the practice to advertise Timken bearings in Great Britain regularly, and we set out below the amounts which have been spent in advertising from the commencement of the business up to January, 1925 with the exception of the period 1918/1919 of which we have no separate details:

1909	£143.10. 9
1910	540.13. 5
1911	586. 7.11
1912	396.13. 3
1913	605. 8. 6
1914	584.17. 1
1915	314. 4. 7
1916	774.12. 2
1917	159.18. 3
1918 (records not kept)-	
1919 do.	
1920	103. 1. 6
1921	1,684.15. 5
1922	1,659.17. 3
1923	2,201.11. 0
1924	3.537. 8.10

4. So far as we are concerned the mark is applied to bearings only.

5. The Mark "Timken" in regarded in the trade as a means of identifying goods of our manufacture, and such recognition is very necessary owing to the fact that other manufacturers in Great Britain are making bearings of a similar type and have been distributing them in boxes like those which we use, the only difference being that our competitors do not use the name "Timken" thereon.

We Therefore claim to be entitled to the Trade Mark as

we own the goodwill of the business concerned in the goods with respect to which the said mark is used.

Agents for Applicants.

Dated this — day of September, 1925.

Birmingham, Sept. 25th, 1925.

Carr & Carr, 610 Boatmans Buildings, St. Louis, Mo., U. S. A.

Gentlemen,

re Trade Mark "Timken"

Referring to your letter of August 15th., we have now discussed this matter with our clients.

They point out that application for the registration of the word "Timken" have already been filed in this country through Messrs. Abel & Imray of London, the numbers of the applications being 459791 and 459792. These applications were in the joint names of the Timken Roller Bearing Co., and British Timken Ltd. They are proce-ding in the ordinary way will shortly be advertised in the Trade Marks Journal. In view of this we should be glad to know whether you desire us to do anything further in connection with this matter.

As regards the Irish Free State the new law is expected to come into force very shortly and it will then be possible to obtain registration based on the English registration.

As regards France we have not yet heard from the French Co., as to whether they have registered the name. We will write you further when we hear.

As to Germany we understand from our clients that Mr. Prausnitzer will be in Birmingham in the course of a few weeks and they prefer to leave the matter over until then so as to discuss the question of the Assignment with him personally.

Awaiting your further instructions.
We enclose our Debit Note.
Yours faithfully, H. N. & W. S. Skerrett.

N. B. Papers sent under separate cover.

[fol. 5017] DEFENDANT'S EXHIBIT No. 94

Oct. 9, 1925.

Messrs. Skerrett & Skerrett, 24 Temple Row, (Next Bank of England), Birmingham, England.

Gentlemen:

We have your letter of September 25th concerning the British trade-mark "Timken". We have just been advised by The Timken Roller Bearing Company of the joint applications in the name of British Timken and The Timken Roller Bearing Company. In view of the pendency of these applications it will not be necessary, of course, for you to file the applications suggested in our letter.

You will please bear in mind the desire of The Timken Roller Bearing Company to obtain registration in the Irish Free State; and you will attend to this matter as soon as it is in order to do so.

* * * * * * *

We call your attention again to the revised contract between The Timken Roller Bearing Company and British Timken, which states clearly that the trade-mark "Timken" is the property of The Timken Roller Bearing Company.

Yours truly, —— ——.

[fol. 5018] DEFENDANT'S EXHIBIT 95

H. N. & W. S. Skerrett, Patent Agents
24 Temple Row, (Next Bank of England)
Birmingham, 7th October, 1925.

Messrs. Carr & Carr, 610 Boatmen's Bank Buildings, St. Louis, Mo., U. S. A.

Dear Sirs,

re Trade Mark "Timken" in France.

With further reference to your letter of August 15th, our clients Messrs. British Timken Ltd., have made enquiries from the French firm who are manufacturing Timken Bearings, and they have ascertained that the word "Timken" is already registered in France in the name of Societe de Mecanique de Gennevilliers.

We have discussed the question of the suggested assignment with our clients, but they are strongly of the opinion that this French registration should be in the joint names of the three firms interested, namely, The Timken Roller Bearing Company, British Timken Ltd., and Societe de Mecanique de Gennevilliers. Our clients are communicating with the French firm to ascertain their views on this question of assignment, and in the meanwhile we should be glad to know whether the Timken Company would be agreeable to a joint registration.

Yours faithfully, H. N. & W. S. Skerrett.

[fol. 5019] DEFENDANT'S EXHIBIT No. 96

January 9, 1926.

Messrs. H. N. & W. S. Skerrett, 24 Temple Row, Birmingham, England.

Gentlemen:

We note your suggestion that the French registration of the word "Timken" in the name of Societe de Mecanique de Gennevilliers should be placed in the joint names of said company. The Timken Roller Bearing Company and Brit-

ish Timken Ltd.; and after considering the matter approve your suggestion. This will place the French registration on the same basis as the British Registration application for which is now pending in the joint names of British Timken Ltd., and The Timken Roller Bearing Company.

It seems to us that the German registration of the trade-mark "Timken", now standing in the name of Mr. Prausnitzer should be issued in the same way; and that this registration should be held jointly in the names of British Timken Ltd., The Timken Roller Bearing Company and Mr. Prausnitzer or whatever person or corporation may from time to time represent British Timken Ltd. in Germany.

Will you please take whatever steps are necessary to carry out the above suggestions.

• • • • • • •

Yours truly, —— ——.

JJG:DM

[fol. 5020] DEFENDANT'S EXHIBIT No. 97

January 9th, 1926.

The Timken Roller Bearing Company, Canton, Ohio.

Attention: Mr. Strough.

Gentlemen:

We have had considerable correspondence with Messrs. H. N. & W. S. Skerrett concerning registration of your trade-mark "Timken" in Germany and France.

We have suggested to Messrs. Skerrett that the German registration in the name of Mr. Prausnitzer and the French registration in the name of Societe de Mecanique de Gennevilliers should both be assigned to you; but they state that British Timken does not want to handle the matter in this way, and suggest instead that the French registration be held in the names of Societe de Mecanique de Gennevilliers, British Timken Ltd. and The Timken Roller Bearing Company. By the same reasoning, the German registration would be held in the name of Mr. Prausnitzer, British Timken Ltd. and The Timken Roller Bearing Company.

• • • Accordingly, we have authorized Messrs. Skerrett to have the French registration placed in the joint

names of the Societe de Mecanique de Gennevilliers, British Timken Ltd. and The Timken Roller Bearing Company; and we are likewise instructing them to place the German registration in the joint names of Mr. Prausnitzer, British Timken Ltd. and the Timken Roller Bearing Company.

* * * * * * *

Yours truly, —— ——.

JJG:DM

[fol. 5021] DEFENDANT'S EXHIBIT No. 98

Stibbard, Gibson & Co.
(Thomas Cooper & Co.)

21, Leadenhall Street, London, E. C. 3

2nd February 1926.

Dear Sirs,

Trade Marks

Messrs. Abel & Imray recently received a letter from Messrs. H. N. & W. S. Skerrett, in which the latter firm stated that as the result of correspondence between you and British Timken Limited the British Company had been considering their position with respect to the trade mark "Timken" and the respective rights of themselves and you in the said mark. You will recollect that the agreements between you and the British Co. contain clauses intended to reserve the name as far as possible to you, and that there is at present a joint application for registration in the joint names of yourself and the British Company. Messrs. Abel & Imray were asked to attend a conference with Sir Duncan Kerley and Mr. F. E. Bray, and as a result of this conference we are able to send you a copy of a joint opinion of Sir Duncan Kerley and Mr. F. E. Bray; we enclose the copy herewith.

The law with respect to trade marks in this country depends largely upon statute, and it is not open for a manufacturer or trader to register any mark he pleases and in any way he pleases. Any registration has to be brought within the provisions of the Act dealing with trade marks. Apart from the statute law with respect to trade marks, there is the Common Law, the principal point in this being

that if a firm can show that its goods are known in the market by a particular name or mark, it will be able by legal proceedings to stop another firm from using this name [fol. 5022] in such a way as to deceive and cause people to purchase the goods of the second firm in the belief that they are the goods of the first firm. Registration of a trade mark is not necessary for such proceedings which are known here as a "passing off" action.

There has always been the question in connection with the name "Timken" as a trade mark, that it has not been used to signify one class of goods; it has been used at different times to signify (1) goods of your manufacture, (2) goods manufactured by the British Company and to some extent also, we understand (3) goods manufactured by the French Company. The name "Timken" may also have come to signify not the origin of the bearing but a particular kind of bearing, just as in the well known case of Liebeg; the Liebeg Extract of Meat Co. Ltd. had to give up the use of the name "Liebeg" and adopt the name "Lemco" because Liebeg had come into common use as descriptive of a particular kind of preserved food. Registration of a trade mark gets over this difficulty, but if a firm can prove a case within the Common Law, registration is not of so great importance.

So far as we can see, your agreements in the form in which they are at present are about as helpful to you as they could be. It would, of course, be a good thing if the trade mark could become a registered trade mark, but Sir Duncan Kerley and Mr. Bray are against making an application for this purpose; they are also of the opinion that the present application for joint registration will not succeed, and that the only chance of registration would be concurrent registration.

According to our law, a trade mark means a mark used or proposed to be used upon or in connection with goods for the purpose of indicating that they are the goods of the proprietor of the mark by virtue of manufacture, selection, [fol. 5023] certification, dealing with, or offering for sale, and in a case of honest concurrent user or of other circumstances which in the opinion of the Court make it proper so to do the Court may permit the registration of the same trade mark or of nearly identical trade marks for the same goods or description of goods by more than one proprietor

subject to such condition and limitations if any as to mode or place of user or otherwise as it may think right to impose. There is another provision in the Trade Marks Act which is relevant in the present connection, to the effect that a trade mark when registered should be assigned and transmitted only in connection with the goodwill of the business concerned in the goods for which it has been registered, and shall be determinable with that goodwill.

We are inclined to think that the present application for a joint registration will not succeed, and that it is a question whether it would be best to allow matters to remain as they are or to rearrange the agreements and then make an application for concurrent user. We do not think that it would be easy to come to an agreement with the British Company as to the terms of an agreement suitable for concurrent user.

* * * * * * *

We feel, however, that we are to some extent in the dark and shall be glad to hear from you before moving further in the matter.

Yours faithfully, (Signed) Stibbard, Gibson & Co.

The Timken Roller Bearing Co.

[fol. 5024] DEFENDANT'S EXHIBIT 99

Joint Opinion

We think it more useful to advise as to the position generally than to deal with the specific questions in our instructions, some of which are framed upon assumptions which are open to question.

The name "Timken" was originally applied to bearings made according to a patent of which Timken was an inventor. It has been used in this Country in respect of bearings made by successive English Companies and also in respect of bearings made by the American Company and to a small extent by a French Company which have not passed through the hands of the English Company at all. In the literature of the English Companies the name has been frequently used in a context which suggests that it describes a type of bearing rather than trade origin.

In these circumstances it is clear that neither the English nor the American Company could prove that "Timken" distinguishes the goods of either Company exclusively of the other, and neither Company could obtain registration alone.

Having regard to the fact that there has been no user of "Timken" by any third party it is possible and indeed probable that, if any third party were to commence to use the name, the English Company or the American Company might succeed in stopping such user in an action for passing off, but it is by no means certain that such an action would succeed. We think on the whole that if any one were to sell bearings as "Timken" simply, he would be stopped; but that, if he were to sell them as, say, "Smith's Timken Bearings" the result would be doubtful.

In these circumstances we consider it most undesirable to proceed with the application to register. Joint registration is inapplicable, as, except for the payment of a royalty, the goods of the English and American Companies are produced and sold independently. The only registration which might be obtained would be a separate concurrent registration in the name of each Company. Having regard to the way in which Timken has been used, as referred to above, we think that such applications would probably be refused at the present time and that it is very undesirable to raise the issue by any premature application. The [fol. 5025] longer the time during which no third party uses the name, the stronger the position will become.

It follows from what has been said above that Clause 4 of the agreement of January 1, 1925, is inoperative so far as it purports to determine the ownership of the name during the subsistence of the principal agreement. An exclusive right against third parties cannot be created by agreement, and to treat the name as the subject of a "Licence" is inconsistent with the existence of an exclusive right in the American Company.

So far as the clause deals with the position on the determination of the principal agreement, it binds the English Company to discontinue the use of Timken, but as the English Company is not bound to assign the goodwill of its business to the American Company, the latter would have to establish its title against third parties on the ground of the name being distinctive of its goods by user.

As regards the future, in our opinion, the existing agreements should be determined. In order to render the position of the English Company secure there is no doubt that the most satisfactory scheme would be for the English Company to pay a lump sum in order to secure that none of the American Company's bearings should come into the country marked "Timken"; but having regard to the import of cars, we appreciate that this may be impossible. In that case, there are two alternatives with a view to securing the position.

(1) One is to aim at getting concurrent riglits firmly established in which case a fresh agreement should be made based on the assumption that concurrent rights do now exist and defining the conditions of user. The literature of the Company should also be revised.

(2) The other alternative is to combine the interests of the Companies by one practically absorbing the other.

As regards the position in France and Germany this would have to be ascertained according to the laws in those countries and we cannot usefully say more than that the position there appears to be insecure from the point of view [fol. 5026] of the English Company and its subsidiaries and that we consider that new agreements covering those territories should also be prepared and submitted to experts there. No express permission as to importing cars with Timken bearings should be included.

With regard to the question of royalties, it is clear that so long as the English Company continues to make bearings according to the methods covered by the later patents which are still in force, royalties are payable upon all bearings so made.

Bearings which are not protected by any subsisting Patent would not in our opinion have been "made under this agreement" within the meaning of Clause 7(4) of the Principal Agreement, had that agreement remained unmodified. The subsequent agreements do not in terms alter the basis of royalty payment except as regards amount; but the agreement of January 1925 does make the use of the name "Timken" as between the parties a matter of contract deemed to be the subject of a licence and we are upon the whole of the opinion that reading the agreements together the effect is that the English Company is liable

to pay royalties on all bearings sold as "Timken" Bearings.

(Signed) D. W. Kerley, F. E. Bray.

Attention: Mr. Strough

Gentlemen:

The writer has discussed with Mr. Brooks his letter of October 12, 1926, to us, but has never made a written reply thereto.

The letter of your New York representative suggests the filing of a number of applications for registration of the trade-marks "Timken" and "T" in oval. So far as the word "Timken" is concerned, the field is fairly well covered; although we are in difficulty in Great Britain, New Zealand, France and Germany.

Your application in New Zealand has been unsuccessful by reason of your inability to obtain affidavits as to ownership of the mark, the New Zealand trade recognizing the mark as being the property of British Timken. In Great Britain, it seems impossible for you to obtain registration in your name. In both cases, it might be possible to obtain registration in the name of British Timken, with a promise to assign the registrations to you; but we have not done this because of the provision against assignment of a trade-mark registration separate and apart from the business. In France and Germany, representatives of British Timken have obtained registration; and presumably they are bound [fol. 5028] to assign the registrations to you whenever your relations with British Timken are terminated. The difficulties in these four countries could be surmounted if you were to take over the business of British Timken. This would

merge the somewhat conflicting titles of yourselves and British Timken, and, from the legal viewpoint, is by far the best way of handling the situation. If the matter is handled merely by you beginning when British Timken leaves off you will probably not be able to carry back your title to the trade-mark, and there will be the possibility of trouble with other people. For instance, in Germany we understand that "Timken" is more or less equivalent to "tapered" and your right to your trade-mark may be lost unless you can relate back your ownership to the date of the Prausnitzer registration.

You have a great many registrations of the word "Timken"; and one man's guess is as good as another's on the question whether you should obtain registration in Timbuctoo and Zanzibar in addition to those that you already have. It seems a needless expenditure to register a trade-mark in every possible place; but it is likewise true that no matter how obscure the place may be the time may come when you may wish you had a registration.

. . . . . .

Yours truly, Carr & Carr & Gravely. By (S.) Jos. J. Gravely.

Messrs. Carr & Carr & Gravely, 1304 Central National Bank Bldg., St. Louis, Mo.

Attention: Mr. J. J. Gravely.

Dear Mr. Gravely,

We are referring to your letter of January 12th regarding trade mark registration. Apparently the oval T is sufficiently covered, and also Timken, with the exception of Great Britain, France, Germany and New Zealand.

You suggest that we seriously consider the advisability of taking over British Timken. This is a very large order, and we do not now know and we may not know for years whether this will be advisable. In the meantime, if it is

at all possible to get Timken registered in these four Countries, we want it done.

Our present Contract with British Timken may expire in two years, and we want you to prepare an agreement supplemental to the existing one, which will protect us on the trade mark Timken. We haven't the faintest idea how this can be done, and if you can see no way in which to do it, will you please so advise us promptly; otherwise, we would like to have you push this along.

Yours truly, The Timken Roller Bearing Co., J. F. Strough, Secretary & Treasurer.

Carr & Carr & Gravely, 1304 Central National Bank Bldg., St. Louis, Mo.

We are sending representative to England next week to negotiate purchase of controlling interest in British Timken for us. We hope at same time to arrange for modification of agreement. Please wire us tomorrow morning your general suggestions as to what should be done regarding name registration, and write us fully to reach us early next week. Also please advise us not later than next Monday giving your opinion whether Claim 14 in Shafer Patent 1551334 is broad enough to cover both convex and concave rollers, and if so is there possibility that SKF type infringes.

Attention: Mr. Strough

Gentlemen:—

We have Mr. Strough's telegram of April 1st advising that you are sending a representative to England to negotiate for a controlling interest in British Timken, that you hoped to obtain a modification of your foreign agreement and asking for suggestions as to the filing of trade-mark registrations. We understand that you refer to registration of the trade-mark "Timken".

We are glad to note that you are endeavoring to obtain a controlling interest in British Timken. This is in line with our own suggestions and will put you in control of the trade-mark "Timken" all over the world, whereas, under existing conditions, there is danger that, if your present license agreement with British Timken should be terminated, you might not be able to prevent others from estab-

lishing a right to use the word "Timken" in certain countries from which you are excluded by the agreement from doing business.

The principal matter to be considered in making a new agreement with British Timken is to make sure that subsidiaries or agents do not acquire any rights that would entitle them to use the word "Timken" without your permission; that is, to see that they duly acknowledge you (or their immediate principal British Timken) to be the sole [fol. 5033] and exclusive owner of the trade-mark "Timken" and bind themselves by appropriate instruments to hold in trust for you (or British Timken) any and all rights, powers, registrations and the like affecting the word "Timken" that they may acquire or become invested with during the period of their contractual relations, and to assign and convey the same to you (or British Timken) or such other parties as may be designated by you (or British Timken) together with any good will they may have acquired under such name, and to agree specifically not to use the word "Timken" after the termination of such contractual relation. For instance, Mr. Prausnitzer and the French subsidiary have effected registrations of the mark "Timken" in their own names but, presumably, for the benefit of British Timken. You should see that no right adverse to you shall grow out of such registrations but that your right thereto (or the British Timken right) be formally acknowledged. The agreement should also specifically obligate British Timken to cause its subsidiaries to carry out the agreement.

In the past, we have been very anxious to obtain all registrations of the trade-mark "Timken" in your own name instead of in the name of British Timken; but if you obtain control of British Timken, there will no longer be any objection to its obtaining registrations in its own name. Accordingly, we have today wired you that if you obtained control of British Timken, it should register the mark "Timken" in its own name in those countries where you [fol. 5034] have not been able to obtain registration. The most important of such countries are Great Britain, Ireland and New Zealand. A joint application was at one time filed in Great Britain, but was abandoned (as we understand) because of subsequent adverse opinion of British counsel. The filing of an application in Ireland has

been withheld pending the issue of a certificate of registration in England.

In New Zealand, an application in your own name has been unsuccessful by reason of the impossibility of obtaining affidavits of dealers that the mark "Timken" indicates goods originating with you. Said dealers stand ready to make affidavits that the mark "Timken" indicates goods originating with British Timken; and an application in the name of British Timken should be successful.

As a matter of precaution, it would be well to file applications for registration promptly after the negotiations are concluded for the purchase of the controlling interest in British Timken by you. The filing of such applications would forestall any effort on the part of outsiders to begin the use of the mark "Timken" on competing bearings.

Yours truly, Carr & Carr & Gravely. By —— ——.

April 4, 1927.

Mr. Heman Ely, 1075 Park Avenue, New York City.

DEAR MR. ELY:

Lothrop has written you two letters today—one on our Steel Mill and one on future development and reduction in bearing costs. Mr. Klinedinst has written you about industrial bearings.

The three Powers of Attorney will be sent you from Cleveland on Tuesday. An extra copy for your own information and use is enclosed herewith.
